(2:13:26) no matter what I say if I have any any of the bigger podcasts I have I'm not going to announce them before they're already done and it's been wrapped up I think this is good is the name okay the payout yeah I think that's pretty accurate right payoff yeah I don't know payoff sounds maybe the payout what's a better name yeah I'm not worried about the debunker stuff people just keep asking about it but we're we're like ignoring all that I don't even talk about it in most of my podcasts anymore because it's

(2:14:12) been so thorough the debunks have been so thoroughly debunked already it's just for newer people that are following along that you know know maybe have been you know victims of social contagion and think that the stuff's been debunked when it hasn't hush p uh yeah maybe we'll go with something like that instead yeah the problem with payoff is it just doesn't sound right from the literal sense like it's like a we're

(2:15:15) like we're getting the payoff but it's not it's not like a payoff like uh like something positive it's something negative right buying silence I think the cheap price thing will be self-explanatory right people can come to their own conclusions on if this is worthwhile when I look at this I think this is nothing other people you know I think this is that's the what the piece is about right what does it take to buy people's silence turns out not very much and that's what this piece is

(2:15:47) all about I think that's what we'll go with well it's not so much that they like came to the m like hey guys we're going to give you this money to stay silent it's more of like if you want any money you have to sign this agreement like the right at the end is the big kicker right forcing the family members to find sign a full exemption settlement right this is what they're doing is they're saying that you can't do you can't say anything about the agreement you can't you have to fighting

(2:16:18) pretty much and it's crazy cuz you look at this and a lot of these people have lost their main income sources right if it was like your husband or something and they were the big bread winner and the or you know I don't want to be sexist it could be anyone whoever is essentially the person who made the money now they're gone in your family it's like imagine the pressure to sign the agreement to get the money scary I think buying silence is what we're going to go through here maybe we just call it just buy in

(2:16:47) silence maybe we don't need the families of the victim's part I like buying silence in general that's that's probably the way yeah this is this is it okay we're good to go we're firing this off let's go go ahead and like it if you like it guys no pressure I'm going to post it to my Discord as well how's this neighbors must have a dog outside or something wonder if you guys can probably hear that my microphone picks up everything I'm glad my dog is uh very good wow already five likes I literally

(2:17:49) just posted 10 seconds ago this has actually got me like legit emotional just man the stuff about the families is the stuff that really makes me uh the hardest stuff honestly it's like the family you just imagine if it was your family right on the board of the plane and all the crap

they have to go through it's completely unfair yeah uh my interview with Zack pain

(2:19:18) yesterday was really awesome you guys should check that out um we actually had some callers call in as well which was nice and he and I talked offline for like another 30 minutes afterwards I feel like the best interviewers the ones that are really most open-minded I have great conversations with afterwards uh which you know goes to tell that they're just good people and uh yeah you know it sound like he had been screwed over in the past and had some bad stuff happen so I'm glad that he's uh been able to

(2:19:46) recover bounce back Etc definitely check that one out I think that one's on Rumble um where you can find them I could have kept the family's part but it's fine I think nobody's tried to silence me at least overtly I think that uh you know people have tried to discredit me you see a lot of it as well I mean their attack Vector is like oh you're blocking me you're a bad person right but it's it's a damned if you do damned if you don't situation right if I don't block the people then they're

(2:20:20) going to post fake stuff and incorrect stuff in my comments and my replies which is what they want to be able to do and if I do block them then they claim that I'm you know whatever based on blocking people which it's totally my right to block people in my comments for any reason I want right and I I do so only when people are uh condescending rude trolling or being disingenuous and the reality is I tell people like I can't tell the difference between someone who's like a disinformation agent or somebody who's

(2:20:46) just being a jerk but but doesn't matter to me either way and the more people complain about it the more they just justify that they should get blocked I've always been said that if people want to be unblocked and they think they were done so for an unjustified reason they can reach out to me through sub proxy or on one of my other social medias right through YouTube whatever uh the number of times that's happened is a very small very very small number of times so okay um I'm going to switch over to my other

(2:21:16) image real quick quick okay Bing AI I'm going to make a b right back image real quick while I go to the restroom I'm going to grab a coffee probably be about 5 to 10 minutes at most then we'll be right back and we will work on the Edward Lin additional evidence probably won't be as long um but still pretty good uh I wonder can this Bing AI stuff make it like wider the music should still be fine here let's do uh be right back with space background oh wait I already logged in what's

(2:22:23) this I gotta log in again sure keep me logged in okay give me a second I'm going to set up the OBS so that I have another thing here okay let's see what we got here oh yeah this is pretty cool oh actually we're going to make it better with space back okay I'll do if you have any questions

(2:23:32) here for the last second while I'm setting this up let me know yeah I agree with you rustom totally uh I can probably grab the link for you guys if you want if someone wants to

watch the Z the pain uh Zack Payne interview give me a sec here it is yeah this there it is listen okay there's the Zach pay interview think that link should work just confirm for me if you don't mind oh okay here we

(2:24:39) go oh this is a good one we're using this one holy [REDACTED] Sikes so for I can't get the B right back right why does it why does it have two RS it's like the AI can't figure out what BRB means oh well we'll use this for now um which one do I like the most I guess we'll use this one download close out of that let's browse got it make full screen

(2:25:51) oh I just realized I probably had it was probably black screen wasn't it yeah we were on the black screen my bad guys my bad I did not realize we were on the black screen okay uh so we got the BRB thing up here give me uh five or 10 minutes guys and I'll be right back and yeah so um if you do want to help with illustrations really what I need at this point is just stuff for my stream like uh like a graphic that's like the intro graphic and starting soon and be right back ones like here like these right

(2:26:32) here I was just using some AI but I could use something that you know if something that's either animated or something that is like this you know related to MH370 would be awesome if you want to contribute um I would not turn that down I appreciate it it oh yeah you're right I have a spelling error there rip H I'm not going to change it I'm too that's too lazy people figure it out it's only one letter mistake problem is if you update it it like messes everything up changes all the the views

(2:27:06) and everything on it super annoying let me look right damn it okay I probably will update it actually post also the problem is when you up yeah I can't update it it messes up all the formatting when you update your post it's so annoying it changes all the format when you try to update your post like I'll show you guys it's they got to fix this like look at all this it changes it [REDACTED] it screws up everything God man then you have to redo all that stuff so I we we're just going to have a typo feels bad oh sorry we weren't even

(2:28:09) looking okay so here I'll show you guys so I want to show you what happens when you try to update it like they got to change this so This part's fine when you get down here I don't know what's causing it but all this starts to get messed up this is all wrong all this formatting look at all this so if I make an edit and I save it all the formatting breaks it's just it's ridiculous so we have to deal with it unfortunately one letter mistake okay all good though thanks for no thanks for bringing it up man I

(2:28:43) appreciate it like I always make one mistake here there it sucks super annoying if they fix the edit functionality then it'll be a lot easier to correct those mistakes right now it's just super annoying but thanks for bringing it up okay give me a few minutes guys I'll be back e

(2:30:15) always e Sun you

(2:32:15) will go and grab a drink I'll be right back guys fall I

(2:34:15) you you e yeah

(2:36:15) you you e

(2:38:29) okay we are back everybody back in Action woo okay see what we got going on here uh okay see what we got going on in the chat here yeah we ain't giving up yeah the size of the orbs um I have a link somewhere they're pretty big honestly but again it's a field probably around the orbs right let me figure out where it is I think I saved as orb size so I could find it

(2:39:42) yeah is this the one this is a pretty good post about it if you guys want to find it you can see the same here this is actually the one that look at this pattern this is how we know these orbs are not being manually driven literal perfect wave pattern pretty pretty amazing honestly oh this is the one that had this look at this perfect wave pattern that's amazing man I haven't looked at that one in like forever who is this user Journey guide I hope we gave Journey guide credit this is the one that I I have

(2:40:41) somewhere look at that we might post this one actually uh tomorrow I have this one somewhere I don't remember where I think I'm going to keep these up and post these tomorrow and give Journey guide credit again let's watch this damn that is wild man they're perfectly vertical around the plane yeah so much new info has come out since the confessionals that's why I've been meaning to do another in-person one so that's the orb size one oh here's the so yeah space junk jle

(2:41:46) Boogie was the one this is why people say that I don't steal people's work what are you talking about like I always credit people this is actually going back to August I've credited people the entire time again this is a field though right it's pretty big though but there's not little people inside these what it is is probably a much smaller Mass inside here that's generating this field around it which is why is a little bit deceptive this is a little too big as well it's not quite this

(2:42:19) big oops I'll move it back in a sec oh yeah here we go and here's and I I mean I even linked right to it so oh this one's good too uh William where did what come from oh um I don't think they came from the Drone so yeah we'll do a little intermission here and then we'll get on to the Edward C ly stuff stuff's just really cool I mean look at this one some of these Recreations are pretty amazing can I save these I don't if anyone can figure out how to pull these out of **Reddit** to' be

(2:43:20) sweet I'll be right back yeah these Graphics are awesome pretty sweet what's this oh this is if if you were looking at from the front of the plane like interested in the cockpit you see like nothing hey s23 um I would check out for now uh I mean they're all pretty good but I like the Alpha Warrior One probably the most right now in terms of what's available right now not everything's out there right now

(2:44:23) um I'll link the Alpha Warrior podcast for you guys I just thought he was a good interviewer we got through like a lot of content with him I think it's all free I mean there's like a

commercial in the beginning but that's about it this one I think it's also on YouTube or something but that's the Twitter link I'll have to ask him oh it's on Rumble I think oh he doesn't find it yeah I don't know I don't know where his Rumble is I may have to Ping him on that so see if that that link works for you

(2:45:11) though yeah the Alpha Warrior one I think is probably one of the best um oh yeah okay so where did they come from yeah so we've looked at these all these pictures and those help to show you like how popular this stuff was early on like it was really popular early on there was a lot of people following yeah there's already almost 3,000 views on this on that post I just made 25 minutes that's easily the most emotional post I've made though I mean it's just

(2:46:13) hard to read the family memb stuff right um what was I going to show you guys the oh yeah okay the second orb trajectory is what I call it I think I've got it somewhere saved I can find it pretty quickly I got to get better at learning all the names of my files cuz when I'm trying to pull them up in the middle of these interviews it's hard hard like I just don't have them all there it is

(2:47:16) okay watch the second orb here guys so this is the first orb you see the second orb there what I want you to look here on this one is right down here near the water where my mouse [Music] is yeah I actually have a second folder with all my stuff but there's just too much actually at this point so this is the first orb it's already come in watch the second orb there it is it just appears like right there out of the water and it just shoots up see that I may post this tomorrow too I'll probably do the videos tomorrow I

(2:47:54) haven't done the videos in several weeks and I'll probably do some of the variant versions that we have here like this is the color channel change version the orb just peers out of the water there skims across the water shoots up through the cloud it's like I wonder if it comes from a submarine saw it right there there it is my mouse is right here very weird just appears right here where my mouse is right here appears out of out of nowhere huh I don't know it's really bizarre I keep thinking maybe a

(2:48:57) submarine but I can't figure it out cu they they could even be com from different objects I guess seems really really hard to fake to me um there's not really one with solid Tracer lines um let me see I have this other one here's the the full color enhanced oops I changed the name hold on so you can see the first orb come in there's Mouse first orb is going to come in from up here right now or there it goes so actually first orb comes from off the side of the screen yeah like way just rockets

(2:50:01) in the first orb interestingly misses too like it's not tracked on yet they join pretty quick you know second orb jumps in from here third orb then shoots in from the side of the screen third orb almost seems like it could be coming from the Drone the drone's right back up there and then this orb comes in from right that same angle H I keep wondering if the Drone is locking in somehow okay let's close this theral like is the Drone the thing

(2:51:09) that's locking on the plane or could it be the satellite or could they be doing it from the I think that he might have been flying up besides now we're going to get into the Edward and stuff in a minute yeah I agree the Drone being there is pretty weird but the the part of the reason why the drones there is to capture this high quality video like this we don't you don't see nearly this much detail with the satellite right yeah it's got to be like Mach 3 I've been estimating 2,000 miles hour

(2:52:07) it's they're moving real fast they're moving 10 times faster than the plane the plane's turning so it's going about 150 200 miles hour this seems very difficult to fake right there too this this part right here where it's zoomed in like this and you can see this like heat signature like moving down here like how do you fake this no way I don't understand like how do people think this is fake they just can't comprehend it to be real that's the only thing I can think of I think somebody faked this shake and

(2:52:37) everything as well just if you look at fake videos they're always like really smooth right so so look at this I haven't scheduled the next interview with salvator Pas yet he wants me to post some more of his uh some of his papers but it's really hard to post these PDFs these PDFs are like do I have them up right now I can share them these PDFs are like really long I will be sharing these so I think I'm F to post them this is the review of the patent this is the mass reduction device craft but you can only post four

(2:53:26) pictures per post on Twitter so this means this is one's got to be at least two posts and I haven't read through them all yet this one's a little bit longer as well this one is what six pages five pages so I was thinking trying to figure out how I can fit this into one post it's not going to be able to so like basically tomorrow will probably be dedicated to Salvador Pi science going through these and doing videos in between and probably watching football some combination of those three things yeah I think the biggest thing

(2:54:04) people can't believe is there's a cover up but I mean it it should be obvious like the official narratives are just complete [REDACTED] it's like not even close to reality do you guys want to watch the interview again the interview with the m prime minister guy or Minister of Defense just straight up nonsense honestly Minister when did you become aware that MH370 was missing mm sometime that morning right away right away this guy has just given me sketchy sketchy vibes just right away sometimes this morning

(2:54:47) like the way he answers so quickly so when did you become aware that mh37 somebody asked me when I became aware the plane was missing the last thing I'm saying is sometime in the morning I'm going to be like yeah it was at you know 1840 UTC or whatever right was missing mm sometime that morning what time matter does it matter does it matter dude you're doing an interview where the whole point is to build a timeline of when it happened yeah it matters man it matters when you heard the plane was missing yes it

(2:55:21) matters in a storytelling sense yes in a storytelling sense yes it feels like satire it feels like satire watching this like it just feels like it's like a Saturday Night Live skit again the timeline

uh will will will show the timeline will show it's a direct question you're the one who this is seven weeks later seven weeks later this isn't like this is like the next day or something like this and I I think when the um inquiries uh actually the inquiries dude this is seven weeks later how were you not able

(2:56:02) to answer a simple question um take place do you really think that Malaysia can hide why is he saying do you really think Malaysia can hide this like this is like a guilty person who's like do you really think Malaysia could cover this up like I don't know are you admitting to it right now the the way uh things have unfolded apparently look at this smile do you really think Malaysia could hide this this is like like I give the the kids eating candy right it's like do you really think I could hide that Mom uh

(2:56:33) yeah why are you saying that course not that is why don't no no we couldn't hide it this is not a controversial question I I love her response this is not a controversial question this is not a controversial question you should just be able to say the time this is sure it's not and basically we're trying to coordinate he deflects here so he deflects right after this right so when he she says that the response should be okay the time was this instead he just comes up and says we're trying we're

(2:57:05) really busy we can't we can't figure it out now looking working into a deep sea search as we talk today the last thing on my mind is trying to figure out what time that I got that information the last thing on his mind dude you're doing an interview an interview in person where they're asking you a question why does this have to do with you thinking about some deep sea search like what time did you lose track of the plane man what time were you made aware well I'll put it to you like this in a

(2:57:33) storytelling sense for a documentary right take us back to the take us back to that day March the 8th how were you informed that the plane had disappeared this like this okay okay got to come up with something what are we GNA say here guys what are we gonna say uh let me come up with some [REDACTED] here we go there there were phone calls there were phone calls dude she asked you what time uh there's phone calls DCA and I'm in a way quite fortunate that I'm also the Minister of Defense I'm fortunate that I'm also the Minister of

(2:58:09) Defense that's not even an answer no one out there is holding two portfolios and then he tries to like play the victim well I'm just really busy I'm doing two things at once um this is divine this is divine this is divine he's invoking God like it just what the heck man this is the sketchiest thing ever from the force um I don't know if he's aware of exactly what happened with the videos but he's clearly clearly in cahoots with the United States government at this point now now this is after Barack Obama has

(2:58:46) visited the Malaysian prime minister this is after the uh this new narrative has been developed which he knows is a lie right and he's just trying to deflect answers many uh lines of way or the other Because unless I I have it in front of me today that sort of questions are so detailed these questions are just too detailed he just can't answer detailed questions like what

time he was made aware of the plane was lost now like look at these oh god let's see where's the part about the Hostile he

(2:59:21) admits it's not hostile I've said that in the beginning and I think that's confirmed by the Prime Minister too what did the military do when it was detected well I mean it is an airline that came from our airspace is a commercial airline and the militaries actually said that they didn't consider it as a hostile they just said he just admits they knew it was a commercial airline ler they knew it's not hostile this is right after he says it's unidentified how does this all make sense guys how could you know if it's

(2:59:54) unidentified as a commercial airliner if you don't know it's MH370 how can you know it's not hostile unless you know there's a fire going on it's an emergency event that will impact so much alert uh with special Sops are you going to say that we're going to shoot this is the weird anybody if they did go up in hindsight would you agree that we wouldn't be in the situation we are now which is I don't think think that's specul it's speculative that if we sent up planes to track the the the Rogue 777

(3:00:36) that we wouldn't be in the situation we are now uh I mean it's speculative in the sense that yes that's exactly how it would have played out we would have known the plane went are you going to say that we're going to shoot it down she ask he asks her are you going to say that we're going to go shoot it down what where's that coming from she didn't say anything of the sort well you said that not me not you said that not me I love this interviewer I would marry her in a heartbeat marry her in a

(3:01:06) heartbeat I love this not not going to shoot it down what's the point of sending it if we're not going to shoot it down what's the point of setting up a jet to follow the plane to see where it's going to see where it's going she just is I love just ruthless ruthless to see where it's going well to see it going you need a fight for that we don't need a fighter we set up any plane you want but a fighter jet yeah serves the purpose I mean what other plane are you going to set up there you going to send another

(3:01:37) commercial airliner up there after it we talking about military procedures military procedures milit AR uh yeah you've got a rogue 777 could be hijacked flying over your country yes I think you should set up a fighter jet that shouldn't be controversial just to even track it and if I did shoot it On You' be the first to say why does he keep talking about shooting it down who's talking about shooting it down how can you shoot down a commercial airline with 14 Nationals half of them why is he smiling right now

(3:02:13) i' be a worst position probably I I mean yes if you shot down a plane you're going to be in a worse position you could just track it though why shoot it down though if it's not hostile America perfect answer she's the best she's the best why shoot it down if it's not hostile here's his response why shoot it down why shoot it down though if it's not hostile she like she's perplexed Americans would the Americans would what kind of response is that then he looks over to the right

(3:02:41) this is the creepiest part of this whole interview 14 Nationals half of them Chinese I'll be in a worst position probably why shoot it down though if it's not hostile why the Americans would the Americans would and then he looks over what is he doing DCA contact the military I just can't even I can't even with this guy I can't even I knew we would catch this guy I knew once I watched this interview I knew this guy is going to get caught saying something stupid there's no chance like it's just

(3:03:11) there's no way he's not going to get he's not going to say something silly um are we are in there's us spy satellites over the regions are we in touch with them yes we're in touch with them okay guys where the f is the plane then okay and as as if that's not even enough I made this go further because he just incriminates himself further can you tell us if you received data from the Eng engine manufacturer Rolls-Royce yes boom got him I mean what this guy they should have hired somebody else

(3:03:54) honestly it was too easy to incriminate this guy okay that is just we needed a little bit of laughter break that was just absolutely Wild Man craziest interviews ever in my whole life never seen anything like that in my whole life I've watched so many interviews just complete meltdown from that guy complete incrimination if you guys go back and watch the old press conferences I watched hours of them there's probably more honestly we probably find more incriminating stuff just blows my mind I want to get the one I might clip the one

(3:04:26) where the New York Times journalist asks the the guy that was to the right of that guy the guy was speaking in the beginning asks him like aren't there Diagnostics that are like sending data and he's like we'll have to look into that it's like isn't that be the first thing you figure out like the very next day it's like hey what are the Diagnostics that we're sending data we need to track where this plane went no we're going to just figure that out as the investigation proceeds it's like

(3:04:50) time is a little bit of the essence here guys like we're trying to find a plane that might crash people might be alive in a boat somewhere it's just it's too much for me it's just too much this cover up is like the sloppiest cover up I've ever seen uh it wasn't even a good cover up uh let's see the cell phone of the family's calling the cell phones yeah yeah we can take a little bit of a side break here let me see what else I got I've got like my file folder of stuff I've downloaded is just huge now

(3:05:29) just huge and some of the files aren't really named appropriately let me see what do we got you know what while we're waiting for that Don Lemon if Don Lemon ends up being right and we owe an apology to Don Lemon what if it was hijacking or terrorism I don't know if I can live on this plan anym but what if it was something fully that we don't really understand a lot of people have been asking about that about black holes and on and on and on and all of these conspiracy theories let look at this I

(3:05:56) can't believe you seriously said we asking about black Hol Bermuda Triangle and then technically it's not a black hole but looks like one of course it's also they're also referencing The

Twilight Zone which has a very similar plot who was talking to Don Lemon is what I want to know Preposterous but is it Preposterous you think I know it's Preposterous but is it well it is a black hole is about you know a small black hole would suck in our entire universe so we know it's not that mut triangle is often suck in our entire

(3:06:23) universe who how are these people exist man how do they exist on this on this planet I just can't let's see what else we got oh so here's the lowquality VFX guys you tell me if this is I don't like to do the VFX stuff anymore but I found the lowquality one this is the original that's the original there's even less pixel there's even less frames in it and look how janky it is you really think that that's in our in our video like they use the the remastered version because this is just so

(3:07:00) pixelated there's no way anyone would ever think that this could possibly be in our videos oh man uh let's see what else we got what's this one I don't even know what some of these videos are uh this is just a clipped version of that although sure let's just let it play out you can very clearly see the zap illuminating the clouds in this one oh here we go here you go here's your here's the phone ringing ring ring ring you can hear it beeping [Music] admittedly it's like a video of a video

(3:07:58) so it's like kind of hard to really see but in the beginning here you can see it's ringing right there and you can hear the the beep here in a second of the dial tone right now right there night 19 families of the victims signed a statement saying they could ring the passengers phones 19 of them wild Wikileaks I don't think they're going to touch this I remember I **leaked** out I reached out to the uh Anonymous Twitter account that's got like millions of followers they didn't respond either

(3:08:35) and they were already like in the middle of that they were talking about how they were going to try to get disclosure and hack somebody or whatever I'm like hey why don't you just promote these videos and we'll get a figure dis closure will get figured out in about a minute uh Anonymous is probably controlled by the government that's why early on I use the uh guy Fox mask cuz Anonymous needs to come back to the people Anonymous is the the anonymous that's out there is full of crap let's see what else we

(3:09:08) got I I still believe it because there isn't any evidence to the contrary and and uh actually most of the circumstantial evidence I believe points towards an Abduction of this plane you just hear what she just said guys most of the circumstantial evidence points to an Abduction of this plane this was like a month after why and I don't know by who but I'm I'm I don't know why and I don't know by who uh the US government ring ring convinced that that plane was taken by somebody this is the girlfriend of

(3:09:45) American passenger Philip wood on CNN and and and when we talk about that that that scenario I mean as of now as you know investigators at least what they've told us what they've told the families they haven't been able to clear of course the plane's still intact there's no debris field it's not possible guys not possible to not have a debris field for a 777 crashing into

the ocean just not possible blows me away the captain the co-pilot or the flight crew they have cleared all the passengers from any kind of ipon do you

(3:10:15) think that when you talk about the plane being abducted and and taken uh that someone on board pilot crew member was responsible um I don't think the authorities have given us much confidence in their investigative skills so far so I wouldn't consider all the passengers cleared first of all and I don't necessarily well how are they saying the passengers are cleared there's two Iranians that are on this plane spending tens of thousands of dollars supposedly trying to go to Amsterdam but flying through Beijing on

(3:10:45) fake passports where they've changed their identities it's like how do they clear that think that anybody from the crew was involved they could be we just don't know um it could be that every single person on that plane is an innocent victim in this and uh it was a military action of some she calls it a military action oh my God I missed that early uh some country instead we we honestly just don't know anything it just blows me away that people believe the official narratives in retrospect believed it though you know I mean I was

(3:11:14) an idiot that believed it too right but like people ask me why I think the videos are real cuz the amount of evidence is just overwhelming everything lines up to the videos being real everything wait are these the same video oh these are the same video get rid of one of these it's it's just so much evidence out there it's just an overwhelming amount uh do I have the one where they admit that they here's here's some more if that's not enough guys we just watched the clip of the the Malaysian Minister of Defense

(3:11:56) admitting that they uh spy satellites were in the area and that they were in touch with the US government so let's take a look at I've got all my image and stuff sorted out so that part's actually fine oh here by the way oh wait can I I can't pull this over these guys are using fake passports and they changed their identities and two are the like only non-asian people on this plane how do they just dismiss that here's proof that the clouds are accurately illuminated from the zap back lit front lit not lit back back lit this

(3:12:43) is not fake guys it's like I anybody wants to try to come at me with trying to be this fake good luck man good luck this is why I don't give Lock oh here we go found it there's even a guy tied to this Colonel Mike Jackson 460th operations Commander at Buckley cbers provided technical data to the intelligence Community to help solve the mystery of Malaysian Airlines flight 370 what what just what huh I mean explain to me how that works out is this the data that they provided is this is this the data are we looking at the data right

(3:13:46) here cuz when was this solved you mean the the plate that they gave up in 2018 after finding no pieces of debris from the official search where there was no solving of the mystery where they never found a black box is this it are we looking at it colonel Mike Jackson if you're out there is this what we is this the cers data that was used to solve it someone just got got to tell me here cuz ain't making a lot of sense to me wild man I mean that the answers are just out there in plain sight guys it's

(3:14:23) all just out there in plain sight and all we had to do is just dig up the answers that's all we had to do to solve this case so yeah I think we have solved the case honestly I mean we have the reality is we're looking at it poof there goes the plane where it went we can only speculate but but certainly didn't crash in the South Indian Ocean uh if you want to send me stuff are we uh buddies on uh Twitter the best place is just to DM me in Twitter um send me your uh if you want to post your uh account name in the chat here I'll

(3:14:58) delete it after I add after I follow you and then you can DM me people can only DM me if I'm following them back because otherwise I just get trolled all the time yeah there's only a few non-asian passengers on the plane most of the almost like probably 90% of the passengers on the plane were either Chinese Malaysian or Indonesian yeah we don't know if the people would have died honestly like the reason why I think they might not have died is that the plane didn't crash somewhere else right if we found the

(3:15:35) debris field in like let's just say like the Atlantic Ocean right then we would have said okay they all still died but the fact that we didn't find a debris field anywhere indicates that somehow at least some of the people lived the problem is this is a very dangerous event we've got going on here so we've got this lithium ion battery fire spewing toxic smoke people that are fighting it might have died just the people battling the fire um and then it's they're battling for over an hour and then they have to survive this

(3:16:07) zap which unless that technology is proven who knows man who knows so I like to think that somehow this technology was proven and that they're saving the plane because if there if this plane's doomed then and you're trying to get rid of the plane you just can let it crash you don't then you don't need to have a big cover up right just let it crash we find the debris in the nicobar islands to get solved the next day thanks uh us UFO task force appreciate it yeah the um we did a three-part series with

(3:17:11) the investigate Earth and uh it just got better and better so you know part three is probably the best part one I was actually really scared that was the very first podcast I ever did was with investigate Earth and I was actually spooked back then I didn't know what if they would try to silence me or what might happen I just wanted to get the information out there as fast as possible so that I wasn't it wasn't all on me and since then I've just done as many podcasts as possible it's actually

(3:17:38) exhausted me how many it's part of the reason why we haven't been able to put out as much uh content is I've been doing one or two podcasts every single day I actually got finished with a six hour podcast this last week which may be coming out here next week soon and then there's there's another probably big one coming that I'm going to be doing here this next week as well I'm not going to say any details but there's more stuff coming too so uh the investigate Earth I think is

(3:18:09) just on what Spotify or like apple whatever the investigate Earth one is audio only at least I think it is you have to Google investigate Earth but they're they're a big podcast they said

that they had like over a million downloads in last month or something like that so quite a lot of people that have been listening on that one I'm going to keep calling him Lieutenant Commander Edward C Lyn even though it's like a ton of words to type out because this guy deserves in my opinion to be Vindicated and have his

(3:18:48) rank come back a lot of people I've talked to have argued well he still technically you know committed the offense of revealing this information to our enemies and to the public I don't even care technology like this should be made available I think it's a crime that it's not and I more I think about it I can understand that line of argument that like you know **China Russia** gets this technology but the answer should be we should be trying to come to develop peace with these countries we shouldn't be trying to be

(3:19:17) like at odds with **China** and **Russia** right like we got to be we have to unify as a single species on this planet kind of like Independence Day in fact we're going to play that right now just to Hype ourselves up a little bit so some of you guys might be too young for this um but I'm not and when I was younger this movie called Independence Day came out and it has in it like the best speech that I think has ever been in in a corny movie like this it's really good I'm going to so they I'll give you I'll set it up

(3:20:04) for you guys okay so the aliens have come and they hover over all the major cities with their big spaceships their mother ships and then the time the timer comes down and when the timer gets to zero all the alien ships open up their weapons and zap away and destroy all the major cities on Earth so everybody that's left has to desperately try to fight back against really overwhelming odds right and it leads everybody to go to these remote bases where they haven't been destroyed whoever the the few survivors that are left and it becomes a

(3:20:38) one last desperate fight for all the people that are left of humanity to try to rise back up and to you know find any desperate way to stop it seems like there's no hope whatsoever so the president of the United States has to come and hype everybody up for the basically suicide attack report immediately maor sir good morning good morning in less than an hour aircraft from here will join others from around the world and you will be launching the largest aial battle in the history of mankind mankind that word should have

(3:21:31) new meaning for all of us today we can't be consumed by our petty differences anymore we will be United in our interest perhaps it's fate that today is the 4th of July and you will once again be fighting for our freedom not from tyranny oppression or persecution but from [Music] Annihilation we're fighting for our right to live to exist and should we win the day the 4th of July will no longer be known as an American holiday but as the day when the world declared in one voice we will not go quietly into the night we will not

(3:22:25) vanish without a fight we're going to live on we're going to survive today we celebrate our independence day I like how it's not like 5 minutes long either he just gets straight to the point just lets people know what's good how it's going to go down love it big fan of that it's a good speech looks a little dated nowadays I mean what was that from probably like the 90s I

was like a little kid when that movie came out yeah New World Order MMA sadly it did go quietly into the night 1994 wow yeah

(3:23:23) that was a long time ago nowadays that's 30 years ago holy crap okay I think that movie still holds up today though it's pretty interesting if me if you watch it it's pretty pretty legit Will Smith was a little kid back then okay my boy Edward C Linn we're going to vindicate the [REDACTED] out of this guy let's just put some stuff down here

(3:24:29) we'll move it up as we need it we need that what else do we need where's the part about him being reassigned that part about being reassigned I I couldn't find a source for it before now we have the source it's like holy crap so he went to this naval war college so they basically were like tapping him right and he would be pretty old at this point graduates in 2012 and then gets assigned to this super secret Squad the vpu2 look at this whole quote We need he gets reassigned March 25th guys

(3:25:41) three 3 weeks after Malaysian Airlines flight 370 goes missing his next entry is in the brig like he didn't as far as I can tell they caught him right away right everything I've been saying about if you are have a citric session running you're going to get caught well crap guys he got caught they caught him right away it seems like too the only issue with this timing is that the video didn't get uploaded technically till May 19th so it's like they probably already knew something was going on with

(3:26:22) him but this timeline basically confirms that he would have been there watching MH370 and his deployment was February 2014 so he was only there for like a month and a half and then they reassign him for huh oh yeah four years so this would in

(3:27:41) four years so this is 2021 he got out guys so he got out in 2021 they probably hooked him up with a job so he wouldn't go you know break his plea deal or run off to China God man I don't know who I feel worse for the families of the victims or Edward C wait what the plea deal was reached in April oh yeah okay yeah sorry in 2017 yeah yeah yeah I mean he got reamed like compared

(3:28:59) to the other people that had similar charges he got nine years they began investigating in early 2014 bingo I mean this guy was connected man he's like friends with uh friends with General Flynn as well I might actually pull up his Facebook profile as well I haven't decided if I want to go there I don't think I really do but that just invites a lot of people to go looking for him I wonder if reese and an would have

(3:30:09) been one of these people this is interesting too makes me wonder if reese and an would have gone quiet to protect him right that reese is a friend of his but even so like that actually actually brings a different different angle up like the footage gets released later on after he's been suspected and he gets transferred off and then they arrest him later on even though they can't find a direct connection to the footage to him maybe we need to pull the old articles as well that say the dates that he was part

(3:31:18) of this is also contradictory this one says that the Wizards fly the a ep3 Aries 3 but this one says they fly the PA Poseidon is this the prostitution charge look at this crap they literally had a sting operation they ran on this dude look at this I felt like I was talking to my mother they literally just straight up

(3:32:23) got this guy to try to incriminate himself ridiculous man if this dude hasn't deleted his Facebook profile by now I don't even know pretty sure we pulled the pictures though a while back sorry I'm looking around for

(3:34:10) Stuff damn I don't know if I have the pictures crap I really didn't say the pictures wow that was dumb of me well that's fine um okay let's answer some questions blah blah blah yeah he's probably been watched at all

(3:35:25) times okay so we need to find the article what do we need we need to find the one that corroborates the flight manifest and the one where it shows was the time that he was deployed there it is boom

(3:36:49) where's the Flight manifest one he worked in Washington before that it's pretty this dude was connected man I can't believe oh yeah oh I am you can't send me messages yeah yeah you you should be able to send me messages if I'm following you you can send me messages wow this is wild 16 years for this guy okay we need the flight manifest one

(3:38:25) it's wild wait what I can't believe they rejected my entire Freedom of Information Act request like what doesn't it feel like if all this information's out there that we're

(3:39:27) reading right now uh send me just put your uh your whatever tag your Twitter tag in the chat um karen and then I'll delete it afterwards or you can delete it afterwards W after I follow you you think that there's all this information out there that they wouldn't classify all this or like they wouldn't have to classify the freedom information request feels like they know we're just close and we'd be able to figure it out there'd be something incriminating in there with let us know no I don't see it just don't put

(3:40:15) the at sign just list out whatever your your name is without the at sign okay yeah that'll work hold on uh okay I didn't find anything under that there there's no person with that name no results for that a UK oh I shouldn't say your name um yeah I don't find any person with that name in Twitter it's pretty bizarre how do I not find anyone with that name in Twitter no results you have to just can you reply to [Music] um can you delete tweets after you can delete tweets just reply to my most

(3:41:16) recent post and I'll find you that way I'm going to remove your your things from the the chat here oh okay hold on let try that oh if you just signed up I might not be able to find you yeah you could be Shadow banned or something cuz your account's so new so if you can reply to one of my my tweets my most recent tweet I can probably find you that way just say something like hey I'm willing to help out with your whatever you're going to help out with someone just

said something really nice that means a lot to

(3:42:29) me that's a lot of that's a lot of likes I know a lot of you people also you know probably feel the same way okay let's see what we can do about our man Edward cin here I hope we're right about this guy I just can't think of how we could be wrong about this guy it's just too much lines up you know okay I'm looking for the replies yeah your reply is not even in my uh on my post

(3:43:34) Oki so I think Oki you might be uh you might be Shadow Bann for now if so it's fine just wait a few days and then we'll get back in touch I appreciate you helping out though wait what wait what he was involved in Counter Intelligence weird so this could explain why he was promoted and like basically

(3:44:38) selected huh I don't think it's relevant for us here but it means he would have had connections to people to be able to leak that video now wonder if reeside andan is not one of these Taiwanese people weird where's the Manifest stuff how come I don't see it okay okay yes I know he was socializing with time when these people it's not a crime

(3:45:50) so they dropped those charges by the way the adult adultery how is adult oh yeah cuz he was married okay so he was married as well we're adding this in there what the flight manifesting on in here oh okay well there's no manifest in

(3:47:09) here there it is he had a flight manifest you shouldn't have wow there it is there it is it's interesting how you tie all these things together and then it it works out like you can figure out so much

(3:48:13) information not any one particular where's the 2014 thing here it is do we know that these are actually tied together here maybe they just didn't get him on the videos at all like maybe they just left that off but that's the reason why they came down him so hard with everything else okay I think we have enough evidence

(3:49:19) here converting to the P p8 Poseidon is that what was going on like I don't understand that where's that weird article that has a picture of him with the PA posidon as well um I may have to go to Twitter for that one I just can't see any scenario where this guy's not related to these videos okay I got to dig through my posts and there's a lot I haven't done an update Post in a while so give me a minute you guys can watch along the a by the way the AR has not got back to me either even though it's

(3:50:23) like a crime apparently to submit a false thing nor is the FBI nobody's gotten back to me it's cool not not weird at all uh it might be in the round up here yeah there it is we'll go ahead and just throw this on there at the end this is the best article look at this why is this at the top this is the plane he flew p8 Poseidon as part of the special Squadron this is six days after he was reassigned can I make this top thing go

(3:51:35) away this is one of the images we need though God I wish I it was like an easier way to

draw a line it's very weird that this is there let's put that in my images okay we got that one saved let's see if there's anything else in this

(3:52:37) one maybe we missed something for oh where's the part about the classified information being available on the internet weirdly I didn't see that on any of those give me a sec how could the if it was just some flight manifests that wouldn't have been

(3:53:42) available on the internet so that's pretty weird there it is is this one of the same ones that we already posted secret information FBI informant look how many different articles we had to quote for this no this is a different article it's all from the same organization nuclear train specialist fall of him pleads guilty six years from maning misinformation Strange Case Edward C ly yeah wow this is a different article okay um you know what we

(3:54:49) can yeah we can do that we don't need this last one we'll just we've already quoted that one so it's good um he was interrogated for 11 hours jeez man open source information this is a different this is

(3:55:53) a different quote huh I don't know what that means so that's very odd this one actually isn't the right quote this isn't right article we might not use that one I don't know if we need to have the ambushing thing in there how come we can't find this is that it there it is this is is the one right here I mean what could be classified

(3:57:08) information is available on the intern inter I just don't know how this guy could not be the guy we'll use this picture as well uh the plane is not at the bottom of the

(3:58:20) ocean sorry we searched everywhere you can't have a plane crash into the ocean without leaving a debris field so it's N9 years later so it's not uh 2015 anymore guys they didn't find anything they searched everywhere can't hide a plane at the bottom of the ocean they didn't find any black boxes those would would have been pinging they searched All Along The Ark you're never going to find a plane down there guys you're just wrong if you believe what the TV tells you you need to need to start waking up

(3:58:54) you need to start waking up to reality just looking for anything else on here almost makes me wonder if like he either they couldn't prove he's **leaked** it or something it's kind of weird that he's like talking about how it's available on the internet makes me question you know makes me doubt that we've got them but there's just no way it can be anybody else the dates are too damning I'm guessing they just didn't wouldn't put it on there because they couldn't prove it but they reassign him like 5 days

(3:59:56) later or not five days but a few days like a few weeks later okay e

(4:03:08) o how's it is that always well posidon p8a Poseidon for

(4:06:07) for interesting do we need this last part the entrapment angle is pretty interesting but I don't know if it's relevant I'm going to delete that part I don't think we need that it's already

long enough I want to just keep it high and tight okay what else we got

(4:07:21) uh yeah that thank you for reminding the Richard Quest the reason why I want to see the Richard Quest one I want to see what kind of door they had can we tell from the background if they had a reinforced door or not cuz if the door was not reinforced then there's no way that the pilot could have done it the plane was produced in 202 2002 here's the image sure can't tell is there a bigger version of this image if we could see that door right there we might be able to rule out pilot suicide entirely I still don't think there's any

(4:08:16) way that you can really keep people out of a cabin for hours you might be able to keep them out for some minutes but there's a bunch of ways to get into the cockpit including just going around the door and breaking through the wall uh but no you can't sucks yeah this picture is not quite wide enough I'm skeptical as whether or not a plane produced in 20 20 2002 would have had the uh 911 um requirements built into it already seems like it would be a little bit too early oh wow this video's gone okay way

(4:09:04) back machine here we come it's probably didn't get archived though I'm guessing [REDACTED] not didn't get archived damn it damn it damn this would have been good if you guys can find uh this thing from Richard Quest that would be pretty big O ooh turn around turn around let's show us the door show us the door this is actually pretty damning of itself this means that this there would have been other crew in there look at

(4:10:07) this there's room for more people in this front thing most likely it's not going to be unattended by one person if this is MH370 at least we got to save this that's it we don't we can't see the door sucks damn it yeah there's nothing just can't see the door it's too bad okay okay um I mean he's got to be the guy right I

(4:11:13) just don't know how he cannot be the guy okay save this yeah the F oh they didn't oh they didn't publicly call for the airlines to install them until January of 2020 or 02 damn William that's big uh can you send me a link uh William can you put it I don't know if the links are allowed in the chat but go ahead and and post a

(4:12:16) link other I'll find it actually I'll just find it because the plane was produced in 2002 so that would mean it probably did not have the reinforced door even though they claimed that it did there's no way they upgrade this is Malaysian Airlines third world country they're not upgrading their their doors there it is this is from 2023 though where's there it is this would seem to

(4:14:06) indicate I mean this doesn't even apply to Malaysia Airlines fa is uh United States I think it's almost impossible like I I would not be surprised if they lied about this the door situation on this airplane I don't think this one had an advanced door on it I've flown Malaysia Airlines before probably the only people in the person in the chat here who has maybe some other of our International friends have

(4:15:11) I'd be extremely surprised if they had upgraded doors on this plane was this the one you were looking at uh William yeah the pilot had a way point for Diego Garcia in his simulator I mean that's pretty self-explanatory I'm not sure what you want me to explain uh uh I mean that that just means that maybe he flew there maybe he was having fun you know I don't know it's not you can't land there if you're commercial aircraft so maybe he just thought it'd be fun to do while he's at

(4:15:46) his um on his simulator so this is an FAA ruling so this is only applies to the United States as far as I can tell this is interesting I don't know if that's the right one though um I'm going to not get too sidetracked but I'm going to search one more thing going to use the way back machine here custom date range let's look uh 911 2001 and let's look like right before

(4:16:52) the plane incident we'll look between 36 2014 I'm going to go use the restroom real quick guys I'll be right back be right back back e

(4:18:35) uh good afternoon esoteric gold welcome welcome uh the German Wing guy actually just crashed into the mountain that was I think in 2015 yeah it was 2015 so supposedly they changed the rules after 2015 that you are no longer allowed to have one person in the cabin at any point in time so it's kind of hard to tell whether or not what would have happened in MH370 but the answer is like if it didn't crash in the South Indian Ocean then the pilot suicide narrative is uh ruled out automatically actually there's the Twan rule right

(4:19:31) there wait this isn't even the same thing what is this the thing is they I'm sure he crashed it right away right because again when someone suicides a plane this is 911 when someone suicides a plane they do it immediately they don't fly around for six hours right this is the one that I actually talk about a lot because it makes no sense on why you're going to fly around for six hours like it's one thing to keep somebody out of the cockpit for like 15 minutes it's another thing to keep people out of the

(4:20:16) cockpit for hours on end he'd already been treated for Suicidal Tendencies and unfit to work by his doctor so that let's look at this one real quick and like the fact that I know about this should add some corroboration to the fact that I like to look into a lot of these situations cuz I'm scared of flying and I want to know if my Pilot's going to crash my plane or whatever the situation might be you know okay chat's still flowing okay I wasn't sure give me a second guys someone was dm'ing me asking me if

(4:21:27) the families have reached out to me answer is zero zero family members have reached out yeah it seems like Malaysian Airlines got paid off pretty heavily for this too for the compensation pretty pretty weird I would have thought if Edward cin is not the guy would you think he'd reach sh to me or this his lawyers would or somebody we're going to keep we're going to keep harping on until they do okay let's see what happened here um so what's the they can't tell me about the flight path here

(4:23:18) Jesus Christ that's pretty dark man I want to know how long it was cuz my guess is you

can break through these doors after a brief period of time right um and this one I wonder this plane was upgraded it looked like to have the special door on it what's the timeline there's no timeline so this is literally only 10 minutes

(4:24:24) guys this guy crashed the plane in 10 minutes yeah 10 minutes less than 10 minutes you crash the plane so when people are suicidal you know the doors are not impenetrable unlike what people want to think you're going to be able to get in there in an 8 hour flight or whatever it is when people are suicidal they crash the plane within minutes this is actually really strong evidence against pilot suicide from MH370 right here uh I should have kept that ah it doesn't matter we we know okay um let's look at this St as

(4:25:30) well I don't know what this is I don't know what these are are these the individual planes what is this what is the model of MH370 this is interesting oh God look at all these ads yeah the just this is Airline reviews what is this what is this wait wait

(4:26:37) what this is before what guys am I what what's going on here this is before the plane went missing how's there an article about before the plane went missing what was that boom you can access access the electronics base we're saving that yeah I mean there's definitely ways

(4:27:51) to get into this cockpit there's no way that uh they would have been able to keep them out for hours the first thing the pilot would do is drop to 10,000 fet what do you mean there's no evidence there's no credible evidence we have a literal witness who we have eight Witnesses on a boat who saw it 10 minutes later dropped 10,000 ft as well as K T who also saw it holy crap yeah guys I mean this cover up wasn't even good oh man I didn't think we'd run into some more evidence so we can't tell if the door

(4:28:30) actually got upgraded let's just do one more date range search here let's go like this far okay good you guys still hear me good um yeah we got 42 people currently watching not bad I see why my YouTube was all messed up last time too because uh it it like goes off from being live for some reason I'm not sure why

(4:29:40) that's the only cockpit what what you guys reading this holy [REDACTED] they actually were initially saying that there was a catastrophic explosion they actually mentioned the lithium ion battery fire situation my God what do we have Source on this is there really no source catastrophic explosion we need more sources for this

(4:30:48) wow wow guys this is why I like to not do too many podcasts because I got to be able to investigate we just keep finding more stuff I just never thought we' in any world we would find all this evidence holy crap man this is why you have to do these reverse searches so in fact like this is why you got to do date searches like this um let's change the search we don't need to go back to this anymore look at this there it is 1840 1840 UTC

(4:32:00) again wow they really just changed the whole story man they changed the whole story this is why it was so confusing early on with the times cuz people didn't realize there was two

events the plane going dark and the plane being lost were not two different events and they kept it off fiscated so that people couldn't figure it out is there any quotes I need quotes from officials what what 20 defense Tech experts linked to electronic warfare hello holy [REDACTED] guys holy freaking

(4:33:04) [REDACTED] we're doing it we're doing it right now yeah yeah yo this is crazy this is actually just crazy holy [REDACTED] this is why you do reverse searches on the date ranges guys Google just covers all this stuff up we don't care about how it's tracked where's the thing about what look at what is this electronic warfare kidding me me these are the free scale semiconductor scientists holy crap that's who they're talking about right there aeronautical black hole what what what what what why is this here why are we

(4:34:07) looking at this why are we looking at this here what what I I don't even what it's screenshot time we got to make sure this doesn't disappear this is the wildest some of the wildest Things I've ever seen look at the two things we have listed here motive what actually happened is the fire scenario on here too this is a wild article man no they don't ring when they're out of coverage guys phones would only ring if they're

(4:35:10) switched on not in the water and the batter's charged and they're near a mobile phone site this is the motherload this article holy goodness okay well this one's going to get its own its own piece I mean this is just holy crap what does this even mean what's an aeronautical black hole what does that even mean what what guys it could have just Fallen to an aeronautical black hole I can't I can't even guys this is just bizarre man wow Google images of what sorry n the depressurization is not

(4:36:13) going to show up in the data what it means is they would fly low I think the radar data is all [REDACTED] they've like messed with it so that we can't figure anything out and it doesn't make any sense the radar data has the plane doing stuff it literally can't do okay they didn't lose both engines hasatu Googled images of what pictures of what uh not sure what you're Googling sorry I'm not sure maybe that's not for me here I'll post the article for you guys this is sorry man this is the one

(4:37:06) of the weirdest articles I've ever read wow holy crap guys I think we got it man cloaking technology what how is this here this is going to be gone isn't it yep I don't know what this means wow I have reached out to Jeremy Corbell

(4:38:18) yes he follows me and I have messaged him a couple times I have not got a response no second time I think I was kind of open up to him as much as I could try to convince them that I'm a real person not some kind of disinformation agent still got no response oh Google area nautical black hole okay give me a sec let's Google that together boys boys and girls what is it black hole approach it's an illusion I mean there's no real images of it though just these are just actual black holes this is that's super weird so

(4:39:12) there is no real such thing as aeronautical black hole that that's just bizarre that they

would put that there I don't I don't understand all this problem is we know it's not cloaked because the smoke disappears alien scientist is he here this is straight up wild this is the craziest article we've seen so far this is the what is this this podcaster I was on was trying to cast doubt on these people being important I mean I I went on a podcaster who was honestly he embarrassed the hell out of

(4:40:11) himself and I hope he doesn't edit any of the podcast because like he's going to look like a jackass he was trying to cast doubt on these guys being important and I'm like dude just Google it man like oh they're not cxos they're not seite levels so they're not important like the logic this dude was using was specious at best like dude the seet people are not the people who are the most important people at the company not even remotely just very weird this was posted two days after the plane went

(4:40:48) missing look at this too look at all this evidence guys this is like this is what people should have been reading right this is the best article I've ever read like they had to cast out on all this stuff right to get this this is like the closest one they even they even have talk about the acoustic detections wait where's okay what is this stuff why are the phones still ringing look at this yeah there cell phones don't ring guys look they are really like this is

(4:41:55) wild holy crap look at this the def the phones definitely won't be working they'd be underwater out of coverage and this time buy out of battery that's a professor we have on on named right there as well holy crap you think they were logged in on their laptops while they were on the on a plane from Malaysia to Beijing walk me through that logic were they on their laptop back in Beijing this article's how long is this article this article's insane I want to see them talk about

(4:43:03) fire nobody knew about these lithium ion batteries I mean if you they known about the lithium ion batteries everybody would have been on this yeah we'll come back look look at the date on here March 11th 2014 3 days after okay it wasn't a [Music] bomb no debris mechanical failure doesn't cover it hijacking doesn't cover it it's a fire it's a lithium ion battery fire explains everything there's the Poseidon or the no this is the Orion is that it okay that's it wow this

(4:44:10) article is just straight up incredible Daily Mail holy crap Daily Mail Daily Mail you just redeemed yourself from nine years ago full Redemption let's look at this one I just want somebody talking about a fire they just nobody figured out that it could be a fire how how did no one figure out there's a fire what wait what oh come on come on New York Daily News come on I'm going to try to cheat it here how do I stop it there we go stop come on

(4:45:26) dang yeah I think the fire may have been in the front and I think it may have damaged the equipment from the lithium ion batteries that were in the front of the cargo base and then the smoke carries out through the plane and the reason why this is could be support is KT was able to see the cockpit windows in the pitch black which would indicate there might be a light source Illuminating from underneath yeah see so they they moved away from the catastrophic

explosion because the plane turned around so they didn't realize the plane could still be

(4:46:07) on fire even though it had a minor explosion God damn man how are we so stupid this is just straight up wild man yeah they probably did take the phones maybe but maybe not right like what if even if you take the phone like what are you going to do with them destroy them I mean that would be the smart move right you take the phones and Destroy them right away but let's say this is 2014 maybe they don't realize and they just put them in a bag somewhere right and they put them in the closet and they don't destroy them right

(4:46:52) away I don't know the phone thing is just weird I can't fully explain it or understand it same way I can't explain why Philip wood would have his phone or have a phone up his butt and be able to like send a message out that's why the only reason why like I'm I wouldn't like that's why I'm not harder on the Diego Garcia thing if I could come up with a plausible explanation for how that all works I would be screaming about Diego Garcia from the rooftops cuz that's that's where the

(4:47:18) plane went where else could this plane go guys unless you think the plane went to another dimension or another planet right or whatever like it had to have gone to Diego G there's nowhere else for it to go it didn't go to **Russia** like Jeff wise was saying like it's just not possible you know I must have gone somewhere else else okay here we go fire I thought about EMP burst but you don't need EMP burst I think the fire can accommodate and account for all the damage and what happened to the to the

(4:47:59) plane based on the wired article that came out later on they were arguing for an electrical fire it doesn't need to be electrical fire it's just a lithium ion battery fire yeah the fire is going to remove oxygen too yeah so in a fire scenario the oxygen is going to get removed so you really have to fly low huh there was a consignment of lithium ion batteries wow this one nailing it how' they not dig into this wow the former Australian prime minister is the one who is lying about the Pilan suicidal wow this guy is lying about it

(4:48:55) not he was not suicidal so they made a fake suicide story that throw people off from the fire holy crap whoa this was a couple days after so all this information was fake this this ended up being all **debunked** wow so Australia was involved in the cover up Malaysia's involved in the cover up United States is involved in the cover up unless this guy got fed bad info but either way then he's just like you know useful idiot wait this disappearing act didn't come out till 2020 2021 or something so this article is not

(4:49:47) from whatever we're reading here is not from days after the event there's no way she could have written an article in two days here's the stolen passports search and rescue operation underway I'm telling you guys there's no freaking way he wasn't part of the search and res rescue he was not there had to have been part of this there's just no way it can't be a lieutenant commander Edward C Linn there's no way we're going to find anyone with even a fraction of the evidence against him as we have against

(4:50:27) Edward C Linn here that he's the guy okay we're going to do one more search and then I'm going to post the Edward C Linn thing and then I'm probably going to stop cuz it's been 5 hours of streaming yeah there's too many quins this is just so crazy man yeah the fact this guy was trying to say it was murder suicide right afterwards that's wild man straight up defamatory they needed a cover story though and they had to throw people off the real story right look at this look at that there it

(4:51:31) is look at this oh we're saving this we're saving this I haven't even read it yet but we're saving this yeah the just heads up the flight simulator stuff is all [REDACTED] uh it the the flight path actually matches the path he was supposed to fly on February 4th to Jetta they just used that as a cover to claim that it was like a something that he planned to uh that he planned like it doesn't even match the route that that the plane ended up taking it's like it's like an equivalent of using the VFX **debunk** to **debunk** our

(4:52:22) videos it literally only matches like partially from flying through the Straits of Malacca and the annals and then they say oh well there's a diversion Point like one way point that's they find in Sim simulator that's in the South Indian Ocean and they just try to like connect it together it doesn't work at all he was just practicing mh15 which is his flight to Jeddah like literally the day before on February 2nd or 3rd the whole pilot suicide narrative just completely falls apart upon any cursory

(4:53:03) review why is this reasonable to conclude the fire literally could have just started 64 seconds after this is weird statement right here just because there was no alarms like we've watched the lithium ion battery fires they light up like I just don't think they knew about how dangerous the lithium ion battery fires were back then it's not that the fire ignited it's the fire exploded these alarms down there are not going to catch the fire just when it starts to smoke we've watched these lithium my batterers they

(4:53:43) start to smoke and then boom so when it goes dark would have been the explosion and that's when we have people hearing it that's when Mike McKay sees the plane on fire I mean we've got eight Witnesses nine 10 witnesses that corroborate this yeah I don't think that the pilot is in on this guys I mean I think that it's just I mean it's possible but just unlikely the thing about him being involved is that the lithium ion battery fire kind of pours water on a lot of the narratives because it becomes then an

(4:54:15) emergency event where they're trying to save the people where you're not planning out an emergency fire like maybe if you start the fire intentionally but it's just too complex like just teleport the plane without the fire right you don't need to have this whole fire scenario just makes things more complicated but it's possible just unlikely in my opinion but you know whatever here we go they burn very hot and they're not easily extinguished oh look at this God damn this is this is good this

(4:54:52) is good see the cargo bays are designed to withstand fires so it would be able to survive because they're going to go down there and start battling it immediately right and put it

out but it's just going to keep coming back up but what that means is it's not going to burn through the cargo bay fast enough but what it also means is the people would have it's going to break containment like it's going to be in that cargo bay and they're trying to put it out but the Smoke's going to be

(4:55:23) billowing out throughout the plane holy crap I think we got it oh look at this there look it is there it is so if it's in the front it's going to burn out it's potentially going to destroy the wiring it's not that the fire has to spread here it's going to be the explosion that's going to cause it to happen the explosion is going to depressurize the plane as well I mean we've seen these lithium ion battery fires they we're talking 500 lbs of them the one the fires that

(4:56:29) we've seen are like less than 5 lbs of lithium ion batteries this is 100 times more as far as I know they didn't do any of this testing that this article is talking about from like just two days after the event doesn't have to burn through that it just has to explode and destroy it I'm almost certain now this fire would have had to be begun in the forward cargo bay and this is where one of my sources thought that it would have started as well in order for it to propagate through the air conditioning system with

(4:57:16) the smoke oh boy this is crazy doesn't sit with the known facts actually sits perfectly with the known facts and this is wrong here too take longer than two minutes to start the fire absolutely not and it's not that it took that long for it to start it's that that's when it ignited that's when the explosion happened let's let's watch a video guys let's watch a video where are the videos where did I put the video I was just looking at it yesterday damn it where is it there it is who wants to watch a

(4:58:20) video guys battery for another battery they had it was also lithium ion and they were charging it to get ready to ship it off site for an activity they were going to be perform date they were charging monitoring the telemetry look at that everything was going look at that look how fast that erupts and this is just tiny lithium ion battery guys we're talking 500 lbs of lithium ion batteries that were on stacked on top of each other they come in here put it out look at this this guy's going to die man these guys needs to get out of there

(4:58:59) what is this guy doing like dudee this is toxic smoke man they okay so now the firefighters come in I think no no not yet okay Fire's out Fire's out just kidding we're back now they send in the actual fire department they're still trying to put it out they can't get it out either you can't put these fires out look at that this is what happened to the plane no one can really tell me otherwise this just perfectly explains everything okay oh let's see let's see what's got what we got in the chat here

(4:59:54) um yeah the public just didn't know about the dangers man he was told by the Malaysian prime minister the Australian guy was O that's sus huh yeah I mean there probably was lithium batteries in the 777 but those would have been probably pretty safe the issue is that they put together these 500 lbs of lithium ion batteries the same day the plane went off and so those are most likely had defects in them there's something wrong with them and even just one

lighting up is going to cause the whole thing to like

(5:00:42) light up yeah I mean I think that the technology they deployed can put out the battery fire 100% that's what I think happened yeah 500 lbs man okay um it's not from the windshield this is pretty interesting though somebody was actually out there proposing the fire theory on the same day March 8th same day the plane went missing and look this guy sees it go down this guy sees it on fire literally sees it and they have to discredit him and make him lose his his job unbelievable man this podcaster is trying to tell me

(5:01:38) he wouldn't be able to see the plane from 300 miles away yeah well chat GPT disagrees oh wait why is this not so this is cruising altitude for some reason I got a different answer on this one one I must have asked the question differently why chat GPT why why are you

(5:03:04) failing me right now whatever I got an earlier one here that said you can see 310 miles so it's no problem and most likely he's looking and seeing it low on the horizon as well because of how far away it is despite the fact it's 35,000 ft up and so that's why he thinks he sees the plane crash so he doesn't actually see the plane crash here and if you look at his his sighting here see what does it deting say see he thinks it hits the ground because he's seen it low on the horizon from 300 miles

(5:03:47) away he had no idea how far it was he sees the Burning Plane until the Flames go out after just 10 to 15 seconds so they put that they put that lithium ion battery fire out within 15 seconds right lithium ion battery ignites this guy sees it and it goes out right away cuz they put it out with the fire extinguishing devices but guess what not going to be enough wow okay well oh what's this one okay I'm starting to get sidetracked here boom boom there it is we're saving this one too the fire theory is 100% guys

(5:04:44) 100% that's what happened cuz they had to pull the buses so it's a serious event and they're trying to battle the fire this is exactly what went down this person probably didn't even know there was lithium ion batteries oh wait hot Knight sea level oh oxygen masks are no no with a fire oh we're going to save that

(5:05:50) too we're probably going to have to wait for tomorrow for our evidence list just cuz we just found so much more evidence look at this this is basically the wired article here that we're reading by the way I think this is actually the wired article so we instinctively went to the closest airport he just knew lwi is the one where you can actually land the plane what day was this March 19th

(5:06:56) okay okay I think we are going with the Edward Lyn thing I think we've got it where do the orbs fit in you got to watch some of my appearances literally just pick anyone you want to watch just go through my profile on Twitter and uh I would say you can watch the ones from yesterday if you want there's far oh in fact Project Unity one I thought he was making this on patreon did he just make it free wow there's already 500 up votes or uh 350 up votes on this

and 2,000 views

(5:08:08) okay uh if you want you can watch this one I guess seems like it's available for free that's the interview from yesterday with Project Unity I probably need to post this as well tonight so I'll probably post that later and uh instead of doing the all evidence we'll post Edward C Lin thing right now no wonder I've got so many replies yeah somebody just replied to saying that I don't know if one of you guys was replying saying that uh about the fire that all the people knew right away and

(5:08:57) they thought it was fire I like how some body else noticed the thing about Supreme Court Justice on my my reply sorry I'm just replying real quick and then we'll post on Twitter here I'll pull this over got here oh by the way like if you can tell from these replies I don't get all my notifications a lot of people's notifications just don't come to me at all I try to respond to as many as I can

(5:10:02) just cuz I want to show that I'm a real person trying to respond but we're starting to get to the point where it's nearly impossible okay let's see what we got here what are we going to what pictures are we going to use for this one do we need this

(5:11:05) part I think I like the Navy Congressional liaisons shows that he's an important dude okay let me let me move this over oh good this one's a three-hour synth wave playback okay for for

(5:13:31) for when filled out I wonder if this actually if they're being like obca here if this means these are the charges that he was actually got it seems odd just feels like two manifests is not getting nine years in prison there's no way right do I like dead ma uh sure I mean we're not playing anything that is um um the reason for the music here is it's just chill Vibe

(5:14:35) music but also I I don't want to play anything that can get us uh copyright tried so that's that's the downside here yeah so these manifests aren't once available on the internet so that's what I don't understand this like the story here doesn't really add up I'm actually going to delete this part because I think it's a little bit misleading delete this part too I just want to make less stuff did we mention the investigation began a we just got confirmation investigation began after he joined them

(5:16:00) say officials this is this seems really damning doesn't it it's just me I feel like the timeline just pretty much Nails him I don't think we need this part either just keep it tight it's already long enough as it is okay let's read through it again I'm not sure the two instances of

(5:17:59) handling misclassified info are actually exactly tied to our two videos they certain they could be though could also be that somehow he's not the leaker I don't I know who else leaked these I just don't doesn't make any sense but maybe he just revealed them as well hard to say feels like they definitely are offis skating here so do we have everything I think we have it all okay now we need pictures okay

(5:19:11) do we need more pictures or is that fine don't I have a picture of the charges somewhere thought I saw a picture of the charges from yesterday here it is we're going to put that charge thing on there as well three pictures is probably good I don't know we have to put four

(5:20:18) pictures it's probably fine I think we're probably good on that okay how are we doing with the streaming 45 people watching nice okay I think we're probably gonna finish it up here I got a so you can you guys can watch the room 2008 20 um stream tonight I'm going to be on and uh we will also I'll post probably the Project Unity uh thing on my Twitter here in a second as well I think that's good uh let me see what time uh it's n uh 10 o'clock Eastern so 10 o'clock Eastern I think

(5:21:24) you should have it'll be the I think it's going to be streaming on Twitch and on Twitter or whatever um YouTube I'll try to I'll post a link if you uh do a search in Twitter for room 2008 you'll find it just read over this one more time is our picture let me just double check this picture paided okay okay let's [Music] go boom uh I need to double check let's

(5:22:27) post this in the Discord let's take a look at my highlights here am I miss okay no we got that okay profile add this one to the highlights okay feel free to go ahead and share like that whatever you want to do thank you for helping out guys we also have a ton of evidence now of this fire we might have to do a followup on the fire piece as well W already 8,000 views on that not bad um let's see we're going to turn the synth wave music off okay a look save this close that

(5:23:35) yeah I don't have Spotify unfortunately might have to get it it's just a lot okay I need to talk to Project Unity he's in the UK though so he's might he's probably asleep it's pretty late over there um let's take a look here what there's no way anyone spoke to reges side non directly people always want to try to connect stuff together you know conspiracy theorists especially like you guys got to be careful about connecting things just because there's two things

(5:24:38) that happen doesn't mean they're the same doesn't mean they're connected just because they happen similar times doesn't mean they're connected it's why we really have to be very cautious when we are investigating in general um but yeah seems pretty good pretty good reception is this just what how come I can watch it is this what am I missing here confused can I watch it cuz I'm he's somehow giving me access anyway let me know if you guys can watch it yeah room 2008 is going to

(5:25:14) be the one so look at my Twitter I'll post a link to it later I've already I think I retweeted a post from it yesterday so you should be able to find it I'm going to take a little bit of break before that that's going to be in a few hours going to get some food Etc and yeah anyway thanks a lot guys appreciate you watching here tonight and following along I'll post a link to where you can watch it I'm not sure if they have a YouTube channel or what you gotta search it in uh Twitter search in Twitter for

(5:25:44) room 2008 and you will find it peace y'all

MH370x All Evidence Grind - YouTube

<https://www.youtube.com/watch?v=iDEzlZydsMU>

Transcript:

(00:02) okay we're live for

(01:58) I've got the chat open just in case I didn't even announce it though cuz I just want to work and grind thanks SK evening Jason how's it going we need to pull up our evidence we're not doing music tonight CU too many people complained about it so I just got my headphones in instead hopefully it's not too loud probably start the Edward seed Lin stuff with psychological profile file

(03:59) for what up Nathan yeah we're chilling going to try to get some of this stuff done I got to get this done by like tomorrow and I'm really busy tomorrow too so we got a lot of work to do um strong evidence I may jump around a little bit while

(05:05) I'm uh filling this stuff out yeah that would list is pretty damn long my line of work stays the same I'm in it I think I've mentioned before I work in healthcare I've worked in healthcare my whole life

(06:58) for yeah we're not doing music tonight uh big poo got too many comments about people complaining about music I'm listening to music though just you guys can't hear it hey DC disclosure team what's up

(08:02) Grandmaster UV glad to have you here I had some quote about Captain saying you couldn't disconnect the electrical generators I'm going to change it I think though I think we will keep this for

(09:53) sorry my family members has a question for

(11:28) for one sec guys um Phil Schneider wasn't he the one

(12:32) who's talking about Dums and stuff like that the deep underground bases Phil Schneider I've watched his interview before yeah Nathan you're a little over my head honestly I wish I was better with the science stuff it's kind of embarrassing that I'm not public repository right now my Twitter I've archived everything so it's all there in Twitter I guess I'll give you guys some free uh healthc care advice uh one of my family members is

(13:35) asking so if you ever have to go to the emergency room and you don't have insurance

they will bill you at the maximum rate uh insurance companies don't pay maximum rate so if you ever do have an emergency you don't have insurance like many people don't at least in the United States uh you should call the uh like the payments Department the billing department and you should negotiate with them they'd rather get something than nothing so a lot of people don't realize that yeah I'll probably be streaming a little

(14:33) bit more I'll stream again tomorrow night but uh I've got to get to sleep early tomorrow which is why I'm trying to grind this as much of this out as I can before I pass out tonight I'm already super tired I was watching a lot more of these videos um I may pull this one up again where you guys can listen to again because this is just the craziest freaking thing man I can't believe this dude where is it can't believe this Malaysian uh defense M Min guy absolutely wild man I'll put it like over here minister

(15:15) when did you become aware that MH370 was missing mm sometime that morning tell me if it's too loud I'm not Len to it should matter in a storytelling sense yes but again the timeline uh immedi and I I think the inquiries guy um take place do you really think that Malaysia can hide the the the way uh things have unfolded of course not but this that is why this is not a controversial question not when you and and basically uh we're trying to coordinate 26 countries for search now looking working into a deep SE search as

(15:59) we talk today the last thing on my mind is trying to figure out what time that I got that information well I'll put it to you like this in a storytelling sense for a documentary right take us back to the take us back to that day March the 8th how were you informed that the plane had disappeared the there were phone calls um the DCA and I'm in a way quite fortunate that I'm also the minister of defense I think no one out there is holding two portfolios um this is divine and I had calls from the uh Air

(16:39) Force um so many uh uh lines of communication and and it happened you have to understand you know what time it happened you have to also understand where it happened it was at the time in which they moved into Vietnamese airspace there was a period of time that uh we were with really trying to figure out really between mases the DCA the military getting information to the Prime Minister um me as putting my hat on as the Min acting minister of transport and then dealing with the military um in in that respect so there

(17:17) were many um ways in which information was coming in but for personally on my part like anybody else this information has got to be digested we have to look at it calmly so were you aware that it was missing before it was due to land at 6:30 sorry were you aware that MH was missing before it was due to land there was um an indication that uh they were not in the radar you know um there was no more communication um we had to confirm with the Vietnamese authorities then we had to get the militaries activated then we

(17:54) have to get uh um Mas uh uh to verify and corroborate and then we have to get all those countries uh involved on board did Air Traffic Control try and contact MH370 that morning I'm sure they did but uh I think I cannot uh today uh confirm one way or the other Because unless I I

have it in front of me today that sort of questions are so detailed that I do not want to be cornered and be misquoted air traffic controllers we understand it knew that MH370 wasn't responding right to Radio Calls Etc from around 1:32 a.m.

(18:39) yes 4 and 1/2 hours pass what happened in those 4 and 1/2 hours from the Malaysian perspective to try and locate the plane well I think that I want to know too and uh you don't know of course I've heard stories from uh and reports from all sources but based on other speculation and based on uh uh doubts um I want to be sure being the minister responsible what comes out there is credible and is corroborated and it is verified now if there are areas that we can learn from this I'll be the first to

(19:15) admit it well you are the one who can verify and corroborate and that is why I'm with you and I will answer with the panel of experts because they will be asking not speculative questions they will be asking whether standard operating procedures have been followed International standards of civil aviation codes have been followed and uh that will come up will you confirm whether I'm quite confident of that will you confirm how many times DCA and air traffic control tried to contact MH370 well you have to actually uh get

(19:48) the DCA to do it not today I mean if you w give you time to find out because I'm not these questions were not given to me in advance you know there are million and one questions out there that been so detailed I don't think we can answer it all in this uh interview that we have today I'm not being defensive I've got nothing uh really to um to to um avoid because uh what we have done since the beginning uh everybody actually um that I've spoken to including leaders from Nations that have got a longer history

(20:26) of um aviation history and said that this is something that is baffling to all baffling yes you as Minister for defense then and this should not be controversial and this is really a key Point here and it was in my list of questions MH370 flew through multiple military radar zones right did the Malaysian military detect MH370 in real time we detected an uh an airline but uh we I think we' got on record to say that was not identified at that time as m H 370 but a an aircraft unidentified was detected that morning

(21:03) that came out I I've said that in the beginning and I think that's confirmed by the Prime Minister too what did the military do when it was detected well I mean it is an airine that came from our airspace is a commercial airline and the militaries actually said that they didn't consider it as a hostile um um aircraft why what were they relying on to come to the conclusion that it wasn't uh by the uh um officer that was in charge of it and like I said earlier there was an inquiry under the um the

(21:39) Royal military Air Force that will come out too so who was on duty how many people well I mean these sort of uh questions like I said is not going to get us very far well what we're trying to understand is understand the level of knowledge and and and surveillance right but you need the experts you know like I said there are we are talking about going through multiple countries military airspace you need to talk to every single country out there about their military

capability that's the line of questioning that you want to ask about

(22:16) Malaysia what is more important is for us to actually understand how we looked at moving from the South China Sea to the STS of Mala what happened and can we just agree that those sort of details um are going to come out anyway we I don't think it's so controversial that it's going to um be something that uh will impact so much on what we are investigating in hindsight is that unfortunate that the decision was made it wasn't hostile well it's not for me to judge you know I mean uh do you want

(22:54) we we didn't go through a situation like the September 11th Americans were not prepared then and it took uh uh two planes to crash into two Twin Towers Pentagon and on the way to uh uh Washington for them to have the present sop we are not at war with anybody right now so do you really think that I want to um put our uh suco uh on high alert uh with special Sops in that kind of situation um but why not send the Jets up if you you you have conceded earlier that you knew very early in the morning the plane was missing there were

(23:34) there was 4 and 1 half hours time in which to respond out was hostile it was commercial it was from our aspace we're not at war with anybody if they did go up in hindsight would you agree that we wouldn't be in the situation we are now which is I don't think I don't think that's speculative even if we send it are you going to say say that we're going to shoot it down well you said that not me no I'm asking you I could not Poss not not going to shoot it down what's the point of sending it up to see where it's going

(24:12) well to see it going you need a fighter for that they were talking about about military procedures and if I did shoot it down You' be the first to say how can you shoot down a commercial airline with TW 14 Nationals half of them Chinese I'll be in a worst position probably why shoot it down though if it's not hostile well the Americans would did DCA contact the military that morning yes they did what time you have to ask the DCA and it will come out the details I think this are the dates because I do not want to be trapped by

(24:51) from my experience in the last four weeks by dates by numbers by names by Rank and approximation well we'll give you the details Carol if you want I can get confirmation um we'll give you the details for for your documentary it has been reported on once it is confirmed by DCA once it's been verified I don't think this is something that we uh I can confirm it today because I don't have it in front of me but we'll give it to you before your documentary adds I'm not asking for an exact time

(25:20) I'm asking now during this interview at around what time did the DCA contact the military and a and alert the military that there was a plan missing I'll confirm that I don't have the details with me today was it before 6:30 a.m. I'll confirm that too because I do not want to say something and then on record and then find out to be not the case that 911 line do you agree that the military detected MH370 in real time they detected an e Thanks new order a commercial e what did the radar show moving around it showed uh uh an

(26:02) aircraft that was um commercial this it it's a blit what did the radar data show though let's discuss altitude what altitude I I don't like I said having the details of the altitude and what what was more important did it reach 45,000 but what is more important right is to make sure as I said from the beginning to find aircraft right we need to stick with the the at hand there this is a very simple factual question did it reach 45,000 ft whether what the military radar coming I said the military have done uh uh an inquiry on

(26:39) this we having the panel of why why won't you answer that question why I don't have it I don't have it you don't know what else I know there are many um information has come out but what I need to say today it will be depend very much on um the structure and how are we going to move forward I have a plan you know and this plan we cannot move forward without facts I know but the fact the facts will come out and we will not get the facts today because at the end of the day but you have stressed you have

(27:10) nothing to hide so why not answer a simple question around it's not as simple as that why well because we have put structures in place with the NTSB the aib have all agreed to come on board and I come on to your docu uh your interview to to reveal things which are going to come out anyway I think it just have to be fair to me you know um if by this afternoon I find out from the relevant authorities that these two questions um can be answered these questions have been asked day in and they out so then what did the radar data show H what did

(27:48) the radar data show did it show location you're still going on about the details which radar you the military radar data you know you got military radar you got civil radar you got satellite the Chinese satellite there are 21 Chinese satellite one of them actually gave me uh uh satellite images in the South China Sea you really want me to confirm something when even uh satellite that's coming from a third party has shown to be negative so basically you're looking at a man who's followed every lead from the

(28:24) first day and a lot of these leads that was speculated by the media and wanted people wanted answers for which people completely forgot the three oil slicks the fact that there was a fireball on top of an oil rig the fact that there was a live boat and live Ro and the satellite you won't tell me what altitude no I won't tell you I'm you won't confirm how long it was on Military radar you won't confirm how many people were on duty you won't confirm whether the DCA contacted the military is in

(28:56) what time but do question going to be so critical to what because Yes Minister because they are about the process that the government followed at the time this plane went missing and that is what the world wants to know if that's what you want to know there are other people who want to know many other things much more rational much more convincing to my uh present uh Focus there are people who are not looking at that angle only those are people who really want to know where is the place two things the world wants

(29:28) to know agreed where is the your absolutely and number two how was it lost agreed so what we need to do so that happened that was a weird weird interview guys I mean wow um

let's get to some questions here yeah I mean you don't have to agree with everything I don't care I'm just putting the evidence out there people I was trying to say I'm trying to tell them what to think uh no just the evidence is extremely strong that's all is that guy in on it I he's definitely in on it let's be honest guys

(30:10) let's be honest oh is my camera messed up be a little bit better why is it huh doesn't match whatever but yeah I mean that guy like come on like he he doesn't know something this dude's just definitely like being super sketchy about his answers he knows something's wrong do we know he knows if they know the **truth** like the whole **truth** I'm not sure but I went and watched like three more well I went to go eat dinner I watched like three more press conferences it's super super super suspicious like how did they

(31:07) not know where the plane was they had the radar data so five days after uh the in the press conference 5 days later they admitted they gave all the radar data to the United States like what they didn't even give it to the public they gave it to United States first what how does that make sense yeah it doesn't not bad it's pretty good now oh here it is this is the one I had

(32:20) it we're going to move this where's the suicide thing this is already starting to look really good I might actually get to sleep tonight where the hell is the suicide oh here it is we're GNA put this right here for

(33:29) yeah that's that's good right there I don't understand why my OBS is so inconsistent with my live stream it's just not the same I don't understand odd try that I don't know we'll see if that makes it any better hey tupo what's up buddy I think the debris actually is

(34:42) MH370 something's definitely wrong with my video how can these be so out of sync on one of mine my head's at the top of the screen and then when I look over on the YouTube one it's like way down low these things can't be the same I don't get it I don't know I'm going to line it up here whatever it looks good on this one so I'm not sure why i' be so off on that other one there was another one so I mean you guys can read what I'm going through through it

(36:02) they had 42 ships and 39 planes at least searching for this in the days afterwards so there's no way there was a debris field they would have seen it the next day but actually this probably should go down here actually that's where it's going to go yeah could probably go in either honestly yeah Sean that's part of the reason why I'm moving away from UFO Twitter I mean we're we don't really need the drama I just don't care it's too much no like we need more mainstream appeal anyway like the thing about it no

(37:06) offense to anybody who's part of UFO Twitter I know some of you people are watching but ufology doesn't really have a lot of credibility in the mainstream it should probably have more than it does but it doesn't the conspiracy angles the real angle here for

(38:48) I mean I'm not really on the ESPN claim anymore so that's probably outdated information if you think I am Espionage claim is a little bit outdated still possible but I'll updated

I one of the things I was watching today though did confirm that there was only two fake passengers on board the plane at least in terms of stolen passports it was like the next day or I don't know if it was the one that five days later but it was pretty interesting yeah can I post links in the chat I think I can oh he gets asked about spy

(39:26) satellites in this one it's unbelievable I might have to watch that one again where do we put that that's same the same guy the same guy from that the clip you guys just watching get asked about spy satellites at 16 minutes into this one I'll post in the chat uh I'll put the highlights what is so at 9:30 gets H says check out that link she wasn't asking for apology for being blocked she was asking for apology because I tied her to King uh to kmf uh

(40:31) just somebody who's uh had made a new account after they got banned which yeah I could see as I was a little overzealous and blocking people but I mean if you're following somebody who just created a new account and less than one hour uh you know don't think it's unreasonable assumption to think you're connected to them but we don't need to delove on any of that stuff it's me apologizing to somebody I'm not I'm not so egotistical that I can't apologize to somebody who

(40:59) feels slighted and needs an apology to feel better like why would I why would that bother me I mean the thing about it guys is that like I'm trying to tell if people are sincere or not and somebody who has an emotional reaction like that is 100% sincere like they're not faking that they're upset so that's the reason why I uh that's the reason why I apologized the people that I'm trying to avoid are the people that are defaming me that I think are potentially related to us intelligence um the people that don't

(41:33) have their motivations make no sense right and I say this a lot especially on people on **Reddit** I I can't tell the difference between these people on RIT especially there's so many on **Reddit** that are like they're either just fake accounts and they're just delusional or you know they're related to us intelligence and either way like I just don't care I just block them one thing that we noticed was really interesting is that the account that posted the VFX **debunk** actually I gotta go where is that one dress in the

(42:09) **debunk** before I forget we got a lot of stuff I gotta add in there that I don't want to forget about don't I have a whole special part about the VFX **debunk** we're going to actually break it up into two now I don't want to rewrite everything though but I don't want to forget this one um the thing I found interesting about that

(43:51) chat is how much recorded stuff there is about all these people that are out there that are like acting sketchy um I watched this really hilarious video that was posted by this uh harassment archive uh account that account is the only account that has permission to make fun of me just too funny it was uh the battle of the bastards from uh Game of Thrones Recreation uh yeah that one's amazing and like when all the uh the Allies come in to save them at the end it's a picture of me riding Jamie mous and a bunch of other people as well

(44:28) uh that I just I couldn't stop laughing at that especially the part that was interesting is they had like people from like NASA and stuff like in press conferences that were uh I'll post it for you guys they were in press conferences talking about these people harassing them it's like man how much how many people are these guys harassing like they're harassing like NASA people like as much as I hate NASA like you're not going to see me like harassing them and like trying to troll them come on

(44:55) like what um I'll come back down to this part I want to I want to finish up the Edward C Lin thing and then I can give you guys the link actually I got her here hold on you gotta have a Twitter to to watch but I think most you guys do where was it oh here it is I saved it this account is just too funny man yeah JL I'm glad that I can hit all the questions you know that's the point we should be able to touch we can explain everything about these videos the science part is going to need a little bit of updating I may

(45:54) save that for tomorrow Tupa is uh front and center in a lot of these videos as well tells me that they've been after him for a long time probably I just don't want to be involved in it just leave me alone it's too weird for me oh um emotional response

(47:25) e yeah I'm GNA leave that se I'm going to separate this okay I might have to turn this one into two different posts honestly um I'm going actually move that to the other pertinent evidence part Jesus yeah when I show up on the Ste that is the the funniest thing ever okay well you want to know who uh Edward

(48:29) cin is Let's uh let's add his stuff in here God I hope I last long enough here tonight starting to fade already this is Edward this is Lieutenant Commander Edward sein when I once I saw Sig that's when I got pretty sure already we were we were on the right guy here let's be honest guys this guy didn't get thrown they didn't throw life in prison at this guy for two emails guarantee you that go look at what other people get charged with for retention of classified documents they don't get nine years for two

(49:29) charges they went after this guy harder than anyone it was the first case of Espionage by an active duty member since the end of the Cold War like they don't go after somebody for life in prison unless it was something really really really big so why is everything going back to locky Martin too I really don't want locky Martin to disappear me man uh like all the stuff we were looking at is all Sig if you Google Sig payload top hits mq1 C in fact where is that just Google this real quick and

(50:51) you'll see very first hit you'll see s is mq1 C which is our drone yeah new new order I did mention that I said it earlier today as well that I my whole career I've worked in healthcare and that I have experience in it I won't go any more depth on that if you're able to figure out where I work uh do not call my work they've already been informed that if anyone's to call my work and say anything that they should to go directly to the authorities also and this probably shouldn't have to

(51:46) be said but don't try to call the government or my security clearance that's a really good way to get arrested so don't do that they will definitely track you if you try to do that and I guarantee you it won't work out well for you so just don't do that I saw people trying to post to do that like you gotta be pretty sick in the head if you're thinking about doing that okay I'm just going to copy this one right here

(52:57) yeah thanks Mac appreciate the support uh my co-workers I don't know some of them know about what's going on and they're supportive nobody's really against it I still just do my job like a normal person it's not like I'm doing my job like hey guys here's the update on the MH370 investigation I mean why would it bother them you know as long as it's not interfering I will say it's exhausting to try to do two jobs essentially which is what this is I used to do fun stuff and play like

(53:30) video games and stuff like that but no uh yeah we never know about it's true no I don't I think being a little bit cautious is very warranted given the the situation what we're dealing with here I mean you just watched that Malaysian uh defense minister like just lie to this lady for 15 minutes straight about this and I just watched another like hour and a half of uh of recordings somebody just messaged me about the James Fox thing somebody's trying to damage his career I don't think James Fox is uh I

(54:15) mean granted now from what I've seen people coming after me sure I'm sure he's got people coming after him but when you say stuff about like people trying to damage your career usually I'm thinking did somebody pull up some uh is he getting Russell branded or something you know like they they found something in his uh dirty in his closet because otherwise why what are you trying to get ahead of you know maybe like if me coming out be like guys ignore everything that's about to be said about me guys he'd be like wait

(54:42) what no um what I'll say is we shouldn't be trying to reach out to anybody related to anyone I'm mentioning here just cuz I mean first of all it looks pretty bad um and also we don't want to be harassing people same with the the families don't don't reach out to like families or the victims or anything like that please if any of these people want to reach out to us they'll reach out to us um yeah we need people exposing the government I mean if this is what they're hiding then Jesus man

(55:28) yeah uh heavily redacted three-page charge sheet oops I mean look at this stuff we haven't even got to the good bits yet like this is already like wait what did this guy get charged with I may have to find where's my ep3 are are is two piece where' I put that one here it is real time tactical Sig and full motion video int intelligence I mean come on guys kidding me this is this is where the videos came from they're on a plane and he's looking

(56:32) at the videos and he's probably got the Drone right there as well I mean the only part I wonder is like did he really just like film it and save it while he was like there in real time or did he like the next day while he got back to the base do it and the question there is I don't just don't know how they save the stuff and what kind of access they give them you know

presumably he must have had some access to it or maybe like the plane lands and he goes back and he logs into it saves it on a flash

(56:59) drive something like that seems possible flash drives are like the number one risk when it comes to like either putting information onto our Network or stealing information from networks in my past a lot of places I used to work on hospitals and stuff like that unrelated to my current job um the big issue was like a lot of them would try to lock down the back of the computers that had the flash ports on them although I don't know I should even mentioning that it's definitely just like a big security risk in general but

(57:31) a lot of these like healthcare companies and stuff like that too are um the bigger risk is uh what do they call it getting Ransom weed like if you you can just read about it's not even private information happens all the time places that like their security is not good they get ransomware then they have to pay like a fee because there's no the way out otherwise you just lose all your your super precious data I mean look at this about this crew fuses collected data with offboard data like what do you guys think that means

(58:09) like that's talking about Sig it's talking about our situation Battlefield situation awareness come on um I wonder if I need to make a sub tab for this it's anti-submarine Warfare applications too it's like wow this is definitely seems like it it fits the bill you tell me this isn't the guy oh the burn debris you can just

(59:19) Google it and find it they tried to claim it was libr resin what come on yeah yep yep what I'll say is uh if I was in communication or trying to communicate with anybody uh I wouldn't mention it to anyone either because I need to keep that stuff close to the chest right if you think about it so even if I was in contact with any of these people I probably wouldn't mention it to you guys so that's just how it is what I will say is that I'm pretty sure this is a guy I have a high degree of confidence

(1:00:03) he just I mean look at the evidence here and uh if he is the guy we need him to come out and talk because this is going to be one of the only ways that we'll be able to convince a lot of people that the videos are real because if somebody likes him comes out now if you look at this like and you go through what I did with the uh sacrifice piece which you guys can read this person made a huge sacrifice to give us these videos and we ignored it for like seven years nine years imagine what his mental state is

(1:00:32) right the whole world ignored him leaking the videos he had to go to prison no one got him out I mean man if I was him I wouldn't want to talk to anybody about it I'd want to move on with my life he's almost certainly been turned in a way where he won't want to talk about it but I mean if we apply enough pressure he'd probably be forced to yeah stuck snet I mean stuck snet exactly what I was thinking of in terms of the flash drive stuff I mean all it takes is plugging one flash drive into an open

(1:00:59) port and that's game over if there are organizations out there that are worried now

well go uh increase your security man don't uh don't skimp on the security side it's important where's the vpu thing here it is I mean he was privy to the Navy's black program portfolio man I mean that that that means he had access to information about these we these technology that we're talking about on the videos I just don't get why my YouTube

(1:02:16) videos different like different than what OBS shows me like not even close why is it so different just doesn't make any sense in my YouTube it's like my head's like off to the side which is probably what you guys are seeing but in my OBS it's like way up at the top what what okay I'm going to try fixing it we'll see my guess is that it have to be like this is there just a big delay I don't

(1:03:24) know what is going on huh whatever can't be can't worry about it too much so hopefully I don't look too weird um did we post when he got arrested yeah sting operation sec I'm using uh Nvidia

(1:04:47) GPU yeah UFOs is just a straight up joke at this point what other part I don't understand about these subreddits uh especially somebody like was trying to mock me on the ufob B subreddit about like oh you they always say the same thing oh you believe aliens zap the plane that makes more sense than whatever right it's like wait aren't we on a UFO subreddit like isn't this sub reddit for people that like believe there might be non-human Intelligence on this earth like why are you trying to make fun of people for

(1:05:16) trying to think that non-human intellig could be involved in something it's very odd yeah so I moved the camera and it actually didn't do anything on the YouTube one I wonder if it's just broken huh I don't know we'll try like that for a minute who am I making this document for for the world I guess I am GNA send it over to uh I think it's okay to say this I'm gonna send it to Jamie ma m I'm probably saying his name wrong if someone can tell me how to say his name correctly I'd really appreciate it so I don't

(1:06:13) sound like a jackass uh and I'm G to send it to anyone else who wants I'll probably share it with you guys as well because it'll be really easy like some of this stuff you can just Cy and paste it like when people talk about the debris which they do all the time right you can just pull the debunk in the debris and just copy and paste that for them and then boom you're good to go yeah I mean the thing with ufob is that like I've got people stalking me like even my Reddit account has like 150

(1:06:42) 200 followers or something like that and some and they're not all like on my side they're like trying to follow me around and downvote all my posts it's like I can't I can't stand Reddit like if Reddit just got rid of the down vote option it would be already be 100 times better still would be garbage but it would be a little bit better okay let's get this Edward C Lin piece done here we're pretty close to the end on this for

(1:08:23) what for so let's do some math here so we took a nine-year deal with the last three years suspended so that's six total years the suspended part I don't know what that really means

exactly but he had already spent nearly two

(1:09:26) years in pre-trial detainment so he basically had four extra years after 2007 so he probably got out 2021 so he's been spending the last two years wondering if anyone ever realize his videos are real yikes pretty rough yeah the chy Spy Parts down here too where was

(1:10:34) it here you go undercover FBI agent who under ell Katherine woo so they did this they basically had him sleep with this woman and tell have her tell him secrets about this place so they could get some like proof on him sketchy huh sting operation did I say it was FBI sting operation yeah I don't think our Alias really matters I mean this is the part where we can tell he's not going to talk right so it was just the two charges of

(1:11:47) classified information that is the only thing that's stuck everything's redacted we can't even see the dates on the charges it's like what can't even know when he did it I mean the time frame just matches exactly MH370 I think that's a pretty good summary right there any questions on the summary everybody I think that'll

(1:12:52) work okay let's see what else we got here uh why do I doubt the stereoscopic qualities of the video now people have posted this claim that like YouTube could convert a normal video to a stereoscopic video but it hasn't really been proven so until it Go proven one way or another it's not really that important um we know the satellite was there so we know they had video of it we know they could create video of it we know that they were generally doing 3D video so I don't know it's just not that huge a

(1:13:34) point and I'd prefer to be accurate so I don't know I can't tell if this whole like YouTube creating 3D video stuff is even legit or not it could even just be disinformation itself I mean if they could do that why would they stop doing it oh okay the YouTube looks better now so yeah I guess moving the screen down did help it does look weird in this one though huh yeah you guys should definitely be very careful on reddit reddit is uh most of the narratives you're seeing on Reddit are fake almost everything you

(1:14:13) see on Reddit on major subreddits like news subreddit it's all fake and I and by fake I mean like they're showing you what they want you to think that's that's what I mean right a lot of the content would potentially be real but a lot of it's misleading like a lot of it I honestly just stopped going there entirely uh just there's nothing worthwhile to even read on there and it's actually it'll do a lot better for your psyche too like it's all like outrage bait they want you to you

(1:14:40) can tell they're trying to get you to be upset at certain things they're trying to get you to hold certain narratives they're trying to get you to hold certain political beliefs um you know the whole works same reason why I stopped stopped uh having cable TV like uh seven or eight years ago is that like cable news it's all garbage you don't don't watch cable news at all or maybe even the news at all the information that you need to know will get to you I don't ever feel like oh I'm not

(1:15:11) informed or I don't know what's happening in the world no um I mean I don't think Edward C Linn's family wouldn't probably speak English I imagine you don't think you need to speak to him am mandrin yeah I mean my doubt post wasn't really to say that I'm doubting stuff I mean I I always doubt stuff or I always question it I think that the the post I made about doubt was more about in general people shouldn't be so confident about everything right like there's a lot of stuff that we have to try to

(1:16:11) uncover even when we have this much evidence like we still want to be skeptical open-minded I think the science is the biggest part that I'm doubting right now I just don't know there's like two competing theories they're not mutually exclusive but like I can't figure out how they unify together but at this point and now I'm glad that we mentioned this where's the science we're definitely going with we're going away from macroscopic decoherence and we're going to macroscopic coherence now which I asked

(1:16:37) Sal Pas like what the difference is um and he didn't really give me a good answer but I'm sure I will get it let's see h for

(1:18:00) what was that thing um supposedly I'm probably not saying this right but what salvator Pas was saying was that you don't necessarily need a meta material like elcan A9 to induce room temperature super conductivity there's other ways probably or by other electromagnetic uh properties forces what's the word I'm looking for here mechanisms now when we doing with the what should we say about the tooro torole Toro Idol how do you pronounce that God I better learn how to pronounce that correctly Sean yeah I'm hoping they

(1:19:04) improve we passed that law about whistleblowers because maybe that would protect people like Edward seen do the technology that we're seeing here not sure if it would but maybe it's not Australians wouldn't have been able to hear a noise when the plane um was lost but there was nine um when the the plane went dark there was nine people on the coast that did hear alloud noise which is consistent with the lithium ion battery fire explosion I don't think reeside and Nan's ever going to come forward I

(1:19:42) actually don't know if reeside and Nan's uh still with us honestly especially if they're not an American I can see that he got silenced pretty easily probably but who knows tur oid is that how it's pronounced tur oid turo turo I'm going to definitely not say that correctly um uh what do we call it Orient their uh what did you call the thing oh the orbs are H they Orient their Whatchamacallit

(1:20:47) thing pointy boy pointy thing we're going to call it pointy boy till for now until I come up with the the right name toid okay toid toid toid void toyid toyid toroid I'm struggling orbs Orient their point thing towards the center of mass or what's it what's the right word here I might have to watch the uh the Bob uh Greener thing again but it makes sense like they they're forward facing engines at the last second they turn them and they rotate them right towards the middle they're definitely doing what I was

(1:21:43) saying it's yeah pointing Vector let's I like that thank you Orient their pointing Vector thank you for that let's call it just converge uh so when the orbs are

(1:23:06) Sal Pai said as well they could be theoretically remote controlled when I asked him about that he got like real weird too like one of my good Pro one of the things that one of my skills is that I can tell the difference when people are like holding back information right and you can you can glean a lot of that as well really felt like he wanted to be careful about what he said at that moment so what was the explanation they were um creating a matter wave or something what was it I got let me pull up my questions with

(1:23:46) s yeah you guys can read all this I don't care these are my up some of my works that I'm going to be working on here still got three things lined up that I haven't really got into oh okay so extremely low temperatures can allow them to couple and move as one well I should move it down here for

(1:25:13) I think that's what these orbs are doing they're something they're doing something to the electrons around it based on what let me pull that piece up getting so tired from the Bob uh Bob greenier thing what was that he was saying about them spinning wow the Minister of Defense one already has 21,000 views in three hours oh my God okay combined movement can cohere the electrons let's call it combined what so it was it was moments not movements fractal torid

(1:26:17) Mo moments I'm going to still call it Mo movement in this particular case because I'm not talking about that thing yeah I this is a pretty good list I'm going to move macroscopic Quantum coherence down

(1:27:51) for for well we could talk about the vibrational acceleration as well I just never really fully understood it yeah that's a good point the orbs are

(1:29:00) essentially Crea a unification of the forces in a singularity I think that's the correct way to phrase it fractal toal moments create a unification of the forces inducing The Singularity I think that's sounds pretty smart yeah what was that about the the vibrations oh yeah I want that

(1:30:12) mechanical vibrations from the megahertz transducers can make densely charged veilance shells overlap it's a little bit too deep I think on that one what did I say about it oh I said other electronic mechanisms uh I think that I'm going to say repeated pulse vibrations can cause the densely charged I think that's right you think that's accurate repeated pulse vibrations from transducer what else did I write about that this is the stuff that starts to go over my head like pretty hard I'm just not great at

(1:31:11) um what is it um thermodynamics and all the other stuff this part oh is that what MZ is MZ stand for microwaves no that's megahertz what's up people who are new who haven't who just join joined us yeah I don't think the singularities T torodial or whatever to God I'm already

struggling to roid whatever but it um I think it's the movements that the orbs are making is how you would describe that but when you looked at Bob uh Green's like the small version of what

(1:32:16) he did it looked like you know a circle that got popped out of uh some Mass oh oh okay you can't hear it never mind good I thought you might accidentally be listening to him talk over there on my other screen yeah the 4chan leak is still kind of weird me out because it's a lot of similarities to what we're talking about here nonradiating bound huh I think we got enough on the science side I mean it doesn't have to be perfect it just needs to be enough for the Layman you know yeah I'm going to leave it as just

(1:33:11) transducers instead of the specific part yeah Andy that's the big thing I mean there literally is two satellites there so that's why I think that the 3D stereoscopic thing is uh like the intelligence Community trying to cast out on it if they really could prove that it was false they they would have proved it but at the same time um doesn't really matter again either way the satellite was definitely there and I just got a quote from the guy he was asked about the satellite in the video I posted earlier today like that

(1:33:48) that same guy that I posted the video of on day five press conf conference they literally asked him if the American satellites were there and he said yeah we're working with them like what in fact I might where we going to put that what was the defense minister's name is he I confus if he's a defense minister or Min transport where do I put that that video I'm seeing it play over here looks on his face just a straight up liar man just a straight up liar no wonder people were so freak like bugged

(1:34:41) out about that guy I'm going to try to clean up the flight path part here and then I maybe do some of the **debunk** stuff yeah that then we'll be pretty much done probably save theories and speculation for tomorrow I might keep the theories and speculation stuff separate I mean as you can see like look how long this is already how many pages this just to get to there yeah it's already what 10 pages long God it's not going to it's going to take like eight Twitter posts here's the other one I this is weird for him to claim that

(1:36:06) you guys need to go check that out 16 minutes uh 40 seconds I think is when he says it pretty bizarre and I've got 50 notifications Jesus the memes people post on the the defense minister it's just too damn funny man yeah if you put me in that that's what I was going to say I actually edited this out I had to recreate the post on the defense minister uh because I I I actually had scheduled a post earlier today and it just it failed so I had to rewrite it and I was going to say that you put me in the room with

(1:37:08) that guy for 10 minutes we're going to have a full confession like if I confront him with this information that guy's going to fall apart no doubt Mo need some more work as well um that

(1:38:47) I think those are probably the strongest evidences there ter toal yeah okay it's toal okay good toal toroidal toal let's get it right toal toal toal toal now I'm saying it correct to roidal

where did I put the Edward C Lin stuff up here probably have to move the witness stuff up there huh orb analysis probably is going to move down I think the witness stuff needs to be coming up next and then probably y MH370 maybe why even MH370 first

(1:40:04) maybe even it goes up here then the witnesses should go right after lithium ion battery fire yeah lithium I battery fire then we do Witnesses I think maybe even the requirements to understand them would be real right at the top those might even be first I think I'm going to move them up

(1:41:11) toal toal yeah my guess would be that learning about reverse engineering or non-human intelligence would also indicate that our history is uh quite a bit different than we imagin it to be from a human species which I think if you watch Graham Hancock stuff and the ancient uh ancient apocalypse he prints a pretty strong argument from an anthropological standpoint that our history is dates back further than then uh we really think that it's more than 10,000 years old which if you think about 10,000 years is not a long time

(1:41:50) doesn't make sense to to me in general Tesla as well a lot of people talk about Tesla in general yeah I mean we've got a ton of information on Edward cin man this is one of the biggest ones if you're going to criticize tell me tell me somebody else who would fit the bill better than this if you can tell me somebody would fit the bill better than this then I'll say that we don't have enough evidence if you can't tell me anybody else who fits the bill better than this then and uh what do you

(1:42:23) want man he got caught with flight manifest from a search and rescue in 2014 the defense argued that the classified information is available on the internet you know like what more do you really want dude the fact that we even have that much information about him being the guy is in my opinion pretty incredible I've already Freedom of Information Act requested the FBI and the NCIS on his uh history as well maybe I'll even put that at the top all I'll call it pending foas I think it's pretty

(1:43:29) solid I don't know I think the Edward C ly stuff is really solid um fake requirements uh we also need to add in here as well um I'm going to put down here better understanding of physics than most phds you know just given what we know like everything looks perfect from a physics standpoint all explainable but it's all stuff that like uh really only Advanced phds even understand and not even necessar phds phds isn't even the right term because turns out like having PhD doesn't mean anything just a matter of like people a

(1:44:15) lot of these people who are knowledgeable it's like Pas and uh Bob greener even uh Roy I don't think any of them are phds and they're all like the smartest people when it comes to this stuff because they're dedicated to it right Einstein was just a guy who I mean who was investigating and and just loved to figure stuff out right he was passionately curious doesn't take uh credentials for that just creates passion is what it takes for that okay what should we work on next flight path oh we could do the VFX

(1:45:19) **debunk** this one I think has been people let go of this one but maybe we need this interesting enough this one here about this frame rate difference in the zap was actually by the person who was harassing us that got their account banned so it goes to show you how dishonest these people really are they were just making up crap I'm not even going to address this one

(1:46:24) things that are artifacts of the software we're not going to even address for

(1:48:04) I've literally never gotten a response ever once when I ask somebody how many pixels match on the VFX **debunk** so if anyone's out there and they're claiming that the VFX matches on some frames and then they're adamant about it which they always are all you have to say is how many pixels match just remember that that shuts down the debate every single time cuz they're so dishonest they can't even respond like they're not even can't even let themselves admit they were wrong because none of them have actually

(1:48:32) tried to check the answer is like probably like 50% of the pixels it's not even close so silly I think we addressed that right for leave that

(1:50:19) there can do get rid of these oh yeah this is a good one too okay sorry I'll look at the questions in a second guys I'm just focused right now and I'm getting spammed on messages at the moment listen to Little Nicki

(1:51:42) Minaj I listen to all kinds of music guys if you haven't been able to tell from my posts listen to pretty much everything oh let's where's other pertinent information right here let's do total darkness Moon down sun was set satellite I'll say with false color IR

(1:53:05) ah I'm stting tired illuminates of clouds zap uh illuminate uh illumination illumination okay heck yeah starting to get real spicy now look at this okay let's move this oh yeah okay let me do some questions let's see what we got uh my T brain everything can have

(1:54:16) counter points made against it so the the question about having counter points made against it why do you think nobody's made counter points against everything the answer is right here a full story is needed to explain these videos make just making counter points doesn't do anything it doesn't break down the story right what you have to do is you have to somehow cast out in the entire story casting out one piece of evidence doesn't do anything we got 16 pages of evidence you know so you say oh well

(1:54:50) well maybe it's not I would see Lyn okay cool it's still a fire it's still Malaysian Airlines you know that's the reason why I'm stacking the evidence so high is that it makes that impossible if all we had was one piece of evidence of course they could cast out on it and then we wouldn't have a strong story that's why when you build a case think about like a criminal case in the criminal cases against people like for murder is every piece of evidence accurate not necessarily you're building a story that

(1:55:19) a jury is is going to be able to buy into right that's what we're doing this isn't a

scientific paper that we're writing here we're trying to build a case that people can believe and the reality is it's very compelling you can tell and it'll be very compelling when I tell the story on the next podcast as well and we're just going to keep getting better and better at it the science part interestingly enough despite potentially being the most important you know that from the Layman's perspective people are not you

(1:55:46) know most people aren't understanding all that right like when we started talking about roidal effects and things like that it's you know going right over everybody you you tell them black hole and okay now they're they're thinking of it but that's why we want to be careful because if a black hole really would destroy the planet then we don't really want to refer to it as that if we can avoid it so I will remain speculative when I bring that stuff up on my big interviews um I wouldn't even think phds aren't

(1:56:14) even good at politics honestly I've lost so much respect for Academia I I give like letters next to people's names literally zero credit zero credit I judge people based on the stuff they say so I won't say the person's name but like the person that was chiming in as well that was supposedly an orb expert I did not judge them ahead of time right I could have looked up their stuff and seeing that they were not very credible but I don't judge people that way I want to see what they actually say what are

(1:56:41) the merits of their arguments but when then that person brought up the Cambodia C picture of the plane in Cambodia jungle like that's okay now I'm throwing out everything you say from that point forward that's the laziest lack of critical thinking that I've ever seen what do you really think that there's a plane in the middle of the Jungle with no like crash marks like planes have to land man it didn't just plop down in the middle of the forest with trees all around it doesn't even

(1:57:09) make sense obviously it's a plane flying over the trees and I looked back at the old historical um uh satellite data and it's not in any the other pictures before the most recent one on Google Maps so it's just like I judge people based on the content of their character and based on the arguments that they make um and then I go look at their profile and realize oh okay this person's in la la land right and I don't have to really listen but even so like what do I care if they want to believe

(1:57:35) like whatever they're some kind of orb expert I'm not going to go there and try to bother them I don't have the energy I just don't care if people want to be grifted and send their money to people like that for their you know their expertise or whatever they claim to have like like go nuts man if that makes you happy I don't care it's hardly the worst thing in the world yeah so from I mean this is these videos are not fake guys I mean let's look at the list where's the list and we got to add

(1:58:13) the Marvel VFX guy on there as well where is that that's actually reminds me there's so many little things we still have to add oh and I got a bunch more down here too oh boy oh boy I mean it's fine I think we addressed a lot of this stuff I'm I do want this one though um what was

that we were just talking about oh uh yeah the I can't forget the Marvel VFX expert let's go do that real quick before I forget Marvel VFX expert let's not

(1:59:21) forget that okay where is it so we'll put it next to oh this should be smoke change that to smoke where the I'm so tired I'm not even seeing it I don't see the top gun Maverick one it's supposed to be right here in the middle you guys see the top gun Maverick one you guys see it I don't even see it yeah it's not

(2:00:29) there huh okay um right sorry let me see I don't know if what mkin I don't

(2:01:38) know if this is like God technology we're not that far I mean it's just Advanced honestly but just because you can move something at very high speed doesn't make you a God you're not invincible same with non-human intelligence people want to argue that like how could a non-human intelligence craft crash I don't know the same way we lose a 77700 people make mistakes you know things happen just because an object is built for flying long distances doesn't mean it's Invincible um it's a bit of a

(2:02:11) logical fallacy that people have there presumably these craft can crash they probably don't crash a lot the other question is can one of these if a craft is a UAP or whatever can it really go through solid matter I'm still not sure about that I think what we talked about salvator Pi helps explain how um yeah I don't think we're talking about time travel right now though um how these craftter we don't see them because what we're seeing here in our videos this thing literally goes the speed of light you don't you don't see

(2:02:41) it unless it's hovering around um yeah we are time traveling right now that's true as far as I can tell you can only go into the the future although we should probably put that in somewhere theoretically it's possible I guess but you'd have to switch timelines if you go to the Past where's the teleportation part that's a good one so you guys are

(2:04:00) reminding me of some good stuff here what time is it it's not even that late so interestingly enough it doesn't it removes from civilian radar I think it only removes from primary radar I forget how this works like I'm going to get primary and secondary flipped here and the thing I just mentioned too military they claimed it it reconnected at last let's do military radar these guys also like it makes no

(2:05:08) sense how they didn't know where the plane was I was watching these videos uh CU I told you guys would watch more of these um news conferences like how do they not know where I'm deleting this too satellite does not reconnect um how would they not know where this plane went they have they're looking at radar and then they're like searching in two different places and people were like freaking out at them one this New York Times guy one of the uh um press conferences I think it was like one of the ones the next day he

(2:05:41) just straight up asked them I think it was the next day one he's like how does the plane is it possible for the plane to completely go dark and they're like we going to look into that it's

like what do you mean we're going to isn't it's just a basic question is it possible or not like there had to be like devices that were sending data and he just asked them and they just like won't answer the question like we're doing a full investigation like what do you mean a full investigation like time

(2:06:03) is of the essence these people could be alive out in the water somewhere yeah there's no way they lost track of the plane and then they're being koi about they don't know what they're tracking or like maybe the plane turned around and had a turn like what do you mean maybe it had a turn they released the data later on and it definitely did just it's like it's so sketchy I can't believe I didn't look more the more of the press conferences before I I watched that guy and now like

(2:06:31) I'm almost wondering like if we look at the press conferences we're going to be able to like piece together that for sure it was [REDACTED] yeah so they how are they going to claim that they know that it's a civilian craft without being able to track it and how are they going to claim they knew it it's not hostile that's the weirdest part how can you claim it's civilian and not hostile without being able to authenticate it so it makes no sense I think I'm done with this

(2:07:35) satellite system reseted I just don't trust any of that data just doesn't mean anything to me maybe I'll put this up near the top honestly I'm going to keep the satellite ping stuff on here too this might come back into play it's very weird the satellite ping stuff how they like it just doesn't ping the other satellite and when I confronted Victor about it he was so scared sketchy about it which makes me think there's something to it he was acting really weird it doesn't make sense for him to

(2:08:26) be an agent though because he cast doubt on so much of the official story I think he's just misguided I'm going to move this as a note I I kind of like that being the flight path being the first honestly uh let's just call it lost trust this is pretty good maybe this actually

(2:09:42) goes into the fire part we got so much stuff here oh no we don't even have it there so that's fine yeah I mean I think that a lot of people just can't accept that uh these videos can be real which blows my mind I mean look at the weight of the evidence can you imagine the next like confessionals thing that I do in person for like it's going to be like 3 hours to go through all this it's really just a matter of like the sequencing of it there's just so much and like I probably won't even go

(2:10:29) to the Diego Garcia stuff like we don't even who even cares like at this point we have so much evidence doesn't even matter where it went people speculate sure we we'll keep the data there because I want to have all the data there but we don't need to it doesn't even matter where it went and what happened to the families we can already just prove it's all fake and that the videos are real the reverse engineering part is going to need to go to the bottom we could even could do a thing on the victims

(2:11:02) too uh so that would be where it went and then families of the victims or where

passengers what about oh about the passengers because that's what people ask right what about the passengers and then we can have a paste on that I probably won't add to that yet because I want to get the be meat and potatoes part finished here this is looking really good guys this is looking really solid okay let's see it's not even so much the Boeing like Boeing is definitely involved but um Rolls-Royce they're the ones with the

(2:11:46) engine data there's no way they have engine data you got to can't convince me otherwise so where did we put the northern coordinates stuff the nicobar islands I think that's up here in the the facts yeah satellite shift indicate the northern coordinates okay doesn't have to be super so I'm going to delete this and then the sketchy data I probably shouldn't say sketchy data it's a little bit too like childish uh let's call it anomalous ping data anomalous is that how you spell anomalous anomal Oh

(2:12:43) yay almost P that out let's call this 1941 let's call it not even pattern how about subsequent limited those are for this is like header or stuff I had with pictures I don't think we need that either damn there we go Kaboom I mean that just super cast out on I think this has got to go near the top this is like right at the top I [Music]

(2:13:47) think listening to some Madonna right now okay requirements videos I wonder if the flight path goes right at the top even before the videos I guess I can move up and down so let's do I'm going to put it right after the videos yeah cuz like if you think about how I would run through it the first thing that people always ask me is they want to know okay what was the official story right and that's what the flight path really is is this is the official story yeah why they wait so long release the

(2:15:12) data super sus man give me a second let me just see what kind of messages we got here I got some private messages give me a second phase Singularity yeah maybe phase Singularity I didn't really want to use the word sing phase Singularity though Singularity sure yeah okay we'll go with that person

(2:16:16) who messaged me oh yeah the monopolies that's the word for it [Music] monopolies that's what we wanted here monopolies thank you for that whoever messaged me that uh I don't know what azth means but sounded cool okay thank you for that people who messaged me it's looking really really good now I love it getting excited here yeah GPT is okay I probably could use it but um I like to do stuff myself I mean I I like to think through like how I'm going to describe and I've done so many

(2:17:19) podcasts now where like the one that's coming out tomorrow the Alpha Warrior one is one of the best ones I've ever done it's about an hour 45 minutes I think and we we went through it like systematically the Alpha Warrior guys interestingly enough um some of these like more like conservative political uh ones I've done have been like the best hosts like I I was a little concerned at first that we might be digging into like some other uh conspiracy territory but no they like just keep it straight up

(2:17:50) like just right down to the the brass tax you know they they don't even get too conspiratorial I'd say the UFO ones are the ones that have been more uh like um I don't know what the right word for it is not not really hostile but adversarial perhaps is the right word CU like all the UFO type host people are all super skeptical right the the ones that are more like the political like conspiracy side or whatever they're like the ones who are have been the better ones yeah watching the videos with the

(2:18:24) science that we understand is been the part that's blown me away man I wish we could make a two or three minute video how do you turn this into a two or three minute video it's just no way to do it really right the interesting part is a lot of the people that I've talked to actually do sit through like can sit through a three-hour podcast the stuff's so compelling that's the thing about it and once you get going it's like oh you don't want to stop if I present it the right way I guarantee you we can make

(2:18:49) most normal people sit through three hours of it just think of like the documentaries that you've sat through that are like pretty long and you just want to hit the next one right and you want to next episode like I could see us turning this into like four or five episodes you have like um you know certain breaks at certain points right where it becomes kind of like a cliffhanger where you got to know the next thing you know like okay the next thing is okay what's going to be the motive right and then I mean you start

(2:19:17) of course let's let's just run through it let's see how it flows let me just make sure I had all the questions here no the scientists uh they're actually really Engineers is a better term for them but scientists is still accurate they were going to improve the efficiency of certain plants that were in **China** was what the official narrative was but there's 20 of them which is pretty bizarre if I missed anyone's question just repeat it I I haven't been paying that much attention to the chat

(2:19:40) so I think I got all of them plane probably couldn't land due to the fire my guess is that the landing gear was damaged or it just wouldn't come down down I don't know why some people have tried to claim that the landing gear is down in the videos it's definitely not um and then so the next move is they would try to land in the water but landing in the ocean the plan's going to fall apart and everybody's going to die it's not like sully solenberger in the Hudson River you're in the middle of the

(2:20:04) ocean so this plane was most likely doomed if you have request for podcasts best thing to do is reach out to the podcasters I've gotten so many requests I can't even fill them all um and I had a waiting list going and I've been trying to do as many as I can but it's starting to honestly just drain me too much uh what I would also say is if you guys are oh the aouth is the intensity of the gravitational flux on the face and the oh okay cool good to know that that'll be helpful for when I explain it

(2:20:43) intensity of the gravitational flux so it's kind of like the field around it right um when I make share this you know feel free to uh you know use this as much as possible and you know

share the information that you find is relevant you can give me feedback on it on certain parts that we can either add to I'm sure we're going to be missing stuff on here that I'm going have to add to later uh yeah and again I wish we could do a one minute cosmology uh send me if you have a request that you want uh send it to me

(2:21:17) at M H 370x proton and I'll take a look at it I haven't even looked at my email today but I'll take a look in the morning for sure um but I'm pretty booked up looking at my schedule like this week's already like I think just full let me just look got a podcast tomorrow another one on Wednesday I have two more on Thursday and then one on Saturday I'm going to go on to the the room 2008 uh one which is a twitch stream uh and I've been doing ones that are bigger smaller I don't even

(2:21:56) really care the size that much anymore um just because I like to help out the people that have been supporting us following us the room 2008 guys are really cool um and I the reason why I'm saying it is because I'm not afraid of them cancelling or anything like that honestly at this point like I wouldn't even mind a person there two cancelling it's just been a lot uh but they were really cool I helped what what they were one of the earliest ones that talked about content on the stream on their uh

(2:22:19) twitch stream and I like sat in the chat and chatted with them so I think talking with them in person would be a lot of fun I think that was before I revealed my full identity as well so that'll be a good one to do those guys are really cool um and hopefully they get up to date on some of the more recent stuff and then uh it'll be a really fun conversation with them and that kind of bleeds into what we're trying to accomplish here is that we're trying to go to a point where the evidence and the information

(2:22:46) is undeniable um where you know even if the government doesn't admit it we have so much evidence here that everybody just knows that it's the official story is BS right that's kind of what I'm trying to get to and that's my that's my strategy I just got the cards on the table you know that's what we're doing is we get to a point where everybody just knows like this evidence is overwhelming and we know that the official narrative is nonsense because of like you know the where is it

(2:23:19) you know plane not crashing in the South Indian Ocean I mean h how do you argue against this and **debunking** the debris they deployed 42 ships and 39 planes and this was initially and we know that they were communicating with the spy satellite or with the go with the US government and spy satellite so how do they not find this plane the next day thanks Ryan appreciate your feedback um yeah g Blake I'm not sure about what would happen on the other side that's a really good question and I wish we had another way

(2:24:00) like I wish I had two more videos of watching it up here because I would never have believed this without having two videos even with one video I would never believe it really takes two videos uh to even believe that this can be possible that's how crazy advanced it is um yeah Joe **Rogan** would just be I mean that's the dream guys I don't know if that'll ever happen but my

big fear is that Joe Rogan would get contacted by the government and told like Hey we're going to come down on you if you talked

(2:24:30) about this this is classified information and at this point I'm sure not that maybe not everybody I'm sure there's people out there that are just they don't believe right and they can't believe but uh some of the bigger people and stuff um probably the only reason why they haven't reached out would be like you know they're they're getting told by the government like don't don't talk to this guy this is information that's uh National Defense right um but the way we

(2:24:58) break that down too is we just make it so that everybody knows to the point where it's like okay it's actually more suspicious that you don't talk to me which it already is for the mainstream media like not that I'm going to go and talk to them like I'm looking forward to the day where CNN calls me and I can tell him to go to hell that's going to be a great day I can't I can't wait for that day uh cuz I I don't care about that at all honestly it gives us more credibility to not not go on mainstream

(2:25:26) media and then if they try to defame me or anything like that lawsuit I mean those people have a lot of money I saw what they did with uh what that sandan kid or whatever his name is I don't know how much money he actually got but he definitely won that defamation suit no doubt so if they try to make me to be some kind of cons weirdo or whatever like yeah it's going to going be just time to go to the bank yeah manifest that it's actually not predictive programming because predictive programming I think has to

(2:26:00) come before the event so a better explanation for manifest would be uh art imitating life I think but it's really weird how similar manifest is but that's one of those things where you wonder like hey it's kind of like the Don Lemon the Don Lemon piece like was were they told something something like did somebody know something here like what the hell like how are they coming up with that right uh lost is the one that I would say is more predictive programming where it's like this plane disappears and goes to

(2:26:29) some other dimension and then they these people somehow appear like can you imagine the passengers just showing up on TV and being like hey guys we're back I'm back from my plane trip on MH370 we were alive the whole time that would be wild yeah crypto I'm assuming that's for a a podcast if so yeah send me an email I'll take a look at it probably in the morning too tired uh the event wasn't that that one that got canceled right away I never saw the event but I think it was something similar right where

(2:26:58) people like disappeared or something the only one that I've seen is lost and that was like you know early 2000s mid 2000s and the first couple Seasons the Lost were good but it just kind of went off the rails from there I think the Lost was good when it was all about the mystery oh this this is where wait okay only missing that but color tone matches thermal matches official flight path has it running out of gas and there's nowhere else for it to go uh this probably should go in debunking the debris right no no this should go over here

(2:27:39) this should go over here cuz people say oh the ocean's really big that's like one of the worst excuses ever like arguments like that are social contagion so people want to know what social contagion is is arguments like the ocean's really big like that's not somebody that someone thought themselves right that's something they heard on TV and they're repeating as their own belief because if you think of it it doesn't make any sense like they've searched everywhere where the plane could have gone there's

(2:28:08) no other spot it's not like this plane has another five hours of fuel to keep flying around they searched everywhere so like arguments like the ocean's really it's just social contagion and what I would challenge you guys with as well is that you'll be other stuff like that too people in your family maybe you even do it where you may find yourself making an argument that's not even really your own argument you don't even know where it came from and that's where we have to learn how to critically think

(2:28:33) right you hear something on TV say oh Ocean's really big well you should think about it and go wait does that actually make sense right yeah sha Ryan would be interesting um I know that I presented the case to his team uh uh but those are types of shows too where if I do have an invite I'm not going to be able to say anything ahead of time like I'm just going to go do it and then after it's done I'll let you guys know so even if I had an invite for that I wouldn't be able to tell you honestly same with Joe Rogan but Joe

(2:29:01) Rogan like if he were to say yes I don't think he'd be able to cancel afterwards so I probably would just say if I got on Joe Rogan honestly what I will say is we we've got some stuff coming up there's stuff coming up don't worry about it and this is only going to get bigger and bigger I think I hope and I don't think it'll be able to be ignored official search probably probably move that up here as well right A lot of these the Y MH370 stuff doesn't really match in the right spot they search every on

(2:30:07) path um South Indian Ocean and malaka Straits or mock of straits I think that's how you spell it right did I spell it correctly is that how to spell it no G no g h let me double check yeah okay that's how it's spelled cool yeah I did not like the end of lost either I thought it was just just a cop out and the reason was because I watched listen to all the podcasts and that was like early days of podcasts with the creators Damon lindeloff and I can't remember the other gu's name and there would be all these people speculating on

(2:31:11) how it was going to end and what was going on right and they kept on saying over and over and over again that it's not it's not Purgatory it's not Purgatory it's not purgatory and the end was okay it was it was Purgatory it's like come on man like obviously they didn't have it planned out they just came up with it on the fly yeah the thing about the oceans being really big is as silly as like people thinking that they had to oh that that's what we're going to do um that's a good one we can't forget that

(2:31:53) one US government is definitely tracking a rogue 777 in a post 911 world oh probably move this we can probably move this down though I realize we already count stuff like that okay

uh no I haven't looked into Texas Instruments or Carl Group I'm actually avoiding looking too much into private companies CU I'm not as afraid of my

(2:32:56) government as I am some Rogue organization disappearing me and it's not really that important to solve the mystery God this this quote's super weird I going to have to go find this one again this one's real bizarre this actually makes me tie into what the minister was saying about the satellites helping like what the hell does that mean they didn't find a single piece of the plane how could they have solved the mystery this DSP detection being ignored I'm probably going to get rid of that

(2:33:31) because even though it's interesting like we've already proven the hydrophone data and all that so I'm not that worried about it yeah I don't think people realize how big a 777 is I mean it fits two it can fit almost 300 people they're huge Okay so we've cleaned that up wow it's looking real good uh Penny was it Penny wise not Pennywise what was her money Penny money Penny was saying we should do a summary she was an X BBC reporter I think not sure though I feel like the evidence doesn't really need a summary but having

(2:34:23) a summary in general for like podcast review would be pretty useful no no bodies were found not a single one I think they tried to argue like sharks ate them all okay sure sharks ate all the bodies uh the luggage just what sank or something what what happened to all the luggage what happened to all the pieces of the plane the official story early on was that this plane did a Swan Dive a perfect like perfect 90° Swan Dive and somehow didn't like you know 10 out of 10 in the Olympics like no splash and even that didn't make any sense but

(2:35:01) people never even questioned it and then later on they changed it to being like a 14 degree angle uh just makes no sense I should add that in here actually for makes no sense it was right on an active shipping

(2:36:04) route too I mean come on what okay let's go back down here the science is pretty is pretty legit here now I don't know about un I'm going to get rid removing unwanted particles I think it makes more sense that they're tracking the plane and they are creating they're allow they're doing this electron com combination here yeah I'm going to move this one up this is looking pretty spicy I like this I can use the bug analogy as well I think that that's a good one for people

(2:37:07) to understand so if you people want to understand how time moves fast for Less Mass just explain that that's how ants and flies are able to move so fast despite the fact they're so tiny right like why can a tiny bug why can a tiny bug move so fast despite the fact that we're huge and it can move faster than we can move right if you think about in terms of relative size to how fast it's going it's going way faster than us given how tiny it is but that's because the time is moving so fast for it so in theory that could also

(2:37:40) explain his lifespan why their lifespans are so short is that time is just moving faster for them I'm not sure if that's really accurate but it seems to make sense uh what about the barrier

yeah okay we already got the barrier part in there too um this probably needs to move up the suicide myth probably goes after the debris or actually probably right here

(2:38:47) I think that's where it fits best yeah yeah I like that a lot okay and then we flow into lithium ion battery fire we talk about the witnesses bring all the other Witnesses into play the reason why the fire fits into the witnesses really well is that's how we found it the Philip wood narrative that's down here at the Diego Garcia bit I'm going to move the motive part a little bit I think uh yeah I think I think we're just going to go above orb analysis I was thinking about having the **debunk** stuff go higher

(2:39:50) uh but because the reality **debunk** stuff is most people who have been on like **Reddit** are going to be thinking oh this is fake because I saw the **mick** West **debunk** H does this go before motive probably probably do all their pertinent information first I think we can get rid of this stuff though because I think I moved these into their own category up here requirements yeah we don't need those I already talked about this stuff I would say probably get rid of the one possible fake passenger that one I don't think they're related

(2:40:45) anymore oh this is the same as this right here I'm going to move this one up right here all uh not going to put them all Dives in

(2:41:54) there yeah crypto we already saw it we've been talking about it a lot of the science that we posted in here today already has it in there oh yeah the Florence D Changi stuff uh that's interesting and we didn't put that in here uh maybe that's go down here that's pretty weird um yeah so the **debunk** stuff like normally I'd put it up sooner because that stuff is like what people are going to think of but I want it to flow more naturally oh motivation probably I think motivation is fine up there teleportation might have to move

(2:43:06) up though um um oh we already addressed those there it's going to go before science I think and then we can put cloaking did I already say about yeah that Bob uh green year

(2:44:13) analysis was amazing okay yeah honestly the salvator Pas interview was amazing um oh wait who here is Bernie Who's Bernie I if Bernie's on here the burn eye from uh Alien scientists we need to get in touch set of something up he was asking really good questions on uh Alien scientist I want to chat with him again oh Crypt Bernie yeah oh you sent me okay you sent me an email right yeah yeah that

(2:45:18) analysis was legit I mean wow it was funny cuz I fell asleep after the Salvatore Pas thing and I was trying to watch it but I was too tired and I can't I woke back up and I started watching and I'm just cuz I had like 50 pings about watching it so I go watch it and I'm like how is this really going to be that good holy crap yeah it was wild someone's asking me I forgot to I was looking at my 50 alerts um someone was asking me if I spoken to Florence I have spoken to her not going to really comment more at the point at

(2:46:04) this point but I've spoken to her before uh yeah so I think Prince William I think visited

Diego Garcia like he went to the malds like right after something weird like that oh yeah did we have the thing about the logs being destroyed I think it was like June or July I have to go back and look I can't remember if it was June or July I'm just going going to go June for now we'll actually do June July like all the flight logs just randomly got water damage in 2014 what uh the Philip wood one came from

(2:47:04) 4chan I'll send it to you guys I have it I've saved everything I have all the receipts guys every single time actually I was literally just looking at it it looked like my search was still up there's also a message from Philip wood on the plane as well but we haven't really corroborated to the point where I'm comfortable with it but it is pretty interesting he talks about how it's hard to breathe there's your link for the 4chan picture if you want and you can read about it if you want that's where I have

(2:47:32) it right here we have rebunk that picture um against the the **mick** West **debunk** which like he had seven points I think and we were able to **debunk** I think five of them and the only two that were left were subjective anyway claiming that it's it was easy to fake and the sketchiest part about it was after we rebunk it he commented in my in my post and he has me blocked so I couldn't see his his thing but somebody mentioned it and I went and looked and he didn't even like argue against any of the points he just

(2:48:07) repeated the assertion that it would be easy to fake that was it which is really weird cuz like to me that's like a legal response right somebody having like an emotional response is going to have like a little meltdown like a lot of the people that you know that try to defame me and stuff like that that we argue with but his response was more of like I don't want to go to jail like that's what I that's the kind of response that I got from like I figured from him is that he didn't want to get caught down

(2:48:30) in a lie right where he could be proven to be lying about it because if he just makes an opinion then you know you it's not a legal thing which is the thing about **Mick** West is he's not an idiot it's clear he's a smart guy and that's the reason why like I I think he's sketchy in general like he's too smart to be this dumb is is really what it comes down to right so there's no way he's looking at these videos and he's going yeah that's obviously too fake for me to look at

(2:49:00) he's too smart for that right uh which is why like his cultists who I call them like their literal cultists of his like they need to wake up man you're following a false prophet wow okay guys this is looking pretty good I mean I think we can add some stuff tomorrow but um oh the passengers what were we going to say about the passengers uh God what are we going to say thought somebody said something I think tomorrow the plan will be to go through every point and just make sure we've got them all and then go

(2:49:49) through any of my other works that are potentially newer ones that we might have that we might not have [Music] gotten Texas Instruments I think what we can say here is families of the victims never believed the official story uh um it's all speculative of course but

(2:51:14) whatever of course it's speculative though I don't know what happened to the passengers interestingly enough true story The Blocking from Mick West predates these videos um I had seen him post a bunch of fake debunk's like he that's what he always does and I think I was the one where he was trying to argue like the dod Navy ones where he loves to try to argue I just asked him on Twitter if he has been if he was paid by if he's paid by the Govern government and he just wouldn't answer and then I asked him

(2:51:48) like what does how does he make money cuz like he doesn't have a job so how do you just how do you make money without a job especially when you live in like uh an expensive area I won't say where I think he lives but you live in expensive area in the country you haven't had a job in 15 years you run a website that you're paying for as well that definitely doesn't make any money metabunk does not make money uh he doesn't doesn't monetize his YouTube and and then like like send me some like pre-recorded YouTube video

(2:52:18) where they claim he addresses it he doesn't address it at all it's all like his other addressing like the same thing with the Wikipedia sock puppet thing his he just makes a claim that's clearly [REDACTED] where like oh I was just switching my account to switch to my real name like no you got caught and banned because you were using multiple accounts it's like oh but no no I'm just going to use my real account from now on so it's all fine like what uh so like all his stuff's like that and so

(2:52:48) like even the thing about it's like oh he just made a bunch of money off the Tony Hawk video games and he never needs to work again like the one thing I know about rich people is that they never get tired of money the idea that like he's not making any money is complete hor [REDACTED] I would almost 100% guarantee speculatively of course that he's an influencer paid by the government right to influence people uh I would be surprised if he's not let's just leave it at that we know that the government's paying people to

(2:53:16) influence people that's not even a question so why wouldn't they be paying him right um did we put the thing about the official times all the times before we're at 2:40 a.m. where do we put that the early reports of the next day had the plane losing contact at 248 or at 1840 UTC where do we put that maybe we put that in Wyatt MH370 that's probably where we put it huh no we'll put in the fight path

(2:54:33) here yeah we'll put that there that's a good one doesn't makes sense to ask public for any leads I mean I put my email out there people have emailed me I mean I've gotten stuff I just don't report everything out that I get to you guys uh like this part about the families the victims all going silent like I have reason to believe that some people have been like told to be quiet it's not anything I've run with but it's out there oh we didn't put the general out here I don't know if we should really like

(2:55:17) burn the general that hard but I think we'll make a comment about it let's add it in other pertinent information I I don't know I respect the military I don't really enjoy uh calling military people out because the reality is like they have reasons in their mind why they think

that covering this stuff up is important and there's definitely National Security implications there's no doubt we talked about that with salvator Pas but like I keep telling people they shouldn't have done it to

(2:56:16) MH370 and shouldn't have let and they definitely shouldn't have been recording on two videos oh uh I want to put in [Music] here uh I think we're going to add another category here we're going to absolutely just completely go at **Reddit** and the UFO sub**redd**it these people deserve it more than anything they've been trying to ban

(2:57:20) me and everything else well I told you guys what would happen if they're listening right now I told you guys what would happen you thought I was joking around you thought I was never going to get on any big podcast huh well when I blast you guys in front of a million people we'll see we'll see who's laughing h we're going to absolutely systematically destroy the US disinformation complex uh spelled manufactured wrong they shouldn't attacked me with so many weirdos because now it just made me

(2:58:06) more inclined to exploit or tell people exactly what they do Forum slide we're going to grab some defin I mean I don't even need definitions for the first two this one though I I took a definition down for before I'm sliding I'm just reading hold on oops

(2:59:27) yeah so this is so it AI and this is only half of it the Forum sliding with respect to **Reddit** has to do with like if you have a bunch of content up there that's like telling the **truth** and you don't want it to be there then you bot up vote a whole bunch of stuff that's fake and then in the comments same same exact strategy right uh so in the comments you post vake comments you post those to the top people don't see the stuff that's buried down to the bottom that's the form that's how you slide the content you

(2:59:54) don't want people to see and that's essentially what they did with the **debunk** too manufactured consensus uh and actually we'll just let all these play into one another which is the way that this I think works really well maybe we can put social contagion at the bottom actually this is actually helps me work on my disinformation piece frankly because this is this is what my disinformation piece is going to be is basically these uh let's see use sock puppets to post fake content and have it upvoted uh social Contagion

(3:00:46) fake content spreads through word of mouth and peer pressure individuals uh what is it co-opt or adopt beliefs without knowing the source so that's how it works right so manufacturer can send is you bought upload a bunch of whatever fake content you want to be at the top and when I say fake I just mean it's man it's manufactured which means that it can be real based on real things but the idea is that's what you want people to to believe and think is real and what is to be true and of course you have to censor

(3:01:32) as well um I wonder if you should have a thing about censorship as well narrative control yeah let's do narative control next so you have to upload that you have to make sure you censor everybody who's telling the **truth** and ban them under like false pretenses because

otherwise the **truth** ends up breaking down the brainwashing use Forum sliding for anything that you can't censor to make sure that your fake content and your and what you want people to believe is at the top so with respect to these **debunks**

(3:02:15) that's why if you go look at the threads you see all these people going thank God that's been **debunked** oh that's been **debunked** that's been **debunked** that those aren't sub that's not like those are just opinions that's not uh substance and that's how the form sliding portion works so then people don't see the stuff that's real because it's been pushed down right uh let's do simple comments yeah see so it brings them from the top to the bottom yeah and then social

(3:02:49) contagion uh Works be because people are just you know a lot of people I've talked to they don't even know they'll just say oh those videos are fake weren't they fake from some video game they don't even know where it comes from because other people just told them they talked to them in Discord about it whatever they'll say oh the mh3 Vos those are a video game and next thing you know that person adopts it is their belief even though they don't know where it come came from uh so this is like how

(3:03:13) disinformation works right and this is why **Reddit** it is possibly the number one source of disinformation on the planet today and radicalized too because the side effect of this is that people get radicalized because they think that the fake stuff that they've hearing is true and they adopted as their own belief so what happens when the person goes to the social contagion route and now they've adopted those beliefs as their own well once you try to tell them the **truth** it's easier to fool someone to think that they've been

(3:03:39) fooled so what happens when somebody who's been told a lie gets told the **truth** they get angry and that's how you get ter domestic terrorists that's how you get people who you know get radicalized is that they think that oh anyone who goes against them is like an enemy right or and then they'll even think that they're an enemy of the **truth** but the reality is if someone's told a lie you don't get angry at it only time people get angry is when they get told the **truth** yeah that's a good one as well

(3:04:14) another analogy like cryptobots where people oh I make \$20,000 a week doing this and they think oh well that's got to be really you know that's got to be really smart whatever and go do that and that's a form of brainwashing too the crypto movement in general is a little bit sketchy in my mind um I think there is a Grassroots movement there in crypto but uh you got to be careful that you're not getting stuck in a pyramid scheme or anything like that um if if something seems good too good to be true it almost

(3:04:40) certainly is so just be careful careful about that guys that's probably good enough for tonight probably going to pass out we did a lot of good work here tonight guys thanks for your help um I mean really it's nice to have people there are around and are um helping make sure we get all the stuff on there today let's look at the bottom few pages and just make sure we didn't miss anything essential right the narrative stuff I'll probably move to a separate page uh we're going to get rid of this

(3:05:13) oh rolls Royce interesting um we should probably move the Rolls-Royce stuff somewhere we already talked about the hoax are never finding the plane the relations this thing's kind of speculative and this turn or whatever I don't think that's really anything either this whole impossible turn it doesn't I don't think makes any sense we already got this we did this we got the Shadows the rollsroyce dead I think we want to put in other and we can move this stuff around but the flow is pretty good right

(3:05:55) now this should say where's the other data the Rolls-Royce thing is pretty weird like they should have had the data they would be able to corroborate the stuff okay we actually it was 2014 when he was in charge we did that we did that why is it filming Maldives we did all that trajectory of the orbs uh h I don't think we need any of this how was some Punjabi Batman stuff

(3:07:02) who um I think Punjabi Batman's legit and the reason why I think he's legit is that I don't agree with everything he's done I I think he's just a normal person that makes mistakes and does get some information that is uh real but you know if I'm expecting somebody to be like disinformation I'm going to expect them to be a little bit more like like less human right uh the way disinformation works is quite a bit different than somebody who's throwing out real data and then they throw out

(3:07:35) something else where they're just misguided where they're just you know trying to solve it like I thought some of the stuff he gave us like he's probably one of the biggest contributors to our case um but we didn't follow a lot of his stuff either um where I just I didn't find it to be very credible like even the the M Alabama crew like cargo stuff it's just there's not enough connection there like there even might be real like those two guys who got killed or whatever like I don't

(3:07:58) think they overdosed but it's too hard to connect it to MH370 oh reeside defending the veracity of the videos that's interesting um we need to add that down here I don't know if we need that part just by later uploaded for later upload videos okay a UFO Lodge site I think what that

(3:09:09) means is Forum right see right here this is actually a translation from Spanish he had a harsh discussion with other users regarding the veracity of the videos he's certainly not telling them they're fake so he had to have been arguing them with them about them being real right I don't the rest of this stuff is complete nonsense it's just like one guy's opinion uh Jeff wise we've decided he's not credible anymore but um some of the stuff that he says probably accurate I think he's just

(3:09:53) misguided the fact that he broke away from the Independent group probably gives him more credibility but the fact that he goes to **Mick West** thinking that **MC West** has any answers definitely destroys his credibility I mean like dude you're supposed to be the MH370 expert and you're asking **Mick West** for advice like what that was super weird that was one of the weirdest things ever when we saw him asking **MC West** to join his his podcast what if Jeff

wise wanted to be legit he should have come to me and asked me to

(3:10:25) be on his podcast then people might have watched baboom that's just me dunking on him sorry Jeff nothing personal buddy uh uh that's this is an interesting part no one can figure out why the the pilot want to turn the satellite data off or on but I'm not sure I'd even trust the satellite data at all is the issue K T saw the plane with no navigation lights which indicates that there was no power so I don't even believe the satellite data stuff at all yeah the Game of Thrones thing was funny as hell it was only like it's just

(3:11:16) really long I was sitting there last night watching it and I'm like oh boy how many how many comments am I going to have on Twitter by the time I finished it and you know because I'm getting so many notifications now I I can't keep up anymore and I like to try but it's just too hard what is this oh I caught up I'm not even sure I'm actually keeping up on the messages I think it just stops alerting me after I get too many sorry I'm checking real quick at least 25,000 views already on

(3:12:02) the cover up uh video of that guy of the defense minister it's only been five hours who's he talking to who's this guy I don't know oh yeah thanks for posting my the thing here I wonder how many people we even have watching right now I mean this is just a random stream um let's see 40 viewers not bad I'm probably gonna have to make another post about you know people who act rude or condescending are going to get blocked because people seem to keep forgetting that I don't know why people cons

(3:13:05) consistently feel like they can just be deags in my replies but man that's a bizarre interview bizarre okay let me check a couple of these real quick nice somebody offering to animate some stuff oh people are apparently talking about me and some other in the a better **Reddit** yeah no I'm going to go to bed too I think yeah it's dropped off a bit but we we got I think what we needed here done let's delete this stuff we don't care about this Jeff wise stuff we talked about Jour I just want to make sure I keep this Jour

(3:14:04) stuff I need to post this somewhere else real quick we can delete this wait investigators said the mh37 70 search we postponed we may have to look into that oh yeah none of the elt beacons activated on Crash we should do that huh why it didn't crash we need to add that that's a good one these actually only activate when

(3:15:14) the plane crashes so those even wouldn't even been those should have actually still been activated I assume Ben is making a joke I don't know man if not I'm not sure what you're saying what I will say is I wouldn't make fun of the science man it's uh I think it's probably going to end up being legit so unless you want to look silly investigators denied that Rolls-Royce sending the engine data I mean that's obviously nonsense we did that oh forgot about this one some social media sites had the

(3:16:15) passengers still being online that's weird let's take that we need to add that in there too I'm glad I didn't forget some of this we're going to go SLE we're at like the end there we're

going to go to sleep right after this I mean I am you guys can do whatever you want uh oh oh you're just being uh spiritual yeah I don't know not sure huh so RF frequencies used for cell communication do not penetrate water

(3:17:19) that's the explanation I'm going to post this so actually I think we've been we've seen him around what's this about delete this okay uh uh investigators knew the underwater signals were false I think this was when they F in those false pings but it doesn't even matter this is interesting they took the search off and they knew they were searching in the wrong way so the perpetrators would have no reason to fear any Discovery H it's interesting thought anyway that's all the rest of

(3:18:09) the evidence so tomorrow uh I don't know we'll do a little bit of the theories and update these These are way off now the theories have changed quite a bit since then and maybe update the passenger stuff go through the rest of this but this is looking legit like I'm pretty ready for whatever the next podcast is with all this evidence so how long is it let's take a look starts up here I'm going to get rid of the summary for now I might bring it back we could add more pictures too but I'm

(3:18:45) not sure yeah Consciousness is definitely the missing link man I mean sure I'm with you guys on that I'm glad you guys listening enjoyed listening to the uh investigation and what we're working through it helps give me a drive too it's hard for me otherwise to go through all this takes a long time as you guys can tell so it's at least 10 and a half pages right now and that's without the the theories otherwise it's 13 pages long already so it's a lot it's a lot gentlemen and ladies and

(3:19:23) gentlemen okay sleep time y'all thanks for coming here thanks for being here thanks for chatting thanks for asking questions and thanks for being part of the investigation the real story of MH370 the greatest conspiracy largest verifiable conspiracy of all time let's chat again tomorrow guys uh hit me up on Twitter uh we will will be in touch peace

Salvatore Pais & Ashton Forbes - Pais Effect, Superforce, and Superconductivity - YouTube

<https://www.youtube.com/watch?v=-yTRDmpl0Lk>

Transcript:

(00:01) hold on Boom okay we are live sir we are live here today with Salvatore Pas one of my favorite people on the planet right now he is doing my first ever interview this is going to be hard truths with Salvatore pi and Ashton Forbes so right off the bat sir go ahead and introduce yourself never ever called me sir number one call me brother got it brother that that really goes to the soul with me so Ashton thank you very much this is an honor to be your first interview so

I'm pretty sure there will be a lot more

(00:37) after this one trust me on that love it now and I hope to be uh in further interviews as well that'd be great now all right let me give a disclaimer um right off the bat uh I'm required to do this so I come on this podcast as a private citizen and the uh let's say the statements speculations opinions that I make are in no way implicating the United States Navy nor the United States space force got it they are my own and as such I shall present them um now can I give a five minutes sort of origin and

(01:15) okay the floor is yours uh s the floor is yours thank you sir um I was born in Romania I'm very proud of my Romanian Heritage you can call me American apple pie made in Romania I just love hearing that I heard it once before and I like that so uh um I will say something in Romanian so people are convinced that I'm from that basically it says I'm very proud to be Romanian uh hooray for the Romanian people hoay for Romania and nothing without God um and as far as why I'm here uh recently A friend of mine told me that

(02:09) they have changed right after the Tim ventur interview where I gave an interesting rendition of the P Effect called P effect Resurgence by the way I practically implore your audience and everyone on the live stream to Google the P effect resurgence those three words P effect Resurgence it it goes directly to a Tim Ventura page we will tell one day whether it's taken down or not yeah it's you know another little point in the Spectrum let's call it that yeah so basically in in Wikipedia on October uh 18th I believe

(02:50) of this year they changed right after the interview almost they changed to say that my work now represents a **scam** a pseudo science dis information when you go into Bing now the AI agent never before has done this it calls my work crack pottery and it's almost as if my work is starting to have a concerted effort to be undermined Shadow band and uh you have to question why especially after the Tim ventour interview you have to see that to to see where I'm coming from now it is very important to also understand that I challenge the

(03:32) mainstream physics Community to send their best we're talking about people like caraid we're talking about people like Seth Lloyd Mex uh Max techmar um David Gross uh Brian keading um Stefan Alexander yeah others Frank wilchek um any Nobel Prize winner they have out there I I wish to have a committee whereupon I'm given one hour I'll go to the Blackboard and prove to them that the P effect and the Super Force concept are correct yep I'll show them exactly how they were derived they're extremely

(04:15) simple and minimalistic math I believe in aam's razor I do not believe that mathematical acrobatics should pass for great physics as a matter of fact I believe the simpler the mathematics the more important the physics especially if if you have a good understanding of what the problem is yeah many times great physics is found by accident is not actually looked for and uh one other thing that I wish to mention also is that this is not new physics this is a new perspective on Old physics W and this is what makes it incredibly

(04:52) interesting because there's so many things out there that have not been tried yet it is as if classical electromagnetism ISM theory has been uh put aside the moment quantum theory came in a lot of things that were introduced by Oliver heavyside into the equation of James Clerk Maxwell were sidelined and things they should have been looked at weren't uh anyway I I I will not um there's one more thing that I need to say because um it U it it um we have to be careful exactly how I answer certain questions on the P effect

(05:36) sure because unfortunately as almost every other piece of physics out there the the pis effect can be weaponized absolutely and it can create a super weapon of all weapons a weapon of such incredible power as to render the tulam device a popcon in comparison and this is not hubus this is mathematics and physics now it it it is also important to realize that a weapon of this nature any army and I mean any army that would feel the weapon of this nature first would become invincible number one number two and this is incredibly it's

(06:19) very very important to understand what the this super weapon would represent as a new Epoch in deterrence no Sayan Nation is suicidal and any insane Nation should not exist hence let's leave the super weapon in the realm of physics but let let the audience know let your live stream know that certain things numbers frequency ranges spectrums I cannot discuss that's fine this is something that can be quite detrimental to National Security if taken in the how should I say from the incorrect perspective so I will not even touch on

(07:05) that if I I I hope I have your understanding that if I disagree with the question I will try to be as uh as polite as possible but I will say in the interest of National Security I cannot answer that question yeah sir you already went through like four of my questions right there uh from your interview for your intro right there um and I just want to agree with you on that front you know I've heard you say multiple times you are not a spy and you are not a patriot I am also not a spy and I am a patriot as well um and to

(07:36) that sense the the thing I would bring up is this is actually one of the optional things I was going to bring up at the end but you just kind of addressed it is that uh my opinion is that most likely our foreign adversaries have already potentially figured out this type of Technology if what you're going to be telling to us is true and what that means from a Humanity's perspective is we need to be very responsible with this technology because I agree with you I talked about it last night on my space that Mutual assur

(07:59) destruction but it's a whole different Epoch of deterrence that we are it's not just nuclear weapons anymore now we're talking about something that's millions of times something that can modify SpaceTime and as a matter of fact the schwinger limit breaking breaking the schwinger limit points to that fact this is physics this is not this is not crack Pottery it's not Fiction it's just science no absolutely not sometimes I wish it was yeah me too it is not science fiction this is science fact and I'm like you if I

(08:34) accidentally call you sir it's just a matter of respect I do that a lot for people that I respect and you're one of the people I have the same thing don't take personal off if I do it B by

it my own boss is like stop calling me sir he's a great dude so anyway so you ready to dig into this thing because I think that you touched on part of what I want to begin with which is um you've mentioned in your previous podcast and I don't want to rehash all the stuff that you've talked about before especially

(09:00) with Kurt who I thought you had a great interview with I listened to the whole thing and he's a very smart guy especially when he was talking about quantum gravity I just thought wow this guy is super intelligent oh k j mongle is truly a theoretical if he was representative of the mainstream physics community and he had a say I'm 100% that at least you would give me a hearing yep at least and I think that our plan here what I want to do is hopefully vindicate you in their eyes as well and get that hearing that you want CU I think that

(09:31) what we're going to be talking about today the physics that we're going to be going over is practical it's stuff that can really exist and we need to make sure that it gets the proper respect and that kind of goes into my first question and point is that you've mentioned that your papers were submitted to I believe Cornell and they wouldn't publish them without a sponsor right why do you think that is what what do you think your view is there it um Cornell University archive is in my opinion the best

(09:58) blueprint uh service of all time as a matter of fact once you publish an archive most likely your paper will be published in a highly impacted Journal if at least if not a high impact at least a moderate impact Journal so in other words 100% your paper will be published so I have great respect for archive uh the fact that they need sponsors maybe it's quite possible that a lot of uh individuals put certain physics in there that is I look Joe the plumber can write a physics paper if he understands the the

(10:38) the precepts the the foundational the fundamentals of physics once you understand them you can write a physics paper and even Joe deplama can publish an archive if he has a sponsor unfortunately yeah but the whole idea being is we're not living in the time of Einstein where basically a Swiss patent Clerk can get five papers published this is the ano mirabilis the the year of the greatest five papers in my opinion that open physics to a whole different dimension of of of of of um of reality of of possibility conditional

(11:18) possibility there's no such thing as impossibility there only conditional possibilities but to go back to the idea of why I think archive is blocking and needs a sponsor is sometimes you can just you cannot just go on archive and say look Einstein was wrong and here is the please you know there there have been so many proofs as to the fact that the gravitational field equations of Einstein must be at least partially correct because there's so much experimental evidence for it so bring if you have a theoretical argument against

(11:53) Einstein then you must argue from a very strong mathematical and physical background and also present experimental proof and some of these papers unfortunately do not now I understand where they're coming from however in my opinion we do not live in the time of Plank and Einstein and Heisenberg and the great ones even fan I mean fan is we talk about

1950s still it's a it's hard to and sometimes people that should not even get there because they know the editor or the chief editor please nepotism in physics un

(12:43) permissible I would argue as well just to kind of not to cut you off but I think that I agree with you there and what I would argue is that Academia has kind of Forgotten what science is right science is a scientific method it's the uh study of observable reality of being able to experiment uh and be able to prove Concepts you know and I think that now what you just pointed out is that it's been inundated with credentialism right and saying who do you know and what do you know um and so you know one

(13:11) kind of point that I would say kind of closing that bit off because I think that you have been done a disservice is that sometimes seeing is believing you know imagine if we had video proof or experimental proof out there that could prove your Concepts right maybe that would give another level of credibility to the things that you're saying absolutely sir AB experiment Trump's Theory every time totally again experiment Trump's Theory every time absolutely and it's an interesting verb and a lot of people get

(13:40) a little itchy when they hear that word but still experiment trumps Theory every time now can I just give a quick rendition of the P effect Resurgence oh because it's important for people to uh before u in in in my papers is actually in my patents there was one paper that I was able to publish in a high impact Journal title e transactions on plasma science uh it's on the plasma compression Fusion device and the uh Chief editor had uh two two different um I went through two different review boards I I mean it took a long time as

(14:23) you can see if you look at it took a long time for me to publish this B I went back and forth argue this argue but at least they were open-minded enough to realize it was something new something worthy of being seen again this is all I ask for is a chance to express myself to express this physics that I think can have some meaning to the progress of civilization y I want nothing more I don't want royalties I don't want money for the I don't want anything except the progress of civilization we need

(14:56) unification of civilization in order that we do not perish from the earth I'm afraid of the future sir it look extremely Bleak at this point in time and we have we either come together and as one one unification one UniFi civilization or We Shall Perish that's what I've said many times as well actually and I think that what you said about science is um very accurate too and that the way I've seen Science 2 is that it can be encrusted very molded and that it takes somebody to push it forward break through the barrier right

(15:31) and with your science that's what I see is that I see that people don't want to believe in it because they haven't been told that it's possible and if they were to just look at your your math look at your models I think that they would realize that there's something there that's actually substantial and then it can push us forward the thing you said about unification I say that almost every single time is that we live in such a divided world right now where if we get that unification this this

(15:56) science could potentially be that thing that unifies towards common purpose right the physics of the Super Force in my opinion can bring about unification of of mind and soul yeah the two should not be driven apart they're one and the same one manifestation of the other all is one one is all this is the true basis of hermeticism and this is the true basis of all future of civilization if we have a chance to survive this is it unification of civilization it has to be a common goal a common objective and why not I

(16:36) remember at one point Eric Weinstein as a matter of fact mentioned one time travel maybe this should be our final objective to leave this earth break the shackles of Earth break the bounds of Earth and and become an Interstellar civilization that maybe just maybe will give us a CH chance for survival the the road that we are currently on is total abysmal and predition couldn't agree more so let's let's attack your quickly oh actually I was gonna go to that in just a second I think that's the next question if you

(17:14) don't mind because what I want to do is I want to **debunk** this there's a a **debunk** of a **debunk** of you so the biggest thing I think your detractors mention when we talk about your patents is they claim that you can patent anything now what I read from or from watching your last interview is that only three of your five patents were even approved which to me would indicate that it's not true so I would like to get your opinion on that sir there's very simple way to **debunk** the I don't even know what the correct

(17:46) terminology is anymore for example I don't use UAP UFOs you shouldn't have raas 70 years of History just because you think that new terminology would somehow eliminate the derision the derision is far more basic than that history is important sir y never forget never forget history okay but anyway let the the way to argue that is look at the office actions of a great primary examiner called Philip bonzel of USPTO oh my goodness him and I went back and forth between him Mark glut who is the uh United States navir patent uh lawyer

(18:28) and also a good friend of mine a amazing P lawyer this trust me anybody that can write those and also the office actions you should see what Mark did you should see what Mark glut did with the office actions in response to Philip bonzel Philip bonzel I mean he really bit into the physics he said you cannot tell me that it's possible to create electric fields on the order of 10 to the 18 volts per meter and induction magnetic induction otherwise known as B fields magnetic flux density on the order of 10 to the

(19:07) N Teslas and it's a easy way to remember that it's  $E$  equals  $CB$   $C$  being the speed of light free space but anyway so that's how I remember the numbers sometimes I forget them myself but the whole idea is once once you're able to create it's not exactly that you create  $e$  and  $B$  of that it's the energy density that you can create from rendering the  $P$  effect and the  $P$  effect speaking to the  $P$  effect is it okay if I yeah I think that's a good Segway that was my next thing so Jump On In what's your definition of the pious

(19:38) effect for our viewers okay it it can be thought of as controlled motion of electrically charged matter going from solid to plasma undergoing rapid acceleration transients via

accelerated vibration and or accelerated spin leading into very high energy densities being formed because remember the electromagnetic energy flux is really the speed of light  $c$  times the energy density the Epsilon sub 0 the Epsilon sorry sometimes I drift into my my my English so the the Epsilon zero uh times um um um the electric field

(20:24) Square so  $C * \epsilon_0$  times the electric field square that is your  $s$  your the magnitude of your pointing Vector let's call it that's the electromagnetic flux and and that electromagnetic energy flux if it's on the order of  $10^3$  watts per met Square which really corresponds to a energy density on the order of 10 to the 25 jewles per meter cubed then we can break the swinger limit  $H$  if we can achieve anything past that those particular values we can actually um put it this way vacuum Decay complete vacuum Decay interesting so the

(21:10) swinger limit is really the achievement that all of a sudden you the the very Quantum fabric of space time it is unraveled it breaks apart it tears apart and you can see it by the formation of particle anti particle pairs mhm I heard you talk about this quite a bit now real quick on that the vibration keep going let me give yeah let me I'm sorry you're fine Ash I promise this is the only time I'll interrupt because it's important to see the the that's why I call it the Resurgence of the P effect

(21:46) another way to see what the P effect is all about is to say it's really the generation of extremely high energy densities yep that are up up by The Accelerated vibration and or accelerated spin of a non equilibrium plasma okay that means the plasma that's out of equilibrium you can think of of that um they have a term for it called cold plasma cold as in you know non- thermal plasma and it really has to do with the um the electrons of this plasma uh that talks to the plasma density very high I cannot go into numbers but anyway

(22:28) okay so what right so these the the the number of these electrons do not observe something called a Maxwell boltzman distribution that's what a COR plasma is all about an out of equilibrium or non equilibrium plasma once you drive that far from equilibrium at a particular vibrational frequency okay you can EX you can induce extremely high energy densities yeah if you do this locally think of it you know the thing popped into my mind sometimes you know some crazy stuff but anyway um think of it as a steak you take the meat tenderizer you

(23:16) know the big hammer  $Y$  and you keep on pummeling in the same spot over and over what do you see eventually a hoore yeah a ain't that interesting so is that the vibrational acceleration there that you're kind of describing what I'm describing is the unraveling the ripping apart the tearing apart locally of the space time fabric at a Quantum level determined by this incredible amount of energy density that is put at that particular point the more energy you put in a particular point the more that in in that locality SpaceTime

(23:55) will break apart will tear apart and it's possible that a hoore a will develop like a black hole almost if we truly understand what a black hole is um but you see I just like Frank wilch see Frank wilch also believes in the materiality of the vacuum in other words we we're dealing I'm not quite sure if it's a crystal lattice we're not talk about time crystals here even though that's

another thing that Professor Wilch is greatly known for but we're talking about almost like a um the one at a Quantum level you can

(24:36) think of SpaceTime as being a material it could be a super fluid but it also has almost a A Spacetime geometric structure to it yep and that's what my Super Force speaks to what is your thought this mind it's quite possible others have come up with these ideas before but the equation one in that Super Force paper and please please post the Super Force paper and also the aiaa paper and also the IPS paper to your live stream and send it to everyone you know those three papers best represent my work I believe in the in the number

(25:12) three uh like a a great man that that once lived and uh I shall not mention because I mentioned him before and many and he trust me this Nicola Tesla will go down in history as one of the greatest we've ever had I agree with sir and the way he was treated abysmal absolutely abysmal that dude JP Morgan watch out watch out if you know what I mean anyway yeah yeah uh so yeah I think that um interesting enough so I think for people who are in the chat you know what you just said about the papers I've posted them on my Twitter before

(25:55) I'll throw them in the the uh description later on on as well but share those papers s here is telling you guys that you know share them far and wide um those are very important now with respect to uh some of what you're just talking about around the pious effect you know I think that what I saw in one of your past interviews too was that using vibrations as opposed to spin is potentially more beneficial could you explain that a little bit yes sir you can um for example the we we tried an experiment uh called the high energy

(26:29) electromagnetic field generator to see whether we can get the um magnitudes of the pointing Vector namely the electromagnetic energy fluxes uh very high up based on accelerated spin of an electrically charged object unfortunately we could not get an electric charge more than 10 to the minus 8 kums you put that in that Sigma squared term which is the surface charge density squared and you'll see it's it's quite a deterrent we're talking about 10 Theus 16 going against you and uh even though we try to make

(27:06) the test section very small to it's still however for anyone that's out there and wants to see further what the high energy electromagnetic field Genera experiment brought I encourage them put a fo in and actually get the unclassified report there were two anomalies there were two anomalies that were observed as a matter of fact some very highly placed people from the technical Committee of the Senate arm Services committee came to nav a px to interrogate how should I say the members of The Invention evaluation board on why

(27:46) they passed these five patent applications because a lot of people said that if anything these should have been classified so there was a whole team that was was sent from the Senate arm service committee to investigate I'm pretty sure that U that certain individuals I shall not name names but they must have said oh this was a **scam** this was a total uh misappropriation of funds even though we're talking about only what 0.

(28:17) 5 million for like I don't know like 15 people over a period of three years please I mean do the math and you'll see what I'm talking about compared to some of the stuff that's going on but anyway I shall I shall not make it too dark now so so the whole idea being is there's a report out there it's unclassified and it talks about two and so even with a charge like  $10^{-8}$  kums instead of the one Kum needed to get the kind of energy densities we were truly looking for to observe certain phenomena that I cannot

(28:53) discuss those uh are that's anyway yeah um even with that two anomalies were reported and actually in the report so that's interesting yeah I'm experimental observations we're not talking about Theory here we talk about experimental observations and that's my next question too related to this accelerated vibration like what's the delivery mechanism can a laser do that or can you speak to that or is that uh sure sure I I shall speak with it but only in the general yeah sure just to point just to

(29:27) point that uh it is very interesting that the 2023 physics Nobel Prize Went For What electron Dynamics MH induced by attosecond lasers yeah interesting the minus 18 second lasers very interesting we not about femtosecond we talk about attosecond there's a reason so let me say let me just leave it there interesting yeah and okay are you're familiar with meta materials sir probably right I have some familiarity with that yes sir so but I I would rather not discuss that portion okay it has something to do with certain

(30:13) things so that's fine so let's go on to the next one then in terms of your patents uh this might be a question I don't know if you can answer or not but do you think that these patents are operable today what we know about technology see a lot of people have questioned on that and said how dare the USPTO Publishers they were not properly enabled because you know the all the ingredients are there yeah but you have you have to know what you're doing number one number two it is important to understand the nature of

(30:49) the materials the P electrics exactly how they operate for example what is the main difference between strontium titanate barium titanate what exactly is something called the most power effect anyway I mentioned it actually in a publication of mine one of the few papers I was able to actually publish in a journal but only because it was in the beginning of the journal and I think my my opinion is is that the chief editor needed papers more than anything and and he was taken aback by by the the what's what's the best the ambition

(31:30) of the idea let's let's P it was actually the high energy electromagnetic field generator that paper that I published I think it was the international Journal Journal of Space Science and Engineering yeah and trust me I tried to publish the Super Force paper at the same Journal thinking you know I publish the conditional possibility of spacecraft of space uh conditional possibility of spacecraft propulsion at superluminal speeds M and that high energy electromagnetic field generator in the same volume I think it

(32:03) was volume three of I think I think it was issue anyway it was um they were both published in the same volume one of them is a technical note the other is a full-fledged paper y

um a technical paper uh I try to publish the Super Force paper in the same Journal they they would not it's it's as if my name it is on some sort of a blacklist you know they mean oh salv toz no no no just I'm talking about sending papers and having rejections within a matter of 12 to 15 hours I wow that's interesting

(32:45) what I'm saying I don't know have you ever gotten the uh my results are changing quickly if I Google you right now is that gonna happen it's a bit of a badge of honor you know I I uh between you and I uh I have some friends back in New York City that how should I say they watch for my statistics one of them said dude one time I Googled your name and because he he watches he he actually has a statistical charart of he said that at one point in time my when you Google salvator you got over 300 Million

(33:15) results and all of a sudden it dropped to like seven million and then it went up he had no idea what was going on he said this is not possible what what are we talking about here I mean you have numbers higher than Andrew Tate but oh I I hope I didn't get anybody cancelled for from you I don't think so at least not in the sense you connected to Romania but anyway so uh I think I wanted to jump into the Super Force in your equation number one which you wanted to talk about because I read through your paper I looked through all

(33:50) the patents as well trying to do my best as a Layman to understand them and when I look at your super force uh you know especially with equation number one it basically says that if you look carefully at the mathematical structure of the plank Force you can realize that this is the Super Force it does not contain the  $H$  bar I've heard you say this namely the modified reduced plank constant therefore it can relate to Quantum phenomena exhibiting macroscopic classical Behavior namely a macroscopic Quantum phenomenon now when I look at

(34:17) that I think are we talking about a unification of quanta and macro and is that what you how you would argue your uh equations here absolutely absolutely sir equation one speaks to exactly what you're talking about and as a matter of fact page two of the it's just a three-page paper I mean anybody for goodness sake oh maybe that's why I got a 15h hour rejection because it was extremely fast but you know just that equation one yeah is so powerful because I will tell you what it says it actually says it's the

(34:49) Super Force that is the energy gradient at both the plank scale and the energy gradient at the Horizon scale which is when talk about observable universe how is that possible that the Super Force can be the energy gradient at the very lowest of scales signifying the lowest of our Realms the quantum realm and also the highest that we understand the observable universe not only that I believe because of the way it's fashioned for example if one day we were to find out that our universe doesn't have an observable

(35:26) radius say of like on the order of  $10$  to the  $27$  uh  $10$  to the  $27$  meters it has something on the order of  $10$  to the  $80$  meters or something of that nature that equation would give you how much mass is in that structure which would think what that means it means really we're living in some sort of a matrix Like A Spacetime geometric structure that can be altered yeah a construct

right construct a construct of some sorts which is I'm not going to talk to the simulation hypothesis because I think this is very real I I believe when I

(36:05) pinch myself it really hurts so so I Einstein said something far far far more subtle and far more um philosophical nature namely he believes the Moon is still there even though he's not looking absolutely that's a good argument yeah and I think that we can the spiritual stuff we can dig into potentially and then the follow interview because I think that that we probably are on the same wavelength there in terms of our beliefs on that and what the only thing I would say is that from my own personal perspective

(36:35) the more I dig into the science and dig around the science especially around this the more spiritual I actually become I thought it would be the opposite but it turns out that no I think that I have more of a spiritual understanding the more I dig into science which is very interesting and I want equation one from now on to be addressed that as the Super Force equation you know if if meaku can can say that his you know here has the god equation then you know I think my hubus level is far lower by saying it's mine

(37:03) is the Super Force equation okay it was your the way you explained it um I think I've heard you say before as well is the super force is acting on SpaceTime geometric structure at all points in space and time as well is that equivalent definition which means what it also speaks to quantum entanglement that means every point in in space and time is connected because of the existence of this Super Force yes it exists at 10 to Theus 35 M which is the plank length but still it oh one one more thing the Super Force equation

(37:33) speaks to which is when I realized that I said whoa whoa whoa oh my goodness um if you put in that equation okay so the superforce the equation for it is  $C$  to the power of four divided by Big  $G$  so it basically says speed of light to the fourth power divided by Big  $G$  and and um if you you put in um if you realize there's such a thing for example okay if it talks to an energy gradient at every scale because that's what equation one really says if it goes from the very smallest to the very highest maybe it goes for everything in between

(38:12) so I tried the mass of the proton yeah guess what the Super Force says okay I put in the mass so in um the Super Force being  $mc^2$  divided by that characteristic length I put the mass of the proton which is like 10 the minus 27 kilograms okay and guess what I get I get a a characteristic length on the order of what the short child radius for proton so the proton is treated by the Super Force as a black hole no wonder the proton takes so long to Decay if ever got it that is an amazing equation the Super Force equation will one day be

(38:53) known by physics everywhere I hope I you know and I do not mind if they rederive it they call it their own but at least you know somewhere in a footnote they say you know some crackpot called P thought of this too you know we're not gonna call you that I want to be respectful about that I know that you're sensitive as well about what people call you and I think that that's part of the Vindication that I want to go through with you as well is that I tell you sir I've been I've been I mean what we talk

(39:23) about blood tears sweat and misery of the mind and the Soul over this because the moment they called my work U and I understand may maybe I understand I'm not quite sure exactly what why the drive war zone called my papers the UFO patents the UFO Navy patterns the moment again it it became a symbol of ridicule and mainstream physicists would not even look at that because again symbol of derision and I understand why they changed the the terminology to you AP but you shouldn't I agree because we're

(39:59) talk about the history of so many people who were involved in the subject matter and for them and them alone we should leave that term as is my opinion the U and UFO should be unacknowledged I agree with you I the UFO thing as well and I also don't want to link your work to UFO because it's really just science it's not necessarily related to UFOs although there's obviously a connection there because from what people see it can describe that as well so you know that's why when we look at the description of my

(40:30) discussion with you it doesn't mention that at all because what we're digging into here is the science right we're digging into quanta and macro unification we're going to dig into superconductivity here in a minute as well and that's the stuff that I want to learn about the stuff that's not Fiction it's just science so one quick question one more thing about the second sorry about and I promised you not to interrupt again oh you're fine it's your show here sir no no no the this is your

(40:56) first interview so I should be a little more polite but this is my chance to to say certain things and who knows maybe I get a word from command sh and and I can't and this may be my last in who knows who knows anything can happen the **truth** is but as Andrew Tate once said I will never suicide myself yeah but anyway okay now now the the the the idea being of on the second uh page of that paper on the second page of that paper of the Super Force paper uh take a good look at the way that I prove that this is the force of unification there's a

(41:38) remarkable formalism very simple that the strong nuclear force divided by the electromagnetic force is one divided by the the defined structure constant U it's usually on the order of 1 divid 137 it's like 007 but anyway and it's very interesting that when you actually take the decimal of that 1 / by 137 and and do it in a calculator and you see what I'm talking about it's as if the numbers become a wave it's as if the numbers it's it's a vibration of so it's it's very strange just look at the way

(42:12) the numbers change and how it's trust to do one divided by 137 and you'll see what I'm talking about now um what's what's truly uh okay what was yeah so so using that idea I was able to show very simply that the strong nuclear force equals the gravitational force at the plank scale equals the Super Force so that the strongest of the forces that we know of the strong nuclear force which operates on the order of 10 to the minus 15 meters uh so one fentom meter and the gravitational force which is the highest

(42:53) that we know of hence the general relativity the Einstein field equations and so forth so those two scales are at the plank scale those two forces are equal and equal to the Super Force

hence the Super Force is the force of unification that makes a lot of and and you can actually find on that same page very simple with some rudimentary math something that I called in another paper conditional replacement technique and one can Google it and see what I'm talking about the the CR key some people called it at one point cathode ray tube

(43:30) I just don't anyway the conditional replacement technique if taken simple in that linear equation um you can actually show that in both the D and the Shing equations the Super Force exists because it's an energy gradient at the plank scale so do you believe then it's so it's so simple this is why I love it because I like simple mathematics that points to great physics yeah that idea of coupling the two amazes I understand that a lot of people are fascinated by ER equal epr and ads equal CFT and so forth and we can

(44:17) discuss this at one point of in time but I'm sorry Juan Mala we live in a de vacuum as Eric valinda once pointed out I'm pretty sure Juan will be very mad at me at this point in time but anyway Lenny saskin too but I have great respect by the way Lenny susin started out his thing as a plumber in Brooklyn ain't that some speaking of Joe the plumber yeah doesn't matter you start theoretical physicist oh I would love to have him on the comittee as well he he's one of these visual mathematicians he

(44:50) believes in Geometry that's a very interesting mind the way his mind works Lenny and he's like a at a certain age and yet I couldn't tell I mean the man is is is a giant it's a cerebral giant you know so age Advanced age doesn't mean a thing just like pedigree doesn't mean a thing why shouldn't the Joe the plum be able to even publish in archive because most likely if you can publish an archive maybe your paper will be seen in science nature uh physical review letters it'd be nice but anyway

(45:25) that's a dream all right so um I just for the viewers you know when we talk about unifying Quantum and macro I think I saw a question that was kind of helps uh for them to understand do you believe that faster and light communication is possible based on your equations that we talked about the Super Force um we have to be careful to to understand the nature of the medium okay within the same medium so in other words I I believe a medium speaks to a a given uh uh Light Speed most likely having to do the index of the of refraction of

(46:01) that particular medium and also couple with the speed of light in free space there's a very simple formula that you can see that's a ratio but anyway so in other words if we able to modify the medium it is quite possible that soall faster than the speed of light is is feasible but within that given medium no Einstein was correct it is a quote unquote physical barrier but only only presented by the nature of the medium that Medium can be tenderized you can tenderize it to the point a hole is formed if you putting

(46:39) enough energy density at that particular point in space and time cool so that I appreciate that answer I think that helps out with the viewers quite a bit and I think the next thing we want to jump into is super conductivity so can you define super conductivity for the audience and then in addition to that you talk about high energy densities can room temperature

superconductors achieve those densities and how so okay uh that second one I would rather not discuss okay for reasons that I've said before got it the first one

(47:12) it's in the theoretical realm oh speaking of which I would love I believe Leon Cooper is still alive and Stefan Alexander knows him I would love him on that ComEd too okay and we we're talk about the BCS theory of superconductivity yeah we're talking about one of the I I should not use the term Gods to describe men especially uh since hubris may be greatly involved so but he is one of the Giants of superconductivity and I believe he's still alive and also Brian Josephson yeah squid superc conducting

(47:46) Quantum interference devices oh my goodness the stuff that he can do with that but anyway uh uh I hope so people are watching so that they you know your name dropping a lot of people are really smart so yeah both Brian Joseph and Leon Cooper are more than welcome on that committee I I would love to hear oh my goodness they're such Giants but kid kid has to be there I mean this is a man this is the father of true semi in my opinion of of semiconductor technology but not only that he has such ideas for example even

(48:17) in gravitation but because he has the pedigree as an electrical engineer even as a professor at ctech that man is not being hurt properly by the community that supposedly he's not part of science should not have limits agreed sir so what's your definition of superc conductivity for the audience super conductivity well output an electrically charged super fluid could be a superconductor so the idea uh being that it's possible that we can actually slow photons in a superconductor interesting I've heard that that's interesting isn't

(48:54) it very interesting it it talks to the ability of medium now a superconduct itself is is really basically zero resistance as the electron flow goes through a certain Medium say a wire let's call it a wire for lack of a better term even though the way electricity actually moves along the wire rather than through it is very questionable but anyway I shall not go there because I'm already called the crack but I don't need so even though there was a very interesting uh podcast on on veritasium as as to that illusion

(49:30) that uh hey okay I'm I'm diverging I'm taking so many times so so the whole okay and there's one more thing that defines a superconductor that's the MERS effect that's the ability of of the of of the superconductor to actually I believe it actually forms a magnetic field of itself of its own some sort of Ed currents that actually form on the superconductor and something called the London penetration depth see a magnetic field will actually penetrate the superconductor interesting unlike I

(50:04) thought it worked around it see that's the beauty of it it actually goes to the London penetration that but what it does it forms Ed currents which talk to a magnetic field opposite that repels the magnetic field that's put upon the superconductor so yeah but there's a Landon penetration that and so and you can I actually I remember that I I I wrote a paper I think the room temperature the um the AI scitec uh speaks it was a presentation that was based on a paper that I wrote that I presented at a aiaa scitec 2019 and

(50:43) please make sure you post that because slides four to slide nine is extremely important I even in one slide actually solved the vacuum catastrophe you know the whole idea you know I'm looking at it right now that we get 120 orders of magnitude difference between the quantum realm and and how how how is that possible well it speaks to the idea that maybe we're not dealing with plank LMS here we're dealing with some space cells of a different dimension and terahertz frequencies ain't that some but anyway

(51:15) yeah that's as far as I go I should not say more than that so well I got more then it might Broach further Dr all of a sudden I you call me so the next one though is related I don't know if you can dig into this because I heard on The Theory of Everything podcast too you were mentioning that Bose Einstein condensates can allow for room temperature superc conductive effects is that something you can elaborate on um or is that also kind of pushing it too far that's more that's more the the um okay uh to understand how the room

(51:49) temperature superconductor that I'm talking about which is an active room see I believe believe that uh maybe one way to solve superconductivity at room temperature is not necessarily by material properties to actually find for example I k99 and so forth you know the whole idea of finding a specific material C barium strum type no maybe it has to do with a way that you can influence something that is already a superconductor at very low temperature but make it a superconductor at much higher temperature so raising the

(52:26) critical temperature and actually uh there's a great paper out there still on archive and one can Google it hopefully it's still on hopefully they haven't taken it down there's a lot of concerted effort to make my work look like pseudo science so so someone Google it fast before it goes it's written by Dr Victor LNO uh VI k t o r Lao or Victor with a C I'm not sure heard you Reference last name is LA k hn o LNO and he's from the Russian academ form of the Russian Academy of Sciences he uh he wrote a

(53:05) paper called um something the road or the way to High and um room temperature super conductivity something of that nature used to be on archive but in reference 10 he actually speaks to the idea that the way that I do it the way he believes that that my idea on the room temperature superconductor as possible is that what I'm really doing is forming a Bose Einstein condensate and then actually moving the condensate because of a certain vibration within that field because and you can actually read his paper and see the last

(53:43) paragraph and he references me it's the only actually the only um I believe the only paper out there you know in the academ quote unquote academic community that actually references that particular idea and I think uh he's got he's he's got quite an he's got a point somebody read that paper carefully it's the last page and he references my patent in reference 10 I believe still remember that he he actually wrote a book recently on high temperature super conductivity as well but anyway I digress sorry so no you're

(54:22) fine because that's actually I think you just said the last thing the next thing I was going to say which is I heard you say that uh in a previous interview that extremely low temperatures

can create the Bose Einstein condensate which can allow uh things to move as one the electrons potentially if I'm saying that correctly um and that they might even talk about yeah go ahead is macroscopic quantum coherence the idea that is possible under certain conditions for example what's a superconductor a superconductor is really in the words of

(54:49) Phil Anderson the idea of emergence now Phil Anderson Nobel Prize w a great mind he um God I believe he's he's deceased but uh he um at one point he was talking I forget exactly how he tackled that problem anyway I digress that's fine look into the work of Phil Anderson and his idea of emergence and how he links it to something called macroscopic Quantum coherence how how how um a physical object of classical size can behave as a Quantum entity under certain conditions what's the difference that macroscopic

(55:34) Quantum decoherence as opposed to coherence decoherence exactly decoherent that that is the some people think for example the gravitational field could be a decoherence method by which something that should res or should have a quantum mechanical actually it was Roger Penrose that mentioned that but anyway um um the whole idea is decoherence uh it it's it's one as a matter of fact look into slides 4 to9 it's in there look into slides four uh 4 to9 in in my aiaa um uh scitec 2019 presentation it's in there it descri

(56:14) microscopic Quantum coherence to a T and as a matter of fact if you have it up read what I what I write in that particular slide like read the whole thing it's it's uh uh I still remember being in that room I actually got a standing ovation for that slide they were absolutely I mean people was we I I felt so good being able to to to talk to my peers and and getting some feedback that was not so negative in nature so read it do you know who presented before me in that same room Robert Zubin we actually met we that great guy

(57:01) too but okay you go ahead and read that please yeah because I actually I think I quoted this when I was posting these slides on Twitter because there were so many slides I had to break them up into fours and part of it was saying that this is this is a vacuum that has undergone macroscopic Quantum coherence locally around the craft as a result the craft experiences suction into the conditioned vacuum um another part of it says that this may be the very condition to achieve a state of macros opic Quantum coherence the idea idea being

(57:28) that we never leave the system uh let the system achieve thermodynamic equilibrium by constantly delaying the onset of relaxation to the equilibrium hence the production of Maximum entropy is delayed the system May violently react by Genera anomalous emergent phenomena such as but not limited to inertial mass reduction which we're going to talk about here in a minute I think and this speaks to what I call the Progene effect this is the work of Ilia pin you can say in a way that the P effect is the engineering of the pin

(58:00) effect what I call the pin effect his Nobel Prize I believe 1973 if I'm not wrong I remember that the his Nobel Prize a lecture paper being written I think December 73 but anyway uh he also wrote a book called order from chaos very or out of chaos very interesting uh he was I believe chemistry but Ilia progin was an incredible mind and he basically his his idea

was The Ordering of what he called dissipated structures that order that chaos can be ordered under certain conditions the idea being you're dealing

(58:45) with a nonlinear medium for example of plasma you drive it far from equilibrium hence accelerated vibration or an accelerated speed Spin and then you have a constant electromagnetic energy going through it like a flux of some kind and and uh you able to uh get these dissipated structures I think he used the example or Bard something called Berard cells Berard I'm not it's it's French uh I I should know better since I took so many but I believe it's Berard the whole idea is for example in on on a thin plate um if you have a

(59:26) layer of oil very thin um and you hit the plate from underneath a metal plate so you need conductivity there to make sure you know if it's a dielectric this thing will never get H so so the the whole idea is they form these in in time they form hexagonal cells hence something that EV that begins chaotic the movement becomes ordered yeah and he used that in his December 19 an in incredible I I suggest everybody go and try to find the um Nobel Prize lecture by Ilia PRI I believe it was 1973 um something about time fluctuation

(1:00:10) structure anyway very interesting paper yeah you very um I think this may be similar and let me know if it is or not but I think you mentioned um driving the plasma from equilibrium that will begin to self-organize and that the electrons will begin to move and lock Stu in one giant matter wave as well comments on that yes I actually used the phrase that another great uh used volan k i i i absolutely like love Professor K the the only one to reply kindly to my emails like he you know even though he would not support my paper and archive he he

(1:00:47) gave some very good reasons for it and you I mean I'm I'm 100% sure that if I would have kept you know nudging him stuff event he's that kind of person I I truly see people like that people like that should get Nobel prizes not people that deride others and make fun of them call them cranks and crackpots please come on I've had similar experiences with Academia and the ones I I'm with you are the ones that people that are willing to talk to anyone right not regardless of what their pedigree is

(1:01:17) that's Professor K people that humble themselves people that don't consider themselves to be soothsayers so those are got his no price for BC by the way yeah he showed it I think by combination of something called evaporative cooling and Laser cooling you can actually cool atoms with lasers ain't that cool that's really cool there's a lot of stuff you can do with lasers so especially with plasmas but anyway I digress I'm gon I'm gonna press you on this next one then so is it fusible to work with uh

(1:01:48) electrically charge solids then I know we've talked about a lot about plasmas but what about solids in general any theories there hypothetically speaking it's possible under certain conditions but you need electric charges on the order of kums and um it's not easy you can use patrons and something all the patrons are a modern version of of something called a vandag graph generator so you can actually get high charges on on on a particular um uh metallic substrate but it's it's it's not simple and it's not easy to keep

(1:02:23) that charge from disar in to the medium you sometimes you need High pressures it's it's how should I say it's complicated so I I prefer simple things and I think the best way to do this is with plasmas now now I'm not saying that plasmas are easy to subdue as a matter of fact they're a very interesting animal I sometimes think plasmas have consciousness of their own but I digress um uh yeah okay they have like almost like a double layer you have to study what the Hans alane thought of plasma

(1:02:59) it's very interesting there's another great um Anthony parat the whole idea is that our universe is more than 99.99% plasma yeah so okay and hence the busard Ramjet the whole but then anyway I I'm digressing on so many levels okay go ahead I'm sure that the people who are being quoted and referenc will appreciate all of the shout outs that you're given them uh so that's why I don't want to slow you down at all so I mean and next the next thing kind of feeds into what we were talking about

(1:03:28) with your slides which is and as much as you can speak to it how does inertial mass reduction work and what does it mean for the capabilities of both technology and propulsion in general um it works the way that I expressed it in in my public domain got it papers yeah uh what I can speak to even on an experimental level is for example the one thing in my opinion is most important most important is to create these holes and space that's why when you when you show I you know I wanted to make sure that the person that I have

(1:04:10) the interview with was actually you I look this is my confessional so I actually went to a podcast called the confessionals I think merco Media or something really good a tremendous a really good dude too that dude yeah he's a good guy but anyway very very nice guy uh and and uh um by the way you you come across oh man you come across really good in that podcast bra people should check it out by the way anyway go ahead when I saw when I saw what those orbs did the local of points the locus of points that they

(1:04:44) formed and the moment I actually I actually slowed down and started because I actually saw one of them actually couple of went in front of of the nose of the aircraft and this thing was we're almost free four so we're talking about very high speeds and I kept on thinking they're trying to form a Locus like almost like a spherical bubble around the aircraft and then I thought more and more I said oh my God they're actually what these three orbs are doing they're depositing energy at a particular even though it goes with a

(1:05:20) spacecraft still I think they're moving fast enough to have a local locus of points that you can say it's like a spherical bubble that deposits more and more energy within that particular um section of SpaceTime to create this breaking of the schwingl and and if you do that you create a hole in SpaceTime and when I saw what I saw I didn't anticipate when I saw that thing the the the the the hole it formed and then I almost saw like a RI ring that formed around the hall it was like a a refraction of of the of the super fluid

(1:06:00) nature of I said oh my God this is the P effect I you and then I had to pull myself down say they would never believe that most likely you know Ashton will have to go for absolute hell

to prove that this is not you know oh my goodness well we're going through it sir we're going throughway slowing down I wish you the absolute best luck in this because this is the best the best experimental proof that the quote unquote P effect is real so we'll have to have a followup then for sure where we take a look at

(1:06:35) the videos together and go through it I think the audience would absolutely love that for today though I just want to stay focused on the science just because you know I think we want to vindicate you and your science here and I think we've done a great job so far of explaining how it can be practical and real right as opposed to the detractors who want to dismiss it um now if you have this inertial Mass reduction craft uh do you know what would that look like to The Observer as they're watching that

(1:06:59) move and would they produce a field or how does that work yeah have you ever seen Star Wars oh yeah I can see your shirt by the way but which the the X-Wing oh I pred myself all the way part of the resistance baby you know anyway the the rebel alliance but I've always been truly a rebel at heart but H is it going to look like the hyperspace jump that they made that on live stre sorry anyway no no no I meant anyway nothing wrong with being a slave no I'm kidding but anyway well as long as our existence depends on others

(1:07:38) we are all slaves whether we say so or not it's a whole different thing but anyway let's call ourselves Rebels got it while we still we're the Rebel Alliance right now yes sir absolutely okay now um do you remember how the um I think they were called what were they call the the the Imperial Cruisers humongous yeah do you remember how all of a sudden they would just vanish as if a hole was formed into that's exactly what happens with that triangular structure that I represent in the back that's that's how I Envision it

(1:08:14) and that's why when I saw what I saw in that video I said oh my God but it's very interesting uh and you're 100% right they had to be autonomous and the I'm I'm I'm 100% sure these were some sort of collision of voiding software that I all I remember is that like inside the orb because you also showed the thermographs it there was some sort of a propulsion plan some sort of a power plan there difference yeah there was something going on in the middle of that or but anyway yeah I digress sorry about

(1:08:53) that no yeah but that's what would happen yeah people are loving it I can already tell so okay so it would look potentially like that hyperspace jump I think that's really cool um you actually just answer one of my other questions which was coming up which was you know do you think that these crafts could be uh there would have to be somebody inside them or could they be remote controlled you know I think that's an interesting question right with respect to your you know yeah go ahead my opinion both both would be possible I

(1:09:21) think you can make this I think you can make make it into an Interstellar travel uh that's cool I think I think you can do both but I think it's far easier to do the first of all the the loss of human life nobody wants to deal with that goodness gracious so so much sometimes so much better to have these autonomous artificial intelligent agents again this means if it's true

what we saw that means that AI is not a new thing at all but anyway 10 years ago almost right digress I digress way too much oh I I have another theory on

(1:10:04) something I call the triarchy of sension eventually we'll talk about it it's very interesting has to do with artificial intelligence for example in my opinion you can test whether something has become a artificial general intelligence by basically seeing if it can generate given say textbook data so we're not talking about stuff that just pulled from the internet but stuff that's pulled from physics manuals something that's been experimentally proven so using textbook data given a certain computational power level I

(1:10:37) believe as long as the AI the AI agent can generate an original concept it becomes AI That's thinking of GP G yeah go ahead super intelligence is not very far off so I anyway I'm not I'm digressing on so many levels but I another thing for example the Super Force speaks to a super density and eventually I'll talk on that too something called so Super Force super bang because of the super density and super intelligence again I call it the triarchy of creation ah you know after all I'm a crackpot right so

(1:11:18) since my huus level has been you know inflated to the max why not break the shwing a I'm kid why not just change the whole world because that's what I think we're do here sir that's what I think we're looking at um if you can prove if you can prove that that video is for Ashton that is a Nobel Prize brother I if I if I was the Stockholm Community I'd freaking immediately give you a Nobel Prize in imagery or something or I don't know like creative thinking I'll just take a PO you know I don't need the

(1:11:50) Nobel Prize but yeah that's only if uh you know like you a priz I also have to say at this point that I would never hurt myself and uh yeah I'm never going to do anything like that either just want to make sure that that's on the record here uh just kidding yes yes neither Ashton nor I would ever suicide ourself thank you never never any circumstances um so also I just want to dig into a little bit kind of what you just mentioned which kind of digs into the stuff we were talking about is in your uh patents

(1:12:20) you talk about nonlinear medium using a plasma reson inside a cavity uh related to microwaves and then you also say that you can convert high frequency uh electromagnetic waves into gravitational waves can you speak to that at all that has to do with another paper I put out on I think a society of Automotive Engineers remind me to send you that paper I I also have I think yeah like starts with 204 Z that Pap but anyway it it was published in the it's it's it's a paper that was needed to to get uh the patent

(1:12:58) um that was incredible though that that office action was a first I mean they actually approved it as a first the high high frequency gravitation wave generator it could be because uh prior to this they were shown to be I mean we're talk about the genius of Kip Thorn here you know and and and very bearish and Lio for goodness sake I mean you know the experimental and theoretical Kon of course just like Penrose got it for black holes but anyway and and and by the way sir Roger Penrose or you should be called lord in my opinion so Lord

(1:13:36) Penrose if you're ever watching this there are no such thing as SpaceTime singularities I'm sorry I disagree with you we can have an argument on it I think uh ABA ashar is correct as in there's a Quantum bounds so in other words it never goes to zero it goes goes to something on the order of the plank density which talks to the super density but anyway that's a whole different ball game we'll talk about the super density one day because it talks to the super bang not the big bang the super bang all

(1:14:08) right all right sir yeah so I've got a few more questions that are kind of similar to stuff we've talked about I don't know if some of it's going back um you know and I think I've heard something on your Theory of Everything podcast where you talked about there being a thin insulator regarding your inertial mass reduction craft does this actually have to be a physical element or can this be something that can be produced by a field of some sort as well what are your thoughts on that a very

(1:14:32) good question sir I'll leave it there I love it that's I love when I get that answer honestly because uh the same reason why I send in Freedom of Information Act requests like I don't care what the answer is because no matter what the answer is I glean information off of it uh as an investigator um now I guess the next part two is kind of related to what we were just talking about with uh you know not to go into the the videos that we were talking about but the effect the what we see there in the videos is uh

(1:14:59) you mentioned I think with the pairing up of electrons causing potentially a suction effect or potentially creating a void that may create the suction effect a void within the vacuum so it's exactly what you see it's almost like a black hole Yeah is it a black hole I guess that's my question see oh my goodness I um does it matter like how you define black I have a feeling between you and I I have a feeling that every black hole for every black hole there's a white hole so I so in other words it's kind of like a

(1:15:29) wormhole kind of so you have the ability to actually transport from one point to another for so for example going from point A to point C without actually going through point B yeah I think we don't really understand what the quantum vacuum is all about and I have a feeling there there's so much more to physics that I think with still in our infancy we think we almost know it all oh no I agree I think physics it's almost I would say three maybe four months old that's a long time till this thing

(1:16:07) becomes an adult basically I think JFK mentions that too is that the greater our knowledge increases the greater our ignorance unfolds and I look back at that and I think that we think we're so Advanced but we are still potentially cavemen compared to where we could possibly be is my View and it's funny you bring up the black hole white hole situation that's always something I've wondered about too because what we see in physics is symmetry A lot right the idea if you must have an entrance why

(1:16:34) not an exit interesting yeah and so uh when you're generating this void in the space time continuum which I believe you argue with these certain energy densities getting to that um

would this potentially energize particles outside of the Void do you think or any thoughts and theories on what might happen there and do you think it would at least look like a black hole I I I mean I could speculate I can give you my speculation yeah please I think it would be a whole local phenomena I have a feeling almost nothing uh maybe

(1:17:10) something that um uh I'm not sure whether for example the clouds because you mentioned there were clouds like where those clouds in any way could you see the move in in any way only slight I'm not sure I have a feeling that the the effect would be highly local interesting and it's it's as if a portal is open within a fabric of some sorts but somehow this fabric has the ability to recal almost spontaneously it's weird again the whole idea is that once you remove this energy density this thing just comes back and

(1:17:56) that's why super intelligence I truly believe what we're dealing with the inner the universe is a sentient it's a sentient being and and I tell you we better be careful what we do with our planet because you know what antibodies are yeah they fight back right against anything that it doesn't want things right yeah well that that makes me think about some other theories that I wouldn't mind talking with you on another podcast as well which is into more of the you know what are the implications of you know this advanced

(1:18:30) technology where it came from and what it would mean for you know lots of other philosophical uh approaches but we can save that for another time that's another thing physics and philosophy must be bridged again we must marry these two agreed the divorce that went between physics and philosophy should have never been allowed I believe physics has so much to uh to gain from rearing philosophy and I think Carlo Rovelli others like him Lee Smolin oh man that's a physicist I would love him in the committee both of them

(1:19:10) but I think Lee Smolin has taken a Canadian citizenship and you know there's this so in other words the people that would be in this committee would have to be United States citizens due to certain things out yeah out say you know and I'm pretty sure the comedy would be unfortunately I would love to have it televised but I have a feeling you know my betters my superiors would not you know would agree maybe to a skip conference rather than anyway yeah I'm not gonna go there well that's I'm glad

(1:19:39) I don't have any needs I don't have to worry about those types of things but I understand the the prickly situation that you might be in sir so again I just appreciate that you're you know able to talk freely about this type of stuff and yeah you know you can out it's just that I was super Furious when when I saw the the changes they did to the Wikipedia page I mean for goodness they pseudo science that's like you know H vomiting in my face and then spitting on it too you know I mean what else you

(1:20:08) gotta take a and I'm excuse my language oh you're fine you know I grew up in not children a tapestry of obscenity Second To None yeah but anyway yeah so I have only a couple other questions I was thinking maybe we open it up to some uh live chat questions if I see some out there so um one last thing that I've been curious about which is uh and it kind of goes

into the UAP phenomenon and but it's definitely related to your scientific approach is do you think this craft or your craft that you have kind

(1:20:41) of uh patented can go through solid matter or are there limitations to it what what is your thoughts on that cuz I know that we they talk about multitrans like different being able go through different mediums right water air space but what about solid Mass right um let me just say there are no impossibilities just conditional possibilities under certain conditions everything and anything is possible the trick and this is where it all comes is how to engineer those conditions interesting so in a way I've answered your question in a way I

(1:21:31) haven't but I'll leave it at that I think a you know one of my favorite characters in in and in and shows uh it wasn't it wasn't the American version of House of Cards it was the British version uh his name was Francis erard Fu it's pretty interesting how the initials go and to say you may possibly say so I could not possibly comment I don't know but that thing stuck in my mind that show was great at least I watched the American version until the last seasons unfortunately you know yeah don't mention the name or

(1:22:08) you'll get the get this yeah I don't want to get us removed here um it's a total it's a total loss though because oh my God great Remember The Usual Suspects what what I mean whoa and great movie so um one thing I want to ask or say as well this is just kind of a general statement I have before we J into questions is that you know if your daughter's watching I want her to know that you are a great man and all the anyone who says negative stuff about you they can come talk to me because that's

(1:22:39) nonsense you you know just for you your dad is an amazing person he's going to be a historic figure potentially potentially even the history books so ignore all the nonsense that the haters would say they don't mean anything they don't even matter honestly and that's the way you deal with them is you don't let it get to you so that's all I wanted to say to her if she's watching God bless you sir God bless you for that thank you very much for saying this yeah she she she tried she she she tried so

(1:23:06) hard one time I found her crying and she was reading so I'm I said please oh my God redit of all things I mean you don't read that stuff you know but anyway yeah she she is a she's gonna be 12 soon enough but still you know she she's a sensitive get I wish she took it more from her mother but uh yeah you know she she took it from me unfortunately okay so yeah she's a great kid thank you for that God bless you sir if you have any children same goes to yours appreciate it appreciate it I don't but I

(1:23:39) appreciate that anyway I'm sure my family will be happy to know that you are able to prove this you will definitely get a prize to me it's just about **truth** you know let us let us reiterate neither Ashton Forbes nor Salvador P would ever suicide ourselves thank you 100% And yeah for me it's about the same name as my podcast hard **truths** right these are hard **truths** that are hard for people to accept uh but they are true and we still have to look even though we don't want to accept it we have to look so I've got

(1:24:10) a couple questions from the audience here uh if you're ready to go I don't um one of the first ones here is they want to ask you about the relationship between Pious effect and exotic vacuum objects apparently they go by a number of different variety of names are you familiar with those and can you speak that yes yes that's a very interesting uh the the whole idea of U super cavitation the whole idea of son luminescence and uh what was the name of that gentleman I remember reading some papers on him he was he he was quite a

(1:24:42) quite an engineer I shame on me for for not remembering the the the evos if they can put that in the in in the in the live that'd be great you know so you can uh but anyway um I'm not quite sure if there's similarities I think mine is a more general form of it mine is really the engineering of the Progene effect that's what it did I I think that's the best way to say it it it really deals with taking things far from equilibrium and and again the whole idea of Rapid acceleration transi and the

(1:25:17) whole idea that you don't that you don't have the the time differential of your acceleration is non zero that's very important and don't forget equation seven please do not forget equation s in the i e TPS paper that the plasma compression Fusion device it speaks to something very interesting an energy Runway that that um uh an exponential increase with time and accelerating vibrational frequency read be very careful when you look at that equation that that that says a lot of things so I hope I answered some of

(1:26:01) that um yeah I I hope I but definitely God what was his name now it really drives me crazy he he quite a character an incredible incredible mind he also went for hell uh I'll put it on the screen here for people to see for a second shame on me shame on me for for forgetting that man's name they're really God so there's the answer for that oh no problem so somebody else had another question which they wanted to ask about your thoughts on eer equals e uh what did your thought on that Einstein Rosen

(1:26:38) the Einstein Rosen Bridge equals Einstein Podolski Rosen the whole idea the quantum ENT entanglement really speaks to this bridge between these two particles but think what particles are the Super Force says that the pro proton can act as a black hole so if so why not the electron maybe the electron is also a black hole maybe all particles act as black holes and as a as a matter of fact maybe that's why we see these uh quote unquote particles not disintegrating for example the proton the Decay time is on

(1:27:11) the order of 10 to the 34 I don't know exactly the the unit of measure but even seconds would be horrendously large so so uh but most likely the proton will not Decay unless you do something again I'm am not sure exactly how the Super Force speaks speaks to for example the hix field I think for example the hix field speaks of a different scale I think the Super Force is so fundamental it exists at the plank scale It actually drives everything put it this way it is the force to rule them all yeah one force to

(1:27:49) rule them all one force to find them one force to bring them all and in the darkness find them and it's interesting they talk about Dark Energy maybe that's what the darkness refers

to but anyway okay that's interesting yeah some other stuff let's see what people have well people wanted to First say that we love you back you know so everybody's a big fan of you in the chat right now just let you know they're great people people want to know what gives you hope for a better world I think that's an

(1:28:16) interesting philosophical question um what gives you hope for that world I I you know I was I I I had to turn the uh TV off in in the morning I I was I was hoping for some better news and again physics and politics should not mix so I I I am totally apolitical consider me to I'm okay but I will say this and listen carefully and I will say this in both Romanian and **Russian** and now I will say what I have to [Music] sayi different languages different

(1:29:19) religions yet signifying all is one one is all unless we come together we shall fall apart unification yeah that's what all these languages speak to the one **truth** and you know what that **truth** is why can't we just come together this is the only way we have a chance a unification of civilization will give us the ability ability to go to the Stars otherwise that chance will never come yeah not the way not the the path we on that's all I have to say awesome I think they also figured out who the doctor was Doctor Ken shoulders I think

(1:30:09) is the potential name think Chad had it was on top of it for you what a great oh my God remarkable yes remarkable mind as a matter of fact you know this whole idea of U the negative energy then you know the whole idea of the formation of the hall for which this thing is sucked yeah that's that's the science of someone called I God I forget he used to go by the name David froing but I believe his name was Herman Herman David froing I think David was his middle name but David Froning Dr Froning University

(1:30:43) of Adelaide I believe Australia very interesting man you have to look I think in one of my papers I actually cite him and I I I regarded him along with people like uh John brandenberg uh uh Paul Murat he he he recently passed from cancer the these were great great people these are great people some of them are still alive but I believe Dr proning and um and um and Mr mad are no longer with us uh Mr brandenberg thank goodness is still with us he's he is a good man he is a good he should be listened to tremendously his gem Theory g m gravito

(1:31:23) Electro grav electromagnetic Theory Gem Gem should be looked into absolutely it's fascinating and he also talks to the pointing Vector me he he was able to actually um um show the the the the mass of the hick particle that's huge because we really talking to the Hig field there's not that's why the whole idea of the God particle please there no suching as particles the fluctuations in fields what exists is the but anyway again digressing sorry next question you're fine no I think we're we're drying up

(1:32:01) but I have a question for you as well which is um another physicist that I've been talking to has a theory called dilation Theory and um I think that the way he would describe is that time is a fluid Symmetry and that you can essentially take gravity out of the equation and there another way to simplify the mathematics I think similar to what you do achieves the same perhaps inclusion but goes about doing it a slightly different way um and the reason why I liked

his theories in general I'm just curious your thoughts on them is

(1:32:30) that you know the idea is the less Mass the faster things the faster time flows The more mass the slower time flows time is incredible it's pretty cool right time dilation time I wish I I think of time as some sort of energy field I wish I understood more for example gravity responds to time why and and it again we're talking about physical time here we're not talking about the time as we understand measured by clocks because remember clocks themselves are made out of what atoms and atoms respond

(1:33:03) to the quantum vacuum and the manipulation thereof so you have to be very careful by saying oh there's no such thing as physical time you know uh today is equal tomorrow please I don't think we really understand time what it really means yeah and since we don't understand time how can you say understand space time the unification of right yeah so so we have to be careful to to to that's why I'm saying we are only in the infancy of physics maybe two three year month old compared to what other any yes definitely not an

(1:33:43) octogenarian yeah yeah so I want to go ahead thank you here I'll let you go ahead and say you have last words I want to let you kind of say whatever you want to say can be you know anything that's to your mind I just want to say one thing and one thing I hope we have other interviews I I truly I I respect you sir I respect you 100% And I honor your your uh your investigative uh approach your research and your ability not to give up that's what it's all about no matter how much crap how much feel matter they frud

(1:34:16) you just every now and then deflect uh you know yeah smells what can you do keep on going achieve that objective and trust me Ashton if you're able to prove this wow yeah and again stating this for the audience neither Ashton Forbes nor salor would ever suicide ourselves thank you never right um I did have one last question too which I hope because you work for space force now is that is that correct uh or with them uh I since I mean uh we have people I sir to to me uh too much I don't I I can stand lies lies

(1:35:03) to me you know like this whole idea that lies layers of Lies upon lies becoming accepted truths for God's sake it's just it's just an an a total anema like like sacrilege to me so I'm not going to lie no I don't work for the space force right now I I work for the United States made got it okay but I'll leave it at that okay yeah no problem well in that case then I yeah I would just close out and say you know this was the hard truth podcast number one this is a a big one I mean I respect you more than you respect

(1:35:33) me as much as you might think that we each have our own frame of reference and perhaps it's a you know Balancing Act but you're one of my favorite people on the planet I've been talking with you offline as well um and you know I want nothing more than to vindicate you and your science that you've put out there um and you know I want you to stay strong as as well because I know that you have been getting attacked and hopefully this podcast went to some degree to you know have people take you seriously which they should absolutely

(1:36:02) anyone who I need a committee I need a committee of Highly credible highly accredited scientists Nobel Prize winners we talk about Lee Molen we talk about Seth Lloyd we talk about um Brian Keating we're talking about uh even Eric Weinstein yeah I mean why not even though he's not of the so-called correct physics pedigree his idea of geometric Unity is quite interesting even though some papers uh were written against it please you know everybody should have some say but again give me a committee of Highly credible people and in one

(1:36:38) hour I promise you one hour I can prove to them that I at least know what I'm talking about at least that I'm correct and at least partially correct and if not sir I promise is never to do a podcast again never to even like publish one more paper that'd be oh no it make sure that you're successful which between you and I between you and I it's not happening anyway so it's like I'm getting I'm I'm getting so many rejections I just stopped you know like now I just go for preprints because

(1:37:11) in my opinion it's almost as good as you know as long as the server survives and you're able to that's why I asked you please show that paper everyone you know just send it out because it's like a domino effect even if the service get shut down somebody will have that paper and somebody was say damn this crack pot wasn't such a crack pot after all but anyway so do you want to plug anything as well that was a good somebody brought that up anything you want to plug you have a Twitter do you have any place

(1:37:41) where people can find no no sir I'm I'm totally off social media oh my goodness are you kidding me and not that again that that thing of the I think between you and I having social media is conducive to that s thing that weely anyway so yeah yeah no no no no no absolutely not so um I just want to say please also go on Kurt J mongal theories of everything that was a great podcast please also go to Tim Ventura interviews also Project Unity Jay Anderson oh incredible dude and don't forget Jeremy riss alien scientist I'm in very

(1:38:20) interesting and that group people that those two dudes Jeremiah the engineer and Michael Peron he did a thing with Tim ventur on lk99 watch whoa that yeah he's a real material scientist yeah I was watching that and closely so yeah um s's going to be on the alien podcast or the alien scientist uh um stream next week so guys check that out for sure I'm sure it'll be a great followup to what we've been doing here as well I just want to thank you one more last time s I couldn't be more appreciative and we can chat for a few

(1:38:54) minutes offline here but thank you very much chat and everybody who's on here today uh everyone who's there on the podcast this was uh the very first inaugural of the hard **truth** podcast have a great day everybody

<https://www.youtube.com/watch?v=T9ITvA9Zhpc>

Transcript:

(00:14) okay okay I think we're back if you guys can see sorry about that screwed something up had to fix it okay starting over here see what else we got here okay sorry about that had to fix some settings so I had to re restart the the stream um what so interestingly enough this is too loud again I might just turn this the music off for now there's like no low setting it's like the lowest possible we'll try this if it's too nois if the sound's too bad for the music let me know I'm going to get rid of

(01:17) it um interestingly enough one thing he said was about he got he did it and gave it to the Navy and there was no royalties involved just seemed really odd his thought was oh well the Navy can sell it for cheaper but it's like uh I don't know I don't trust the the government anymore that trust private corporations um Cornell one L's or two I don't know

(02:36) I don't know if we need this question anymore think we need that one it's kind of a good one what kind of materials that's a good one so we're going to ask about that meta materials definitely um [Music] we'll definitely ask about met materials I just want to figure out where this

(03:38) goes I think it probably goes down here I think I actually had something my notes about asking about that he also said he had a quote that I liked a lot great physicists must be great philosophers I like that quote a lot because science is the study of observable reality here's another one here we're really going to be mostly digging into the nural mass reduction one that's the one I want to talk about the most with him today uh maybe I can pull those up as

(04:41) well I have them on my Twitter right J Philly got a picture already oh yeah that's not bad I mean it's we're getting there yeah we're trying to get a thumbnail setup while we're doing this as well the one I made is pretty janky you know I'm not an artist let's see where are my other questions so we asked about the vacuum State see what else we

(05:46) got I got a lot of stuff here I'm just going to paste these down here so I don't have to keep looking back and forth give me one second guys oh wait no I think this is we we talk about the Cornell part above so we can we're good with that okay we would definitely want that we can delete these

(06:51) messages save this so we're going to basically start with a little introduction action after we do our introduction we're going to talk about the scientific papers and then I want to talk about I'm going to we're going to **debunk** the patent thing as well okay we're going to do it right about probably here um heart

(08:05) probably change this we'll see we're going it's going to kind of flow naturally this is going to be kind of just notes biological effects I mean yeah I'm doing live stream with salvator pi later

today uh so what he'll say if I ask about biological effects is he'll just say that the f around it is going to make it so that the person inside the cavity would not be affected I have a better question which is does somebody even have to be inside or can be can it be remote controlled where is that question I

(08:40) don't know we'll put it down here [Music] somewhere [Music] [Music] yeah no but that's a good thought though in terms of I've thought about the same stuff you guys have thought about the way we have to ask we have to be very koi about it so he said some pretty interesting things

(09:45) too let's see Navy to space force we got that one I'm trying to delete some of these messages about the patents being operable I don't really care who he's working for we did those patents he in toe podcast he mentioned that um sometimes things are hidden in plain sight he actually referenced Ross Kart's book several times um I don't know if I really need to dig into that I think we asked about what it would look like to the obser I think we already have enough questions to go over an hour where is the stuff about the

(10:48) Observer do I don't have that in here here it is okay I got that part in there as well he mentions about new ways of looking at Old physics we could probably put that in here I kind of like having this just be like a run-on continuation from Kurt's toe podcast Kurt is super smart holy [REDACTED] I mean when he talks about quantum gravity my man is on another level okay so he talks about generating a void in the SpaceTime Continuum I want to ask if that would look like a black hole we going to ask that probably down

(11:57) here oh I got some pretty Co questions for him here did I asked this already to have up here let see like this one what's the inspiration for your work cuz he's an engineer not a physicist so huh kind of interesting right he's writing physics papers for some reason oh you guys are going to love my one of my questions too it's probably uh probably a little koi here

(13:13) you like that one what do you guys think about that question [Music] this is one I'm not going to ask but when I look at those patents I don't get the impression that this came naturally to him I get the impression that he saw something [Music] [Music]

(14:23) right I want to be super KO on some of this stuff God I hope I don't get my my YouTube struck down from this okay we're working through the list here Hello Cheers Karen I think Karen I don't know I'm suck at pronouncing names yeah we're this be a lot to talk about more than I thought

(15:55) [Music] am probably going to move the super conductivity stuff down move down here going talk about super conductivity said some pretty interesting things on this toe podcast guys if you're following here on the questions I'm posting should be getting pretty interesting

(17:11) so think of the craft as being sucked into the void sucked between the voids of the vacuum our interview is going to be good okay let's see if we got any questions uh um yeah it's

gas is not going to be uh you guys are confusing me

(18:18) here oh yeah CN is believing you're right I said didn't mean in um yeah I mean that that's uh these are just notes the gas part is an interesting part when he answered it he basically said he wasn't a spy when that he asked about solid state stuff so I mean I'm an investigator I'm somebody who can tell when people are being honest or not so I have a really really good idea of what is being held back um I'm not sure I'm going to ask this but interview with salvator Pas in a

(19:25) little bit um let's see what else we got here guys he jml if you check out Theory of Everything he already kind of asked that he was asked if he had ever seen a UFO and he said no which I think he's being a little KO with his response there as well so that's why we're going to ask if we if he thinks these are operable cuz that's basically the same question yeah there's some stuff we're going to ask about the trails as as well basically he describes it as a pulse looking for my notes he says when the electrons couple

(20:09) within one another that allows them to move smoothly oops God neck hurts today um couldn't say how they accelerate the frequencies I don't know what that means though oh here it is here's the answer to that person with the lines okay so propulsion where's the propulsion part I'm probably butchering this I better double check the spelling on this bad boy here G swier effect I don't know how you spelled gers swinger effect someone tell me how to spell gers

(21:20) swinger I got no idea no idea 27 concurrent viewers nice okay let's see what else we got here you said something about a thin insulator so that's where the meta materials comes in where did I put my met materials [Music] thing so the meta materials thing is basically that you produce the meta material this is where ufology comes into play the Bismuth zinc magnesium composite that they've created that's what this is

(22:22) doing is essentially it allows for the electrical flow but it basically stops it when it hits the insulin later and that's how you can create the shell uh around your object pretty interesting if you drive the plasmas from equilibrium they will self-organize I thought that was very interesting as well up in the Super conductivity Parts here where's that part about the microwaves [Music] nonliner medium is the plasma resonating inside a cavity because of the microwave got probably to reorganize some of these thoughts here make sure

(23:23) they're legit in the right order that's H more than half of what I had I mean this is this is a lot [Music] already he said the void would be like a black hole where was the void okay we already got that only a few more questions that I

(24:27) haven't throw on here yet we already asked about whether or it's operable I don't really need that he said he wasn't familiar with any craft using the pious effect today he probably want us to uh explain the pi effect as [Music] well he said it is feasible to work with electrically charged solids that's very interesting this part's really really interesting copy this we probably need to do the super Force

(25:36) first oh here it is so I don't know what SE I don't know sequence to ask these questions something about applying pressure and then a for voltage is generated I don't know if we need that part it's interesting though say you can see the material vibrate when you put a current through it gerswin there we go thanks man appreciate it where did I have [Music]

(26:41) that there it is oh it's just gerswin not gers swinger that was actually super close yeah I think the inspiration should be first maybe we move the operable one later right yeah okay so blah blah blah let's do that operable craft one I need to ask when we get to we're probably only going to be focusing mainly on the nural master reduction one for obvious reasons I think we're looking at it [Music] see what you guys are [Music] saying um yeah oie could the trail be a kind of mini Wormhole I think that

(27:47) that's actually not outside the realm of possibility it's not really a wormhole but he does I think he's saying the same thing is that he's a if you read this part about converting electromagnetic waves into like um gravitational down here what he's really saying in my mind here is that they're able to produce a void that we see is that black line and it's did I spell gersin Ron yeah um that it's able to pull the craft forward in the void the void's creating the suction effect

(28:29) I learned a lot about [Music] this we need to move this [Music] one I want to do super conductivity first [Music] actually we probably do Super Force [Music] first I like super Force let's start with Super Force and then we'll move into Super conductivity I like that and then we can move into inertial Mass reduction [Music]

(29:47) this pairing of electrons one might have to move [Music] up if he asks about anything about being a spy I'm this is what I'm going to drop that'll be like an optional question we got through this pretty quick but I mean this is going to go for at least an hour here I mean look how much questions we have this will easily go for an hour he talks a lot too so it'll be uh for sure I'm mostly just let him speak I wonder if my Diego Chris Garcia questions a little too on the nose uh Ali either faad Ali could be

(30:50) either man I just want to see how he reacts so keep in mind I'm an investigator consider me like a cop cops asking you questions it's not so much how what the answer is it's how you answer yeah I think we're going to have to have a followup so I'll pull up the videos real quick cuz the way I imagine this going down is that we'll have a followup where we go through these videos right actually I'm going to show I got the better video I don't need to go to the [Music] archive then we show the videos right

(31:37) and then we go okay here comes super conductivity I mean we're definitely seeing these orbs are definitely super conductive here now 100% I'm 100% sure of that part that I mean the way it comes in here just scream super connectivity it's funny cuz I I recognized it without even understanding it my first look this I immediately thought super conductivity they're just moving too quickly without any resistance I mean I guarantee we were showing this and he was looking at his own work uh that's the impression I got

(32:29) I'm not going to ask him directly but that's that's the impression I got I think he this this effect right here you're seeing this is what he's going to be able to explain to us how is this producing the zap here this looks so weird when the way they're going around it right here it's like cuz they're going so fast I wonder if they're even going faster than this they're spinning around like perfect formation and they just zap the plane it producing this macroscopic effect on the plane itself

(33:26) here so it's not going through a wormhole it's just speeding up super fast and we're looking at on camera so it's just woof gone so I wonder if it's going the direction of travel I don't know this is so weird from the thermal it looks like it's sucked backwards hyperspace is one way to think of it but it's not really hyperspace still normal space just super fast I think I don't [Music] know yeah it's self arranging that's what's happening here so the electrons are basically turning the plane into a

(34:19) giant atom with electrons surrounding it and then it's achieving in the state of Quant somehow these orbs are doing that to it I mean that's got to be related to the how they're spinning around it they're targeting the plane for sure and this is why again this is us I mean they're looking at it cuz they know what's happening here they know what's about to happen right there or just spinning around [Music] it I don't know man you're uh remember the bors model that's a feel around the

(35:28) orb you can see the temperature difference as well right around it no it's definitely still on this Earth at least in my opinion I don't think it went to another dimension just an optical illusion that it went to another dimension why is that so loud I want to look at yeah I want to watch this a few more times so these super conductive orbs are that that right there is a thing the fact that they move in like that right do the lines in front of them actually go away can't really tell let's see do I have a decolorized

(36:32) version of [Music] this they're definitely achieving a Bose Einstein condensate no question they're doing it on a solid matter though not on something that's a gas which or plasma which is the part that that's the that's the trick here that's the part that they're holding back that's the part we have to figure out let see if I have [Music] thermal looking for a different version [Music] [Music]

(37:44) oh here it is let's look at it from this one strip thermal version I might post this video again I haven't posted this video in a long time what the oh I think I just I moved it so now I can't see it again God that scared me for a second um yeah can't apparently you can't move the file while you're playing it so you can see the lines a lot clear here yeah so the lines no the lines are still

(38:54) there you can still see the lines in front so the lines don't go way in front for sure you can still see them like right here you can still see the lines in front of the orb right here this is some type of pulse that it's doing do I have the pulse in here yeah there it is accelerate vibration through a pulse current to me that's what we're seeing here possibly is that a laser what

happened to my music

(40:01) that's weird music stopped didn't even really stop just stop playing whatever I'm going to try this one if this music sucks then we'll do no music this one's only two minutes long what the hell yeah you're right something H happens too fast sucks I wish we had like 4,000 frames per second here whatever high definition is can see they're enclosing on the plane just it's too fast to catch so fast holy

(41:20) [Music] [REDACTED] just want to watch the videos a few more times for [Music] inspiration so the thing about the Bose Einstein condensate is you seem to be able to do it to solid States I think doesn't have to just be plasma that's that's the missing sauce okay the music's too annoying now Oops why what the hell I don't know what I was trying to

(42:24) do there that was weird so if they can do this to a solid state and not just plasma how the hell are they pulling it off I think that's what we're missing CU this this is a 777 so this is not a metamaterial so they're doing it even without having a meta material which leads me to believe that they are able to create this organization that he's talking about here I think we're going to move this down

(43:27) down here once you get the electrons to move lock step now you can turn the plane into an atom and have the electrons flowing around it I think that's how they're pulling it off it's weird very weird what was that oh football's already on today this Frame is the key I think so you can tell the plane's going back here I think

(44:31) it's getting pulled back already in this Frame huh so they're generating potentially already starting to generate the void in this Frame right here it's getting pulled back void is being generated and then the void gets created boom plane's definitely getting pulled back I mean the plane's not you don't see the plane there anymore the tail is sticking out at this point there's just nothing there anymore this shock wave effect thing here is happening as well the intelligence Community is

(45:21) definitely the one that put out the **debunk** there's no question which means that you know Quest has got to be connected to the intelligence Community or they're using him one or the other but this is real and anyone who's trying to **debunk** this is definitely suspicious me next frame is just Z you can see the playing game pulled back here as well let me see if I can find the one where the plane gets pulled back oh I had two versions that one here

(46:28) we delete the second one I'm looking through my my videos here give me a second what's this one oh that's just the normal slow-mo app let's look at it again definitely weird yo guys hey guys don't maybe it's from this video game does it look like it's from this video game look how janky this looks this is the original version not the one they used there's only like four frames in it just unbelievable man the one they were trying to compare to doesn't even isn't

(47:31) even the same just ridiculous they actually added more frames in the higher quality one

worst **debunk** ever I was actually going to PO to look at at to get this guy the link to the um historical trajectories so I went to the **debunker** uh website not the **Reddit** the actual **debunker** website which I'm not even going to mention and there's just now a whole bunch of my posts that that are there people are so Furious it's like they just and nobody can **debunk** anything they're just super mad that I've put all the evidence out

(48:04) there which is awesome that's the point let's see what else we got here yeah let's watch this radiation component I mean certainly if we were to look at it from like a relativistic perspective well that sounds like visible band light being blue shifted in the ultraviolet and you're getting literally a sunburn and and if if you look at an ocu bear type thing where you know lights getting lensed around the craft Etc stuff should be blue and red shifting so things coming towards you would actually red

(48:46) shifts spectrally and the people getting like Burns so that's ultraviolet that's like ionizing radiation so that would be light being blue shifted into the ultraviolet as it's lensed across the bubble that the craft creates and so we are seeing artifacts that seem to show that it's ba they're basically manipulating SpaceTime and and I guess that's why you get this sort of skipping across time effect or something it looks like the things are just you're sort of you're literally folding space time I

(49:20) guess so you can get from point8 to you're riding a wave basically you create a wave and you're on top of the wave and you're riding across space time and then of course there's kind of the other thing is you know if it's like an Einstein rosenbridge thing you know two points on a piece of paper and you fold it but like the way they're jumping around and skipping talks about this it looks like you're moving very rapidly he's talking from experience from having watched videos like

(49:49) punctuated kind of movements because if think of an accordion and those way the wer writing Accord when you flatten out the accordion like flat space time you would smoothly move across yeah what they miss is the time is a fluid symmetry you can bend it oh here we go portal sucked here we go watch this guys look at so that's where the plane was in the previous frame you can actually tell it gets sucked back look at that that's definitely the tail sticking out right there pretty wild I have a second one yeah Oli I think the orbs are

(50:36) creating a bubble around the plane or a shell however you want to think of it it doesn't have to necessarily be a bubble something like that or or I guess the more accurate way to describe it is they arranging the electrons into a wave a solid wave where they act as one and then that's allowing it to essentially act as like a shell or something I'm not really sure somehow they're able to move an entire plane that's not met out of meta materials that's a solid object you guys want to see the second

(51:17) orb this is how you can tell the second orbs coming across the water you see how clearly you can see it in this one watch this second orb there it is you can already see it right away here shoots across the water right there where's that coming from looks like it comes from like down

this little thing down here definitely comes from the water wait it just looks like it comes out of nowhere you can clearly see it right down here shoots up through the cloud very weird man color enhanced version crap I'm going to take a nap for

(52:18) this I am wiped that first one just comes from a side though yeah anyone ridiculing these videos most likely is either just completely brainwashed can't accept reality or they have nefarious purposes really comes down to that these are some of the best vide these probably are the best videos in the history of the world when it comes to uaps whether or not they are you know nonhuman intelligence or not I don't personally think they are but doesn't really matter to me what's this one oh yeah clearly see The Parallax

(53:14) effect okay we're just going to look at a completely different one just because it's really cool this is Iran over tyan tyan uh shooting at this orb in the sky look at that you can see some of the fire actually go right past it here they're trying to say it's a flare why is it not falling then just staying up there this is one of the coolest videos I've ever ever seen can see the shells going past it some of these look like they're just going right through it I and they probably aren't but you get the

(54:11) idea very weird picture yeah I think most people just can't accept it you know it just breaks their whole brains and I I don't mean that in like a mean way I just mean that in like a way where cognitive dissonance will not let them allow them to except uh reality that they're staring out in two videos they're in perfect synchronization okay you guys want to see the sketchy data this is me just going through the Su log tab it takes me like a minute this is how much data there is I mean look at the times over here 1606 look

(54:41) how many rows there is for each second over here on the left so this plane takes off around 1642 okay so I just keep scrolling down okay so this is where the planes now on the runway way 1630 is where it goes on the runway the 1642 took off okay planes flying Northeast now okay still flying Northeast you can see I mean the data is perfect right there's no issues with any of this data 1707 apparently it was like turned off or something but I don't see any noticeable indication of that in the data here 1803 we've already had our

(55:25) issue happen 1825 now boom look at this what 1839 just zeros at 1840 it's just all zeros look at this what the hell and you look down here wait what five hours just went by like come on guys this Dad is sketchy as hell nobody can tell me they looked at that and they went yeah that's that looks that looks normal that looks normal guys let's go back to this part 1839 just zeros immediately once you get to where our zap is at zeros all the way down and then when it picks back up again it's just oh there's the next five hours like

(56:11) you saw how many Ros we just went through right look at this now look at this there's 1941 20 41 2141 2241 2313 what we just 5 hours just went by all that like that minute and that over minute right there that was like just less than two hours for that hundreds and hundreds of rows now it's just 10 rows come on these experts are either incompetent or they are compromised I don't know which it's pretty embarrassing um let's see what else we got I want

to watch the Don Lemon video do I have it

(56:55) yeah oh yeah this is this is the weirdest video ever seen on CNN by far March 20th so this is a week after what if it was hijacking or terrorism or mechanical failure or Pilot error but what if it was something fully that we don't really understand a lot of people have been asking about that about black holes and on and on and on and all of these conspiracy the people been about black holes Noah says what else can you think about black hole Bermuda Triangle and then she says huh just like the movie Lost and of course it's also

(57:29) they're also referencing The Twilight Zone which has a very similar plot that's what people are saying I know it's Preposterous but is it Preposterous you think saying that who was saying that on March black holes about you know would suck in our entire universe so we know it's not that M triangle as often weather black hole's going to suck in our entire universe guys is a TV show so I think I always like she's right about the TV show part at least um what was I going to pull up oh the other

(58:11) thing I want to point something out here guys why is this **debunk** talking about being teleportation August 9th nobody was talking about teleportation I'm the main investigator I didn't even come to the teleportation Theory until like end of August maybe early September I was on Annihilation at this point assuming there was Annihilation the **debunk** is already **debunking** teleportation away why would that even be the case it could have been cloaking it could have been Annihilation at this point no one knew this this government

(58:48) funded **debunk** that pushed out here by an AI the day after the videos reemerged is already trying to **debunk** teleportation they gave away their hand they knew the videos were real they were putting out a fake **debunk** to get ahead of the narrative that's that's amazing to me government's nothing if not stupid I mean they're just not even good at what they do when it comes to disinformation it's embarrassing does it show them being teleported away who who claimed this where does anyone even claim

(59:20) this the claim look the claim the claim here doesn't even say teleportation in it there's nowhere does it mention teleportation in this claim that's it oh actually that's not true stealing it and teleporting away with it let's just double check does it actually say teleportation okay okay I stand corrected it does say teleportation huh who posted this hey I'm still banned for one day sad they banned me for seven days for responding to the comments in uh where everyone was posting about me is this a

(1:00:19) bot this is okay to do right to look people through people's history on a video I think so this is all public look I want to see if this is a real person I want to know if I'm being led on a a scop to reveal this information or not there it is H doesn't seems doesn't seem nefarious seems like a random person interesting to look at okay the video is **debunked** several

(1:01:24) months AG go okay France 24 let's take a look I mean who who paid for these **debunks** this is some [ ] is this the Cambodia crap **debunks** are just fake nowadays huh it's pretty wild

straight up fake completely fake **debunk** that they have here they completely falsified this **debunk** it's amazing do not trust fact Checkers guys do not trust **debunks** I don't know this is a different one or something and it of course it tries to combine two different things in general as well which are completely separate

(1:02:30) pretty sure the FBI can't declassify footage at all so that part doesn't make any sense videos are far from recent they actually have links to the archives at least they did that part right this guy right here is a straight up operative in my opinion this is the guy that runs the UFO interest account we found that he was boding boding comments we had like five identical comments from different accounts this this dude right here super suspicious super suspicious and he he made false statements on his uh his **debunker**

(1:03:22) account as well on Twitter probably still up I have them all save don't worry I always have the receipts guys I always have the receipts this hoaxy is another just **debunker** like junk account or like bot account or something literally just makes a false statement right here you can literally just see from this this not threes there's 93 right there these are twos so this is an objectively false statement made by this hoax eye account let's go look at it hoax fighter and FactFinder uh suspicious icious oh on Mastadon too

(1:03:57) great yeah how's Mastadon going guys this account should be banned honestly anyone who just fak stuff like that they should just be banned it's incredible just fake real put up fake **debunks** for real stuff call claim that it's fake that's unbelievable you can get away with that look just completely fake justification completely fake this justification is false this whole **debunk** should just get removed and even this isn't real like literally no part of the **debunk** is accurate the mq1 pr Max altitude is

(1:04:41) 25,000 ft yeah well we showed it was what much lower than that it's not flying at cruising altitude why are fact checks just so garbage just such a garbage if anyone from France 24 is watching this delete your stupid posts it's objectively false if anyone from Twitter's watching you need to ban this account hoaxy it's just straight up false here's the UFO interest guy founder of UFO interest let's look at this this one this is probably another Twitter link this is definitely just spook city right

(1:05:11) here guys what is this even is this janky website like is this even a real website or just the intelligence Community just make this unbelievable unbelievable guys so anyway the **debunks** are all dead none of the **debunks** are still around uh the videos are authentic and yeah if anyone still believes these **debunks** then you need to you know do the reality perception test if you can tell the difference between reality or not let's just do another another comparison guys are these the same and this is actually the higher

(1:06:00) quality one from 2015 this isn't even the low quality one we showed the low quality one only had like four frames these are not the same event objectively that's a statement of fact these are not the same so if you're still stuck on these **debunks** you need to you know get your mind right guys get your mind right this is not the same thing embarrassing frankly that people

fall for this okay now that we just went ahead and crushed that as well let me see if we got any comments in the chat here yeah I think they might be creating

(1:06:39) some kind of force field in these videos really hard to say but we can see the field around the orbs themselves very clearly here right especially in this part like this is a field around the orb that's not a that's not a solid I think the field is is being bent really interesting um there's a hole there okay I'm going to take a break before the interview uh interview will be in about an hour and a half so I am going to shut down the stream and then we'll be back for the Salvador Pi interview about hour and a

(1:07:17) half guys so come check it out uh and we've got our questions ready to go this is going to easily go over an hour I don't know if we'll get to everything we'll see if we can do a followup with him and yeah we'll talk soon guys

,

MH370x UFOTwitter Week Space - YouTube

Transcript:

(00:00) quality content of you going on podcasts and such um and it's cool to see you sort of uh on this on this journey of someone with like 30 something 38 was it maybe um followers when I first met you um and it was really cool that I I got to meet you right as you kind of entered the wonderful world of UFO Twitter which is can be a little stressful at times but it's also very exciting it's not never boring I suppose and uh and then to you know to see this kind of mission you know that your dedication to the

(00:29) research and to sharing uh it with the world um it's it's I mean I find it quite fascinating anyway and uh and ashton do you need some time to set up your stream I don't want to I think we're good to go I was just should be going oh yeah it looks like we're good here uh so I think so I'm I'm going to double check but you guys you can start I was actually going to I had to leave your stream yesterday a little bit early with uh Steve Basset how did that end up in um with with him how do you enjoy

(01:01) that give me your feedback I mean you know it was like the most glitchy uh space ever uh but I was you know it was really great considering I feel like there was the feedback at least my experience you know me wanting to represent uh someone I respect so much well and uh to you know to to represent the UFO Twitter Community um you know um well um it was not an ideal scenario to be the you know pulling all the levers trying to keep things going um but uh you know and and like ideally you know a lot of people showed up um you know out

(01:34) of out of interest in in Steve's you know amazing career and um you know I yeah I'm a filmmaker editor among other things so you know I wish I could I wish this app would let me like cut it like edit out the the parts with silence you know just to to hear the the beautifully coherent Vision that Steve was you know doing such a great job of explaining but um but it was cool to to have you know all kinds of people have a chance to ask them all those questions um and you know and I love to hear the way he responds

(02:03) to things because he he to me has this really great combination of um of optimism and and sort of grounded realism based on his years of research and being on the ground especially in the sort of political disclosure process and it does seem to be lining up with all the other research I've been doing as well so um yeah apart from the technical side it went really awesome I think yeah I I think that uh you know maybe this is a good spot to start with it because I think today's space I want to keep a little bit more where people

(02:30) can ask questions about the case and what's going on with it you know I've done enough podcast and stuff where we've gone over all the facts and details but of course if people have questions about them I want to answer them uh but one thing I wanted to bring up was you know the question that I asked there was a little bit koi to Ste to uh Mr Basset was about the technology you know I think that a lot of people as well they have this very optimistic approach to what the technology in disclosure really means right and I say

(03:01) this a lot in the spaces is that with nuclear energy comes nuclear bombs with energy that can is fully green free energy stuff like that Comes potential doomsday weapons that are well beyond anything that we have today um you know and I think it's actually star Captain here who's on our space right now gave me the great idea of talking about like warped nukes right so even if you don't Advance the technology even more than what we just see in MH370 videos just the ability to warp a nuclear weapon is

(03:33) essentially Unstoppable right and that's extremely dangerous uh and so we have to be very responsible about the technology that we see and that we uncover and disclosure to realize that you know with this come some very dangerous side effects and so I can even understand why that theoretically the government would want to hide this information right but that's MH370 on those videos so if they really wanted to keep keep it hidden they should not have disappeared a passenger plane covered it up with a fake conspiracy vilified all these

(04:06) people discredited all these Witnesses right so now it's coming out and that means for us we just need to be very responsible with with that information with that technology yeah yeah yeah beautifully put um it um does appear to be uh and someone please correct me if I'm wrong you know the the most compelling at least you know evidence uh uh I'd like to say for for free energy um are there other examples of that we can include I mean there's a lot of documents and uh and things suggesting it but you know

(04:41) nothing uh visually that that depicts it especially in such a in absurdly dramatic fashion in terms of you know involving this the most famous you know the most mysterious and famous

uh Missing aircraft in history as well so I mean this one definitely Takes the Cake I guess but are there any other examples of that that You' point to of what sorry can you clarify oh uh of potential evidence of of this technology we're describing of free energy and whatever else might be going on here I mean I'm sure that if you look throughout ufology

(05:12) there's certainly things that we can find similarities you know I get sent them all the time but with respect to the strength of the evidence I don't think I've seen anything as strong as evidence that we've seen in the MH370 case uh with respect to the videos that we see and on my stream I'll pull them up in a little bit here uh we have two different cameras that are the most highly the most you know um Advanced cameras probably uh that are possible in 2014 they're both filming the same event from two different angles

(05:42) and they both show exactly the same thing you know and they're really up close at least one of them is one of them is from outer space theoretically but it's very very Advanced so I personally haven't seen anything about that high quality if there are other things that are out there other videos then I would absolutely love to see them and people have sent me some good stuff in general uh Hey red glad to have you here what's on your mind buddy how's everyone Duran happy UFO Twitter week but uh I was gonna say two things

(06:14) actually there's this one video from the a ship that I saw that I wanted to get Ashton's take on about the alleged event but firstly I don't know did y were yall in the uh sha kill space I uh I asked him about this case and I found his answer pretty interesting so I'm going to try and find it here somebody sent me something about him actually weird that's so weird you brought that up yeah I was listening to it it was really fascinating and I and I was I was kind of exhausted and and in the bathtub and my hands were a little

(06:41) soapy but I was actually you know about to ask pretty much the same question that you did Mr before we maybe go into that if you want to hold that real quick that thought I think I'd like to just go through what my theory is right now on the situation and I have a flight path up on my video you guys can also follow if you want to watch live uh on my YouTube channel which is just YouTube same at just X Aston you can find us that we're live over there right now um I also have the chat going there although I just realized I have the chat

(07:09) hidden over here so the this plane takes off from qual lumur it's headed to Beijing it takes off at 1642 UTC now we talk about in UTC terms because it's easier to understand all the time frames that are happening keep it straight so about 40 minutes this plane is flying Northeast it gets over the South China Sea South China Sea is very well known right now in terms of being very contested between China and the United States and at 1721 this plane goes dark that's 64 seconds after the last communication

(07:44) there's no alarms in the communication now we believe that what happened here is a lithium ion battery fire and the reason why there might not be alarms is that you're not going to hear anything until this these lithium ion batteries explode this plane has too 121 kg half of it split to the front half of it split to the back if you believe the official report in terms of where

they were there is a witness Mike McKay he's sitting out on an oil rig 300 miles Northeast and those oil rigs are really high up so he can see really far he sees

(08:22) the plane on fire realize this is 1: in the morning so it's pitch black probably his sighting is misreported has supposedly seen the plane crash he says he did not see the plane crash he just saw it on fire at the same time there's nine different people that all report really loud noises from the coastline which again sound carries over water so these people hear this really loud noise probably consistent with the explosion of lithium ion batteries nine of them now this plane turns around so 10 minutes later this plane is flying line

(09:00) very low and it's turned around it's going directly at panang Lan International Airport the wired article that actually argues for a fire scenario argues that this is the correct airport to go to So This Plane turns around goes directly to the nearest airport where it can accommodate an emergency 777 situation 10 minutes later 1730 UTC these fishermen all see this plane flying very low this indicates that there was potentially a depressurization although it's quite the opposite of the official narrative that tries to blame

(09:34) the pilot cuz if you're trying to exate all the passengers you're not going to fly low enough to give them enough oxygen they in order to keep these passengers alive with enough oxygen you need to fly under 10,000 ft potentially even lower otherwise they are going to potentially ex exate from hypoxia at the same exact time there's a communication that's received by another 777 that's headed to Tokyo they hear static and they hear the sound of what they claim is the P the co-pilot or the pilot so this actually cast doubt as to

(10:08) whether or not the communications were really off so this is a very important piece of information now the plane continues to fly over Mainland Malaysia which is a peninsula there were some reports which I haven't dug into it to confirm because this is like res there's people that live out there that theoretically saw this plane flying pretty low as well which would corroborate even more that this plane wasn't going up and down like these radar data says it was just going in a straight shot low enough where

(10:37) people would be able to breathe it gets to panang at 1752 UTC this is 30 minutes after the plane goes dark pretty quickly for whatever reason it doesn't land now one thing here is that the co-pilot's cell phone pings a local cell phone tower so it was probably low enough that they were able to Ping a cell phone tower really important information now if you look at the flight manual for what you're supposed to do in an emergency situation first thing is try to get this plane on the ground as fast as possible but we know

(11:10) they didn't so I think we can safely assume there was something wrong with the landing gear maybe even the fire began with the landing gear like the wired article argues wired article says that the tires might have heated up so much that they burst into flames maybe that set off a chain reaction 40 minutes later after the plane takes off that ignites the batteries that's theoretical speculative whatever happened they couldn't land here the next thing it says to do if you can't land safely with

(11:37) your landing gear is you should try to land on your belly now the problem with trying to land on the belly on the land is that this plane is filled with six more hours of fuel so this thing is loaded up with fuel if you try to land with that much fuel you're going to explode everybody's going to die so it says that okay you you should try to dump the fuel but if you try to dump the fuel while your plan's on fire that also does not seem like a really good idea I actually read some reports about planes

(12:09) dumping Fuel and covering children in kerosene it doesn't seem like it's very safe in general um so most likely what happened here is they were unable to dump the fuel either now the next thing you're supposed to do is land in the ocean so what does the plane do it goes over panang and it goes out into the ocean now potentially this plane at this point had communication with the US government and they had a rendezu point set up because otherwise you would probably just land in the ocean right near the airport but instead it goes all

(12:44) the way out to the nicobar islands now keep in mind Landing in the ocean that's not a safe bet either so Landing in the oceans not like Landing in the Hudson River like suly solenberger did Su the Hudson river is very narrow it's the waves are not not nearly as volatile as in the ocean so if this plane lands in the ocean even on a controlled descent it's going to break apart probably going to sink pretty quickly and all the people potentially are going to have a hard time because it's middle of the night at

(13:16) this point we're looking at 2 in the morning the sun is down the Moon is down there's no light that's been corroborated as well by a witness so they they argue or that the official data says they lose track of the plane at 1822 UTC which is 230 mi into the malaka Straits off of panang going Northwest interestingly enough this is not what the reports of the next day said they waited weeks to release this Rad Radar data and it was very sketchy people did not trust the radar data the next day what people were saying is that

(13:54) this plane went dark at 1840 UTC which is the time time that our boat with the witness on it sees the plane this is also the time where the plane supposedly turns into the South Indian Ocean and the location where it supposedly turns into the South Indian Ocean this is also within 3 minutes of an intercepted communication only reported in Chinese news that says this plane was disintegrating and an attempting emergency landing this is consistent with our event that we've uh speculated on here with so far all of the witnesses

(14:30) Catherine T sees this plane while on a boat she doesn't know what she's looking at she sees an orange glowing plane at first she thinks it's a missile but then she can see into the uh cockpit and she can see that this is actually a plane it doesn't have any navigation lights which indicates that potentially the power is out this also cast out in the official story that somehow this plane reconnected uh in terms of the power most likely it never did especially not if it was a fire scenario also keep in

(15:01) mind in the fire scenario this plane is not lasting 8 hours or whatever they claim this plane lasted into the South Indian Ocean it's actually a miracle that even lasts an hour and 20

minutes and what that would mean is they had to be fighting the fire consistently and so if they are fighting this fire consistently all this hydrogen gas that they use is creating this bromine chemical that's causing the orange glow to permeate throughout the whole plane the orange glow is consistent with the fire scenario as well so C Tes and she

(15:30) actually reported to me that this plane was already low when she first saw it it was not at cruising altitude again consistent with all the witnesses and what they stated in consistent with the pilot trying to save the plane not trying to kill everybody on the plane she sees it actually descending which again is consistent with our videos our videos show the plane descending it also is in the same direction of travel counterclockwise turn in both their sighting that was actually reconfirmed by the GPS in her boat as well as what

(15:58) we see in the the videos as well as the official flight path so we have multiple sources that show that this plane would be in the same right location at the right time not just that we were able to track USA 229 with its sister satellite officially classified as debris in the right location to send the satellite data that we need to send to the cers system to be able to create our quote unquote satellite video at the time of that also 1840 UTC so we have a ton of corroborating data that says our videos all happen

(16:30) here where the witness's boat is essentially so this is in our nicobar Islands in addition to that the Drone that we see was most likely dispatched from one of the Islands nearby there's a base there and that base let me see if I can pull it up for the people who are watching that base theoretically had these drones there we found some other cating evidence that that that the drones might potentially be there so I'm going to open this in a browser for the people who are watching and that's the vo Vex base

(17:05) location and this is a joint India and US base in the Indian Ocean here interestingly enough you draw a line from that base to our location it's at basically the same direction at which we see our drone taking the video from the north so this is another angle of corroboration for our whole story here so very interesting how much evidence we have for it and then in our video we see these orbs circling around the plane they're far too exact to be manually piloted and we see them doing a pattern that's encircling the

(17:42) plane halfway through or some what time through this we see the the pattern change and they begin to circle the plane in a ring formation vertically about 10 seconds later zap the plane is gone now what we think is happening here is and I I hope I'm still saying this correctly macroscopic decoherence some people have argued it's macroscopic coherence the idea is that they're theoretically these orbs are showing super conductive properties they are negating the force of gravity entirely by having their Mass reduced a lot of

(18:20) this comes down to mass reduction they're creating a field what we're seeing is not a solid orb it's a field around something and then combin and I'm going to ask salvator Pas this tomorrow they are doing something that's essentially allowing the same type of mechanism to happen to the plane where they're allowing a Quantum state of a solid object and that Quantum

state is allowing for that object to decohere to revert to a wave function to speed up if its mass is reduced the time increases

(18:52) for it time moves faster therefore it can speed up faster think of like Quicksilver from the X-Men movies right that's kind of what's happening to our plane here and that's allowing it to teleport move the speed of light now keep in mind cameras are just pictures that are stacked on top of each other based on the frame rate if the frame rate's not fast enough then we can't see the plane in real life you might see uh some type of red shifting effect so where did the plane go we don't necessarily know but I'll open it

(19:25) up to questions and we'll just talk about this incident I want to hear your your guys thoughts I want to hear what Melo thinks and just answer questions for you guys for you know next hour hour and a half however long you guys have stuff well you know I think it's a very perfectly fitting together narrative and it's it's quite exciting to have uh you know been had the pleasure of knowing you from your early Twitter days uh till now because um i' I've sort of seen piece by piece how these things do

(19:51) really fit together um doesn't mean I'm a scientist that can validate it 100% but um I think it's um brilliant but um Mr and what's on your mind so I have two actually kind of three things but two things first uh in the nest I put this video that is allegedly supposed to be from the um ocean view of I think just the contrails I think it's after the fact that part of me thinks that that really for a second you could see a little bit but they like pan around and I love the Ashton's um streaming right now too have you seen

(20:19) this video Ashton and do you have any thoughts on it sorry let me look I don't try to figure how to make the nest work I put it in the nest and it's in the comments down here it say the title of the video is Malaysia Flight 370 UFO alien and uh what's interesting about this video too is the uh the date it was uploaded was also uh I found interesting yeah so here's my problem with this I've seen certain accounts post this and try to get me to post it the problem is our videos happen at 2:40 in the

(20:48) morning this you can see Sunrise right so these smoke trails are not going to last that long in the sky so most likely this is not actually tied to to our videos and that's why we have to be very careful about tying evidence is that we need if somehow our videos were happening in the morning this could potentially be it but there's nothing in these videos that directly gives us corroboration it's just a trail that ends and it actually looks like contrails that are high enough in the sky keep in mind ours are also

(21:16) relatively low so we're seeing these um cumulus clouds in our videos which show that it's potentially between 1,000 and 5,000 ft which are really low so could it possibly but I don't find enough corroboration to accurately link it to our videos at this point but I you know sharing it still you know I appreciate any and all evidence and willing to look at it all so thanks for sharing that Panda cool yeah I'm I'm still I still kind of got an open book with I'll see I'm gonna look into it more for myself

(21:46) and then here's uh what I asked Sean Kahill earlier about this and I found his response pretty interesting uh let's see all oh yeah so Sean K Hill he's a he was actually a a wit well I still consider this a witness he was a witness to the nits events he didn't see the Tic Tac but he was on I think might have been the Princeton or something like that and um he allegedly is the one who I think Kevin Day like reported it to at some point so he and I like the way he phrased it today too he was a witness of

(22:16) his chain of commands re response to this event the 2004 Tic Tac event which I think is like that's all valuable information right when you're building a whole picture of something um so he's part of that and then he's also kind of part of the for better or worse like rollout group you know what I mean and lately he's kind of embraced more of the wo side of things okay but um like he is close with Lou Alzando uh he you see him on the news all the time kind of talking about this stuff every now then whenever

(22:45) something breaks or something you know he's kind of one of the uh onand pundits for uh a lot of this stuff so that's who that is um so he's kind of like oh and also he was in the Navy right so he saw the Tic Tac event he was on search and rescue and he actually retired in 2015 so I asked him about this case from his perspective back then and then also about like the reemergence of his video these videos and the thoughts on that and uh it's pretty interesting so that's the background on him and let's get to

(23:11) the clip and the same with dreams and I'll end on change positive change so they do so by building it's not just me um using it itself there is end of time I'm questions um I think it was Panda next then Paul then Shane hello everyone Great Space Holly Stone doing a good job thank you Sean for being here uh appreciate what you guys have done say you know there's no denying like from 2017 to now things are very different might not agreed with everything along the way uh and thank you for your service and my question

(23:52) kind of leans into that because you were in the Navy from what uh 95 to 2015 is what it says online is that accurate it's G be really cool thank you for your service and then so yeah me and a bunch of other people on you Twitter are pretty into the are the resurfacing of the whole MH370 anomalous disappearance and I'm curious about your take on one The Disappearance of the plane back in 2014 when you were still active and then your take on the the emergence of these videos that were posted in uh 2014 thank you so um I've been involved

(24:24) with search and rescue before for folks that have fallen overboard and for aircraft they been lost to se or or ships that have have founded um it's it's a scary experience for all involved um we lost someone in the Persian Gulf over the side and one thing that was amazing was to see almost every Maritime force in in the a in the area of responsibility which was the Persian Gulf stop what they were doing and and go into search and rescue so we're talking Iranian Navy irgc which is their their hokey Coast

(24:57) Guard that messes with with a self time Karis Andes you name it anybody that had a boat was helping us and it was amazing so moving to um I I can never MH what was the the

whole Des 37 right okay so that that suspicious that whole thing is obviously it's a mystery okay and um the search and rescue efforts seen were incredibly disappointing I think all of a sudden that our technology and our our pardon our surveillance capability have been able to pinpoint that and give the some Solace and I think that we also know

(25:32) that it seems that the United States govern to share their technological abilities um beyond that getting to the what the meat of what you're talking about I have not been able and I'm and I'm open to hearing from anybody but in my own research I I took a detour off of that because I wasn't able to verify that the data we were looking at was from the systems or or from systems that are that are in the in the mix so I kind of got off the freeway on that but I looked at those videos and I analyzed

(26:03) them in in the manner that I'm able to with the technology I have and I did find some very interesting things going on with temperature um I thought that if it was edited in CGI someone was very knowledgeable and had read a lot of the dirds and other reports um or data from Bigalow or other people so I find it very confusing and I've kind of stayed out of the mix to be honest with you that's suspicious answer really so yeah that was his response that was pretty interesting yeah that's uh huh that's an

(26:35) interesting response there so what's your take on it yeah I think the thing about he says about the temperature is pretty weird um because I think he's obviously referring to the thermal video right and he's talking about the zap being cold and that for sure and that's definitely what he's talking about there um and the reason why he's talking about that is cuz that's a black hole that we're seeing there um and I'm at this point like 100% sure that's what we're looking at there because I was listening

(27:02) to The Theory of Everything podcast earlier today with Salvatore pasus and he actually mentions that with high enough energies it would create a black hole and it would create a void in the uh empty vacuum state so I think his answer is a little bit koi there if he's somebody who's involved in search and rescue he's going to exactly know what these assets look like right and potentially he's going to know what these satellite assets look like keep in mind he's going to be under an NDA he

(27:31) can't speak about it at all especially not the satellite capabilities so that answer to me spoke to that I think too right in the beginning when he was like uh the US didn't really disclose all of its technological capabilities that could have helped find it or something like that that's kind of the vibe I got there yeah he said that they should have been able to see it right and I at the same time on my stream is playing the video it's like yeah not no duh they should have been able to see it we're staring

(27:56) at it on two videos right and one of them is literally a satellite video so I think that he knows more than he's letting on there for sure uh most likely that's as close as we can get from somebody who has an NDA to basically authenticate that those videos are real um and at this point I'm you know 100% sure that they are so I think that's a pretty interesting response and I

think the fact that he said he was staying away from it is also a very interesting response right because we've seen that

(28:25) from a lot of people nobody wants to touch these and if they were fake everyone would be all over them I mean look at how much fake stuff people are pushing or stuff that let's not call it fake but let's call it questionably real and people have no issue pushing it or promoting it talking about it right all these UFO disclosure people are all avoiding these videos uh you know to me that's quite telling uh so that's a really interesting uh point that or kind of just clip that you brought up there

(28:56) Panda I appreciate that I actually got text messaged about this clip as well and now I know that's where it came from um so let me just while we can take another question I'm going to pull up that text message because now I'm curious if there's any additional context that I potentially missed yeah yeah it was cool to be there I was going to do a followup but like I said my my hands were a little soapy in the bath but yeah I'm so glad Panda asked that so effectively in the and and the uh response was so revelatory um and

(29:28) uh hey we got uh money Penny I don't know if this is my first time meeting you but I'm really glad to have you here um what's what are you thinking at this time uh wow this is great um I'm from the UK I'm a former BBC uh journalist so uh my investigative juices I've really uh really got going on this um and I am in no way technically Adept and able to question the intricacies of of the different videos and the uh uh the technical aspects of this um I'm going to prioritize my question

(30:00) because I could be here for hours but at the macro level um the first question we all have to ask ourselves is why who is behind this why Malaysia why m370 was it something to do with the passengers I've watched so many now documentaries I don't know which one I'm referring to but there is one that talks about **Russia** and Ukraine and turkistan and there is another that refers quite interestingly to another plane disappearance uh this was F-15 uh fighter jets Japanese ones that disappeared into nowhere um I'm just

(30:38) trying to get the date up for you uh 11th of August 2020 was the uh report um I want to know a little bit more about the islands where the US military bases are are very close to this and I'd love to know Ashton's call not on the tech but on the big picture is this a military strategy where an exercise was created using uh military stealth not only the satellites to do the tracking but perhaps the drones or some sort of uh other flight capability we're talking about a lot of reverse engineering on

(31:18) alien crafter has come into um discussion of late um what do you think it is ashon why is this uh um something that might be connected to the American Military and do you believe that's what it is yeah great questions money penny thanks for being on here glad that you we have someone who has your level of prestige on here so first thing I would address is the points you said about the documentary you were actually speaking about Jeff wise's theory that the planing went to **Russia** uh there's no evidence of that whatsoever the problem

(31:50) with that theory mainly is that there would be so many radar systems that would have seen it if it flew to **Russia** pretty conclusively rules that out in general and we're not going to cover up for **Russia** either if **Russia** was the one to take it um what we see in our videos here are both American assets that are filming this we're seeing the cers system which is the space-based infrared system and that is essentially like a Google Earth video playback that nobody before seeing these videos knew was possible satellite technology from the

(32:22) United States is some of the most uh closely held guard Secrets the person that **leaked** these was facing life in prison over this um the second one is an mq1 C Great Eagle also another us asset with a very atlan Advanced Electro IR camera the Drone is made by General atomics the camera is mostly made most likely made by Ron it has a colorized thermal that's been added over the top of it indicating that the person that **leaked** this is most likely an operator they had to have the knowledge base to turn the Flier footage

(32:54) into the thermal version uh based on the dates that we see in the videos it says received March 12th 2014 on the satellite video that's 4 days after the event this builds a psychological profile we can also tell that the HUD dat has been removed the satellite is cropped to only show the plane and we know that because we can see the mouse move off the top of the right and the bottom left of the screen we are able to show with the Mouse frames per second 24 frames per second versus the background of the satellite

(33:27) six frames per second that what we're looking at is a citric session that was logged into the actual Intel spy satellite database we can also tell that we're looking at a screen recording this is not somebody recording with a camera behind them or even their cell phone they most likely did this because they needed absolute proof for people to take it seriously and we still didn't take it seriously back in 2014 we're looking I'm right now on my stream looking at the archive footage right in front of me and

(33:52) it goes back to 2014 for sure a lot of people including myself saw one of these videos videos in 2014 before they had been deleted and they've been out there available to find if you if you were so inclined so to your point the reason why people like Jeff wise Florence dangi who I've talked to who's a very intelligent woman the reason why they knew something was a Miss is that a 777 can't crash into the ocean without leaving a debris field that's the biggest and strongest evidence for why the official narratives

(34:22) are simply a lie is that even on a controlled descent like I talked about in that flight path this plane is going to crash apart into tons of pieces there's going to be bodies there's going to be luggage there's going to be parts of the plane floating all over and it's going to spread out into a huge debris field especially in the water this would have been visible from space for days and we showed that the US has satellites everywhere we would have seen it the very next day so we can cast so much

(34:49) doubt on the official narrative even just today I reported that there was no black boxes found they searched all along the seventh Arc for these black boxes they should have been able

to find the black boxes easily there was multiple systems that should have heard it crash into the ocean the Sosa system the same one that heard the Titan sub pop that same system existed back in 2014 it should have heard the plane crash into the ocean they should have pinpointed it exact location immediately didn't hear anything two hydrophone systems also

(35:18) didn't hear anything Western Australia has hydrophone system Diego Garcia also hydrophone system they also heard no plane crash into the ocean and at least down the southern Indian Ocean or anywhere as far as we know Indonesia has a radar system and Australia has the Jordan radar system both would have seen the plane go into the South Indian Ocean neither did 19 families of the victim signed statement saying they could call the cell phones for up to four days of the passengers 19 of them not just one or two 19 one person proved it on on

(35:47) television we showed the video on my on my Twitter several weeks ago the southern Indi ocean is an active shipping route from Africa to Australia they have this plane crashing in the early morning where the Sun is up at 8:00 in the morning local time no Witnesses at all saw this plane anywhere over there no Witnesses on this active shipping route saw any debris field anywhere the official narrative right away was that somehow this plane did a Swan Dive perfect Swan Dive Into the Water and that's how it somehow didn't

(36:16) break up which doesn't make any sense and ended up being changed later on while after the story had gone cold and they claim no it didn't go directly into the water it was at a 14° angle okay well it would have broken up then and there would have been debris everywhere one more thing I'll do just for you money Penny is I'll go into the debris because the next thing I everybody asked well what about the debris that was found no debris was found by the official search which was the most expensive and extensive in history the

(36:42) official search found nothing not one single piece the debris that was found was found by Third parties most of it was found by blae Gibson which was also from the Netflix documentary people actually tried to cast doubt on him claim he's some kind of agent Jeff wise tried to claim he was working for **Russia** or something like that I don't the impression I got from him is he's just a normal guy so the debris is actually fully consistent with the story that I've put forth that there was a lithium

(37:10) ion battery fire and this plane was quote unquote disintegrating falling apart there's only a tiny amount of debris if you add it all up together and there's a CNN picture that you can look at it's less than 1% of the whole plane it's essentially nothing in addition to that some of the debris had burn marks on it and that just got totally dismissed as well so we've got 10 15 witnesses that all have are adding up to a lithium ion battery scenario and we've got burn marks on some of the debris that washed up and a

(37:38) b77 fire suppression device washed up on the malds and then if you look at that b77 fire suppression device there's even serial number on it you can actually see it washed up like a few weeks later the mald was intentionally excluded from the search they just said nope you're not

involved in the search never looked into that device even though it probably could have been directly linked to MH370 especially in a fire scenario you could see how if they had to pull these things down and manually deploy some of

(38:05) these fire extinguishing devices you could imagine how one of these might get into the water somehow the flaperon which is the piece that essentially quieted everybody it's missing its unique serial plate this is a plate that's bolted on to the flapper on and it's just missing they matched it to a non-unique serial number and the media doesn't even talk about that you can Google it and you can find out for yourself I just find a lot of this to be very suspicious the Barnacle growth on a lot of these pieces

(38:34) highly contested didn't have enough Barnacle growth for it to be in the water long enough and there's an equivalent plane there an exact match of MH370 a 9M MRK that was scrapped in 2013 decades too early purchased by GA Telesis in October of 2013 so there's plenty of evidence that either the debris is from MH370 consistent with this fire teleportation scenario that we see or that it's not MH370 at all but if it's teleportation that we see they could have just taken the plane apart and thrown some debris

(39:07) in the water no problem now with respect to what you're asking about the whose technology is it to me you have to go back to the people filming it right it's the US government it's not some third party that's doing this right the US government's not is definitely tracking a rogue 777 in a n post 911 World we've shown that they have the satellite light directly over the top of the flight path in nicobar islands and we use amateur uh trajectories which are very accurate to prove that as well with USA 229 sent up

(39:35) in 2011 there's too much intent around it the Drone can't catch up to a 777 it had to have intercepted it they're filming before the orbs even show up in the video so they either got super lucky and were just filming this like hey let's throw all our intelligence assets and stare at this plane oh look some orbs just showed up sweet or it's a US operation and they knew exactly what was going to happen even from filming it there's intent in the thermal the Drone video they're not automatically they're not

(40:05) using the automatic tracking of the plane they're actually manually tracking it someone's like actually moving the video around that's why it moves out of frame they zoom in on it to get a really good close look at it and then right before the black hole the zap they zoom out like they frame the video nobody panics when the plane disappears they just kind of zoom out and move the camera slightly I mean if it's me and I'm watching a plane disappear I'm moving that thing everywhere and I'm

(40:30) trying to figure out what just happened right so does that answer most of your questions is that personally I'm very confident that what we're looking at here is reverse engineered technology we can actually explain all the science too it's taken weeks but it's mostly all explained by room temperature superconductivity and room temperature superconductivity will change everything about the whole world it can even enable the black hole that we see

produce high levels of energy Dr or Sal T Pas who's

(40:57) come up with these patents I just listened to his podcast that he had with Theory of Everything and he essentially says that yes this super conductivity can produce these extremely high levels of energy that are required to even produce the black hole that we see there and it's all explained by mass reduction this is what's been held back from the public I've been told Congress has real scientific papers that unify Quant and macro and I've looked at salvator's p uh paper that I posted on my Twitter called

(41:25) the Super Force and in my opinion it also unifies Quant and macro but the missing link is that they're not showing is this Mass reduction is that if you can reduce your mass to zero using let's say this energy shell that we see around these orbs then you can defy gravity and then you can also use that super conductivity to create your own geodesics your own gravity that allows them to pull forward while ignoring gravity this is the missing link here you create a shell around the plane as well using the orbs which we think about

(41:56) they're doing is they're tracking the plane if you watch them they're creating this sphere around the plane my guess is you're doing Advanced AI to collect enough information to say okay how big does the sphere have to be around the plane you force this huge amount of energy create an electromagnetic double-sided barrier around the plane and then you reduce its mass to zero reduce the mass to zero now the plane can go infinite speed light speed maybe even Beyond light speed so we can explain everything even from a

(42:24) scientific perspective yes it's Advanced science that's not available to the public but it doesn't require non-human intelligence to happen now the last thing I'll say and I'll let you guys jump in because I was just kind of going on my little rant here is that I don't care what people want to believe right if people want to believe that that's non-human intelligence it's too hard I don't blame them at all took me weeks to come to terms with that this might not be non-human intelligence and I actually

(42:45) think it's potentially harder to believe that it's our technology and that we can be this secretly Advanced and that's why my argument is that it must be from reverse engineering um but there's a lot of implications that come with that is if that's the case how long have we been reverse engineering this stuff how much of the technology that we're using that I'm using right now computer Etc comes from reverse engineering you know we do know that we know that um thank you for that long explanation and

(43:12) I don't want to take up time but very briefly there's an investigative journalist called Ross cart uh he wrote a book in plain site um I'm not sure if you're familiar with him but his book extensively looks at reverse engineering he in and a lot of admissions that were made in 2020 by the US Department of Defense um I'm looking at his book and what he said and what you've shown and I think there's quite a lot of correlation there thank you for what you've done I don't want to hold up

(43:42) the time um but if you did have time I would love to ask more questions at some point thank you please keep asking questions we're glad to have you here yeah 100% And if I don't know I can't see if there's hands up but we can either cycle back to you I I definitely want to hear more questions from you yeah go ahead go with the others and uh if this time I am familiar with Ross Kart what I would say too though is that what we need to be careful of in general is if this is true then most likely the

(44:05) government is slow dripping the information to the public what people talk about is an acclamation process because this is too much information for people to just take in I mean even a lot of my family members simply cannot accept the information that's being presented right it's so contrary to what we're told on TV and by mainstream media in general uh even academics just can't accept because it says that they've been lied to about what's really possible in this earth and you know so I think that if

(44:34) there is an acclamation process then we really have to question okay are the people that are feeding us the information are they feeding us everything they know or are they just feeding us little by little right and so we have to be very careful if that is the case if this is true who we trust and look at their actions so when you see what I'm doing here and exposing it you can see there's a very methodical approach we're approaching from a scientific perspective I'm not uh you know trickling any information out I'm

(44:59) just giving it out as fast as I get it I'm giving you the whole information like if you're watching my stream right now I have my list of evidence up here that I've been working on for several days it's 17 pages long right and it's all there for the public and for people to read themselves so if you compare that to people who are out there and telling you okay wait next week until the big announcement right you can see that there's quite a bit of a difference in terms of intention in terms of

(45:25) disclosing information so all I would say is be cautious of what you believe and who it comes from but yeah good questions yeah a really great question and just a personal statement on on all that which is very relevant um you know I'm involved in in trying to to just help facilitate the uh the natural disclosure process and I and I respect people for you know all those working hard in government to to make this happen over the years um and you know is my just personal belief that the world is is a you know ready

(45:56) for for the whole thing uh I mean I don't know what the whole thing is but at least you know the whole **truth** in terms of uh what's been going on in terms of what humans have been able to figure out so far so my intentions are to to assist in this disclosure process in a constructive way uh but I'm just one little person and that's me Mr Panda I'm sorry Beno you haven't you haven't had a chance yet great to see you Beno what's what's your question sir yeah hi great space and uh first of

(46:23) all I just want to thank Ashton for all the hard work that he's done the time he's given talking he shows as a listener on my thing um yes I can can you hear me Panda I can I can hear

him up and down yeah we're recycling you buddy apologies so yeah first of all thanks to Ashton and thank you very much for sharing with us your research um I think we're very lucky to be able to to be privy to that um I guess uh you know it's this is something I've grappled with since you bought this of

(46:56) uh this perspective to this community um I think from near and close to day one I've followed your account and you've impressed me all the way along um it is scary to put on the H that that this is real um but what's compelling is the evidence you presented to say that this video is real um just even alone just the dates um how when it was released uh how how quickly was released after the plane went missing um I kind of look at intent as well and I kind of feel like that um that perhaps if this is not a

(47:28) deep state fake and this is genuine uh what you see is what you get video which I'm compelled to believe it is um then it almost there's a notion there that the person who released it um because at the time when I remember like it was yesterday there's a lot of heightened emotion and I think it would have been done as a good thing like perhaps to you know give perhaps in a roundabout wave and perhaps some sort of closure but I I find it difficult to sort of come across to the side that that it's out Tech

(47:58) that's just my my personal sort of persuasion on it um I kind of feel like we're bystanders in this perhaps and I think there were multiple assets that were probably used um to track this plane when it did go off course um and I believe that I guess it would be in the interest of the person that released the footage um not to release 6 hours worth of them tracking it perhaps but the most poyant part which was I guess the the finale where you know it disappeared um recently 60 Minutes did a MH 370 anniversary special and in that they

(48:32) interviewed um some uh amateur radio enthusiasts and they essentially create a good argument also to say well they don't say that it crashed I mean let the logic tell them that's where it crashed because that's what you think planes do right so but essentially they they've given coordinates which were a little bit different off the arc from the original search area um does the satellite um coordinates that that that you've established do they match do they mirror that those coordinates or have

(49:01) you have you sort of listened to those interviews with with those other gentlemen that that claim that they've sort of triangulated the the the the last signal I guess you could say from the radio waves that they interpreted from their research and they line up if you don't mind me asking no good question so I think we're probably talking about Richard Godfrey and that's his whisper R data and uh that was actually the first data I looked at so this investigation is systematically only ruled out data after we've looked

(49:26) at it and found there's no credibility to it essentially and the Whisperer out data was highly contested even right away because the argument that I would give in my earlier SPAC is it's like trying to track uh somebody in a white shirt in a sea of white shirts so it's kind of like piecing together data but only if the rest of your data is accurate so if those iMat pings are

accurate after 1840 UTC which I've looked at them and there's definitely a huge anomaly at 1840 UTC I think that very few people have actually looked at

(49:55) the ual iMat pings honestly a lot of people talk about them but they don't really actually go look at them uh if that is real though then what they're trying to do is they're trying to recreate a flight path using this like radar pings that hit these various airports and locations and the problem with that is that looking at I looked through all 300 pages of the whisper route uh and there's definitely sometimes where like they didn't have detections and they're just guessing right and they're trying to piece

(50:20) together this game of telephone now the problem is the moment you have one thing that's wrong now your whole routes just a guess right ultimately at the end of the day they've looked at throughout the whole seventh Arc they've searched everywhere the Black Box search indicates that as well um they're never going to find a plane down there I'm 100% confident um and they it's not like it's 2015 anymore you know it's 2023 it's nine years later we searched everywhere so all these experts and I've

(50:50) interacted with many of them if not all of them at this point uh half of them blocked me early on which I think is is a good indicator that they're not being very scrupulous in general um you know I think they're clinging to this hope or this idea that somehow 10 rows on an Excel data spreadsheet is more accurate than 15 eyewitnesses and the big problem is there's no eyewitnesses in the southern Indian Ocean like we pointed out there's an active shipping route so how did nobody see this right people would have

(51:19) seen this plane somebody would have seen it they would have seen this debris field so they have to use a lot of uh specious logic in order to come to this conclusion that this plane crashed down there um so ultimately we ended up throwing out the whisper route and it was actually a big point in the investigation because I before all this was somebody who wasn't even into conspiracies in general so I just thought this ping data had to be accurate had to be interpreted correctly that the whisper route had to be this

(51:48) amazing thing so I actually assume there was a minus sign in front of our coordinates in our satellite video even though it didn't really make sense in retrospect because this the minus sign actually put the plane going directly through the whisper route like exactly in the southern Indian Ocean that was the first Smoking Gun to me was oh okay so if people do believe in the whisper route they should 100% believe these videos are real because it has the plane going directly through the whisper out in southern Indian Ocean at like 6:00 in

(52:14) the morning now the problem was we looked at the satellite there we found USA 229 actually was there it was there about 30 minutes before 1840 UTC around 1810 1850 UTC so early on the MH 370x team was wondering can a plane teleport twice because we're trying to figure out how does it get there it can't get there like we have it there at 1840 UTC which is like you know 2:30 2:15 in the morning but the whisper out data has it there at 6:00 in the morning so I had our satellite expert be like hey can when's the the satellite going to be

(52:47) there again and it was just it's not there again for like 12 more hours uh these low earth orbit satellites rotate around the earth every 90 minutes but they don't rotate in the exact same SP spot they like kind of shift a little bit due to the rotation of the earth so it didn't make any sense but then when we realized that we were able to look at the coordinate shifts and map the coordinate shifts out and we were trying to figure out okay could it be inverted the coordinate shifts but the coordinate shifts are going to be

(53:14) there's no way to invert the coordinate shifts right whatever we see from the coordinate shifts don't depend on what we're visually seeing in the video so that was able to tell us that okay either this plane is going south into the east or it's going north into the East if it's invert if it's got inverted on it but if it's going north into the East the plane would need to turn right if it's going south into the East the plane is turning left in both of our videos the plane is turning left so what that

(53:41) means is it has to be going south into the East that means there can't be a minus sign that means what we're looking at here has to be the nicobar islands so we just use basic logic and reasoning we're able to figure out the nicobar islands and that's when the case exploded open that's when we found the witness there that's when we found out oh turns out the satellites right there at the exact same time now it just it goes up to the Northeast a little bit 1840 UTC satellit staring right down in the nicobar

(54:06) islands coordinates this is when everything opened up then we found out about the fire scenario found out about all the other Witnesses I could never make any of this stuff up but what I did realize early on is that if these videos are real which I was fairly certain early on they were that all the evidence would thetically support it right you would be able to find this I didn't think we'd be able to find this much evidence though this is far more than I ever thought in my wildest dreams we will come across and

(54:34) that's why I tell people we have more evidence here than any court case in the history of the world we could convict anyone of anything at this point based on these videos well not anything but you get my you get my drift right I mean I like to compare it to the Alex Murda trial that recently happened although I don't like saying his name because I don't think he's a great person um and that's just my opinion but they convicted this guy with no videos just on circumstantial evidence alone we have

(55:01) two videos 10 Witnesses we know the time the assets we have a satellite that's staring down like how much more do you need I even have the name of the leaker you know which I'm like 99.9% sure he's the guy so all we need is attention we have plenty of evidence stacked up and I know that's probably more than you wanted to hear but I see you you know given the the 100% so Beno thank you for that question I appreciate it if you have any followup I'd be happy to take it well I I certainly do and um you know

(55:28) agreeing with you 100% and again thank you for for all your hard work I'm very grateful for what you do um and I think you're sort of holding um bringing a bit of transparency to to

whereas we didn't have it before um I I guess my other question would be um I remember uh the passengers families being able to call their phones um was there any data like there's a lot of things that we heard there were a lot of leads I guess if you think back that were coming through the media at the time and then they were

(55:58) never sort of followed up um I thought that's sort of one area where they could actually probably extract data as far as triangulating phone signals etc etc with all those different phones and all those different family members claiming the same thing um I thought there has to be some sort of substance to that and also I'd also like to know quickly why do you think it's outtech like do do you entertain that it possibly could be not out Tech and that we're perhaps just observing this and I somehow

(56:23) um that that would just not so much right place right time like as I said like it would make sense if this thing was taken early on in the piece I kind of think to myself like if it was taken over if the plane was taken over shortly after it took off um essentially the pilots lost control of the plane because I guess a lot of other UAP stores especially well most of them in airplanes helicopters even I've heard I've heard you know Witnesses recount their events where um where they they basically lost control of their their

(56:53) plane and the US take control of their plane and but obviously on this occasion something's gone a bit further you know that they haven't come back to tell us what happened so to speak whereas these other people did so I just yeah I just I'm curious about that as far as the phone calls from the families and is there any sort of have you done any sort of more investigative research as far as sort of like the Telco companies and the potential there with with data that could be sort of pulled from that um if

(57:21) if you wouldn't mind yeah there's not much we can do about private company stuff right right and interesting enough it seems like they didn't look into that at all which is a little bit suspicious right because I agree you should theoretically have been able to track that and you know at the time I guess everyone just assumed oh it had to crash into the ocean so we can just ignore that right but you know that doesn't really make a lot of sense now in retrospect it's like you should have at

(57:44) least done your diligence because if they're calling like how are you just dismissing that right um and it's kind of the same as the rollsroyce engine data it's like the rollsroyce engine data will expose the LIE for sure because this stuff is sending the data uh like the same way the Pacemakers do wirelessly right um so there's no way that they didn't have that data and so probably that got covered up to corroborate this South Indian Ocean narrative I don't think that data has ever been publicly

(58:11) released um and the radar data and the amap pings took weeks so if there's a situation where you're trying to be honest about what happened why are you waiting weeks to release it they should have been releasing that data the next day um I would argue that the sat pings have less chain of custody than our videos have um with respect to some of your other questions

there's still mystery could still be Espionage somehow that started this fire as opposed to just random event uh it could still be non-human intelligence like I was

(58:40) talking with somebody on a podcast recently they they were sure it had to be non-intelligence they kind of like you said you know they lean towards that and I said doesn't matter to me like either way we're disclosing the same thing here right I'm arguing is reverse engineered our Tech their arguing is nonhuman intelligence one leads to the other the other leads to the other one right so you know I've been pretty clear it doesn't matter to me what people believe in general I'm just getting the

(59:04) evidence out there to me it's a matter of it's just too coincidental why are they filming the drones there in the right places clearly is these are the signant systems that there are connected here signals intelligence um when you could argue okay they're doing that to track this Rogue plane but to me you're not sending out the signals intelligence team and all these uh satellite assets like you're doing that because you want to film the event and get Intelligence on the technology that you are deploying

(59:31) so that you can you know use it later for intelligence purposes and to maybe refine it to me the bigger argument is it a weapons test is it a test or is it proven technology I think that one person made a good argument that well if the plane's doomed anyway and everybody's going to die if it crashes then maybe there's an initiative that says okay it's doomed anyway we can fire off our test right because even if it goes poorly you know it's collateral damage right at that point it's going to

(59:57) have they were going to they weren't going to make it anyway which is pretty morbid I personally like to think in the good in people and think that maybe there's a thing that says okay if this plane is doomed and 230 people are going to die we have a thing that says we can go ahead and you know use the classified technology to save them right but I don't know kind of depends now the other big thing why it's not necessarily nonhuman intelligence in my opinion is that I am very skeptical of aligning

(1:00:22) human motivations to non-human intelligence what we can see here is that this whatever technolog is being deployed seems to be to save the passengers to some degree because otherwise they're already doomed anyway uh and I don't think that a non-human intelligence is going to give a crap about us if they're so Advanced it's like telling us like are you going to go out and try to save every ant that you see no you're just stepping on it because it's in your way right uh so that's part of the problem that I have

(1:00:48) with that but if you do believe in like benevolent non-human intelligence sure that can come back into play so that's again why it all kind of depends on what you believe even personally um and this actually goes back to what money peny was asking about the motivation I don't think this is about money it can't really be about Goods either just way too high of a risk I mean we see what happened here they these videos got **leaked** potentially all this technology will now be **leaked** to **Russia China** and I think they would have

(1:01:12) already figured it out if I can figure this out from a Twitter account uh nine years later they probably figured it out years and years ago right um but to the point there what is worth it is the intellectual property there were 20 free scale semiconductor engineers and scientists on board This Plane that's way too many people for one plane most companies have a rule you can only have three or four people from the same plane on board um and these people were going to improve the factories or something in

(1:01:39) **China** nine or eight of them were Chinese Nationals 12 were Malaysian Nationals even though they work for an American company we found a 2005 National Security Agency report call I I actually wrote it up calling free scale superconductors because the National Security report was about commercial emergence of super conductivity not just superc conductivity room temperature superc conductivity which is the exact technology that I just explained we're seeing in the videos from the orbs and potentially how they're inducing the

(1:02:08) black hole so to me we found a direct link between the scientists and te and Engineers on board and the government that report even says the technology might be available by 2010 to 2012 but only if the government intervenes with funding so to me this says now we have our direct connection either they are preventing these people from getting to **China** or they because they're going to give this technology to **China** or they's they're taking them they're they're saving them because they need them

(1:02:38) because they're essential there was also a microchip that apparently free scale semiconductors just sent to me today by a person I did podcast on that was a very Advanced microchip and he was actually telling me on the podcast that he had heard they were developing room temperature superconductor microchips that would be used in quantum computers again connected connection from superc conductivity once again and I think that was actually probably part of that report honestly uh so to me that's your motivation right there it's not about

(1:03:07) some patents that are going to revert that that was a red herring like that's not how the patents work they're owned by the company already anyway so even though that might have been a side motivation to me it's about saving these Engineers yes and uh great description and you know if we're going to look at the nhi um motivation which is obviously hard to do as just you know human beings but if we were to attempt it anyway yeah the part to me that seems to be the most uh non-intuitive in uh as far you know

(1:03:38) in terms of why the cameras were all there in the Drone uh you know the two satellites and the Drone right at the right place at the right time when a non-human group of entities perhaps you know swarm this thing um that would imply some kind of very strange collusion on part of our government and the non-human beings the orbs so yeah I I have trouble piecing that together in my mind in terms of any sort of motivation yeah there's a couple questions too I I guess I should monitor the chat as much as possible so they

(1:04:05) didn't roll it out in 30 minutes they have one hour and 20 minutes to roll it out that

drone has to be station somewhat nearby it's not coming from Diego Garcia military base it's too far away but we found that there is these little bases that are joint owned between India and the United States along those nicobar islands where the Drone could have been deployed from now I haven't written this up but there was a [Reddit](#) a [Reddit](#) piece that someone dug deep into where these were all located and there's plenty of spaces nearby

(1:04:32) where this drone could have come from the the satellite is only going to be in the right location there for several minutes which would also indicate that this was a way point that they told the plane to go to where they could get this type of intelligence so again either they're super lucky or you know this was a planned operation and to me it's not going to be any other country or the other Theory sometimes people who is I call it the wakanda theory that there's some hyper Advanced third party you know

(1:04:59) nation state out there that we don't know about uh there's just not really any evidence for that right and it makes it's hard to understand why the US government would hide any scenario that involves a third party country or um you know any type of thing like that do do you think it could be the national research the naval research laboratory themselves because I mean I look them up and apparently like they have like a plasma division essentially not only they you know in charge of the satellites but they have their own

(1:05:29) um plasma physics division that conducts a broad theoretical and experimental program of basic and applied research in plasma Physics laboratory dis discharge and space plasmas so the fact that they sort of work with that technology I would kind of Lear credits exactly to what you're saying that that this is perhaps um they're doing I think if anyone it has to be connected to the United States government in my opinion uh whoever is doing it it so you know if it's a you know uh kind of someone who's

(1:05:58) connected to them sure theoretically uh but you know when I look at how advanced this equipment is whoever owns this technology controls the world so you kind of have to feed that in together so either it's the US government themselves that makes sense they're theoretically the most powerful Advanced country in the world or it's somebody that's directly affiliated with them right or you know there's a lot of other kind of what I call hybrid scenarios right so if you want to believe in the non-human

(1:06:23) intelligence scenario is this a you know they're working together kind of situation you know I try to stick to the more simple kind of solutions uh in general but again it really just depends on what whatever you want to believe in your own personal uh understanding good questions though Beno should we get up some some other people as well and uh r i don't goe Melo I'm not sure um I can't like pull people up or anything so I don't know you may have to handle that part uh yeah yeah no problem

(1:06:55) we'll uh we'll keep the conversation going well just while you're getting other people up can I just also last question so I'm sorry to bombard you um but the Fred valentic case I found that to be very similar like that's more there's an audio clip although the Australian authorities

actually never released the uh the audio but they released a transcript um and that transcript essentially he says when he's radio radioing back to Melbourne he describes what you could essentially say

(1:07:23) we see in this video and that was over like you know um back in the 70s right so I think it was back in 1974 maybe maybe it was later I'm not too sure on the DAT but again the Fred valentic case is just very similar um and also think that the fact that with disclosure they're kind of sort of spooking spheres that's sort of like of all the sort of objects or shapes that they've sort of officially come out with so far one has been the Spheres um yeah so I'm just I'm just curious on your thoughts there like

(1:07:53) you know is this is this do you see any similarities there like any sort of connection there perhaps um and have you looked into the Fred valentic case because I always found that to be that that was sort of really formally the the most sort of I guess if you're looking for sort of Hardcore evidence historically about UFOs and abductions or or people going missings in airplanes I guess that's probably like the most was the most up until now um evidentiary type sort of case that we had on record because you literally had the guy rad

(1:08:21) rading back saying hey I have got this sphere it's orbiting my plane were his words um which again describes what what we see in the video with mh37 I just thought there's a lot of similarities there and I think if you look into his case as well you what I found curious about his case was that week before he went missing he he made a comment to his girlfriend and told her and I've listened to her this is It's he say again but I've listened to her actually State this on video um where he said uh

(1:08:50) if if UFO landed tomorrow I would go with you and he was read in on from a military perspective he was reading on he was showing some papers down in Victoria at a barracks right two weeks before he missing he was previe to some information regarding this technology whatever it may be but he never he told mentioned it to his girlfriend and mentioned it to his uh father as well um and then a week later makes that strange comment to her and then a week later his plan goes missing I just I just think that there's a connection there is I

(1:09:19) think there's a little connections there little little breadcrumbs that I guess sort of may help tie together or you know that identify who's behind this potentially yeah sorry I was muted um yeah honestly I get a lot of different things that could be connected probably more than half a dozen or a dozen go anything from The Philadelphia Experiment uh to several other videos that also show orbs spinning around them and you know I can't say one way or another what I will say is that from an investigation standpoint I can't really

(1:09:52) connect it to anything else or any other consp iraes either uh we have to keep the investigation pure and make sure that all the evidence is really strong so that we can't be discredited from linking it to anything else um but absolutely I think the goal here is that if we can show that these videos are real it opens the door to all these other cases right that are very similar and can lend credibility to those cases as well whereas right now they potentially just get

ignored or people don't give them any credit or people see

(1:10:23) you know a lot of people some people talk to me that some of the most emotional moments I've had with people is that you know they tell me like I see these lights outside my sky outside and I just want to know what they are is what people tell me and I want to tell those people like you know your sightings are should not be dismissed people you know people should look into what you're what you're seeing and give you the closure that you want but I don't have those answers um you know I don't have another situation where we

(1:10:49) have two high quality military videos like we do right now so absolutely absolutely there could be connections um and that's what I hope that with getting the **truth** to these videos that we can you know get people looking at other stuff that is uh you know out there mysterious unusual that could be similar and just other uh esoteric things in general good question yeah well said I mean yeah disclosure you know to many of us it's yeah it's about just keep uh you know pushing open the door further and

(1:11:20) further to more um possible understanding about all these things um Chris Hunter uh wonderful to have you with us what's your question Hy thanks um I two points I wanted to bring up uh such a high value plane with people on board um I almost wonder if it's a tampering sorry Chris is a colleague of mine well isn't that nice well pleasure to have both of you here welcome Chris hi can anybody hear me yeah we can hear you keep going we can hear you okay wondering if it maybe it's a tampering with the timeline to stifle The

(1:11:56) Innovation and science they were going to bring about and and order to stop that um the other thing was is I was thought I read um some information about um when crimeia happened well um Obama we can't hear you or at least I can't uh yeah we can hear um let's cycle Penny up down and up if you can melow keep going yeah yeah um we'll fix this just hang in there Penny do turn around three times counterclockwise no yeah you're good uh real quick Chris on your thing and then I'll let you do the second part of your

(1:12:31) question um the Espionage scenario definitely is still in play so with respect to uh you know is it are they trying to slow the timeline down like if this if these scientists were going to **China** then really what we're dealing with here is a shadow War for control of technology and this was used to be the theory I was on early on if you watch my confessionals podcast which was the first one I did in person uh I was trying to figure out if this is a ufology explanation or if this is an Espionage explanation and my argument

(1:13:01) there was that whoever controls this technology controls the world so you could argue that even pushing them back 10 years would be worth it right because as we've seen here as we've talked about even just warp nukes is enough to be a huge deterrent and I could see why that would be enough of a reason to prevent these people from getting to **China** with that intellectual property that would put them on par with whoever else may have it like the United States so that's a great right go ahead I wonder if there's something on board

(1:13:28) that had to disappear also like some kind of technology or uh you know documentation that they had to make sure nobody else got a hold of because the whole thing just you know disappearing is it would that would answer that question the other thing was is uh when crema happened uh where they had some missiles uh surface to air missiles go off back when a bomb was in and the plane hit the ground and people were killed and and uh I remember seeing footage of the bodies and stuff and they were saying that they thought they were from the

(1:14:00) same flight that we're talking about now but none of the bodies have blood in them they were drained of blood and I'm that was weird because you could see that they they weren't they weren't they didn't have any blood in them there was no anything anywhere so just saying that I I don't know yeah my a lot I think that people have to be careful about okay we've got a huge conspiracy here but that doesn't mean that everything linked together I think that in general conspiracy theories have this

(1:14:26) tendency to try to be all be linked together because everyone wants to see patterns everywhere the reality is mh17 was shot down by a buck missile launcher uh by a **Russian** separatist General I was actually online the day that it happened when they posted the picture bragging about it on Facebook which they deleted 15 minutes later when they found out that they killed a passenger plane full of people there was a different number of people on board that plane compared to MH370 most of those passengers were Dutch so if if you saw some videos I

(1:14:55) would probably be highly skeptical of whether or not those were actually the bodies from the plane that actually crashed because I don't think that those people would have been filming the bodies that they had just shot down right so if you saw those videos and I don't know if inspectors like the third party were even allowed to come and take a look at it because it was such a politically Hot Topic so I would just say be skeptical of trying to connect everything together this investigation will not be connecting anything to mh7

(1:15:22) or any other conspiracies at all but you're you're allowed to believe whatever you want and I say I believed it I just said I heard about this and it didn't seem connected but I I was just making sure that I brought forward everything that I had heard yeah that's totally fair so yeah and and that's just my official stance on that so I just have to be consistent about it and it does come up quite a a bit so I felt like it's important to to mention it and I'm not trying to put you down or you

(1:15:47) know nail you down to that no I I I agree with you there's no actual factual connection to to to it whatsoever so it shouldn't be looked at so I agree good questions though do you have any other followup Penny can you hear us again now yes for some reason I couldn't get back into the space I don't know what happened but I'm very sad I missed Chris's question I'll have to listen to the replay yeah it was mostly on like could there be an Espionage angle and you know he also asked about the cargo so we've

(1:16:16) looked into the cargo a lot I've talked to some of the official investigators that started early on or not necessarily the official ones but the people that investigated early on and the cargo is very mysterious um we do know about the lithium ion batteries we're on board and these lithium ion batteries we're not sure if they're regular lithium ion batteries military lithium ion batteries might be something going on with respect to those as well but it's really hard to get any definitive data because all we

(1:16:40) have is this manifest related to the cargo and then we have the official ATSB report I noticed there was only one American passenger who was um uh an IBM Employee um I presume you know about him yeah yeah Philip Wood Philip Wood is linked to quite a different few different things on Bo related to this case there's a bizarre story isn't there about him hiding uh something taking a photograph that turned out black very strange yeah yeah that one was opposed to the 4chan picture that had Xif data that pointed to Diego Garcia where he

(1:17:13) claimed that he was being held prisoner and he was drugged and that he hid the phone up his butt you know prison style um interestingly enough that that picture got **debunked** by the same people that supposed **debunked** our videos that we rebunk and proved that that **debunk** was incorrect and we also proved that the Philip Wood **debunk** was incorrect as well I found a very detailed analysis that shows that it was not inconsistent with how a picture would look interestingly enough um and also the interesting thing is I think it was

(1:17:40) about the same people British intelligence approached Mark Dugan um Mark Dugan the French guy in the Netflix who was formerly Proteus Airlines um CEO I think he was um so I wonder do you know who that British intelligence person do you know anything about them I wish I knew all that like I've only got involved in this case 10 weeks ago so my knowledge is you know looking back on internet articles and things like that that have a lot of stuff from the archives has been deleted stuff like that I am familiar with Mark Dugan who

(1:18:11) is the uh French author who wrote about it said the plane went to Diego Garcia uh that seems to be where everybody thought the plane went and supposedly was told to stop looking into it um the big thing about everybody thinking they went to Diego Garcia is they thought it was like remote control there I think Jim Stone also mentioned it um there's a lot of other there was even some remote viewers that pointed it to there our witness Katherine T in 2008 thought that it went there um a number of other conspiracies also thought it went there

(1:18:37) like everything pointed at the base and it makes sense this bases in the middle of the Indian Ocean commercial airliners can't land there we showed that we found an article from Facebook that dates all the way back to the time of the plane that there were no departures 72 hours after that from Diego Garcia and it's British territory um isn't it it's a US military base on British territory um I'm worried about the British connection here and the the reason I'm mentioning it as well is the Malaysian um

(1:19:04) government the Malaysian police the Malaysian Airline staff remarkably tight lipped on all of this yeah and the base as well I'm always I'm a little skeptical to talk about because I've

even myself uh you know people told me this base is more secretive than area 51 by magnitudes what I also heard is is not necessarily about aliens not about non-human intelligence but just all kinds of stuff that they're doing I would imagine if this is our technology that we're seeing in these videos that

(1:19:31) that's where you test it right it's in the middle of nowhere I believe that is the most likely scenario from uh everything at this stage but yeah thank you just for all the hard work you've done on it it's amazing and I'm going to keep on it awesome I'm glad to have you there and paying attention especially people who are you know prestigious we've been working with the BBC in the past and stuff like that um you know it's a tough world with live in these days and what comes with these videos is a very

(1:19:56) real disinformation campaign to keep them quiet you know they've kept these videos quiet for 9 years and it's possibly only now that we have the basis to understand them those 2007 DOD Navy uh Declassified videos that show uaps those showed us what Flier footage looked like what Drone footage even looked like before that I would have no idea so when I saw the Flier footage rethermalized mq1 c Grey Eagle in 2014 I didn't even know what I was looking at a lot of people when they first look at the satellite picture the video they

(1:20:27) think they're looking uh up instead of down That's how little of a basis we have to understand what the satellite video might I come from an RAF family my father was in the Royal Air Force and uh then worked at gchq which is a few minutes from where I'm currently sitting the head of cia6 and all the rest of it and I can tell you the military activity round here at the moment I would not put anything past the uh the technology that they currently have yeah and I think another argument circumstantial of course is that you

(1:20:58) know a lot of these Western countries never get attacked we have all these wars happening but no one's really messing with uh the big boys right the the big Allied uh West and I would argue that the technology might be part of the reason because anyone who has this technology can end the war in in a second you can take out the other people's world leaders and whenever you want and some people come and counter back and say well if we have this technology why haven't we just taken over the world but I think that's very

(1:21:23) myopic view is that there comes like you go Kim Jong y has got a bigger button and his hacking infrastructure is a little larger I would suspect and even if you take him out then what right now you have to deal with the entire North Korean population it's not like they're just going to fall in line right and you have to replace them with someone else they might do if we feed them yeah May it's a good point honestly and so you know some of it yeah sure you might but also like you pointed out could be that

(1:21:50) they also have technology what if they can warp ncas right back right now we're in the same situation where we began with where everybody's got nukes and first person to fire it off is going to end the world right so you know there's a lot of arguments why you might say that we don't we wouldn't utilize this type of Technology not deploy it but what it also means is a lot of

these wars that are happening are you know Small Potatoes they're just happening for money purposes or small land grabs things like that they're just

(1:22:17) proxy wars that are going on where nobody's really deploying their real technology that could end these in any any minute and to me that's sad because there's real loss of life that's happening you know in the Ukraine in Israel uh Palestine situation you know I personally feel like we should be able to come together over this technology find Common Ground new purpose as Humanity to try to change our world for the better and that's what I see when I watch these videos I see hope and I hope

(1:22:45) other people do too well I certainly hope for the same thing hey Ashton hey hey how's it going hey it's Noah the one who yeah I'm the one that posted your oh yeah good good oh I was just saying yeah I'm the one that posted your stuff on **Reddit** that got you kicked off for seven days I'm sorry I wish that hadn't happened I kept saying last time no I want to be clear about that too so I don't care about getting banned from **Reddit** at all and uh I think you should post my content there

(1:23:17) I think you shouldn't be afraid or get bullied into taking it down it's very important as well right is don't let them bully you like what what can they do to you about posting someone else's content that's the whole point of **Reddit** right I don't understand why you got banned and I didn't though and that's what just because I guess they were hiding like what they claimed is that I think in the UFO sub**reddit** that's the most controlled sub**reddit** possibly of all **Reddit** honestly but in that

(1:23:42) sub**reddit** um you know I think I called out the moderators or something and said how could they corrupt or something like that or how said that the sub**reddits** corrupt and they tried to claim that I was calling out sub**reddits** it's like how how how was a personal attack or how is it a harassment to call out a enti is the rufos with the S at the end yeah and that's where these videos emerg and the reason why we know it's corrupted is that's the place where they silenc them too right and uh you know that's the

(1:24:07) place where the icy slide account is the one that posted the VFX **debunk** someone actually recently figured out that icy slide just stands for I slide which stands for intelligence Community Forum slide and that's actually a disinformation uh Forum sliding is actually a disinformation um mechanism is that it's that's exactly what they did ironically enough is that you bought up vote the content you want to be seen you don't defend it the account was a one-day old account they didn't defend the argument

(1:24:39) at all they didn't put make any post in the comments at all they got manual approval by the moderators to allow that to be posted they had to approve it I asked the moderators myself if they knew who the person was and they wouldn't respond um which I think is pretty telling in general because you can see how much they' came down on me but they're not going to come down on a one day old account that has no Karma that shouldn't be allowed to make any posts and Forum sliding is you push it to the top and now everybody just

(1:25:08) believes whatever's at the top of **Reddit** right whatever the most upvoted comments are that's what people believe all the upvoted comments were thank God this is over thank God this is proven to be a hoax it's like that's so disingenuous right and the worst part is the VFX didn't even match as a matter of fact it didn't match it's not an opinion it literally did not match um and that's the scariest part is the only factual argument they were making was false um and so that just shows that

(1:25:37) like how powerful disinformation is in fact that might be one of my upcoming pieces is called disinformation just going over uh manufactured consensus and social contagion because I personally believe that **Reddit** is the number one source of misinformation on the entire planet and it might even be the number one radical of terrorists on the planet at the moment well a lot of the things that get pushed the top do become the main story of that sub for weeks and weeks you're right about that but you're not going to find any corruption I I

(1:26:06) hope I hope in ufo because that's why your sub even has to exist though right like why that sub even has to exist it has to exist because of what I'm talking about is that people realize that these larger sub **reddits** they get controlled and once they get controlled now you can't have real discourse anymore and so then people have to make alternate versions right ufo and so I think that the niche sub **reddits** uh like that are still pretty good but the bigger they get then they get targeted for control right and it

(1:26:34) doesn't take much to get control of them and once they have control then they can control the narrative and as long as they have the UFO sub **reddit** they don't really care about the ufo sub **reddit** until things like you have happen right where you posted my content it got thousands over 1500 up votes now they care and then I was forced to basically remove it yeah and then you get forced to remove it right I'm still talking with the mods about adding your stuff back I want to find a reason to validate or

(1:27:00) validate I mean uh what you uh you said about those the research I've been telling them yeah you seem all right you seem legitimate the other mods on the sub I'm me talking to them in the Discord and they seem to not to have any problem with you just that the sub was being rampaged on by people from you **debunking** sub **reddits** honestly when I posted that stuff like after a few hours people started to hop in again you got to just be strong man you got to ignore it right and again that's why the the social contagion works is that humans

(1:27:31) are a very social species we want to appease other people right but the **truth** doesn't care about who you're appeasing you know it doesn't care about what consensus believes and we shouldn't the **truth** is not based on consensus and that's part of the problem is that we've got into a post- **truth** world where the **truth** is whatever the majority believes and that's how we've gotten to this point where we can't believe these videos yeah I I was told a few times I have very thin skin but it's getting a little

(1:27:58) thicker and I'm just trying to do the right thing and hopefully that involves being able to get your content back on there without any problems and hopefully you won't get like

banned or whatever again I really don't want that you do seem very genuine with your findings and your research and you seem to know what you're talking about actually even though people may not agree and yeah it doesn't matter me I think that if you want to do that you should find a piece that you think is very compelling something that's honest

(1:28:24) and compelling to you and then post it there I mean there's several people that are posting my content and I just tell them you know feel free I don't feel like they're stealing my content I don't really care if they post it on [Reddit](#) yeah um my problem is that you're the one that got banned because it was my fault and I just no it's not your fault I want to be clear about that so I didn't get banned because of you in any way shape or form that's not why was your comments you said right yeah and my

(1:28:44) comments in the UFO sub[reddit](#) is the reason why I got banned it wasn't even related to ufob in general so you should not feel like that's on you at all so what happened was for people who are just listening who don't know um when we figured out the fire scenario and we saw the Heat Signature underneath the plane that's right at where the the exhaust vents are we were able to realize wow we can actually prove the fire scenario and I made a PO ask you a question about that yeah one sec once I finish yeah let

(1:29:11) me finish first so yes so we realized that and then my my post about it got posted on three or four different sub[reddits](#) got posted on conspiracy sub[reddit](#) UFO sub[reddit](#) ufob sub[reddit](#) and it took off on all of them except for actually the UFO sub[reddit](#) is the one where it got the least amount of uploads it became number one on conspiracy number one on ufob sub[reddit](#) and I felt like I needed to go in there answer questions because a real person goes and answers questions for people the icy slide account didn't answer one

(1:29:38) question right and so I started answering questions and of course there is it's [Reddit](#) so there's so many toxic people right people being just the worst people you could possibly imagine and so I pushed back a little bit and and that's what they want you to do right because they're looking for an excuse to ban me because it comes down to narrative control you can't brainwash people if someone's out there telling the [truth](#) so that's just kind of the long and short of it go ahead Noah yeah

(1:30:06) I know I was just thinking about the the fact that uh you said something about macroscopic decoherence and nobody really that I know knows what that is and I was hoping to if you want to delve into it uh talk about what that means and how it could have something could happened to the plane but we don't know where it went or when it went or whatever it went even yeah I was thinking about that before so I'm talking about the science I think that's a good thing to dig into is that first of all superconductivity is the secret

(1:30:37) to everything it's the secret sauce it's the key to that allows everything else to happen and if you've reached a superconductive state then you are theoretically achieving the quantum properties but at the macroscopic level now from a Quantum experiment we can look at the double slit experiment okay and the double slit experiment is the most mysterious experiment

all physics if we shoot a photon think of it like shooting an atom through one of two slits we look at the pattern that it forms to figure out which slit it went

(1:31:11) through so what happens when we shoot the photon through the two slits surprisingly we get a wave pattern an interference pattern we don't get a two slits on the on our detector so how can that be it has to go through one of the slits right how can it go through both at the same time we call this wave particle duality so what's our logical Next Step let's take a look let's try to figure out which one did it go through let's look set up a detector to look what happens the wave function breaks down

(1:31:41) now there's just two slits on our detector how is that possible is the universe aware of itself does it know that we're looking this is the why it's the biggest Mystery mystery in all physics doesn't that like give Credence to Consciousness Across the Universe or some kind of do you know and I think everybody can look at it differently to me it says the universe is conscious of itself it's aware of what's going on but when we break it down this is what gives rise to quantum entanglement

(1:32:10) non-locality and quantum teleportation because non-locality is essentially being able to tell information faster than the speed of light if I change something over here I instantly know what happened on somewhere that's very very far away and this is what China has proved several times and so that's quantum entanglement right and somehow we're able to transfer information faster than the speed of light now what Quantum macroscopic decoherence is is reverting that so if you think about what that would mean is

(1:32:42) being taking something that is at a probabilistic point our wave pattern converting it to a deterministic point when we look at it one of two points reverse that and now you're going from a deterministic point to a wave pattern a probabilistic point now you can break it down even more and I think that what we're really looking at is solid state Bose Einstein condensate so Bose Einstein condensate is if we super cool certain elements like lithium 6 it changes its properties and it becomes it achieves the

(1:33:17) properties of Quantum and what that allows it to do is Achieve that wave function status that we see it can do things that it would not be able to do so fermion can turn into bosons a fermion is anything that has solid structure to it and the reason for that is fermions have to be in different places at the at the same time in at the same time in space time so if I have a cup in front of me it's made of a fermion the reason why it doesn't collapse when I pick it up is because all those fermions have to be in different

(1:33:49) points bosons don't have that limitation like isn't this just the same thing as matter manipulation creation kind of it's similar perhaps I don't know much about that in general but here's the thing so bosons allow you to collapse them all down bosons do not have the limitation of being at a different point they can all collapse onto the same point that's what happens when you have a Bose Einstein condensate is now it can convert to bosons where now they can collapse onto one another so if we can

(1:34:17) do that to lithium and convert it from fermion to bosons and then potentially back again in now you're kind of talking about teleporting something or converting to a wave function and turning it back so the same idea can theoretically apply to our plane at least in theory now another way of looking at it is that if we can convert the plane to a uh Quantum state from a solid not from a not from a liquid or gas sorry from a gas or a plasma but from a solid state and we can take its mass and reduce it to zero so turn it from b b uh fans into

(1:34:57) bosons and put it down to a single point where now it has no mass now you can accelerate the speed of light or you can move at the speed of light the less Mass the faster that you can go the new analogy that I'm going to start using is a fly or an ant when you watch a fly or an ant they move extremely fast for how tiny they are relative to our size they're moving much quicker than we are the answer there is the same the less Mass the faster you go and not just the faster you go the faster time goes and

(1:35:30) we can apply this both to small things and to large things the reason why we have curvature is that the less Mass the faster time's going The more mass the slower time's going so if you have an object that's up in the air the part that's further away from the Earth is moving faster than the part that's closer to the Earth what that does creates curvature so what that does over time is now that object is going to move closer and closer and closer to the Earth it's going to converge on it another analogy

(1:36:03) for that would be if both of us are in different parts of the Earth right now we could be on opposite sides of the earth we're both going to walk in a straight line and even though we're in different points you would think that those straight lines would never intersect but if we both walk towards the North Pole we're going to intersect at the North Pole the reason why we're going to there is the curvature of the earth so does that answer your question in terms of the science behind what we're talking about and I might not be

(1:36:29) exact it definitely gets me thinking yeah someone mentioned to me just now in a DM something about the orbs being an emulation of Quant when you were talking about it with us I think they're listening in and yeah his name is uh yeah can we get Roy up here Roy is the one who said that to me yes Roy please join us he's very qualified person to speak on this oh I don't even know him yet no pressure Roy but I hope I'm not saying it wrong cuz Roy is really the expert out there and uh I'm just uh you know a little amateur

(1:37:01) here who's trying to do my best to understand these very advanced concepts but I think that what Roy would say is that time is a fluid symmetry so we don't need gravity to explain everything time and curvature of mass uh that's kind of bending SpaceTime can explain everything that we see out there that can also help us simplify our equations and theoretically then allow Quant and macro to uh coexist and have the same properties and I think that the secret is we can look up at the stars and we can see these same

(1:37:36) interactions um and you know what Roy might say as well is that if we look at neutron stars and the ligo experiments in terms of gravitational waves you know we're not seeing there

is no graviton there's not a particle that's creating gravity it's simply a property of mass interacting with space and to kind of bring back the concept of how time flows if we look at a black hole which has a ton of mass the closer you get to that black hole the more time will slow down and a lot of people say if you're

(1:38:09) if someone's moving towards the black hole it's going to look like their time is slowing down as they get closer to it this also confirms the same theory that we're mentioning and therefore the less Mass the faster you're going to go as well the further away you are now this is time dilation so if we think of the movie Interstellar this is exactly what happens in the movie Matthew MCC he goes onto a planet that's circling around a black hole away from a space station that's much further away they only go

(1:38:38) there for about an hour their time is moving very slow they come back to the space station it's been 20 years for the people that are on the space station the time for the person on the space station is moving much faster so this this is essentially to in my mind a very beautiful understanding of how time Flows In general is that time is not a constant it's fluid it depends on where you are in your own frame of reference which is consistent with Einstein makes me think this is how uh teleportation can be done also I

(1:39:13) remember you said that was one of the things that they were hiding from was besides super conductivity and free energy in your letter yeah I think that oh Jump On In yeah I get some yeah hold on a second um yeah thanks it's been great to to hear you speak Noah and um you know attempting to Chronicle this whole thing including uh the **Reddit** days and the drama there and you know all the Discord stuff and everything that's been happening since of course um so yeah it's great to get that perspective from

(1:39:42) you who is involved in this uh before I was um but uh Jiggy thank you for your patience you've had your hand up for a while uh what's on your mind yeah no problem hey good to be here everybody uh good stuff it's a very interesting case and I've got just three quick thoughts that uh I would love to hear comments on and and hopefully maybe uh new avenues for the investigation but the first one is something that I guess uh money Penny and others already alluded to and that is uh looking at other cases similar uh what really

(1:40:13) caught my eye was I don't know I don't remember who posted it it might have been the W but it was uh the December 1988 case in to Rico where there was supposedly allegedly 100 Witnesses seeing a large UFO being chased by three fighter jets and they also observed three rotating red orbs that apparently disappeared one or more of these fighter jets so you have three you know rotating orbs disappearing a plane I was like wow you know so that's interesting I don't know if there uh other I'm kind of a

(1:40:46) data guy so I kind of was doing a little data mining on that but I'm sure there's even other cases out there that would be similar so that's might be an interesting um Avenue uh the second thing I have for you is Sean Kirk Patrick currently of Arrow hopefully for not not long right um so back in May I think it was the NASA uh briefing or hearing um where it was mostly

you know UFOs or don't exist blah blah blah uh the one thing he did say was you know hey yeah they don't exist but we see

(1:41:19) these metallic orbs globally all over the world uh with these you know Maneuvers that while we're waiting on we can't expl as well and so I thought that was very curious that if you know out of all let me know and I can the UAP UFO literature out there that they brought that up metallic orbs um and so I was trying to figure that out and I guess maybe metallic orbs are less intimidate intimidating or scary for the public than spaceships with little green men so that that could be the angle but then I

(1:41:50) thought of you know what if this technology uh they have um could this be like when disclosure happens then it's like hey yeah we we saved the passengers on that plane here they are you know in an effort to buy some Goodwill after having you know covered this thing up for 80 plus years uh on a a darker interpretation of that could be kind of the my laabs angle where it's like uh there's some sort of uh cooperation with non-human in Ence that uh has something to do with their interest in collecting

(1:42:26) people uh let's hope that's not the case but that would be like oh hey these This Plane they're already gonna these people are going to be dead anyway we're going to take them so I don't know interesting uh thought the last thing I have for you you mentioned the uh burn marks on the debris would it be possible to request you know testing on those on that debris to see if it's specifically you know lithium ion on burns I don't know if that's possible but yeah thanks for the time good

(1:42:57) space yeah good questions on that um the way they described the burn marks was they said it was resin doesn't make any sense to me at all I'm not even sure how that logically makes sense um and with respect to the other incidents that are similar I probably say the same thing I said earlier which is that you know I'm sure that there's other stuff that's similar like this has happened I feel like it'd be unlikely this would be the first time ever I think ultimately what it kind of comes down to is is it the

(1:43:22) same is it what we're dealing with the US government or another government or is it non-human intelligence uh my opinion is that this technology has to be reverse engineered that we couldn't have come about it you know automatically but when I look at the videos it looks like we're emulating what we see from ufology like we it's our version of it it's a little bit different not quite the same but employs the same technological advancements like you see floating or orbs you see these orbs um in terms of

(1:43:54) ufology kind of Zap in and out um we also sometimes see them vibrate as well and it seems like we saw that and over 80 100 years we've slowly gotten to the point where we could create our own version of it and it does make me wonder how much of what we see out there is ours or other other nations as well because keep in mind the videos are from 2014 so that's plenty of time for other nations to figured this out looked at the videos they figured out that they were real their intelligence figured out they were real theyve reverse engineered

(1:44:26) the same Concepts that we've been able to reverse engineer um because if we can do it again with just a Twitter account and no PhD or anything then foreign countries definitely can I even think back to like the Alaska shootdowns and I wonder okay were those even really non-human intelligence or were those reverse engineered probes that China has put together maybe the reason why they don't want to show us is cu it would you know reveal that we also have those types of capabilities because if China has it we definitely have it too right

(1:44:55) um so with respect to the other cases you know I would like if we can authenticate these videos to be able to lend credit to all the other similar cases that have been dismissed for whatever reason that kind of show similar phenomenon and I again I've seen like a dozen been people send me stuff all the time they're similar going back to the Philadelphia Experiment to the Madrid airplane that had orbs around it um lots of stuff similar to it and some of those two things could have been tests and what have you as well um so

(1:45:25) did I miss any of your points but those are my general kind of points but yeah the the only other the other one was Sean Kirk Patrick referring to metallic orbs yeah yeah and I think I've seen some of the ones like the Iraq metallic orb and I think that we're not looking at metallic orbs here we are looking at an energy field that is um as I think that somebody mentioned earlier is uh emulating the Quant so what we're seeing there is it's able to have full Mass reduction to the point where they can

(1:45:54) ignore gravity and then because the way we see these things they're coming at Mach 3 speeds they're completely ignoring gravity and all um friction as well so to me that's what we're seeing there's an energy field and I've always felt like we're looking at an energy field there not a metallic orb I think it would look quite a bit different if what we were looking at was metal although we do see a lot of these metal orbs in the Zeitgeist right now which again is part of the reason why I think

(1:46:19) that what we're looking at here is reverse engineered that look that is emulating what we would see what pretty much what David grush has testified to Congress right testified under oath with respect to Sean kpatrick um I'll just speak off the cuff I don't trust AO I don't trust NASA either I mean these are organizations that have to know the truth they absolutely must know the truth right and if we're able to see these videos in the public sphere just imagine what they have in the private in

(1:46:49) the classified sphere NASA would be seeing these things all the time with their satellites they have to be hiding them uh Gary McKinnon was just on the alien scientist podcast right before me just two days beforehand he's the one that hacked in and basically said yeah we found all this stuff that basically proves that they've been hiding it um I believe that honestly whatever else you might believe about that man I believe that because it just logically makes sense to me um I even believe that they're hiding Life on Mars not

(1:47:18) necessarily Little Green Men but bacterial life and that's supported by the fact that there's seasonal methane on Mars there's not a lot of ways to get seasonal methane on a dead

Planet you know one of the ways is that you've got bacteria that's right underneath the surface potentially just a foot underneath the surface maybe even on the surface itself and that is PR they said there's water on the Moon I mean yeah there's water everywhere that's the thing too right yeah yeah I'm only laughing

(1:47:45) because um yeah seasonal methane can potentially be a problem on Mars under the surface sometimes yeah sorry you're fine and then so they try to argue that okay well the seasonal methane's from some desalinization or some I forget what they say some kind of geological thing but the problem with it being a geological process you use it all up so over time over billions of years it would have been used up so if you have it repeating over time you know uh then it's got to be from some biological process you know farts so to

(1:48:18) speak it's a byproduct process of hate to feel like I need to pull this out rabbit out of my hat but does anyone remember that old Jerusalem Post article from the end of 2021 do you know which one I'm talking about cont here oh it it it said uh something about there's a there's a Galactic Federation I know that sounds crazy but it's it's what it said on the J post oh the Galactic Federation thing yeah that thing yeah the Galactic Federation thing um from I believe it was the Israel Defense guy um you know

(1:48:52) that's that's an interesting well like so if you you know if you believe that we've been reverse engineering these things for hundred years then I think that there's a lot of credit to those kinds of stories for me it's like you know just my personal opinion like I need a little bit more before I'm ready to believe in non-human intelligence like beings being here you know because to me it's more it's easier to understand and believe in like maybe some type of advanced AI that can be

(1:49:18) here like you send probes you know uh I think they're what Von nuran probes right or maybe saying that incorrectly but I would imagine more either I'm more on line of like the ultraterrestrial theory or that there is some type of AI mechanical AI that has reached us but I my mind's open you know whatever comes comes yeah those are just my opinions it it does sound crazy but only because we've never seen anything like it I think I think the more we see of these kinds of things the more we'll be

(1:49:49) open-minded to to think about them in a positive way maybe this is possible you know 100% um I'd like to get some more questions if we have people with their hands up just so we can you know share the wealth a little bit if people have them yeah we have some hands up Compadre um Mars what what's your question um well I first of all the more you describe the like um everything just sort of shrinking into one point you know that scene in the beginning of um Honey I Shrunk the Kids where the the beam of the the inventor's machine like

(1:50:27) hits the apple and then like it explodes and then somehow it's re-calibrated and it gets it just right and it shrinks the kids you know the purpose of the movie um yeah it's it's cool like the possibility that that could be technology we have now like I've watched Star Trek from when I was a kid and it's just like to have Transporters and you know the things that make the food

like that's possible with the yeah the replicators are all gray hot that's possible if you can take

(1:51:08) something that's stored in a tiny tiny one point and then like expand it and reconfigure it like that's all possible and which just really cool and um I uh I wonder if uh the it's just triggering thoughts about the whole nature of reality and like um how sorry I'm a little bit feverish so um if I'm ranting too much please stop me Oh no you're fine um can we money P can you mute your mic I think we got some background sound here or Melo can you I don't have I can't uh yeah know I took care of it

(1:52:00) it's all good yeah I know I know it's hard on the computer to see what's going on points real quick and then you can keep going if you have other follow-ups because I think the Star Trek analogy is very interesting right is that I think Star Trek gets some of it right maybe some of it wrong based on what we're learning here so when it comes to teleportation we're not dematerializing something and rematerializing it we're just able to move at the speed of light which is actually similar to warp drive

(1:52:24) right so that's the part where I'd say it's pretty close to um but really when we're talking about being able to achieve Quantum States I mean now we're opening the door to straight up magic as we would think of it right and that's what I think is really cool about Star Trek and I've also watched every episode of The Next Generation probably 15 times each um back when I was younger because I just I was very interested in outer space in general um and so I think there too is that you know it opens the door

(1:52:52) to all sorts of neat things and that's why our whole world will change and I actually think about Star Trek a lot with the Federation and the way that you know there's no uh demand essentially you know they they sort of achieve a a u Utopia so to speak and that would be really the Ultimate Dream right where we get this technology we can have green energy we can change the face of the world but what do they have as well they have stuff like the prime directive you have an authority structure that tries

(1:53:22) to ensure that we don't have complete destruction of our own planet um and I think that's again the part we have to be very careful of at least in my mind yeah brilliant cancer out of people and stuff like that like that would make treatment so much just instant you know pretty much I don't know it's very cool yeah definitely I think the applications let other people is like huge as well right um being able to fight things like cancer yeah absolutely seems like it could be possible now right so yeah it opens the

(1:54:00) door to everything you know it's uh to me that's why these videos are the most important videos in the history of the world which is the first sentence in my letter to Congress is that yes Malaysian Airlines and figuring out the answer is potentially you know from a human perspective the most important part to vindicate the families of the victims the pilot who is vilified the witnesses who were discredited the leaker who potentially went to prison but it becomes a lot more than just about that very quickly it becomes about changing

(1:54:31) the world to a place where we don't even recognize it in you know 20 years from now so good comments Mars who else has some questions yeah uh yeah thanks Mars uh Chris what's your question thank you hi I'm sorry about background noise I'm at the grocery store I've posted some videos about um aircraft I've seen flying in the skies above uh bber space force phase and during space uh X launches of the satellites they have um they move very similar to what you're talking about uh and nobody can give me

(1:55:12) an answer on them just this just like yep uh-huh so uh I would recommend taking a look at them uh money Penny knows where to find them I'm sorry I'm gonna get off because this loud here oh no you're fine yeah and again good quite interesting yeah people send me a lot of videos and you know what I'll say is I don't have all the answers there's a lot of people out there there that deem themselves susers right where you want to ask them questions they feel like they'll give you an answer you know to

(1:55:43) whatever you want uh it's not the kind of person I am you know I'm up front I don't have all the answers I'd say that I would say that I've become an expert at MH370 in these videos I'm trying to just back you up on saying those planes are real yeah yeah and I think that that could be the case it's the same formation as your videos Ashton um so what we're saying is it looks as though it may be a military exercise type thing using these in the same formation it looks very similar yeah absolutely you know and

(1:56:12) again they they could be right um but you know I think that linking the videos to any other stuff even it's very similar opens the door to being discredited because then they can just discredit those videos and then they can discredit these and that's the reason why from an investigation standpoint I don't do that at all not no matter how similar they look I like I've mentioned I've gotten dozens at least a dozen videos that are very similar to what we're seeing triangle lighted orbs uh

(1:56:41) circling around planes even and I never link them to these videos because of that reason so you have to realize that there is a disinformation camp p is trying to keep these secret and if you followed the way they've been trying to discredit me they're looking for any opening to try to discredit the videos anything and from your guys perspective it may seem illogical but from their perspective it's not uh because generally people are easy to trick very easy to trick so if I link anything to anything else that's like that and they

(1:57:10) can discredit that they will use that to discredit the videos despite the fact that I'm looking at 17 pages of evidence in front of me right now that prove that these videos are real um so absolutely I think it's interesting you can share the videos with me 100% I'll take a look at them but you know don't expect me to go on and say hey this is what we're seeing in our videos because it's just not going to happen no I understand but from a journalist point of view you need three independent sources from different

(1:57:35) areas which is why when there was a UFO sighting in the UK with 450 individuals all reporting independently that's the one that was investigated yeah no definitely you know and I

think that the way that I plan to authenticate these videos is I'm going to find the person who **leaked** them um and that's going to be absolute proof right as that person comes out and says yep I'm the one who did it uh and then we've got it right so to me you know no matter how many independent collaborations we have and other things

(1:58:06) that are similar that it's not going to get taken seriously by the mainstream uh we have to have something that's straight up undeniable um and I mean look at there I've already ignored these videos even despite the huge amount of evidence that we've already presented uh more evidence than I would argue in any court case in the history of the world definitely more evidence than any mysterious plane or any incident ever um and they don't care they won't even look at it they won't even touch it um it's

(1:58:33) just too much for a lot of people to take right and some of them may be controlled by the government so that persp like and 911 they're not going to look at either of those enough conspiracy theories to fill books on them that's very true exact I mean I would say that's very similar right is that you need to not just have a very strong case but you can't leave yourself open to any criticism whatsoever because you know what they'll do is they focus on whatever aspect they can to discredit

(1:58:58) the case right now I've given them none and that's part reason why they have to stay silent and the longer we apply that pressure the more awkward it gets right the takedowns are all very superficial they're all oh this just looks fake this is dumb you're an idiot for doing this you're a weirdo you're crazy whatever right uh but none of those hold any water so they're looking for something else that they can they can stick to and uh you know I don't plan to give them that so that's my game plan I'm I throw

(1:59:28) all the cards on the table in terms of what my strategy is and I let them try to adjust uh I think that their game plan is also very transparent as well that's just my opinion uh yeah this is a good moment to potentially if someone wants to put the the petition that for the um related to the letter to Congress um yeah it'd be really cool to to get people to sort of uh distribute that and you know one one thing I put in the uh in the hashtags above is uh you know activism um so we can also explore that in terms of ways

(1:59:59) of um getting Congress to take this on or or to the very least to broaden um the awareness uh of This research yeah one thing I wanted to say too is check out the post I made yesterday welcome to the Future because I think that that corroborates the science that I've been talking about today and I has been staring in front of me there's been several times where I've been staring at the evidence for weeks and I just didn't click like I've been staring I actually have my background as a thermal picture where you can see the

(2:00:29) Heat Signature by where the exhaust vents are and I had been staring at for weeks I didn't realize I'm staring at proof of the fire and then uh and you can even see the smoke coming out of the back of the plane in almost every single image um and then in this one I didn't realize that in the frame right before the black hole forms the the shell of the plane gets blurry

and I kept saying well it's getting cold which it is getting colder but more importantly the blur because we can explain the blur right like if you try

(2:01:00) to take a picture of something that's moving very fast but what's important is that this plane is already moving very fast and the camera has no issue with it until the very last frame what does that tell us is this plane is accelerating its speed is increasing to the point where the blur is happening and we can see that the orbs are getting potentially gravitational lensing is happening to them they're flattening something's happening to them the also perhaps most importantly is you can tell just visually looking at

(2:01:30) the side by side that the plane's actually smaller slightly smaller in the second image than the first one than the frame right beforehand which seems to indicate there is a mass reduction effect happening here either just visually or you know something in general I mean I wish we had like another 10 frames right if this was like 4,000 frames per second because then we could actually see exactly what's going on here but I think that this proves the idea that maybe these orbs are creating some type of electromagnetic shell

(2:01:58) that's allowing this mass of this plane to reduce down to the point where it can its time can speed up its speed can speed up um and to me that's the missing link on all of this that's what's being hidden from us and you can tell why right warp nukes that's the simple explanation is that that creates an Unstoppable weapon um and that's just one application of it a very basic application of it let's see let's see I think we do a few more questions I'm probably going to only go

(2:02:28) for another 15 minutes or less uh just because I'm very tired and I've got to prepare for Salvatore Pas interview tomorrow so let me throw this out there so I've never interviewed anybody before right and uh a couple weeks ago or less someone mentioned hey you should message salvator Pas this kind of looks or is similar to his patents that he put out there so I find his email address send him an email say hey is this your technology we're looking at that's pretty much how I what my email was like

(2:03:02) and I didn't expect them to respond I've emailed a lot of people and basically no one's responded like all the types of UFO people Etc um even some scientists I've emailed as well I won't name them but I email him he gets back to me the next morning says you know know any weekend you want any Sunday you want we'll set up an interview and that kind of blew me away right cuz he didn't even look to see if I even have a following or anything like that so just think about what what does

(2:03:31) that mean right I show them the I sent them the videos so he looks at the videos and instantly okay and he sends me the papers and says post these papers on your Twitter I thinking he's not going to want me to post the papers he's going to want to keep them hidden or whatever no he's tell me give them away to as many people as possible Right so to me that's pretty indicative that at least he believes in His science and I already thought found him to be very credible from when I first heard about him so tomorrow I'm

(2:04:01) going to be asking a lot of questions not necessarily directly about the videos but I'm definitely going to be asking questions about the science that we've been discussing here now that is explained in the videos um and I think that that should be very telling so that's part of the reason why I'm have to end a little bit because I got to wake up early and make sure I'm fully prepared make sure that I've watched the entire Theory of Everything podcast because there's already been several points in that

(2:04:25) podcast where I've been like wow we are talking about exactly what we're seeing in these videos and another thing that I was interesting from listening to that which is somewhat related to this is that academics won't look at his stuff only one major one of his papers the plasma I'm going to say it wrong the plasma paper is the only one that these uh prestigious journals would even accept to peer review to even look at it so you know what he's seeking is um mainstream approval which I got to give him a

(2:04:58) warning it's going to be tough man uh from what I've seen from academics is there're some of the most closed-minded people in the face of the earth is that academics believe whatever they've been taught is what is real and everything that they haven't been taught is not real the way that science works and I'm actually going to say this tomorrow on the interview with him is that it works in jumps and leaps is that consensus is formed that's all that you have and then somebody breaks

(2:05:24) the mold they shatter the mold and they jum Leap Frog everybody else and then the consensus kind of gravitates towards that I think if you look at science in history that's how it always works you know the Earth was the center of the the universe until Galileo comes and says no it's not and then we realize it's not you know Newton discovers how gravity Works um and so you know all of these people are pioneers and they push science forward and that's the type of people that we need in this world people

(2:05:55) that are pushing forward yeah it's been so uh exciting to get to connect with some experts like this um and to see the response and to see the validation um yeah but it's um it's an uphill battle but I think it's it's exciting because the people who are truly um the ones you know creating the next chapter of Discovery um are are going to also be wants to have the courage to step up at this at this you know historic time where we are getting some degree of disclosure and perhaps we can um you know and then we'll we'll be

(2:06:28) hopefully getting the rest as well soon after um yeah but I mean this topic could not have you know more um fascinating elements um in terms of the hive mind approach you and your um team took uh to uh figure this out and and sort of battle it out on the internet publicly which is a unique sort of modern way of making discoveries collaboratively cha and yeah everything else about this obviously is um if it all lines up as it appears and all the you know the jigsaw pieces fall into place as they seem to be doing every single one of them um

(2:07:01) yeah you know there's just so much to learn from this Mars um what do you think uh I I very much appreciate the um careful open eyed okay that's a a loaded term around here but

um the the care um cleare eyed kind of uh moving forward instead of just you know taking a stick and whacking at the bushes and closing your eyes and seeing what you poke um that that makes it feel a lot more comprehensible a lot more um I don't know real something like that I think what people say a lot is people do talk about

(2:07:50) the approach that I've taken which like I like to think that I'm following the scientific method which is form a hypothesis test the hypothesis if it works out you move forward if not go back to the drawing board right and if you follow the case from the beginning I haven't deleted any post except for just one uh that was related to Aint military personnel um and I won't go into too much depth on that you can actually follow how the investigations progressed and how my thought processes progressed

(2:08:15) and my opinions but underlying evidence is essentially state nearly unchanged right and as we found more evidence and developed those hypotheses we've that's where we've had these Eureka breakthroughs like with the fire scenario with the nicobar islands location um and to me that's the fun stuff because it it shows that it's real right we would not be able to come up with all of this if this stuff was fake right this we would have that's another key thing sorry is um you said basically

(2:08:44) unchanged but not completely unchanged like as you get new evidence you do um revise so like that's important too yep and I mean even I've been going through the all evidence list no you're fine I've been going through the all evidence list and we've deleted a few things that are like no longer really in play anymore you know one thing that we keep going back and forth on is the Iranian passengers you know who were these refugees that were supposedly they were actually not supposedly they were

(2:09:11) factually using stolen passports they were traveling together they changed their appearance to look like the past stolen passport Sports you know in a hijacking scenario these are your Prime suspects they were traveling to Beijing but the the idea is they were trying to get to Amsterdam well there's direct flights from qual lumur to Amsterdam the idea that these people were just like ruled out within like three days while we were going through this South Indian Ocean narrative that has no evidence for it it's pretty mind-blowing to me so

(2:09:43) those people potentially come back in or out depending on which narratives you believe right and that's what I like about this case the most is there's still so much mystery despite the fact we have this huge 17-page document of evidence is that we still don't know everything we've got a pretty clear picture now uh but there's still a lot of room for ambiguity um and I think that ultimately that we're not going to know the full **truth** until the government comes out and says something what I'll

(2:10:07) say is I'm not letting anyone set any narratives um I won't name any people but like there was people today that were claiming that oh this this is the classic CIA Playbook or something like that right and they were trying to post some evidence but you know the evidence was false that they were posting the and their conclusions they were making is based

on false evidence and I'm not going to let people like that set the narrative um and if the government tries to do that that's the reason why we

(2:10:33) stack the evidence so high it gives them no wiggle room at all they basically have to come out and say this is non-human intelligence or yes these are our orbs like nothing else makes sense from a story perspective um and that's what I'm doing here is that when they do come out and they try try to claim whatever I'm going to be the first person to check and see does their story line up with the evidence because if it doesn't then we can rule that out um and that's why you know we have a bunch of narratives but

(2:11:00) none of those narratives are very beneficial to the US government at this point my personal opinion on their attack strategy is that they're attacking the black hole because they need a way to be able to admit the videos are real without admitting to the technology that's what they need so their attack Vector is okay will claim that the the orbs and the the black hole are fake somehow we're not going to let them do that either we've we've been able to explain the science we've shown that from a visual effects perspective

(2:11:28) there is no discrepancies we have this huge list of requirements which essentially rules that out and if they try to claim that they're the ones who made it because they want to you know hoax an alien invasion or whatever okay well nobody's going to believe that right at least we might believe that but the general Public's not going to um so really there's no explanation other than the **truth** that's going to make sense that's again the reason why I love these videos and even early on I looked at

(2:11:54) them went huh government's not going be able to say anything about these as long as we stack the evidence high high enough up uh they're just getting stuck and that's what's happening right now that's why the media won't touch it because anyone who big who touches this it just brings more attention to it that's why people are afraid to say my name because if they do it just brings more people to it more people to the evidence more people are going to know the **truth** and that's why I think that if

(2:12:17) we do reach some of these huge hug huge platforms then it's just going to be all over for the official narrative like even Harden Skeptics go huh okay this is this is a lot of evidence for for a conspiracy here um yeah good comments guys and also I just at this point since we're getting close I want to thank everybody um who's in here right now listening of course and and taking the evidence like my strategy again all cards on the table is I want everybody to know I'm not trying to hold back

(2:12:44) evidence I'm not trying to keep it from anyone else because the more people that know know the more protected I am in general too right so if I disappear for whatever reason you guys are going to rise up and take my place I'm not anybody special not doing anything special the evidence is going to be out there you can take the same evidence and you can tell the world about it right um and that's what I care about is the **truth** uh so you know that's what I've been doing here is pushing the evidence

(2:13:07) out there and what I like to say too is I want to thank the communities not just the Twitter communities even the other social media communities that we've discussed today a lot of them have contributed from the early days and I think I've sourced all of them along the way I've not stolen anyone's information you know when you post information on social media that's public information I'm not stealing anybody's story I've developed my own story for what I think has happened and that's my story but I

(2:13:32) open anyone else up to create their own stories based on the same evidence so you know even though we've had falling outs with people I've had a lot of people and it's actually it's stopped recently but early on especially a lot of people trying to tell me what I should believe what I should follow and you know that's why we had to set rules around that so if we've had falling outs with people I want to go ahead and say there's nothing personal related to that I just have to protect myself and

(2:13:56) protect the Fidelity of the investigation and that's what I had to do from the beginning so if people feel like they were blocked banned whatever and if they feel like they it was not justified they are free to reach out to me either through a proxy or whatever else I will take a look at the situation and determine whether or not I did so unjustifiably and potentially unblock them so far that's only happened like one time and I went ahead and did unblock those people I it's happened a couple times and I've unblocked them um

(2:14:24) and if I did so in false case I I apologize for that but I will look into and see whether or not it really was a false case so you know don't uh just come to me and ask and then have me go find out that you're sitting there talking crap about me because if that's the case then you know it's not going to happen so anyway I just wanted to say that and again thank you guys so any other last questions we have may do yeah we we yeah we got a couple hands up so we'll we'll we'll milk you you for all

(2:14:48) of your knowledge um so uh imos am I saying your name right I know there's lots of little dots and things over the letters yeah sorry if that's confusing for you Melo um you have it right though I was just curious because I know I've seen um Pi's interview on I think he did one with Project Unity um I'm not sure Ashton if that's the one that you had referenced but I was trying to remind myself and like refresh myself on the deal with Pas and I know that um in Ross cold heart's book he dedicated an entire

(2:15:19) chapter to the puzzling patents of um Dr salvator P and that's bizarre I was just going to read it in Ross I've got it in front of me I've just taken photographs of the pages on the same thing yeah yeah you know if you want to read the pertinent um what you deem pertinent that's probably more appropriate I just had a couple of things but yeah please go ahead God I feel really bad now here's me taking photographs of it um the pertinent thing is obviously the patent bit which is summarized um in a really

(2:15:51) good bit here Dr pay's incredible patent begs a more intriguing question if the US Navy has cracked this technology then where could he plausibly have got his ideas from if what Nat

kobit told me is correct that a UAP reverse engineering program was already underway is it totally outside the realm of probability that the US has been replicating an alien craft and is now about to make a light speed leap in technological breakthroughs P's application for a spacecraft patent included a reference to a scientific paper written in

(2:16:25) 2015 which suggested there was a theoretical possibility for Super luminal Craft propulsion in a special relatively relativity framework and finally a reference to Star Trek superluminal is a cool word for faster than light Star Trek warp speed stuffff that's pretty cool piece yeah I 100% agree with the conclusions made I mean um I'm not sure how direct I'm going to be with uh salvator pas on that but my personal opinion is that uh he must have been looking at some craft and was able to reverse engineer the science around

(2:17:01) it right when you look at those patents they're very very specific in terms of what they're doing and they when I remember first seeing them I think in 2018 or whenever they appeared I just went you just combine these three patents and you got a UFO bam there it is right um yeah because there's a couple of them just so anybody that like doesn't know um the first patent is um quoted uh room temperature superconductor the second patent is electromagnetic force field generator the third highfrequency gravitational

(2:17:32) wave generator and then the fourth patent which is you know cart categorizes it as the zest um the craft using an inertial Mass reduction device and what we been talking about here guys we've been talking about all those things right so that's why when people said hey you should reach out to salber or Pi I went holy are we looking at his his stuff right here right and that's another reason why I think it's our Tech I mean this guy patented it so you look and the patent that backstory is really well um summarized in uh this

(2:18:06) chapter of this book it it kind of talks about how we don't know anything about um the the Breakthrough or like the um you know the research and stuff that went on and that they were approved it says here um as far as we know nothing that Dr Pas said in his patent application had any basis in known and proven scientific techn or technological breakthroughs and neither had it been subject to Independent peer review or scrutiny oddly he still got his patent largely because the Navy vouched for his Discovery and then it just goes on from

(2:18:42) there I just thought that was interesting thank you yeah if you listen to The Theory of Everything podcast he actually talks about that so in mine uh just from time purposes I'm probably only going to talk with him about like okay I don't want to dig too much into the you know how it got approved like the disinformation out there which is just patently false is and no pun intended is that oh you can patent anything that's not true at all um the reason why they push back so hard is that the people who were the

(2:19:09) investigators or whatever you know or the not the the patent office like didn't think it could be real and so that's why the Navy had to come and step in and say oh yeah no it is you got to approve this right and so that alone disproves this idea where you can just patent anything um and that to me is what LEDs a lot of credit uh to his his story about it but in

addition to that I mean the technology that we're talking about there is exactly what we're seeing here um and so what he was actually asked in that

(2:19:39) podcast too um what did they ask him they asked him a couple of questions you guys should check it out yourself for sure um but he actually had to dance around a couple of the questions I think one of them was around the nuclear mass reduction oh no one of them was the solid state Bose Einstein he actually got asked about that and he said that oh I'm he said I'm a patriot and so you know I have to be careful what I say is pretty much on that which really led me to believe that that's what's being

(2:20:06) hidden right is the inertial mass reduction for a solid object not just for a plasma but for a solid object that you can create a solid object and be and get the state of Quantum and that's where the inertial mass reduction theoretically comes into play but again for a lot of this stuff I can't imagine that we just came about this naturally the way it's presented just seems like okay this the same concept that I give of the caveman and giving them the iPhone it's like okay they didn't figure out how to make an

(2:20:36) iPhone by themselves as a caveman they they looked at it it took them hundreds of years and then they the material science caught up to the point where they were able to reverse engineer it and then the caveman goes and patents the iPhone and all the other cavemen go no that's impossible that's stupid right and blah blah blah can't it can't be real and then you find out oh no but really iPhone is real and they did actually you know they but they didn't figure it out on their own they were

(2:21:01) looking at it and that's how they were able to determine that um so yeah I find his stuff to be very credible I think that it is we are staring at it in these videos and that's another reason why I am so convinced that these videos are really authentic fully fully authentic you say you know the name of the person that **leaked** it why have you not spoken with them well I mean if you think about it if you look at the evidence around it he took a plea deal and he went to prison for seven to nine years and we ignored

(2:21:30) these videos while he was in prison the entire time so can you imagine the psychological state of this guy first of all he was convinced and told yeah but you said that's the one thing you want yeah no definitely and I think the answer there is that you have to be very careful right could put this guy in danger is one thing thing um and what I'll say is I'm keeping a lot of this close to the vest I say prison was the safest place personally yeah it's hard to say right um but the reality too is

(2:21:58) if he took a plea deal then they most likely want to keep this guy quiet so they want to keep him happy as well so what I would imagine is that they would give him a job potentially related to like a contractor or something like that in the military uh to a degree where like he and and he actually admitted they basically convinced him that what he did was wrong so I'd imagine his psychological state is a state where he's not going to want to talk he's going to run if we try to talk to him now what I would say is that if this

(2:22:27) comes out there's he can't hide right the media eventually would come for him and find out where he's at get him to talk uh the fact that I've been saying his name so much and he hasn't come out and said hey man stop talking about me I'm not the guy is uh a little bit telling to me right if he wasn't the guy I feel like he would have let me know early on but I I'm I'm convinced I mean I've looked at the stuff we're not going to find somebody else who fits the bill

(2:22:51) better than this guy and you can take a look at my piece on it um you know the evidence on why Agent 370 is Edward Lieutenant Commander Edward cin I like to use his military rank because I believe that he they the government did a disservice to him by uh you know making him take that plea deal and I believe he was abused as well and pretty much psychologically tortured to the point where he took the plea deal um but the reality is like if we can get the protections for him then absolutely right um but I don't want people

(2:23:20) harassing him as well because again think about what this guy went through we ignored these videos for seven and nine years who knows if he's even on the side of disclosure at this point you know he might have he's done he needs his work Vindicated then so he needs you just as much as you need him yeah and I plan to vindicate him regardless one way or the other uh if it's the last thing I do I plan to vindicate that man um because to me this this technology is again has the capability of changing the

(2:23:48) circumstances of millions if not billions of people on this planet every day I go by 10 homeless people when I go outside and come back people that have nothing on this Earth and it's just a crime to me that people are sitting out there Rich Elite people determining what the time frames going to be for disclosing this who's going to own this super advanced technology who's going to get even richer off of it while people out there have nothing at all while their mental states are deteriorating because they're living out with uh in

(2:24:17) the in the inclement weather right with no shelter even you know I I just can't live with it is the reality of it I couldn't live with keeping this secret um and that's part of the reason why I'm so driven and what keeps me going is all you guys and all my supporters as well that believe the same thing um and that's what kind of gives me the drive and the passion to keep going with it so what I would say though if you're like a reporter you know and you find that information compelling then you

(2:24:46) know we we should push forward all avenues where we can theoretically prove these videos to be real but keep in mind again the mental state of someone who's like that with the leaker right and maybe there's other avenues like we could try to find Regis sideon non the problem with that is that reges sideon non in my opinion is probably from uh South America just based on the fact that a lot of the people that uploaded the videos were in Spanish um and if that's the case they don't have the same protections as an

(2:25:12) American has um and I do worry about their potential uh situ ation um they're less tracked I tell you it's it's benefited me not being American on a lot of the co stuff I was investigating yeah you in some cases sure in the case of like Advanced military equipment that

you know information that they're trying to keep quiet um I think you want to you want to be have those American protections um and not necessarily South American but the other thing too is that I feel like that person would have come out right if

(2:25:43) they were somewhere in a situation where they could speak they would have reached out to me or they would have reached out to somebody you know recently so I definitely worry about that account um because I think they did have direct contact with the leaker based on the fact that in the description it says protected and based on the fact it took several weeks for them to post it tells me they probably had to be convinced themselves and then they argued with other people that the videos were authentic based on the description of

(2:26:09) people who uploaded them later on so yeah there's a lot of evidence there I think what we need is we need that bill that's going through Congress right now that will allow for more advanced whistleblower protections because if we can get that then perhaps that's enough incentive for people like uh Lieutenant Commander Edward C Lyn to come out and risk his plea deal because if he does come out and speak he's probably going back to prison but if he comes out as a whistleblower maybe it's enough I don't

(2:26:37) know um hey Ashton I was trying to find it um the link to your uh um petition for for congress because it'd be great to put that up in the nest so folks can uh help sign and distribute it yeah I'm trying to find it myself people I see it normally when I just like every day I kind of do a search on MH370 and see what people are saying out there um and a lot of times I'll see the petition put out there which is pretty awesome um where people are reposting it I'm trying to find a link to it um while that's going on your last

(2:27:09) questions go ahead there it is uh if anyone has a question they can go before me but I was going to say something too yeah yeah please man it's definitely your turn oh okay yeah know um I sent uh to Ashton and Roy uh I sent him them both a link to a UFO patent of the Triangular craft that's ours I believe and I also sent Roy I sent you a comment on **Reddit** that I made that he told me about some stuff and I made a comment out of it and I sent that to you too awesome yeah I'll take a look at that um I just went ahead and shared I

(2:27:47) think I shared the the um let's see is it up there yeah there it is so just now I just put the change.org uh thing in there which basically is just a list uh a link actually somebody else made this on my behalf um to the letter to Congress so if you want to sign that if you're I think you might have to be American I don't know but if you're willing to sign it sign it um because I'm not kidding about going to Congress I'll fake it I can fake being American Trump can do it I can do itan it's just

(2:28:14) a petition so anyone can do it ignore it anyway but we're just trying to what we're doing right now just full cards on the table is we're trying to increase the pressure right we've got the evidence lined up we're trying to draw attention to it we're trying to also make it so that nobody can deny that they didn't see it like these news organizations like anyone who reaches out to me at this point even these UFO disclosure people who been quiet the moment they start

reaching out to me

(2:28:38) first question I'm going to ask is why you been quiet for so long right that's the very first question I'm asking anybody I I wouldn't do that you pretty much piss them off because I can tell you're working for the BBC if I got that attitude I'd probably put the phone down on you just say fine that's fine by me just quickly can I just ask why why is it contractors that uh are always on the UFOs or you know that side of it um I I heard you know that that's what they they do the military they would

(2:29:04) always use contractors as such in fact my father was a contractor when he left the raft at gchq but um he certainly wasn't in a in a NASA UAP thing why do you think that is why do they not do it with in-house in employees yeah that's a good question I mean the answer there is because you can protect it from Freedom of Information Act requests right private companies they can Shield that information part of the other argument that I've heard is that it's easier to reverse engineer in the private sector

(2:29:32) whereas in the government sector it's too easy for it to leak out and you when you compartmentalize the the knowledge like if you think of Bob Lazar he only had access to one part of the UAP right and you have to keep it very compartmentalized because otherwise if you someone sees the the whole picture now you have to it's harder to keep them quiet right so from the private sector perspective it's a lot easier is that those people stay there you can see all the information you can keep them all quiet and happy and it's all shielded

(2:30:00) from Freedom of Information Act requests I personally believe that if there are uaps out there that they've given them to locked Martin north of grummond all these huge multi-billion dollar companies that they don't have any like commercial products right that they sell out there they have some but really they're just intimate with the government all most huge percentage of their fundings come from the government so that's my opin andu in **Russia** the giu being the equivalent of the SAS in the

(2:30:27) UK and no doubt a load of independent intelligence services in the US yeah so that's my op isn't it interesting though that the uh for P's patent anyways that it was the naval intelligence like missile people that nudged along the patent process and got it approved like all and that that's where Pas Works um yep so I I don't know thinky but yeah think heavy involvement yeah no the Navy is the ones who are 100% involved in the UAP program right oh yeah everything links back to the Navy on this stuff they own Area 51 yeah

(2:31:06) and so like exactly everything's linked to these to the Navy I mean they're the ones if anything I mean maybe the Air Force as well I've heard because they have space force right but the Navy is the one who I heard back from that all these sightings and stuff and because it's either they're either over water or not really sure exactly what the connection is um it's the Genesis of the UAP phenomenon in my book like that's just my speculation I think that like when first happened like in the 40s

(2:31:33) before or like right around 47 um like you said they're they're on um a lot of these things crashed into the ocean or whatever um I think it was like those are the OG people who handed down you know past the p on to other people but that's just speculative but you know just reading that you know about the pi patents I hadn't even noticed that until like 10 minutes ago I'm like oh yeah more Navy people um but definitely the Air Force and didn't the Air Force like wasn't the Air Force born of the Navy

(2:32:04) maybe I maybe I'm incorrect anyway not sure but totally agree with you on the Navy side and I recognize that about those patents right away and I was like huh that's pretty weird especially because like they want to patent it so that other people can't Pat especially if you imagine like this information is out there and starting to leak out there and other people are going to start reverse engineering it they want to be the ones to patent it before somebody else does before somebody else does exactly what Salvador Pas does right um

(2:32:31) because otherwise it gets really awkward because now it's like oh you've have these things but a private person patented them and their name and it's not related to the government like how do you fight that now now the only way to fight that is you have to expose you have the technology so it's definitely an awkward situation from the legal perspective and I think that's how you get the government that's how you catch them and that's why too like with my Freedom of Information Act requests like

(2:32:53) I don't really have a lot of faith in Freedom of Information Act requests but doesn't mean I'm not going to try because no matter how they respond it's going to give us information they've rejected basically every Freedom of Information Freedom of Information request that I've put in uh except for the one about the general and their emails who they claimed that they didn't have any emails so that also tells me information too it tells me they're not they're not communicating uh their military

(2:33:15) movements and their operations by email so you can still glean some information from that was the specific did you say the general which one yeah so that was the General that I had heard from my sources that their nephew had shown them the videos General retired **General Joseph F Dunford** supposedly he has a nephew actually didn't even verify he has a nephew but if we verify that he does then it'll add even more credibility I already believe that he does have a nephew um and that he didn't uh laugh at the videos at all turns out

(2:33:47) he was in charge of the International Security forces in 2014 and despite the fact that the search was a complete failure and nobody found any parts of the plane he got a promotion to the highest ranked military officer uh in the United States government advisor to the president to the Joint chief of staff department of or Secretary of Defense and so he was the highest ranked military officer 2019 despite the fact that you know they didn't find anything from part of this plane during his tenure and then what did he do after he

(2:34:19) retired in 2019 became board of directors at Lockheed Martin that's quite the career if you ask me yeah hey Logan you got your hand up yeah I was going to say that's it just seems so

typical doesn't it it always seems to be like uh where they tend to uh ride up into the sunset is that those uh those handful of companies right doesn't seem to be a and like we were just talking about right that's in my mind where you go to hide the information if what we're looking at is their technology then wouldn't surprise

(2:34:52) me if locked Martin's the one uh building the orbs either honestly or whatever we're seeing that's being able to create those orb that orb effect um yeah yeah don't they own like all the land around like um is it I think it's Whit Sand's missile base think lucky bought up uh kind of weird but um anyway uh oh I totally forgot I was gonna add uh oh well how you doing doing good how are you doing that was Logan right sorry it's hard for me to tell yeah man how's it going man nice

(2:35:24) to hear damn yeah down here but yeah go ahead keep going um you were like uh I think it was a space that Melo and I was doing that um I think you're your first couple spaces on your on this account right but I think you used to come to spaces before like on a different account right I mean when did you start like um doing this whole activis thing for this whole thing yeah this is the only account I've had I did end up changing my account name just because I had this account account from uh like way back in 2014 when I was a lot

(2:35:51) younger and played more video games and you know uh was going to use this account to try to promote that but I never really did or anything like that uh I was never into Twitter Duty uh no for me it was League of Legends was the game that I was big into at the time um I liked strategy stuff in general um but yeah and then when this started to come about you know I I tried to pick which social media platform as you can tell I'm not a huge fan kind of **Reddit** in general um and so I figured the Twitter just given the fact that what I read

(2:36:22) about the Twitter files and Elon must taking over that that would be the least likely for me to be censored um and so I basically repurposed my existing account to you know do this and that's why you know you'll see pretty much just this on my account um going back and uh yeah I haven't deleted anything you know even I didn't even delete old old tweets or anything like that either I left everything up because reality is I want people to see that I'm a normal person um who has my own uh political uh you

(2:36:50) know opinions in general although I would say that I'm very apolitical especially after seeing these videos the reality is that both sides of the political Spectrum are hiding this it's uh not limited to one or the other um and yeah yeah definitely yeah thanks Lan I definitely Vibe with that whole aspect of this area of research is that it it does uh unite everyone and it helps us get you know past our petty terrestrial differences with politics and things like that because um you know that just distracts us from finding the **truth** and

(2:37:24) the **truth** is you know much bigger than just um anything just uh terms of our human present tense it's it it's you know about learning about much more than that the thing the things that could potentially like I think Ash and others were discussing earlier could potentially help us get through these horrific circumstances we're in right now think we'll ever learn the

**truth** the real **truth** I think we will it's a matter of time right like eventually they'll be able to admit it the question is

(2:37:55) hopefully it's not 50 years from now right the time that they'll be able to admit this is when they uh tell the **truth** of the technology that's probably the time frame we're dealing with here I don't think they're afraid of telling the **truth** that they were looking at MH370 I think they're afraid of uh the technology and the corroboration there is that what really happened here is a lithium ion battery fire and that's a very mundane event relative to hyper advanced technology so it explains like

(2:38:22) why would you have to cover that up why build this whole fake Narrative of South Indian Ocean well the answer is pretty apparent is that this technology can't be revealed and part of the reasons probably they didn't want to reveal to **China** and **Russia** but the reality of because the videos **leaked** it kind of obsoletes that excuse right and now it's more of an issue of you know you have to admit to the world that you have this super advanced technology that could change the world and you've been hiding

(2:38:47) it can you imagine the consequences people lose their minds I mean look at how angry or whatever we are about them lying about it if they tell this to the the whole world it's going to break people's minds and I'm not even joking about that a lot of people that think that whatever they hear on the TV is true if you were to tell them this and this type of this level of conspiracy is real it will shatter all trust forever not just the US government probably almost all governments because it's not

(2:39:14) just them lying about this you say that but the Mexican Government had two small aliens in a glass case that they presented at a big news conference and nobody bothered and I don't think anybody's even spoken about it since there were three of them actually and they had names I forgot them though mummies and interestingly enough Jamie maon who uh actually did a piece about us and I spoke to him personally and uh looked at this case and I don't think that's over yet either but if you look at it they use the same

(2:39:45) disinformation tactics right is attack the source nobody spoke about it and it wasn't covered in any papers in the UK I can tell you that we were talking about it here and we're still researching it actively just so you know um and I I could not agree with you more that it um what you're saying in terms of this I think Ashton uh you're always honest and everything and you're telling your **truth** but I think the world is ready for this and I think if anything we'll have to just try to get the world's attention so

(2:40:10) they don't just forget about it after a couple news Cycles don't forget about me yeah no I agree and I think that that's um again it's that you know if they were to reveal that too it's Paradigm shifting a lot like the technology here is Paradigm shifting so uh my mind is not necessarily made up on that though I am leaning towards th them being authentic um but you know I it's hard to say I just haven't even had time to dig into it honestly but I would say that if you care about that type of thing then you

(2:40:41) know become an activist for it you know dig into the evidence share the evidence the same way that I'm sharing in the evidence right now right if you're watching my stream right now you're watching 17 pages of evidence that I've been kind of formatting here trying to make a lot cleaner I think you can do the same thing with the nasam mummy evidence I I am doing that by the way sorry this you're the star of the space but but but uh money penny which is a lovely name I invite you to join and

(2:41:07) collaborate on this because um it's something I'm actively uh working on well I'd love to if you send me a DM with the details that be great you guys are streaming right now on YouTube yeah I was watch I was watching um Ashton on YouTube earlier I've only got two devices and one of them needs charging so I was a bit stretched yeah I'm gonna close on the stream in a minute too but I will be streaming tomorrow uh before the pi interview um working on the P interview working on the evidence list and getting

(2:41:36) prepared for some podcasts I have coming up as well because not only do I want the evidence list ready but I want the talking points because not only is this about having the evidence lined up you have to present it in a very specific way too and so for me the way I like to start is breaking down the official narrative because that's the part where people have ingrained into their mind right then you start getting into okay guys let's start dealing with the hyper advanced technology that's being help

(2:42:00) kept hidden right um and so I think how you present it is just as important as the weight of the evidence itself I will just say when I when you say how do you present it I am not uh you know an expert in this I did find some of your longer very Tech techical videos really hard work um so maybe I would say present it by doing an abstract and a summary at the beginning for maybe 10 minutes or so and then say to people right if you want to go into the depths now I'm going into it because I think for anyone who you're

(2:42:32) trying to sell the story to or grab them before you go into the detail I did find it heavy going that's just feedback which I hope will be useful no it is actually I think my own mother told me that early on is that you have to digest it and break it down I mean the reality is there's it's so much in this is so involved in terms of evidence perspective that it's really hard to boil down and that's kind of what I think that looking at the Congressional letter is kind of my best approach to it where you know I I gosh

(2:42:59) that was a long letter I couldn't believe that Ashton it was brilliant but it was incredibly long yeah I mean it's yeah I tried my best to just Ste it down so what's coming up as well is going to be Veritas which is **truth** and that's you know my **truth** of what I think happened and I'm hoping to be able to that down into two pages I think the Congressional letter is like five or six or maybe even close to eight um yeah be careful they don't get confused on that with project Veritas because journalists will react

(2:43:27) very differently if they think it's a project ver more right I think project Veritas is gone now I think yeah the big guy left but I think they're still you know doing some stuff good call I do

need to be careful about that so thank you guys all for the info or the questions there is there any more that we need to get before we close out because otherwise I'm going to have to go to sleep here pretty soon I am tired yeah we got to let you prepare and not that you know you'll be great but just

(2:43:49) get your your beauty sleep not that you need that either but you know okay we're going to let you go uh but any last questions before that you're a machine man you're a machine just a big thank you yeah and thank you guys back uh thank you for all the support thank you for getting the word out I've seen people out there spreading the evidence which is honestly brings joy to my heart because again I want to empower everybody with the evidence help make sure they get it out there feel free to reach out to me if you have any

(2:44:15) questions about it uh I'm an open book um I I answer pretty much all my DMs as well although it does get harder and harder now that we've grown to such a significant um size so again thank you all very much uh for being here can I say one thing one more time or one little n message good night darling it was lovely listening to all you thank you good night okay cool yeah thank you thank you to our special guest yes please continue good night oh good night to you as well good night to everyone okay this is the sad part where

(2:44:47) I have to like good night it was very interesting okay anyone else want to say good night as well God love Ashton God love that man and then and everyone else too yes you know this is when I get mushy to you know I do love you people this is a wonderful Community I'm grateful to be here doing the UFO Twitter week with you guys and it's you know I think part of the essence of it in terms of an Asal kind of initiated this wonderful collaborative Community thing is that you know bring in um people who are experts and or at the

(2:45:17) Forefront of of you know this topic this world this field of inquiry into the nature of reality and Ashton like definitely is like a fantastic example of that and the idea is to you know open it up to the community as much as possible so that we can all kind of access this wisdom and uh Vibe together so I'm just really grateful for everyone here let's continue this collaborative approach to uh finding the **truth** and I'm going to have to hit the kill switch but it's not cuz uh you know I'd keep this

(2:45:45) going but we we got to let Ashton go so I love you all good night okay close down that so yeah we're going to finish this up tomorrow probably get this kind of at least in a rough draft format we've got most of the bullet points set up here um probably going to remove some of the narrative stuff probably won't keep a lot of that we'll see we got a little bit of extra stuff down here as well we going to go through but I think a lot of this is already addressed up above but yeah so come check it out

(2:46:20) tomorrow guys um tomorrow interview with Salvatore Pi will be at 2 pm. eastern time I'll make a post about it tomorrow morning probably just as a reminder for people and then I'll jump in and start streaming and get the questions ready I actually have already been working on them they're not super detailed right now this is really all I have at the moment um and I may

revise some of these as well and then I have uh actually a list of notes with new stuff I'm going to add I also need to finish getting

(2:46:47) through The Theory of Everything uh podcast so I'm going to try to speed through some of that maybe even tonight uh thank you guys for all being here if you missed it you can check out the replay um the moment I close it down you should be able to watch the replay um it'll be out there I probably won't upload it you can just check my live Tab and you can check out everything so have a good night everybody or morning for Jim and the other people in there yeah 2 p.m. Eastern tomorrow is going to be the

(2:47:12) Salvatore Pas so thank you guys for being here tonight and uh we'll be in touch tomorrow take it easy guys

MH370x Grind Stream - YouTube

<https://www.youtube.com/watch?v=f7gWUzJANd4>

Transcript:

(00:08) we're live welcome to the stream here we go we're grinding today find my list streamer mode okay first thing we're going to do is add the black boxes why didn't crash dig into the investigation of the black boxes hey what's up guys I hope this sound is a little bit quieter so you can hear me better compared to the background music but let me know if you can't what's

(01:17) this that's a pretty good quote right there okay good thanks for uh checking the levels for me I think it's afternoon now uh what happened to the witness in the confessionals um we talk to her take a look at my piece about um the interview with the witness it's a pretty good one but she's good and um I don't want to bother her anymore you know I think that I don't want the focus to be on the witness I think it she's safer that way in general and you know I'm taking all the Heat on myself here so if anything's

(02:03) going to happen to anybody I want it to be to me not to anyone else not that anything will but you know you never really know okay so I think what we're going to do here copy this days all these cords are in the way this is annoying let's just move it like this there we go so thing about 20,000 fet is that's as deep as the ocean goes there's no way they could have detected this that's just bananas to me peel this

(03:15) out Pious questions too we're going to work on both these at the same time yeah and so if you watch the confessionals you watch the higher side chats uh we got more stuff coming out we've done already I think over seven or eight podcasts this week I just decided that I was kind of like holding out and I just decided that it doesn't even matter if we Rego over the content

there's so much new stuff that comes out every day that we discover um and that really it's a matter of just keeping getting into more and more audiences

(03:48) people that want to watch stuff again they can people that feel like they're up to date they don't have to thanks diarrhea grateful to have you here too I think we added the hoer not knowing how to find the plane already let me check do we have the requirements on here yeah here are the requirements delete that it's amazing how much stuff we have this document is 17 pages long we can get rid of this part I think we have this this let's go down to the HX here

(05:02) hey everybody Welcome to the chat I really want to get a lot of this done if I can today we don't have a lot of time today either you sorry I have to check my

(06:08) notes you guys need to watch the uh theories of everything podcast with Salvatore Pas you guys have to watch it if you haven't watched it get on it I've been watching it this morning and I only got like 45 minutes in and I'm already got like 10 things I need to write up about it I think the biggest thing from the salvator Pas podcast with theories of everything is that when he mentions the energy levels that are required to uh essentially break the what does he call it the um like default vacuum state or

(06:47) empty vacuum State he literally mentions creating a black hole he literally mentions it like we're looking at it in our videos guys so we got to figure out ways to to be a little bit koi tomorrow when we when we talk about it cuz I don't want to dig into the videos tomorrow with him I want to go into the science but we're going to ask science related questions that will be relevant um he also talks about meta materials a little bit indirectly accelerated vibration through a pulse current and what he argues too is not

(07:30) that they're not increasing the spin of these Quantum forces of the electrons they're actually vibrating them and by vibrating them they can produce the same type of effect which is I thought was really interesting because if you spin them really fast then you're going to create forces that theoretically would tear the thing apart but vibration wise it may not they also talk about applying pressure to to generate voltage which I was just watching again rewatching the pyramid uh w files they argue the same

(08:01) thing in terms of how the pyramids could have generated electricity pretty weird it's a lot of connections and some of this stuff thanks Paul Paul was at saying that hope we can solve this mystery so that we can get Justice for the missing missing passengers and their relatives um I absolutely agree that's really the main objective here right the technology is really cool and you know I think that that on a World level it maybe uh surp or um shadows and dwarfs the passengers and their families uh the the victims

(08:39) but we need to make sure that they're our primary focus we just can't forget about them one thing I want to clarify for people we've moved away from the Wormhole idea um it is a black hole actually that we're seeing it's an endothermic event it can be described as a black hole but it's not portaling the plane somewhere what's happening is this plane the speed of the

plane is increasing and potentially they are putting an electromagnetic field maybe even double-sided around the plane which can

(09:15) allow it to obtain super conductive properties and really what this requires is a unification of Quant and macro that will allow macro macro sized objects to have the same properties as Quantum objects which can essentially ignore gravity um and you know move extremely high speeds so this is going to be pretty mind-blowing stuff a lot of people in traditional Academia are not going to be able to accept a lot of this stuff but we don't give a crap we're also going to make sure that salvator P's science uh gets the the Publications

(09:56) that it deserves to get to I think it's disservice to humanity these Publications would look at it blows me away yeah we need to move this one up for sure this is a fact I think we got the knowledge of classified systems already in our other thing this one's very important as well since it was recorded on a citric session where do we put that yeah here let's say

(11:08) let's say let's say we're just going to call this the weaker yeah the vibrating part was very interesting the first thing I thought when I was watching The Theory of Everything podcast with salvator P Pas about when he's talking about vibrating and the the solution being being to use vibration as opposed to increasing the spin um well the first thing I thought is this is a unifying theory of quantum macro what he's really getting at here is you're going to find a way to take a macro sized object and allow it to obtain

(12:14) superc conductive properties which will allow it then to act uh to get the properties of quanta objects but then I thought about commander fraer and his sighting of the Tic Tac in um off the coast of of uh California and how he mentioned that the object was vibrating shaking made me wonder if that was the same type of thing going on yeah it's not a wormhole what's happening is that it seems like they're using inertial mass reduction technology and actually salvator Pas actually jumped around that question on his

(12:54) interview and he said specifically he's not a spy it was pretty interesting um so so what that led me to believe is that there is actually classified information regarding the science that he can't speak to that something's been taken out of his papers in order to protect the information it doesn't make me wonder how much I should be speaking about it but here's my view my view on this idea of inertial mass reduction which I'm now 99% sure it's being hidden from us is that these videos are 9 years

(13:22) old if CH either **China** and **Russia** have already figured it out if we could figure it out they've already figured it out if they have haven't figured it out then they're so far behind that it doesn't even matter if we're somehow ahead of **China** and **Russia** us figuring this stuff out then they're not a threat so either way we look at it um you know then that situation like we we shouldn't have to worry about revealing this information interestingly enough I keep thinking about like who am I more of a

(13:51) threat to am I more of a threat to the US government or am I more of a threat to Rogue

governments you I think that **China** and **Russia** wouldn't really care that I'm revealing this I'm just I'm hurting the United States government by revealing it so I don't think they would do anything to me but if I were to like go work with US government then I would be a huge Target because they know what I can reveal at this point you know if we can reveal this just from two videos that are out there man imagine what we could

(14:17) uncover if we had access to like real spy information from the database from other countries so uh just if anyone's out there listening from other countries spies and what have you you um I have no enemies I'm not against you guys uh if I had the ability I would try to heal all the current relationships that are out there I don't think we need to be adversarial to **Russia** **China** any other country it's counterproductive but we should be doing is working together to ensure that Humanity uses this

(14:48) technology in a positive way that we use it responsibly and that we don't destroy ourselves that's what I think we should be worried about I don't think we should worried about fighting with one another soor I'm just reading some messages here um yeah the phone call stuff you can check out some of my past pieces go take a look at my all works you guys can find links to a lot of the questions you guys going to ask are already going to be in there there's going to be specific articles for all of them including the

(15:25) phone's ringing including one we caught on camera we have a actual video of them actually like proving it the current theory is that it somehow got to Diego Garcia military base it's going to be very difficult to prove and just straight up in front uh I don't really want to reveal too much information about this base because everybody that has talked to me has said that it's this extremely Advanced and uh protected base in terms of the secrets around it so I want to avoid that as much as possible not get copyright

(15:56) tried or have my YouTube video just get taken down for whatever ever reason um because again I'm not a spy either and I do care about my country but I want them to admit the **truth** here so harder they push back on us the harder we will push back as well so if there are US Government assets listening uh take note of that please e

(17:22) is this still true are for

(18:29) we might be changing a lot of the zaps to Black Hole I'll probably still use zap in some instances though after watching salvator pus interview now I'm 100% sure basically that what we're seeing is an intermediate black hole surprisingly and to some people's Point what did Don Lemon though I mean what the hell how is this Don Lemon dude talking about black holes be careful about Googling black holes by the way but you guys get my point just a little joke um yeah I agree whoopy technology needs to

(19:03) be used for the betterment of humanity not for the destruction of others I think that a lot of people don't understand the implications of what we're dealing with here you know yesterday I was on a I'm not going to name people just because I I don't want to but I was on

one of the UFO Twitter week uh spaces and my question usually the question is always the same is I want to ask what do you guys think the implications are of the technology right because I think anyone who's really in the no is

(19:31) going to realize that this goes well beyond nuclear weapons we're talking about the next advancement right stuff that's 100 times thousand times almost infinitely more dangerous than nuclear weapons uh when we're talking about obtaining Quantum properties um we're talking about also the potential for complete doomsday weapons that could destroy the planet destroy whole cities um we're really opening the door up to you know Dr Evil type type super villain capabilities so that's why we have to be

(20:02) extremely responsible with this type of Technology where do we have anything about the zap I don't know if we really need this uh might want to say why it's teleportation right I think we're going to move this to the science portion we're going to end up removing some of this stuff cuz this Wormhole stuff is obsolete now except for this one okay so what we're going to do here is we're going to change the science part around a little bit I'm also probably going to put out another tweet later about the black

(20:59) boxes because I just think that's really big like how do we not find the black boxes it's just impossible black box has had to have been down there they're pinging for 30 days and they're capable of going 20,000 ft under the ocean guys the ocean only goes down 15,000 ft except for in certain parts they should have easily been able to find these black boxes so what we're going to do here is it I think that's probably enough I could

(22:36) say the event would be much more energetic here but kind of goes without saying yeah could be real planet destruction kind of stuff it really makes me wonder about the fmy Paradox in general in terms of like is that the reason is that we don't find other civilizations a lot of them just destroy themselves with uh significantly advanced technology yeah you can uh you'll be able to watch the live stream after it's done I think that what comes along with these videos as well guys is that a new understanding of how we look through

(23:20) things the events of geopolitical struggle in general is that this explains why nobody ever attacks America because is they're going to get wiped out in an instant I mean we could have warp nukes that's even without using any more technology than what we're already just looking at on video I love the guy who's bringing up warp nukes in the space like he he gets it is that even without any other advanced technology all we have to do is warp a nuke onto somebody and that's game over and so a

(23:46) lot of people ask well like why wouldn't we just take over the world why would we want to take over the world so let's say we go wipe out **Russia's** whole government structure what does that do now we have a government you have a whole bunch of people millions of people who have no government now we have to take care of those people and we have to figure them out too nah that's the reason why people don't take over other countries is that you learn in economics that there is a whole like managing the economies of

(24:12) other countries is a huge thing not to mention those people would be native **Russians** it's not like all of a sudden they become Americans right they would Rebel they would fight back that's not what anyone wants right so what instead what happens is it's a stalemate where you know nobody's going to blink and if those countries have the equivalent weapons it's the same way with nuclear weapons where first person to use it everybody's going to start using it so it creates this stalemate situation right and what that means with

(24:40) these little proxy wars is that these are all just small fish fighting against one another right people that are insignificant now I don't mean to say that the people aren't they are very significant and that's part of the reason why these small Wars shouldn't exist and ultimately what these small Wars come down to then is just money right comes down to spending this money and what have you one thing I want to say with you guys as well um keeping the background music on because I'm I'm working and I

(25:15) like to listen to it if I'm doing a podcast I obviously won't have the background music on but I'm not here to just do only question answers right now I'm trying to work on the stuff um be careful who you guys listen to um in terms of what they say I've been very consistent that I'm presenting the evidence I'm building a case I'm an investigator I'm not a scientist I'm not a physicist I'm not an engineer I'm not a pilot uh I have a background in it and I present the evidence I tell you

(25:45) guys my opinions but I don't force anyone to believe any particular thing if people are out there telling you what to believe and what they know with absolute certainty without presenting the evidence then those people are charlatans right right and they're trying there's a lot of people that just want answers but they don't want have to think for themselves uh that's not what I'm doing that's not the kind of community that I'm building and you should be careful of those people who are offering answers

(26:10) but not showing you the evidence um be very careful of them I think I've run into a lot especially on Twitter people that claim to have all the answers I tell you open front I don't have all the answers and that's the difference right people who are credible are people that don't try to tell you they have every they know everything people are just trying to investigate let's dig into the witnesses I think this is a good one to do uh Mike McKay yeah John it's for John's Sister

(27:21) Christine shout out to you thanks for watching thanks for being a follower you know whatever event is going on for you you know congratulations yeah fossil fuels are a huge issue guys so it's not just the dangers to the world it's actually also the socioeconomic impact there are millions if not a billion people in the Middle East and in that General region and uh there's probably I don't know maybe those numbers little off I'm guessing hundreds of millions and their entire economies would collapse overnight entire

(28:10) economies that are completely based off of oil would become entirely obsolete overnight there would be terrible famine in those countries uh their economies would just completely fall apart so part of it is the economic struggle but on the flip side of that what that

also means is that there's certain Elites who are already planning with probably a specific timeline for how they will take control of this technology the companies that they know are going to be the ones that are going to control the technology

(28:40) they've probably already invested in those companies which what I would say is you want to put your money where the elites have put their money the ones the people who are in the no right and they're definitely people who are in the no doesn't take a lot of believing on that one have I been looking into this for years no so the story is back in 2014 I did look into MH370 in general not around like this I just wanted to know why it crashed at least I thought it did at the time and I even remember seeing

(29:11) one of these videos uh lots of people saw these videos I've seen comments uh all over the place about people had seen one or two of these videos back in 2014 and we just ignored them right because we didn't have any idea of how they could be real and when I saw them reemerge after I have seen Flier footage from the 2017 DOD Navy leaks that's when I became interested in the UAP phenomenon began watching I've seen probably thousands of videos a lot of the same ones you guys have seen probably everything that's out

(29:39) there in the Zeitgeist um and after I saw them reemerge uh on **Reddit** on the UFO sub**reddit** uh which I think is probably controlled by the government uh people did a ton of investigation for like about a week until it got censored off of there and I was very early on convinced that they were authentic authentic just from seeing from two different angles was the first thing that really had me looking at it pretty hard um the satellite Trump picture that helped us understand that we could be looking at satellite footage

(30:11) here uh the dod Navy leaks helped us look understand that we're looking at a drone a real drone that has a colorized thermal built into it the science has started to catch up to this now you know 2014 this this science was futurology now there's tons of science about macroscopic decoherence Bose Einstein condensates you know the the public is just behind the military at least 10 years probably more like 25 years maybe even 50 years and uh in addition to that we also needed super conductivity like people

(30:43) didn't really realize that we're on the verge of superconductivity from the public perspective I'd argue that **China** Korea the people that have been pushing these videos have been coming from about super conductivity you know they're taking it very seriously we are behind the scenes on the west from a public perspective and the answer to that is because super conductivity is the key to all this that's how you get all this stuff to work super conductivity enables everything else we see in the

(31:11) videos it may even create the it's the link between Quantum and macro it is potentially how you can have inertial mass reduction um it is how you can essentially have a a plane 777 go at this beyond the speed of light or at the speed of light it's pretty remarkable and I think that all this stuff is so consistent with ufology the same reason why when I first watched these videos I even thought it must be non-human intelligence because that's how consistent what we see is

with that a lot of the ufology aspects and the

(31:43) reason and so the conclusion there is that this must be reverse engineered right we that's how we figured it out it probably took a hundred years but we figured it out eventually right and that information has been leaking to the public in fact I just think from the a technological advancement standpoint Humanity's Advanced way too quickly in the last 70 years far beyond what we probably should have advanced um so I think that a lot of that might come from reverse engineering you know you watch you watch a you know

(32:12) a UAP floating in the sky you go how are they doing that let's figure that out but we need the material science to be able to to do it the analogy I always give is like if you give a caveman an iPhone they can use the iPhone but they're not going to understand how to recreate it but when their Material Science advances to the point where they can create the components then potentially they can so I'm going to type a some more stuff here

(33:31) there might be more witnesses too uh thanks Leopold I'm glad that we have people from all over the world who are following this it really is a world event especially in Australia where a lot of the search was originated from um yeah they they were just searching you know it was it was a wild goose chase they were never going to find that plane there sucks honestly yeah John so I think I already kind of commented on this but **China** would have figured this out nine years ago already right they've had these

(34:12) videos if we can figure them out from Twitter which is the Twitter account uh pretty confident that **China** have already figured this out and if they hadn't figured it out I'm pretty sure the US government would have silenced us in one way or another either just you know deleted our Twitter account or whatever they would have had to do right so they probably assume that **China**'s already figured it out as well um but even if they haven't then they're so incompetent that they're not really a threat now I

(34:36) don't think **China**'s incompetent so I think they've probably figured it out yeah iron I think that that's what we're saying is that it went either at the speed of light or faster than the speed of light and that's why no one that's why we can't see it but also keep in mind what we're looking on the videos is a frame rate so if it's moving faster than the the frame rate then we're not going to see it on the video now if you saw it in real time it might look different to your

(35:04) eyes but from who I from the scientists I've been talking to seems like it could theoretically be going even faster than the speed of light when you obtain Quantum properties you also obtain the properties of the wave function which has is how we've been able to prove quantum teleportation and non-locality which is essentially teleportation but it is very important we speak about it in the right way we have a whole separate part about her

(36:24) and then I'm going to it's called the official is that it this is all there is

(37:29) let's take a look at this black box stuff for a minute yeah I have nothing against **China** I

lived in Singapore when I was younger Chinese people are pretty cool not sure why we're so adversarial towards them in general um one other thing I want to show you guys again let's go over this as well it's good it's good time we're going to go over real quickly the piece from yesterday wait let me see oh yeah star Captain star Captain is the one who was posting about uh Warf nukes I love this guy so

(38:29) funny um let's take a look here I'm G to show you guys this over here so yet another thing that we had been missed for honestly weeks on end is this there's just a delay okay um similar to how we had missed the Heat Signature under the plane which indicated this lithium ion battery fire and the smoke that we can see coming out of the back we can even see the smoke coming out of the back right here this is smoke coming out of the back of this plane here this is the frame this is a frame before and a frame after so we can

(39:20) already see the bending of these orbs already happening and I'm hoping that tomorrow's interview will help explain that in addition to this in the next frame you can you can actually just see that the plane is smaller in this picture than in this one it's clearly smaller so this is seeming to indicate that something's happening here that is a very strong energetic event is happening here that is beginning the black hole that is essentially reducing the mass of this plane in addition to that it's

(39:52) blurred this there's no blurring in the rest of this video These are extremely Advanced Electro IR cameras that are being manually tracked they're not even automatic tracking and focusing happening and then this is the only frame where we're seeing this type of blur which indicates this plane is beginning is accelerating and and moving so fast that it's causing the blur action to happen so this to me is the really absolute proof of the science that we're seeing we're seeing some sort of

(40:20) inertial mass reduction technology it's pretty wild if it was just a wormhole then what I wouldn't expect to see the blur I would really expect to see more warping gravitational lensing even more than this of the plane itself that's just my that's just my opinion I might be wrong uh no no uh news on The Whistleblower you know I think I don't know if we're going to have to wait for that new law to come or not not sure yeah unfortunately we don't have a lot more frames in this I think the very

(40:57) next frame after this the plane's already encompassed the just not enough frames per second for us to watch we would need like a I mean this may even be high def I'm not sure but we would need even a better camera than this and this was 2014 so we were somewhat limited yeah warp nukes just crack me up I every time I hear it cracks me up yeah this is 10 years after the nits encounter uh if I had to guess and I want be careful about talking about some of these private companies because I think that's how you get

(41:40) disappeared but locked Martin is where it all points back to there are others cameras probably made by Ron the drones made by General atomics uh the general that we spoke about who look at the general situation this guy this way guys and I'm probably going to redo the

general piece I need to write that down actually give me a second so this General is in charge of like the U the International Security forces and he ends up getting a promotion he gets a promotion despite the fact that never found the plane why

(42:28) would you get a promotion to being the top ranked military officer after being in charge of MH370 which theoretically was a huge disaster they never found anything I have a I have an idea that they were able to successfully cover up what really happened therefore you get a promotion and then then went ahead and started working for lock heat Sig that's a good question is Sig just solely related to them let's look up certainly seems this way and I think there's even a new better Sant uh that's

(43:08) coming out now too jeez look at this hey look at this drone over here guys is that our drone oh radar dishes on the ground too that's cool oh should we watch this this is probably a little bit more more new oh look at that Sig payload there's your Sig payload right there see how it connects to everything here oh look at this oh my goodness look at this are we going to steal this did you see that the battlefield awareness thing is exactly what we're dealing with here exploitation that's what uh Lieutenant Commander Edward C Lyn was

(44:09) part of that yeah okay I'm 100% convinced it's Edward C he's the guy there's nobody else kinetic and non-kinetic events wow is this how they locked in is this how they locked into to the to the plane with the orbs do you guys see that is that how they lock into the plane they're using signals intelligence and they're targeting it and then they're firing off the weapon somehow or like orbs wow wow well we're saving this one holy crap put this in my Discord we need to come back to that we

(45:14) might have to do a Sig in part two guys it's definitely lock heed by the way somehow the general just ends up being a board of directors of locki Martin after being the highest ranked military officer impressive all seems to be connected by Sig is that the camera no is it this is why the drone's there is this targeting and positioning how is this stuff all publicly available if I'm locky Martin I'm not making this on the internet that's just me but we thank them for it

(46:18) thank you for letting us figure out how this all works doesn't take a lot of deduction to figure it all out hardware and software across platforms for optimal interoperability hello this is wild guys should I apply for a new Cyber career job I don't know if uh I don't know if they'll let me after after our history here uh okay let's find out some more information on this flight data recorder I'm going to have to drop off here in about 20 minutes or so to get ready for the next podcast I'm going to

(47:12) be on the Alpha Warrior podcast I'm not sure if it's live or not but if it is live I'll put a link you guys can watch after that Alpha Warrior podcast I will probably jump back on um cuz we do have the UFO Twitter space later tonight but that's not till later 10 p.m. Eastern so there will be a little bit of time between I really got to keep working on some of this stuff I also need to prepare for some upcoming podcasts I want to put together an outline for going over all this evidence piece by piece I think not just having

(47:49) the evidence is important but kind of reviewing it in the right sequence so that you know Common People can really get behind behind it and realize this is the official narrative's [REDACTED] okay sorry I'm trying to catch up on the chat messages I don't know much about electr gravitics but I have learned a little bit about geodesics which is probably the same thing and I'm going to learn more tomorrow with Salvador P they're generating their own geodesics here probably through an electromagnetic pulse that's creating

(48:29) an accelerated vibration is what I'm what I'm getting I'm thinking but I don't know I do remember the rq-170 Drone that Iran stole that was really really interesting yeah the batteries I mean ultimately we don't need to prove their military batteries or what we just need to know there's 221 kg of lithium ion batter batteries which is a lot it's way too much that's dangerous amount yeah if you guys want to get me on any of those podcasts you listed there uh go ahead and send them messages

(49:10) about me you can link to my content you can link to the Congressional letter is probably the best one to get people on board with it uh I imagine the more people that they get hit with the more they will be inclined to talk to us um you might also mention that there's a very coordinated group of people trying to get people to not talk to me uh because I know that they're doing that as well I mean we've caught them on we caught them on uh one of their spaces admitting to it which is pretty alarming

(49:37) like don't do that guys be better than that um you know I'm not going to say more than that but there will be consequences if you are defaming me to other people um that is in some states like criminally illegal and in other cases that's defamation if you make up lies about people to and say it to other people that's called defamation so don't do that and if you think you're hidden because your your name's not showing on a Twitter account think again okay if you have verified yourself in your name

(50:10) and you get subpoena they will give us that name so again guys do not defame me I'm not joking around about that that goes for anybody listening let's work a little bit on so we got the let's look at this flight data recorder stuff I mean is there any actual good stuff in here blah blah what I want to know is how they work and what would make them not work yeah I know all the people in here this isn't to any of you guys you know I think you guys are all supporters in general but there's unscrupulous people

(50:58) out there that have been doing some pretty heinous stuff and it's in their best interest to stop doing that I've been very kind up until this point but my patience is wearing thin and I'm not the kind of person that's going to make any overt threats or anything like that you're just by the time you hear about it it'll be too late just realize we have people on recordings I if you think that just having me blocked is going to prevent me from getting the defamation things that you're saying it's it's not I've got

(51:37) lots of followers um I do keep track of that kind of stuff just a heads up especially if you are putting your name next to it don't don't do that do not do that what is all this what do we

care about this stuff can we just what are the details it's like oh these are all the different flight recorders okay cool but what I want to know is capabilities yeah I appreciate people that are bold enough to use their real names because it means that they're holding themselves accountable right um and that and that's really big

(52:29) that's why I put a lot more credibility in people that are using their real names as opposed to people that are trying to hide behind an avatar there's no credibility of those people now ultimately what I will say though is I don't judge people just based on their name i i judge people based on the content content of what they're telling me the facts the way they're laying it out and the content of their character that's how it should be if you guys see anything relevant here that I'm missing please point it out in

(53:00) the chat what I want to know is how can these things get destroyed is there any reason why it wouldn't work I mean if a plane's crash into the ocean this black box isn't going to get destroyed that's you'd have to get hit by some extremely powerful weapon I believe oh look at this hello hello there's a whole part about Malaysian airlines in here wow yeah so for the lithium ion batteries they were most likely in a cargo bay that is actually made to be able to withstand fires which would explain why we don't see a very

(53:57) prominent Heat Signature in some part of the plane is that the fire would be relatively contained but it's going to break through that containment um and that's where the smoke would pretty much be going all over uh Antonia the way you're speaking I hope your dad is around uh if not you know uh keep them in our hearts um MKS need well the answer is those scientists first of all 12 of them are Malaysian and eight of them were Chinese Nationals but we have directly tied them to room temperature super conductivity

(54:42) via an NSA security report about uh commercial use of superc conductivity so presumably if you have 20 people that have very Advanced intellectual property now you have developed a very strong reason why you might need to utilize this technology or maybe we're just doing it cuz it's the right thing to do you know saving a passenger plane full of seven of uh of people is a noble thing to do you know if we have that technology we should do it to save people if we can Anton I'm sorry to hear about that um you know I think

(55:17) that what do I want to say I guess I want to say that you know I'm sorry for your dad passing but you know if you hold him in your hearts and our Spirits you know he'll live on for sure and I I'm glad that he would have been proud and interested in this because I think it's very it's interesting topic in general I think there's a lot of people that pass before us that never got the **truth** of what they wanted but we can vindicate them in in retrospect as well in hindsight and that's what we're going to

(55:54) do wow so they changed it so it has to be live streaming that is interesting yeah but the Royal race engines were doing this this is interesting so what we need to look into is the range so their argument is they're claiming the range was too far away I'm going to call [REDACTED] on it right away even before we dig into it I'm calling [REDACTED] um MH370 Black Box range look at how there's

nothing related to

(57:02) it like the top hit should be telling us what the range is this is all like weird news articles talking about picking up these fake pings that they didn't find the plane oh wow it would still be correct cuz it's on a solid state drive why would the transponders be related to the black boxes makes no sense we're talking about ping it's pretty suspicious that so far we've gone through 10 links here and we haven't found anything about this yet okay this is this is getting really weird now okay well I'm not signing up for any

(58:07) crap that's for sure okay and like all these excuses for why the black boxes wouldn't work okay what what's the excuse battery life is short it's 30 days what are you talking about is there any real excuses here it's it's small it doesn't matter we're talking about pings we're not talking about trying to find the object we literally didn't get any pings from it again not floating doesn't matter these things go down to 20,000 ft like literally further than the ocean

(58:39) is deep okay Pinger range is only a few miles that's also [REDACTED] I mean first of all we're talking about they can already go four miles deep underwater and ping and acoustic sounds carry over water so what's the excuse here what's the what's the supposed range oh could have been could have been buried in the mud guys and the hydrophone technology didn't hear it either so okay so basically just I'm all I'm he is excuses I'm not seeing the range you guys see the range they literally don't even explain

(59:24) it this whole thing about the ping range only being a few miles isn't even corroborated in this article in this piece right here in this paragraph which 20,000 ft is 4 miles that's just underwater that's straight down and they literally did this look at what they did here I'm going to save this picture actually too that's a cool picture okay this black box thing is getting sketchier and sketchier okay let's if we delete this I bet you we find the answer right away once per second for 30 days what's

(1:00:19) the range I'm guessing that this range is very far well anyone have any ideas where we can find it so dark matter is as I've been hearing is really explained by complexity the more complex a Galaxy gets the more more mass there is and therefore that will explain dark matter without Dark Matter having to be a specific thing so a lot of the names you guys are dropping I'm not going to say their names on the stream we've reached out to them and they're going to let you down guys if somebody's out there telling you

(1:01:12) that they know how everything works they're probably uh full of crap that's what I'll say okay so a lot of you guys follow certain people that are out there on social media that claim to have all these answers uh going to be disappointed is what I'm going to say without going into too much depth so if somebody hasn't chimed in by now then don't be looking up to them for answers okay Sean that's what I want to know if 37.

(1:01:41) 5 khz how far is that going to go my guess is that's going really far yeah dark matter is not a specific thing what it seems to be is more of a similar to gravity it's a a property of what is

happening with mass interacting with SpaceTime and in order to explain dark matter where the way I've been explaining it is that complexity increases when things go from gas to becoming solids and potentially even life itself and Consciousness and the more life there is there might be more uh more Dark Matter more because really all dark matter is is more

(1:02:17) stickiness right now that's a pretty weird and Abstract concept but we do know that dark matter is not necessarily a specific thing but we do need to have a way where we can explain how is there more gravitational attraction than what we can see from the mass that we can see I'm going to have to drop here in just a few minutes I really want to figure out what the range on these Herz is here I'm going to highlight this and steal this as well going to go ahead and take this as well there's actually no excuse though from

(1:03:04) what I'm reading here that we shouldn't have found this black box yeah when I heard that thing about dark matter too it really stuck with me cuz I already knew that dark matter wasn't a specific thing then the real question is okay what is causing all this extra stickiness that we see it's a lot um I will probably post the alpha your podcast link I need to I need to talk with him actually and figure out if it's live or not I actually don't know checking real quick just wish knew holy crap that's

(1:03:53) cool uh I don't know yet I'll let you guys know but if you Google Alpha Warrior podcast my guess is you can find it how is there not a range on this though oh here we go I mean the depth is one thing I want to know how far there's no way it's just a couple kilometers no chance man no chance if we have acoustic sounds like the sosus system that can hear the Titan sub pop from hundreds of thousands of miles away that there's no way that these black boxes can't be detected from really far away I need someone tell every single

(1:04:46) one is about MH370 and some excuse for why they couldn't find the black boxes this is a this is a pretty big red flag here how do we this this random article is just about MH370 as well this is really suspicious oops well okay I think I'm going to probably close it down here so I can get ready for my other stuff go to the bathroom beforehand we I think we already mentioned the orbs being super conductive I'm putting that in the up above probably going to get rid of this magnetic Vortex Wormhole generator thing

(1:05:26) just not necessary anymore I don't think we're moving away from that okay we've been making Headway here though we've got a lot more work to do though a lot more good news is we're not going to have to edit a lot of this other stuff we're just going to have to be able to review it I'll throw in all the Edward see Lynn stuff in here I'm going to edit some of this but a lot of this stuff starting to look really solid now here I think this is a better format too so like when I start to do podcast I

(1:05:55) want to be able to just run through it like this right okay facts video facts video speculation and then probably going to move into this next like this is the next thing I want to be up here and then **debunking** the debris is probably next uh yeah probably dun **debunking** the debris next even though like you kind of have to understand the scenarios for **debunking** the

debris and then I think we go into lithium ion battery fire and all the witnesses and then you start to get into the science what we see you I think you

(1:06:41) really want to do the science part like later on because a lot of normies are not going to be able to understand and even come to terms with the videos until we've gotten through all this oh I also want to have a part about requirements to understand videos I'm going to do this this is going to be the last thing we're going to do here yeah they show us the depth but they don't tell us high frequency yeah Sean I'm agreeing with you like that's a high frequency so I'm guessing it's

(1:07:14) really far detection range if anyone can figure that out for later that'd be sweet oh 20 kilometers it was it was on that okay I'll go back and look at that but I'm guessing it's it's pretty far okay interesting I'll put speculatively maybe 15 to 20 km given the search though they would have seen it so requirements understand the videos uh we needed 2017 DOD Navy UAP videos that show Flier drone Flier 2019 Trump satellite image from USA 224

(1:08:21) 2011 we need uh physics Concepts uh gu sh worm holes macroscopic deco I might remove some of these or update them based on what we doing the science okay 99 so we need all these things this is a big really important one to understand

(1:09:26) the videos to be real okay guys well thanks for hanging out here um take come take a look at the Alpha Warrior uh Alpha Warrior stream let's see if I can find it for you guys real quick before we even go here it's probably on Rumble I'm looking oh yeah I don't know I'll have to get a link and I'll have to post it if it's live I'll let you guys know otherwise I'll let you guys I'll give you guys a recording and we'll talk about it uh afterwards so oh you're okay you're Kev B okay cool

(1:10:17) man nice talking to you Kev B I appreciate all your contributions I won't reveal who you are um again I'm not sure about where the alpha War podcast is but I will post it when I'm on there otherwise uh yeah we will follow up later after the fact here just trying to look and figure out oh yeah 60 viewers at once cool in okay I'll talk to you guys later have a good one

MH370x Night Stream - YouTube

Transcript:

(00:01) it's not live yet there goes inter it's not live yet sorry guys I'm learning how this works for for

(01:31) let's make sure this works okay we're in business let's get going here if anyone has questions we take a look at the chat okay so I'm working on all evidence and theories here I'm

actually G to switch this over here in a minute I'm going to put this into Google Docs probably actually pretty annoying let's the wrong account

(02:53) here what is going on here why is it got the wrong account switch to my other account it's weird I just won't switch over my other account I don't understand doesn't really matter I guess just looking at this trying to make sure not revealing anything okay there we go um yeah thanks that interview with can con was really good um the reason why I wasn't on earlier and doing stuff is I had another interview that I forgot about today uh it took like two and a half hours so that should be dropping uh

(03:58) next week and yeah got a lot more stuff coming honestly guys so but I'm really overdue on working on all evidence and I want to get some of this going tonight I also want to test my stream so let me know if it's not working well for any reason make sure that it works okay so the way we're going to do this this time we got the videos see here fake video requirements I'm actually probably going to move this out now see here I need to like actually understand what I'm looking at here H get rid of

(04:59) that what do I want to put next here hey red panda how's it going thanks man that's sweet I'm glad the sound is good now um suppose I don't need to wear headphones actually we could play some music while we're doing this right oh yeah I'm not revealing anything just a bunch of [Reddit](#) links okay let's see what do we want to play boy Billboard top 100 uh let's do what won't get us Su I don't want to get a copyright stri or anything like that say streaming I'm just going to

(06:00) look for some music I can play if any you guys have good examples for music that'd be sweet that you want me to listen to that won't get us uh muted would be awesome oh crap I don't have Spotify oh that's not going to be that won't work then here here we go we'll try this one out okay we should have some music going here in a second so we have a little [Music] background there we go that'll

(07:03) do hey everybody we're chilling we're working on our all evidence right now I've got a list over here that I want to add to it I also need to break out facts versus speculation here as well actually I'm not going to delete anything just yet what the hell maybe we'll do like this I need myself I'm going to be kind of moving around

(08:05) during different parts of the evidence here the fake video [Music] [Music] requirements oh we got a lot of people chilling hey guys little chill night stream [Music] action it's going to take a few days to get through this stuff uh Saturday I'm going to probably be working on getting caught up to speed for the salvator pi interview okay what do we want we're going to have to oh here we go here's the stuff I needed to add in there we need to update this list as well um we're going to also add

(09:08) in evidence of the fire also evidence PL didn't crash into that there and some new headers as well we're going to [Music] [Music] add oh nice yeah I can't wait for the Victor

interview or the uh alien interview alien scientist interview on

(10:15) Friday good actually [Music] tomorrow [Music] just turn it down a little bit more we go yeah we got some non-copyright music here so we shouldn't get copyright tried um I'm going to be on alien scientist tomorrow actually which will be big he just did uh Gary McKinnon actually uh yesterday I was watching part of it so I think that'll be good this will help prepare me a little bit as well I want to get Edward uh agent 370 we'll call it and then um technically Edward Lynn lost his title when he was um I think when he got

(11:20) the court marshal or whatever happened but we're going to still call him that yeah alien scientist interviews should be pretty good I think he knows a lot of stuff let's take a look what else we got here oh okay we need to add all the witnesses as well we'll put that up here somewhere we might even have to update the KT witness stuff as well uh we're also going to need motive we got a lot of stuff to add a lot of stuff to add I'm going to try to off memory and then I'll go through my stuff and on my pieces as

(12:03) well uh can we combined fire and cargo probably okay one thing okay let's start with the I think the videos would be background like what are the details of the video right 3D [Music] stereoscopic uh get rid of this reformat this as well while we're here we're going to change this now this

(13:07) is actually we want to get as accurate as we can with this proen a day pack I don't think I need like technology from 2014 stuff so this is actually going to change now to be civer system and I want to move archive satellite oldest version from people can't say reges side and on for some reason like everybody gets it wrong what we'll do is this uh let's say let's that uploaded

(14:18) Source wonder if I should combine these I might actually just combine these to one row save a little space something like that oh damn you guys remind me I have to do something here yeah there's some pretty big people I'm supposed to get in touch with actually that you guys just remind me I need to do that before I go to sleep uh I'm going to keep it close to the vest though I don't really want anyone to know but yeah um let's just say there's some there's some big names that want to

(14:57) get in touch okay do like this see that looks pretty good now I think right uh satellite we might even put the description in here actually maybe add that later on what the hell oh I see what's going on here this needs to be like to go down there I mean I think at this point like we've gotten so much attention people know who we are that's part of the reason why I'm not really reaching out to people anymore like I don't want to be pressuring people people have their reasons for not talking to us it's fine

(15:52) I'm not worried about it they'll get in touch with us if they want to get in touch with us I'm like the easiest person to talk to in the world uh okay so this is also we're going to just kind of repeat this again here probably going to end up working on a little bit of new stuff here before and not just do all this video part right away I'll have to double check this one I think it's

June 5th and then upload mid June 13th somebody wants to double check me for me that'd be awesome I don't think

(16:35) this one says The Source on it but it's presumed to be from the same Source yeah of course I acknowledge the chat guys you know sometimes I get in the zone here when I work though and I don't really just forget to look oh yeah here it is I have it right here I think this is it 12th I thought it was the 13th this one can't someone pull it over here and watch real [Music] quick what does it say you actually can't see on the footage what the heck just says June 5th I don't know the exact date

(17:27) here [Music] oh publish June 12th yeah there it is okay this one is June 12th then we can delete this oh um we can move that a little bit we can say general information or these might just be facts right I might also separate this into speculation how about let's actually call this video facts then we can do video [Music] speculation on this one this is where I want to [Music] put oh I know who that is I know who does the hand thing

(18:31) [Music] huh yeah if you guys have any questions feel free to ask in the middle of [Music] this I think C's system is like rest in peace and peace like I don't think you have to say system again cers produced satellite video is in I can delete this one that is a fact actually I don't know I'm trying to just make sure like if somehow we're wrong on

(19:34) the 3d stereoscopic effect like I wonder if it should move it this this is definitely a fact though perspective satellite perspective changes eight times I think we break these out as well at visible in six and this [Music] part do a quick stream check here yeah the light [Music] no I haven't heard anything back from

(20:38) a I mean we had to be one of the very first people to apply on the a thing I feel like we're not going to hear back which is going to in of itself be kind of a tell honestly the thing about our lives people stay in silence they need plausible deniability anything they say like we have so much evidence so like anything they say Will Reveal information to us uh Nolan James thank you very much for your service greatly appreciated I have the utmost respect for our military yeah sish you're going to get blocked from here too I mean I I warned

(21:26) you you know like don't come into my DMs guys if you do and start saying stuff and I tell you stop stop talking about stuff you better [Music] [Music] listen the screen cap Megan what are you talking about I'm curious uploaded the the vision the version of the screen cap registered on [Music] channel I'd be curious to hear about what that is uh Megan in general guys if if you've been blocked by me though and you think that it's been an error or you want to get another chance then just message me and

(22:16) let me know I'm not an unreasonable person but if I go back and look at threee history and I see that like you're either not supporting or you're you know supporting people that have been talking smack and probably won't happen okay I think we can speculate put this one in speculation I don't know um fact also I think it's General atomics I don't know if this really needs

to be in here put there oh Megan you were the one uh I don't know I doubt it I doubt we're

(23:21) wrong about it that's possible the thing about the YouTube thing's been bugging me though for sure so someone would have to be able to prove it that that that that can do what we have been able to prove ultimately at the end of the day it really makes no difference we've got so much corroborating evidence that everything lines up anyway but it's going to be it's going to be thorough and correct this we need this is a fact um where we put [Music] this guess this is fine just do purp I might end up moving this

(24:27) one yeah that's correct get rid of this we don't need the mission thing on there this is a good one as well so alternate sources exist they higher quality uh thanks John appreciate it yeah I'm glad everybody people are following and getting blown away by the evidence I mean I I think that we've got a very diverse Community we've got everything from probably both sides of the political Spectrum we've got people who are into conspiracies we got people who are into ufology we've got porn stars following

(25:11) us I mean we've got it all guys so be respectful to one another um what the heck are these oh these are the higher quality versions um let's do [Music] this yeah Standish I'll un block you give me a second but just as a a thing don't don't come into my DMs guys and start telling me what to think or asking questions that I are are uh I'm not going to answer Standish you're [Music] unblocked what's all this if anyone else feels like they were

(26:15) inappropriately unblocked just let me know you can either message me privately or just tell me what your username is and I'll take a look just realize I'm I mean if you saw the video from yesterday like there are some pretty Twisted people out there who are uh attacking us non-stop so I need to be very careful about who I talk to about anything okay so we got a couple videos additional videos there that looks pretty good yeah Megan you're fine to talk about all that stuff I don't care I really don't care what you guys

(26:53) talk about on the YouTube channel as long as you're not being inappropriate it's quite a bit different in terms of what people talk about on um yeah are there even DMS on this I don't know if you can even DM people in here probably not it's quite a bit different though when you're like in my replies and you know being rude and what have you a lot of people try to do that because they want to get attention you know that's part of the reason why I don't let them and to be honest like we are trying

(27:25) to build a community that's quite a bit higher level than the rest of the internet you know I think that just if I want a riff for a little second go on my little uh tangent here is that we want to build a community that's more respectful than the rest of the internet I'm pretty I've lived through the entire internet as it's come from its maturity and social media and the way that it is now is just disgusting to me in terms of how people are just rude all the time through an anony anonymity and you know I'm one of the

(27:56) people that love hate Elon Musk like I approve of the idea that like like or I just think at

least if we got rid of anonymity on the internet an nymity on the internet then it would probably just be a better place you know you hold people to account for their actions and the things they say then um yeah everything would be a lot better honestly you notice a lot of the people that talk crap will always do it behind a handle that they feel like they're safe at you know the moment you take that away their actions change really

(28:31) quickly okay so this was part I put speculation I think we will actually keep this here I I like this one I think I mean I think we're pretty confident came from the dark web hey Tupa how's it going buddy I'll say if our buddy um and I don't know who they are for real but uh the harassment archive uh if you're interested in that video you know thank you for that video cuz uh I think the people will be surprised when they see the next podcast turns out multiple people saw that uh that space where those people were

(29:06) talking about me and uh it's a pretty big blemish on those people that was a pretty big mistake of them to do that let's see here cuz a lot of people noticed that video where there people were talking about trying to separate me from the MH370 videos which uh sounds pretty terrible I mean it is terrible and not just me like the people that have been doing podcasts and stuff they noticed it I wasn't even the one to bring it up I'm not that kind of person in general okay this is a good one we're

(29:40) going to make sure this is up here so we're cleaning this up quite a bit I'm also going to highlight some of this stuff yeah Megan I oh look at that look at that that is there he is the legend King milart harassment archive yeah yeah yeah Megan that thing you sent me is actually kind of stuck with me a little bit um but we would need somebody to be able to prove it honestly if we did prove it then we would just you know we'll figure something else out the satellite's right there at the right time so it's almost certainly

(30:26) doing the right thing that we needed to do okay so this is important here um I think we're going to re rewrite this though and what I want to do on this one is I'm actually going to start adding images in here as well for some of the important stuff like the satellite designation stuff so that people want to go to the facts I can just pull it now when I post this to Twitter it's not going to work correctly so we'll see I don't know if this going to work right we'll see maybe I can do it actually like

(31:09) this yeah there we go okay so we do it like that that's the move so let's see satellite destination n all [Music] 22 well let's just leave it like that I was going to call it Newsweek right here but let's just keep it 100% professional um yeah there's quite a a lot of people in here yeah I might have to save this music this is pretty legit I like [Music] this we're just going to ignore the haters guys I mean all cards on the table you know just need to C like I think the best way to beat somebody in a

(32:01) competition of strategy is that you show them exactly what you're going to do and then you still beat them our plan is ignore the haters you know who cares they don't matter the more they rage you know the more they're just going to hurt themselves so we already showed the

coordinates right we already spoke to that so we need to get the citric session thing up here as [Music] well Alo I kind of just pulled everything off here think we can pull this one

(33:18) up I I think I want to move this no it's fine I think this is we're going to change this as well let's do mouse drift explained by and what was the name of that it's not a plural view 3D I might have to look up uh that woman Carolyn's uh Journal uh she has been doing great reporting I think she figured out what the mouse was too I mean I think we did too but somewhere buried if anyone knows what the name of that mouse was not the plural view 3D one but there's some other name for it I'm going to put it in there for now

(34:05) though we can figure that [Music] out yeah Megan that's why I don't really care that much about the stereoscopic effect because it can still be real even without it really makes no difference in the end I'm still almost 100% sure that the final the final version is 3D um in terms of how they they look at it cuz we found this plural view 3D thing as well just seems like it would that would be exactly how they would do it yeah what is it some kind of it's not a track ball though they use this special Mouse I might have to go back

(34:48) and look at my my work on that where is it go back and look at that see man I've got so many pieces now it's like hard to even find the one I want probably not going to go for too long tonight though I just wanted to test out the stream I mean the old internet was terrible so I I changed my internet to a different provider actually hm interestingly enough I don't have it listed here where is it where is it is there any way to get this stuff on

(35:52) the right to go away or is this just always here on Twitter probably stuck there always huh there's the plural view [Music] 3D wow did I oh there it is let's take a look and see guys uh oh there it is soft Mouse 3D stealth or soft Mouse 3D we're going to use this there they is look at those things that's like probably what it is although we might have to move that to speculation we'll put it down in speculation okay [Music] what it's pretty good uh yeah I'll speak on where the passengers I think are I mean the big

(36:49) question is did they even live right so we're dealing with a situation where there's a lithium ion battery fire extremely Toxic Event in terms of you know not toxic like the internet but actually toxic uh very deadly event an hour and uh 20 minutes that they were flying and so um you know just to survive that long with the depressurized plane but they have to fly low enough is pretty tough and then you also have to survive through this macroscopic decoherence which really would require some kind of shell potentially around

(37:26) the plane [Music] so it's uh not looking great for the passengers but possible uh Mouse drift yeah artifact from Citrix probably but that's not what I'm talking about here when I'm talking about the mouse drift this is uh I should call this acceleration because there's a different acceleration when they when you hold it down like this versus moving the mouse around like this it accelerates differently like see how fast that accelerates like this that that's what I'm talking about and so that's how

(38:00) they're using that because it's like they're looking at like Google Earth basically it's not that the goggles make it 3D there was somebody else that did a really deep and dive analysis on looking at it and the stereoscopic effects but I couldn't really understand what they were talking about so if the passengers did survive then the most likely places they were at deego Garcia military base I mean that's just the place where you would hide all the passengers it's commercial airlines can't go there we

(38:32) were able to show that the pl um that they was shut down for 3 Days afterwards there was no outbound [Music] flights this one right here there's exf data picture of Philip wood at Diego Garcia they actually lost all the flight logs like got water logged for this area I forgot about this piece that we wrote all the 200 in no yeah uh in July of 2014 just like months later all the flight logs for Diego Garcia were damaged by water damage what timing unbelievable miraculous timing for that water damage be honest yeah I found a piece on the

(39:26) Philip wood I'll pull that one up too can [Music] see so actually the better one was on [Reddit](#) before [Reddit](#) got deleted but if you click on this link like I had a much better write up but it's now gone these were the conclusions though so basically this just refutes all of what like [Mick](#) West fake [debunk](#) was on the conclusions he had like seven points and all of them were false except for it could be easily faked which is an opinion so if you read this one here like this goes into a super deep dive of uh why it's not it's not

(40:05) necessarily fake and so basically they did a bunch of tests on it and they really show that the formatting is actually consistent with what a real picture would look like with Picasso or whatever this software is so I'm not going to dig through all this right now but here it is right here which I I pretty much just copy and pasted this so This rebunk the Philip wood xit dat a picture doesn't necessarily mean it's automatically real but it definitely means that it's not fake based on the [debunk](#) that was posted so

(40:43) pretty [Music] interesting I don't know why would the smoke not warble I think that a lot of people when they thought the contra quotequote contrails jiggle they were using stabilization software you can't use stabilization software and then claim that something doesn't look right you're using an editing software uh the smoke is going to move cuz it's smoke the better point is that the orbs when they go through the smoke they're accurately distorted and we have an image of that too somewhere in here I

(41:23) think which pretty much proves they have to be real I have that one God you guys know how long it took me to put these all these archives just so long over six hours just archiving everything did I save that one let me see let's go down here yeah maybe I don't I don't know there's so many it's hard to find the right one honestly here it is uh orb movements realistically flow I think this is the one yeah I mean so look at this guys see how it's doing that that's very very difficult to fake and you can see this smoke coming

(42:10) out of the back of the plane right here this is not contrails here this is this is some kind of it's like coming out of the AC or something here we haven't quite figured it out but this is pretty

clearly just smoke coming out of the back of the plane in fact I'm going to pull that up real quick cuz I don't know how missed this I've been looking at it with so many different podcasters [Music] now so you see this these lines right here at the back of the plane these aren't like the tail or anything this is

(42:48) just smoke coming out of the back and you can see it's not coming from the engine this is too close to the plane right here these these lines right here this this is not like cont or anything this is smoke coming from this that and they're coming from like the belly of the plane that's where our lines are coming from I mean look out look at this huge line right here look at that how did we miss that before it's very clearly coming from this this heat Source right here right that's our smoke right

(43:22) there surprised we missed that before you can see the smoke right there look at that smoke coming out of the back of the plane right there this is not coming from this engine over here that video is wild let me see what else we got in the chat [Music] here the person I was talking with today though um he was pretty convinced I think that what we were looking at as non-human intelligence I'm going to turn it down just a little bit [Music] more and that uh you know he was saying that and that's the thing the reason why we had

(44:08) good argument or not argument but just discussion was because you know you can take the same evidence you can come to different conclusions and there's no issue with that right some people want to think it's nonhuman intelligence for the same using the same evidence you know go for it right like that's I've always been all about like use the evidence and come to your own conclusions on the story I'm not stopping [Music] anybody um and that's that those the people I like it's the people that come

(44:32) in and they're trying to **debunk** every little aspect it's like that's just not honest or attacking me you know it's like you're not trying to solve the case okay did we get the remote terminal AIS in there um Heat Signature I'm going to take this one here this heat signature one we're going to move this down to lithium ion battery fire smoke Trails um sorry what about the UK weather pattern yeah if the videos are real then

(45:37) real life is most likely a simulation doesn't really change [Music] anything yeah Northman I mean that's what I went through as well you know and that's what I told the people on the podcast today is that at first I thought this had to be non-human intelligence I mean just what we're looking at is too unusual you know just seemed like everything you would see from nonhuman intelligence but the more you dig into the evidence like it just lines up to you know being us and not being non-human intelligence

(46:09) um which is almost more unbelievable because like the person was saying today I just couldn't believe we could be that advanced you know hundreds he he was saying maybe thousands of years more advanced but I think that you really break down maybe it's not Thousand Years anymore uh the reason why the contrails are jittering in the St version is cuz you're using software which is U making them Jitter you can't use stabilization software and

then claim that there's something wrong with the video that's

(46:35) the whole that's the whole point I've actually addressed that point several [Music] times there's also some people have also used software and then they saw some warping or something in the uh in the Crosshair and that's the same issue as well if you're going to use software to edit or modify the videos then you're going to find artifacts and issues with it that aren't in the original so you need to be looking at the original if you're going to make deductions based on the videos

(47:04) themselves let's see what else we've got guys don't come on guys if you're going to cry in here or whatever in the chat you're going to get removed okay like especially if you cry about being blocked like that's going to make sure that you get blocked just don't do it guys I'm going to give you a warning here cuz I don't want to do it so just be a good person if you can't be a good person don't say anything it's pretty simple a lot of people really struggle with that in the internet age they just

(47:42) feel like so entitled that their opinions have to be heard it's just not how it works so let's get back to some good stuff here um [Music] I think that everybody can AI aside come to their own conclusions on what they want guys so everyone's free to come up their own opinions on what they think the videos show that's totally fine right there's nothing wrong with that having an opinion is fine as long as you're honest and open about it right so when you're not honest and open about it

(48:17) is the problem so I think what we're going to do is move this to speculation I've been thinking about it here I'm going to move this one here and then we'll do think we're going to move all these here like this Sor I'll do some more questions here in a minute I want to get some stuff done here this one is definitely it's going to be a fact but we need to rewrite it viewing this is actually correct uh this is actually correct weird I didn't understand my own point before but what we're talking about here is this Google

(49:07) video Earth situation that What's happen is the C this is the CER system where is where did I put the piece about cers I think this is fine that's [Music] good yeah and if we're just riffing in terms of like what might be going on speculatively of course to me I've always felt like our technological advancements have been a little bit too much right like we've Advanced such a far away in such a short period of time it's doesn't feel like it's been all natural you [Music] know now people are allowed to say their

(50:17) opinions just be honest about your opinions you don't have to you don't have to keep it quiet that's what opinion is you know but you know don't be rude about it you know I think that if you take crucial conversations one of the things they tell you is to talk tentatively uh that's one thing if you really want people to be able to trust you but be open about what you think your opinion is and why you know um and respect other people's opinions too you know yeah so Sean was the one I was

(50:47) talking to today it went really well you know so I think that he's pretty he's all in I think on the non-human intelligence angle which I don't necessarily agree with but we still had a good conversation and we dug into a little bit of the you know the attacks that are on me from his request I didn't I didn't request to go into it he wanted to talk about it and uh so we did uh so I think that'll be interesting as well to see um how much he puts in there at least I don't know I think he's going to have to

(51:15) edit it down cuz we talked for like 2 and a half hours probably we had a long long conversation that's why I was so tired and get on till later today [Music] uh SP we're not assuming it literally is because of the software just look at the real video you you shouldn't have to compare using a stabilized version if it if you think what you're saying is true it's pretty it's really just that simple now if you think there's something unusual in the regular version the downside is that we've already proven

(51:53) it's a citric session logged in which automat atically **debunks** any praic **debunks** uh in addition to that um when you look at the normal version you have to have a reason for why it should how you think it should act we're talking about smoke what happens if you if you blow smoke from a cigarette right it spreads out and we have a plane that's potentially in high up in the air where there's going to be wind flow Etc like if you go look at like contrails for example that are high up they don't stay

(52:24) stuck in one spot they will be move around a little bit Etc so you know it's normal oh leak project what's up buddy we had a really good conversation uh that was a that was a good podcast what's my favorite scary movie that's a good one um for some reason I keep thinking Cabin in the Woods right now but it's not necessarily a scary one I just think it was really funny it was like a good kind of scary movie but I love scary movies those are absolutely my favorite honestly big fan of scary movies okay arom mender you're on your

(53:15) last your last chance buddy like I think you know what you're doing man so you know last chance right I'm trying to be nice to you [Music] if if you can't uh you know help yourself then just don't type man just don't type if you feel like you have to be so entitled you have to talk crap to me or whatever in my chat you're going to be banned I don't know why that's so hard for so many people we're going to make a better internet though people will learn one way or another this is not your place to air

(53:54) grievances everybody yeah weird ending on uh Cabin in the Woods though like what a what a weird ending in that movie uh my favorite part is when Chris Hemsworth rides across the motorcycle and then just runs into the invisible wall uh kind of like oh that just reminded me of uh deep blue sea is another one that I really liked a lot not really like scary movie but you know shark movie I can I can never swim in the ocean just it's just too scary for me guys sorry I got to focus on some of this a little bit

(54:31) get this we need to move this is a fact we're going to move this down here I like that okay I think we're this is looking really nice now what is this one how come I oh oh this is a link

to [Reddit](#) I think uh we don't need this in here for our facts and I don't really need this thing here as well okay this is a fact here and this is really good I don't know if we should say Circle standard [Music] Circle [Music] let's say Max capabilities let's do like

(55:43) that news Nation person reached out to me and DM the other day does anyone know just I I want to know kind of in general what did supposedly Ross Kart was supposed to say something today about the Alaska shootdowns I want to know if he actually revealed anything cuz a lot of people tell me I should uh give Ross card a break but thing is he's never revealed anything verifiable that I can tell I don't like people that try to string people along with stuff either so I'm really curious I mean did he reveal any relevant information today

(56:18) around those shootdowns they were trying to build it up like he did like he was going to I think it was today right it's Thursday this plane is really low they're at the just just above these cumulus clouds I mean it's got to be really low that's when you get down below 5,000 ft I mean that's low you're like a to land nah neither the Drone or satellite I mean the satellite system still isn't public knowledge I mean still people struggle with understanding what the site video looks like the Drone I mean

(57:08) if you were in the military maybe you could argue it I had somebody message me today and say that the Drone video is uh somebody works at at General atomics and they said that the dad drone video is uh accurate that's what they really look like I mean I don't if I can believe him but it's pretty credible when people just randomly send me those messages like that like yeah my friend works there and this that looks good and then they never say anything else to you again you know what I don't like is when people come in

(57:39) my messages and then they're trying to convince me of a bunch of stuff you know it's like just don't bother with that just tell me what you think and then from what the evidence says and I'll look into it okay so I think we already pointed out the smoke thing didn't we we I think we're going to move the smoke down to the fire part instead he said to n other uaps were tracked before this event wow okay that's that's something actually huh okay maybe I got to give him a little bit of credit okay A little

(58:36) credit to Ross huh the object was interfering with the fighter jet system that that's actually interesting respect yeah there was a lot of those before those shootdowns like that was really bizarre man yeah I lost a little respect for him when we started teasing this giant alien craft situation built over a building like if you're going to do that you got to just just come out with it man where is it right this like idea of hey go looking on Google Maps come on cuz you know what everyone's going to do

(59:12) they're going to start digging around for it and you're just going to have speculation everywhere yeah second Hearing in those mummies uh the NASKA mummies I think we should talk about them in terms of like just what they really are right they're the the Naas kamami that were found in Peru and um I don't know what year long a while ago though I think that's pretty interesting I mean people are definitely going to try to discredit that any way they can but if

those are really full bodies I mean they're pretty

(59:45) weird looking you know just out a glance um so I don't think we should be dismissing that or ridiculing them and I've talked to Jamie um Mouse I don't know how to say his last name correctly I mean it's probably easier to say if you're a Spanish speaker but he seemed like a very upfront person to me he did not give me I did not get the impression of somebody who is a fraudster when I was talking to him which I think a lot of people are just discrediting him which they should not be doing um like he was the one who was

(1:00:14) telling me that I should break up my evidence into facts and speculation which I thought oh wow okay cuz I had heard all the same kind of BS that people had heard right and I didn't know what to expect from him but he's a good guy definitely he's somebody that's really trying to get to disclosure right and I think he's you know looking at the trying to get stuff that is very hard evidence out there [Music] so yeah I'm also um skeptical of anybody who's out there trying to sell books and

(1:00:47) on TV in general right I mean they haven't talked to us about going on TV which not that I would but you know I think that it's uh pretty telling right they don't uh people the only people they put on TV are people they know what they're going to say you know yeah okay wall boy the small puncture in the clouds let me see if I can pull up that video we might be able to see it sorry I'm looking for I think the version we need I think we actually need this higher quality version up here in order

(1:01:32) to see that I have it though don't worry the puncture in the clouds is hard to see but it's it's there like I'm I'm pretty sure here it is everything need okay so people who don't know so this is another version of the video which is a higher quality you can actually see much more down here right you can see the NRL pretty clearly here and so some people are saying that like it's not 3D stereoscopic due to this this version existing but this version is actually um newer than the other version

(1:02:14) it's higher quality much higher quality so unless somebody converted this one to 3D then you know it's a different Source potentially man these videos are just incredible [Music] huh Wonder could this be from a plane I don't think so no problem with it coming from a plane is this is it's too small just too small I think what we're looking at here is the CER system but so watch where I have my mouse cursor right here this Cloud right here is going to get a hole in it right after the the plane

(1:02:55) disappears so watch very closely where I have my mouse cursor right there so you see this hole just open up right there like that is weird there's no hole right there right it's like you can see it's pretty blurred right there all of a sudden a hole just opens up you see that hole there now right there where my mouse curses at no hole right we can see there's no hole right there and then zap hole right there so it's it's very minor but there is definitely something that happens right there it's pretty bizarre I might

(1:03:35) try to take a clip of that I don't know that something something maybe flew through there it's hard to say what if the flapper on flew through there and that the flapper on like that's the fla Ron's like actually part of MH370 and it just like flew off that definitely becomes much more prominent right there I mean you can tell like look look at this right here where there's like all Cloud boom huge hole right there yeah so again that's another indicator what we're looking at real here like what did somebody edit this

(1:04:04) and they're like they made perfect volumetric clouds and then they just decided to throw a little hole in here for some reason makes no sense yeah the YouTube compression maybe but I mean you can see it before and after the zap very clearly as well right in there there's nothing there zap now you can see there's definitely a much more clear hole so I think that's pretty interesting I wonder if I should add that in my my list maybe I don't really know how to describe it random hole in the clouds uh let's put it over

(1:04:42) [Music] [Music] here [Music] I just like to call it the zap too cuz like I'm just not 100% sure if we're looking at a wormhole black hole you know I think the best way to describe it's macroscopic decoherence oh and that just reminds me we need another section called the science I'm just want to look down through some of this other stuff real quick oh yeah why is this MH370 is a good one I think I like that only missing 777 I'm going to change one of these to the it's going to be yeah plane didn't

(1:05:34) crash in the South Indian Ocean so we're going to move this I just the why is it I 370 stuff it doesn't really have like it's got evidence good evidence for it but I we felt like we were mixing a lot of stuff in there color tone matches but really these are the main things right it's only missing 777 it's actually the only missing plane I think and we spelled silhouette wrong here what is a triangle in the background coming just out the cloud uh not sure Professor Paul J Paul yeah the hole definitely clearly

(1:06:32) appears so if you want and you want to check it out yourself on your own computer feel free to go to this link right here you can just type it in on your computer I'll leave it up there for a second you can definitely see there's a little hole in there yeah welcome from can con that was a really awesome interview I thought he really impressed me just in general like I've done so many interviews with people now I've gotten a really good idea of who's like good at doing interviews and uh man he was really

(1:07:07) good I don't know if we need to map the direction of the [Music] pinhole yeah we've had the lead one of the lead VFX artists from Marvel and we've also had theoretically it seems like uh one of the VFX artists from Top Gun Maverick both claim that these videos would have done a better job than them or from the Marvel person said that it would take at least 6 months so that pretty much rules out that they're fake people can say they look fake but that's a lot different than somehow proving

(1:07:45) that they are sorry I'm looking at some older messages definitely curious to more know more facts about the nas mummies though and other interesting things um The more I've

dug into this the more I've really had to question my own biases you know I never thought any of stuff that like what we're looking at these videos could be real guys I really didn't um I mean I thought okay uaps maybe but I never thought we'd see them in such high quality and that they'd be 9-year-old videos and then we'd see some

(1:08:23) form of teleportation it's just a [Music] lot uh Megan I already saw it in general I mean the only way we're going to get clarification on the stereoscopic issue is if somebody finds the old YouTube software and is able to convert like the higher quality video into that and have it be exactly the same so somebody wants to do that and and detail it they can but otherwise we're going to let the **debunkers** take care of that one we'll just leave our information up is speculative until then whoopy wowzers welcome I know you've

(1:09:01) been a supporter thank you uh yeah I can probably I mean I'm going to post this so yeah I might share the the whole doc theoretically we'll see I got to figure out how to protect it so people can't modify it but yeah or however that works people can make copies I don't care triangle light formation in the distance is the plan comes out yeah I'm not sure on the triangle light formation thing in the distance but going to work on some of the other stuff here as well so lithium ion battery fire uh let's

(1:09:47) see is there a better way to do this like if I go like this there we go yeah 221 kg of lithium batteries not screen I [Music] think this is kind of speculative but people have said that the way they package those is doesn't quite look right looks pretty suspicious yeah I mean that's the thing if they have teleportation Tech like that's why I tell people when I'm talking to them on the phone I'm like look man and people trying to talk on like encrypted messages I'm like if they can teleport playing they can hack your

(1:10:50) encrypted messages in a second uh Robbie do you have uh tell me what to Google Robbie and I'll I'll check out the quote unquote exact same thing or whatever it is um yeah let me I'll play the video again hold on okay so Professor Jay here wants us to check out triangle light formation in the [Music] distance I also want to know why this is black here for so long seems like there's got to be a reason they were recording for without the screen recording up does anyone see a triangle light formation in the distance here

(1:12:05) here sorry I'm just not seeing any triangle light formation anywhere here uh no Wally I think that the debris is consistent with our event honestly you know this plane is potentially falling apart from the fire after an hour and 20 minutes and maybe even after it gets teleported the debris is actually consistent with the teleportation event as well and so that's why I think that we we've got more evidence than anyone um but that's what I'm going to put here as well let's do uh found debris I think I have evidence

(1:12:51) somewhere about the found debris flight path witnessing the suicide myth oh here it is during the debris we're going to move this [Music] up this is going to take me several days to finish all this there's a lot to go through **debunking** the [Music] debris I mean I think this is a good point to start with though even though it's slightly pretty much the same as the above one

here we're going to move some of these like this one's going to move up here

(1:14:05) [Music] [Music] of do I have the other hydrophones I think this one's so old I don't even have the other two hydrophones listed uh Western Australia and uh no links to MH370 and we're not going to be linking to mh37 or 17 and we're not going to be linking to that either um that was a completely different Plane full of different people from different countries so um not only do I not want to link to it in any way shape or form but there's really no evidence of it I think that a lot of people when you get into the

(1:15:07) conspiracy world I want to be clear about this too I think that people have a tendency to try to make patterns everywhere try to link every single thing together right and we should avoid that we want to be skeptical but we also want to look at hard at the evidence sorry Professor Jay I didn't see it my man you're going to have to take a screenshot or something if you want us to look but I'd also be careful about looking for things in the clouds and things like the same reason why we don't put much stock in things like the VFX

(1:15:38) **debunk** is that you you have to stay away from prosaic explanations things look like other things that's just how the world Works doesn't mean that the're same things but yeah the debris here you know what I'm the next one actually I'm glad you said that did I have one fler we want the flap R here I'm going to change the wording on some of these as well did I mention about the burn marks I don't think I did [Music] oh so I know why I copied this from the conspiracy one which is the better one

(1:16:33) um I had to make some edits to it before I ended up posting on **Reddit** let's [Music] take hey Jay Davis welcome yeah we don't have any any idea where the plane was teleported to or moved to I mean I don't even know how we'd figure it out people have thought of everything like looking at heat Maps looking at gravitational Maps we just really no way I mean that's the reason why you teleport something I mean you teleport it to hide it right make it hard to find that's when I was on the the Espionage

(1:17:17) um Kick I was thinking well they were hiding in the plane right in fact now I want to go back down here yeah there it is I actually have it here I mean man I have it I had a lot in here oh there's the science I already had the science too we're going to move the science part up here as well I mean I probably I might move it back later on I'll reorganize the major categories but the reason why I'm doing it here is I want to be able to track it better oops I just did that for no reason that was silly hello

(1:17:56) [Music] okay whatever this is fine um this is going to be all changed essentially and I think I'm going to get rid of these links I just don't want all these links in here it's kind of [Music] annoying this one though is still [Music] interesting I'm not going to play any Metallica tonight it's going to I got to stick to stuff that I'm not going to get uh copyright stried on so I found something here that we won't get copyright strike on can't be unfortunately anything that's like

(1:18:35) popular uh imagine Sky have a better week man uh you know sending positive vibes

your way I think that a lot of people will have it tough in this world right now and that's part of the reason why I want to reveal these videos is I think the technology here can change circumstances of a lot of people on this planet can give us common purpose as well we're for some reason we're just so divided [Music] now let's just try to be good to one another you know it's kind of hard I guess I think that could be where the

(1:19:17) piece of the plane came from if they burnt off for the portal yeah burning off before the portal is going to put them you know somewhere in the nicobar islands or in the anaman sea which is pretty hard to imagine they would get all the way over The Reunion Island so that's actually got me thinking now like maybe that's maybe they burnt off after the teleportation event it's kind of interesting where's the debris um where's our fire option [Music] here [Music] oh [Music] [Music] this [Music] yeah yeah we should handle everything

(1:20:21) with grace for sure least try to I will say I take people trying to defame me uh online very seriously though so I hope people don't do that you know if you're going to come out there and try to say thing mean things about people just don't do it and if so definitely don't do it under your real name guys um and don't think you're hidden just because you you're behind an anonymous handle like people can figure out your real names very easily so people should try to be good about one

(1:20:53) another to one another when they can one of the benefits of not being on TV is that I'm not a public figure so you know it's imagine if you were just out there just talking crap about some random person by name you know it's not uh it's not a good look not a good look so the particle pattern is interesting I wonder I think we should just change this to orb analysis right like it almost I think it deserves its own own section because circling the plane this is speculative I think I might be moving

(1:21:45) away from this one we just don't really know cuz KT didn't see it but she I don't think she was there looking at the right time so I don't know whether we know one way or another so I think I'm going to get rid of that one does YouTube filter post with links I mean it' be good to know I haven't seen any so presumably okay you're not muted buddy I don't have anybody muted on YouTube uh give me a second I'm looking it up right now three lights in southern sky we'll look at it together

(1:22:40) everybody none of you guys are muted uh but you know don't spam the chat though I mean I might put slow mode on but we don't have enough followers to make it worthwhile yet okay we got the video everyone oh wow wait what am I looking [Music] at what kind of plane is that whoa well that's weird you see how this is like a little different than ours right like ours is like tracking onto the plane and then it's circling around it when I see the ones in ufology like they seem to zap in and out of existence are we looking straight up cuz

(1:23:39) of the stars in the background can't see it anymore oh there uh huh that's pretty interesting interesting I'll give it up vote up vote action not sure if that's the same or not either way it's pretty interesting thanks for sharing that at least yeah sure you can you can DM me a

link but I don't want to talk anymore about the satellite 3D stereoscopic thing can you just let it go or is that like impossible for you to let it go yeah like the other thing too is people get too fixated on stuff if I say I'm not

(1:24:28) interested I'm just not interested if I say that hey what you need to do is prove it then you just need to prove it you need to stop trying to send me stuff to convince me like what I what I don't want in my DMs is people trying to convince me of something right well then send it to me if you can prove it do it but just you know realize if it's not really proof and you just think it is then you know okay did I show the gravitational lensing down here oh I'm super tired probably not going to go too much

(1:25:11) [Music] longer let me see what we got here [Music] [Music] okay not sure what this link proves Megan yeah I'm not sure can you explain this link Megan oh YouTube's filtering people's messages oh okay yeah sorry I don't I can't control like what YouTube's filtering or whatever CU I don't think I [Music] can yeah this is they're not using the

(1:26:16) Regis side version here [Music] though like this is the like this version here this is the same version we were just looking at you can tell because you can see the whole NRL 22 in the bottom left down here this this isn't the ride version that they uploaded so just heads up yeah so just because something shows ride's YouTube channel in the beginning doesn't mean that that's actually where they pulled it from and we know because when we look at the Regis side version here in the beginning we can see the side by

(1:27:03) side so we can see the side by side here it doesn't mean that this video here is the same the one that they're showing here is literally the one that I just showed you guys from the different YouTube channel and we know because we can see again and this one we can see down the bottom left the same thing I was explaining to you before we can see the full n22 so just because something says something in a video does not mean it make it true this video is only 2 months old it's not from way back it's two

(1:27:31) months old that video just because they superimpose the thumbnail over it does not make it the case so Megan no offense but like I think you're trying a little too hard you got to let it go okay I'm going to have to mute you unfortunately cuz like you're spamming the chat now too just get over it Megan please Megan last warning Megan you're doing the thing I just keep keep warning you not to do okay let's keep working here okay so uh what was this here um J Paul you're going to have to upload it

(1:28:24) probably to imager you upload to imager then you got to you can upload it yeah you can get up there so I think I'm going to get rid of this stuff here I don't want this here uh I'm going to get I'm not going to go against this Blain guy I actually think this bla guy is just a legit guy who just found debris now honestly like he never even when I watched the Netflix documentary this is not spelled right uh I never really thought this guy

(1:29:29) seemed nefarious right like yeah people make fun of him he's Indiana Jones guy

whatever but like I feel like people did that just because they needed the debris to be fake right and especially now that we've looked at the fire scenario it's like I think this is just a normal guy he's just out there trying to help people you know doesn't people trying to connect in their like Russian intelligence like come on man Jeff twice this guy he's got rushing on the brain my man uh I'm going to get rid of this flap run

(1:30:04) thing it just doesn't matter whether or not they can inspect it or not it was matched with a non-unique serial number so they already cast enough doubt on it and the same thing with this debris I don't think we really need a cast down on that as well though I do think the teleportation scenario is very important and we've already said that consistent with fire and compaction events so that makes this a nice concise list right here for us so we're doing some work here this is good let's work on this piece right

(1:30:37) here yeah so Megan if you want to make a strong point what I argue is this pull your video up do the same thing I'm doing right now make a word docu make a document right post the screenshots post the link to it link out your posts your points make them clearly whatever and then link to that right that way we don't have to go back and forth with it but I would what I want really want to urge not just I'm not trying to call you out in particular but lots of people see something and they immediately form an idea of the story in

(1:31:07) their head and what it has to be right but be very careful of what you're looking at right you can easily edit two different videos together and and deceive people so that's why it's so important when we go through this list like we're doing we're being methodical about it and we're basing it the original footage here right and we know this is the original footage we're not trying to splice things together we're looking at the exact AR the descriptions of this footage I could easily take a

(1:31:32) picture and superimpose it over this other video here but that doesn't mean it's from that right so um and it's not just for you it's just like I get a lot of stuff like that like an unbelievable amount right uh so it's really important that we are very accurate and concise with our reviews and Analysis but just to so show just so that I'm not uh ignoring I'll take another look to make sure I didn't miss anything in the beginning we'll we'll pull it up together okay so we're looking at this

(1:32:12) video together here where does it start okay so it's showing a picture of the ride and non Channel this doesn't mean anything doesn't mean that what we see later on is from reg sideon on so I want to be clear just because someone superimposed this picture of regid and non does not mean that that's what we're looking at here so is that understood okay again just because someone pulled now a picture of the reges side and on in this description does not mean that what the video we're looking at here is from that

(1:32:46) if it was then we would be able to tell okay I'm letting it play now this one you can see is right and it's in Spanish that one's the same one we saw with the side by side that's the one we have linked at the top of ours I I'm going to skip this because I I don't need to watch the

whole thing I I've already seen this video okay again this is not the same video no I don't need to go put Megan what is your deal why are you so stuck on this just because it says video one does not mean it's from the

(1:33:24) video what am I missing what am I missing what am I missing what am I missing okay sorry Megan but I'm done with this I don't know what you're talking about you're not being clear at all there is no right before the side by side I already looked at the whole thing we watched it Jesus so okay okay let's focus on some other stuff here yeah Megan honestly get over it please

(1:34:27) another time just go go put your document together and figure it out okay like I don't want to waste any more time on this okay guys last time exactly 37 seconds okay just to be clear this video link is not this video are we done Megan are we done I'm actually getting frustrated Now 37 seconds this link right here is this video right here this one okay like you're you're getting very confused is the problem yeah I'm going to have to time you out unfortunately so we gave you three

(1:35:33) chances I'm sorry we tried but you know you just I asked you to get over it several times uh so we're going to move on to some other stuff so we can actually get some work done here so with the orb analysis so this might be gravitational Ling save Essentials and more only at [Music] Walgreens okay yeah we're just guys don't don't worry about that anymore let's let's focus on some other stuff okay so let's work on the south Indian Ocean stuff a little bit more here so on this respect

(1:36:22) we've got the Sosa system would have heard it the Western Australia what's this uh just want to make sure people probably saw stuff there that's fine I don't really care Oh our music stopped well we're just going to start it over one more time probably going to end in a little bit here okay uh let's see here so brief oh

(1:37:45) 19 how about actually let's do [Music] so we got that one yeah so for info it's still hard to fit that's that's good so the iMat ping is actually we can explain um well you're right not exactly so if we go down here I have some of that as well and we're going to have to move some stuff around on that one other pertinent information so the two fake

(1:38:49) passengers I'm just getting rid of all the links in this cuz it's too much with the links this actually oh yeah we need to move this one so see this one was previously we didn't know what to do with it this SOS this is actually now in the fire scenario we need to move that [Music] up that's a good one I like that one um I might end up getting rid of the entire Sude myth **debunking** part because it's just not needed anymore when you have like you're automatically **debunking** it when you go with this fire scenario

(1:39:54) anyway right and a lot of stuff I had in here was just kind of not relevant other than potentially like no suicidal indication and then what I could do here is like including wife officials wife and co-workers 19 18,000 flight hours is actually pretty relevant because that just means

like you had any opportunity you wanted to to crash the plane now counterargument would be well you know if you had some kind of psychological break then you know it doesn't matter how many hours you flew but if You' flown that much you're going

(1:40:34) to be generally pretty [Music] solid this is this is actually important one here what we should say here as well where's the other scenario [Music] I don't think ships can detect ultrasound signals doesn't doesn't sound real if there was if that was a real

(1:41:38) thing I would have found that evidence I'm sure but let me know if you find a link to the ultrasound signals thing here's the other pertinent information I think I'm what I might do down here switch this up a little bit so that it's um and anyone who is uh muted you're not banned you're just I think you get a come back after like a day or so I don't know I don't know how YouTube works but it's not permanent so don't

(1:42:43) worry I going to do my best not to permanately ban anybody unless they go way above and beyond yeah I mean the 18,000 hours doesn't prove anything but it's relevant still um cuz usually people have flown that much are going to be highly reliable you trust somebody who's flown a ton versus somebody who hasn't but we might delete it it's it's not very strong evidence for sure so I get what your point is uh Andy I think you're it's not not totally off base we're going to move this down as

(1:43:24) well and then here I want to add I don't know about the Wormhole papers part thing is we're kind of moving away from the Wormhole papers I it still could be relevant but I think more relevant is you guys disagree with any points or you think I should update them feel free to let me know I think oh so yeah your **timeout** wasn't even that long it's like a five minute **timeout** um see maybe Bob Lazar yeah I'll be honest with you guys

(1:44:29) I believe Bob Lazar you know I watched Bob Lazar uh his video my impression of Bob Lazar the first one when I watched it like when he came out was that he's sitting in front of this car right and he's on he's on video one of these old school VHS videos right and I'm sure he thought he was going to be like a rock star right in his mind he thought the media is going to blow this up I'm going to be huge huge right and he just completely underestimated how much they would destroy his credibility right just

(1:44:57) completely destroy his credibility I even believe it's reasonable that they would have destroyed his paper school records I mean those would have been really old in fact they might have not even had them anymore so they found so many ways to discredit that guy and I think it had a toll on his Psyche on his psychological aspect like and that's why when you see him on **Rogan** and stuff like he's starting to get a little bit more out of his shell now but I even think about from the attacks that I faced

(1:45:23) personally like man you know imagine being B bizar and facing those attacks if you're not prepared for that like it can just mess with you uh Hey shy how's it going thanks for being a follower I've seen you around a lot what makes me work so hard on this um honestly a lot of it's

just not letting you guys down you know uh but just in general I want to get the answers another part of it too is that I don't want it to fade away because if it fades away then I'm a little bit worried about what'll happen

(1:45:54) to me feels like I have at this point I have to be loud about it in order for you know this thing for um for honestly even my own safety at this point like I need it to come out at this point and then when the government admits it I feel like I can let it go after that all they really need to do is admit this is MH370 and at that point you know people either believe the technology or believe it's nonhumans or whatever they want to believe um and it won't really matter I think this is pretty good now I

(1:46:28) like this we can add more stuff to the other pertinent stuff as we come across it that's not really linked to any particular thing yeah Lazar might have been doing it to protect himself yeah I agree Sean there there's no chance of a suicide situation plus we've already **debunked** conclusively this idea that the plane crashed in the South Indian Ocean just makes no sense oh boy I have so many spelling mistakes in here jez it's embarrassing uh what are we going to add here years later why do I have this

(1:47:16) twice okay probably going to go only for another 15 minutes or so I'm pretty wiped [Music] honestly but I did want to put some time in I wanted to test my stream as well especially on the Wi-Fi I wasn't sure how how good it would be on the Wi-Fi here I'm not even wait am I plugged in no I'm not plugged in okay so our evidence that it didn't crash in the South Indian Ocean has pretty damn strong I mean if you read that that's that's oh also back their shipping route so nobody saw this plane even

(1:48:00) though it's an active shipping route and it would have been in the morning so I mean it's crashing during daylight theoretically and nobody sees [Music] anything let's [Music] do this might have to go up to the [Music] top right like that this is some pretty damn strong evidence I'm not going to lie how this plane crash into the oceans possible no response on the letter to

(1:49:11) Congress I think at this point like we started to go main stream like we've moved out of the UFO realm people that are just legit interested are reaching out out I've got stuff coming up in the next couple weeks that I've been keeping close to the chest but uh some pretty big platforms may not if it was huge I don't know if I how I'd be able to keep it actually this I'd have to keep it silent even if it was huge so I can't let you guys know one way or another but we've got some stuff coming up for sure where

(1:49:41) it's not going to drift away yeah the Navy never explained it Andy they never a lot of this stuff has never been explained there's just been like the way it works is plausible deniability right so the way you understand the government is they're just not going to say anything and that's the way that when it comes out that that's how they don't lie right and then so what you kind of have to do is read between the lines what they don't say is just as important as what they do say uh I'm not going to link the Google

(1:50:16) Doc for now when I'm done with it I'll link it out you guys can have a have a gander but we've made some Headway here tonight for sure on this like these orbs will move down to and this is probably not the way to phrase it [Music] say three orbs approach the plane let's say at Mack three [Music] speeds the way I found this out is I just literally Googled the various speeds and I knew that the plane is moving between 150 and 200 mph during its turn and somebody mentioned that it's moving 10 times

(1:51:01) faster so what that would mean is that it's moving at you know 1500 2,000 mph which is really really fast [Music] um I don't want to say they're unaffected by gravity what's happening is they're are they unaffected think their electromagnetic force is just generating their own geodesics what that means is gravity [Music] essentially yeah so third video um there's like a grayscale mirrored version of the Drone video but it's not really a third video I don't think um some people consider

(1:52:02) like the side by side that's stereoscopic being a third video but I don't really want to hinge our hat on the stereoscopic effect anymore although it is very damning especially given the fact that USA 229 is right there at their exact right moment uh but it's probably better that we don't that we probably keep it a little a little bit more skeptical I think it's okay that we can say if it is here then it it does require two satellites if it really is stereoscopic but I may end up moving that down to

(1:52:35) speculative just to be safe I want to keep this list as accurate as possible yeah what I can say is if we get on Joe Rogan the world's going to know millions and millions of people are going to know the truth I mean all we have to do do is go through this list right here right I mean Kaboom this that's why this one's going to move up near the top it's going to go above orb analysis probably it's going to be video facts video speculation and then right after that we'll probably be plane not

(1:53:04) crashing into the ocean yeah yeah Sean I mean that's that's the reason Sean is that you know Sean's asking you know do people really think that in the middle of the day it's not the middle of the day it would have been the morning on one of the largest shipping routes on the planet from like Africa to Australia uh to Southeast Asia that nobody saw this plane right no one saw debris field is completely impossible but it just goes to show how easily people are misled by the television right and by social media is

(1:53:36) that you just repeat the lie and then people believe it even in the face of just common sense right um so yeah yeah shy I don't know I don't want to say that everybody's necessarily a disinformation agent right like some people are just you know they're in a different psychological Place let's say right uh but a lot of what's going on is is pretty weird man like I think that what we talked about today was uh was that uh on the podcast today it was you know you have to think about people's

(1:54:15) motivations like you know if you're really for UAP disclosure why would you ever be trying to cut down other people who are for the same thing even if you disagree right and that's

why like when I was talking to him we disagreed on what it might be but we're still at the end of the day you know trying to get the same thing so it doesn't really matter yeah everything we see is consistent with physics I agree on that it's just that we don't understand physics potentially the the way that it

(1:54:50) really works right the way that we understand physics is the way we're taught and this is why I think that Academia needs a uh a reality check is a lot of academics are just book taught book smart right but book smart is just repeating what you've learned and that's different than understanding it which is a major difference especially when it comes to science you know Einstein was somebody who intuitively understood and and observed the universe and he was explaining at the best of his ability right and even he

(1:55:20) said spooky action at a distance like just freaked him out cuz he couldn't understand when he looked at that he realized he must have misunderstood something right and that's why it's so important that we get to this unified theory of quantum and macro which I'll definitely be asking salvator Pas about because if we can unify general relativity with quantum mechanics then I think we can explain what we see from a teleportation perspective yeah there's an insane level of Orthodoxy and dogma and not just

(1:55:49) science AC Amia in general I mean even uh I watched the I wish that Graham Hancock had come up with a better name than ancient apocalypse but his ancient apocalypse thing on Netflix is really good it's basically just anthropology but he adds a lot of his own narrative in there right but the anthropology side of it's awesome he's like goes to these old sites and he's like able to prove that they're older than you know that this that we would think that they would and that really asks the question of you

(1:56:23) know maybe the flood myths are there's a reason why there's all these flood myths in all these different religions you know maybe Humanity did get wiped out and started over again from scratch it's a little bit scary to think about but he presents a pretty compelling argument especially the Sphinx the Sphinx is one of the most interesting things in general like why is there water erosion on the Sphinx that's super bizarre it's in the middle of the desert yeah Megan I'm glad I sent you down a

(1:56:56) rabbit hole because I went down the rabbit hole 2 with the science and I was already somewhat familiar with macroscopic decoherence I was not familiar with it being on the the level of a 777 like I had seen papers that like theorized macroscopic decoherence but seeing it is a completely different thing we might end up moving this um actually I think we are we're going to move that to the science part I think are we but there's a lot of people you can tell like man I don't know this is going to start to get a little bit maybe I'm

(1:57:54) pushing it here but yeah I've been talking with certain people that're very prominent um and we all kind of agree that like I'm not sure that everybody's really conscious in the same way you know the people online would say like people are NPCs right but some of the reactions I've seen too where it's like people don't even look at the evidence they don't even look at it

some it's like they feels like they can't even look at it like if you watched the or watch the show uh Westworld where it's like they

(1:58:23) talk about look doesn't look like anything to me it's like I feel like I get that a lot doesn't look like anything to me like I they just can't see the door like they're just it's impossible for them to see the door even though they're staring right at it you know and that part kind of weirds me out where it's like people would just say this has to be fake right or whatever it's like well did you even look at the evence have you even thought about what you've been told about the plane like no

(1:58:47) I won't even think about it it's like feels like more of like a robot that's just reading a script that can't go off the script right I don't know weirds me out I never want to be like that no the thing is Andy they're not they're not just trolls are passing through I know people in real life that are in my family that act the same way you know that not only could they not look at the videos they can't even talk to me about the subject like can't talk to me about it like is in like refuse to talk about it

(1:59:35) it's it's weird man it's really [Music] weird I'll tell you guys a funny story here too while getting ready to slow down here it's not really funny it's kind of sad but when this was first happening and I was in the first few weeks of this I had to ask my family if I was in like some kind of Truman Show type scenario like this was some big hoax that was being played on me right cuz I just couldn't imagine how I could somehow be the person who's like disclosing this and work in the case and

(2:00:06) what have you I almost felt like it was more plausible that this is all some big elaborate prank that I couldn't understand rather than it being real and so I actually asked my parents I went over their house and I'm like uh I'm like guys I just have to ask you this is going to sound weird but like this isn't like a Truman Show scenario right you're not like actors like cuz if you are you got to tell me like cuz that seemed at at that point that seemed more likely than this being real all this

(2:00:38) technology being real and that somehow like I'm at the Forefront of trying to help disclose it I kind of just came to terms with that like yeah not everybody's going to be able to deal with these videos you know especially the older generation the people that really you know that the the New York Times is like their their source of **Truth** like if those type of people they don't realize that the New York Times have changed a lot over the years it's no longer what it used to be and uh I think that they they have the

(2:01:10) hardest time understanding and believing these videos to be [Music] real yeah yeah whooped you I mean in the first couple weeks my head space was all over the place I just I was having a hard time understanding like anything could be real but yeah came to terms with it pretty quick I mean cuz you guys have to realize too uh I was never in the UFO Community like at all and the conspiracy like I still don't really believe in like most conspiracies you know but like we're unveiling like the biggest conspiracy

(2:01:55) ever and the evidence is just overwhelming I mean it's convinced me and uh it's really hard to like come to terms with that and at the same time be like okay what else is out there like I don't even want to look they're lying about this and like other stuff is like smaller conspiracies like let's say like TW flight 800 right it's like okay we shot it down right we didn't take responsibility okay I can see that but this conspiracy like we built a whole worldwide narrative we vilified a

(2:02:30) pilot and it was all because of this insanely advanced technology either it's non-human intelligence and you know what I was telling Sean today was uh you know either way it doesn't really matter like one leads to the other if it's non-human intelligence that leads to the technology if it's the the technology that reverse engineering leads to the non-human intelligence so end of the day really makes no difference to me what it ends up being my personal opinion is that this is somehow our reverse

(2:03:00) engineered technology just based on all the surrounding evidence around the filming and everything that's going on but at the end of the day it's just it's still the biggest story ever especially the stuff about the trails of the orbs like we were looking at that today and going through the videos it's just like man how could anyone even fake this there's no way to even fake this there's nothing to even base this off no one even knew what this would look like I had no idea what that this would look

(2:03:28) like okay give me a second I'm going to take a look at my Twitter real quick yeah I mean honestly the scariest part about this hilariously this is actually funny the scariest part about this is the lithium ion batteries it's more scary than the orbs I'm actually more afraid of lithium ion batteries than I am of my government these things are super dangerous guys it's not even a joke they're actually super dangerous more than one per week on on flights I used to fly all the time every single week

(2:04:12) for my job I just keep thinking like man I really was dodging bullets every week lithium ion batteries constantly burning like some years there was like 80 like 70 incidents it's more than one a week so uh like I don't trust I don't trust y'all with uh these lithium ion batteries man you don't put these in your guys car in your uh checked bags please nothing that has a lithium ion battery you should go in your check bags cuz they're not out there looking in the cargo hold that's the thing right and so

(2:04:42) that's the reason why this is definitely a lithium ion battery fire is they had these 500 lb of these dangerous batteries just sitting in their cargo hold nobody's out there looking at them so of course they probably start smoking there's no alarms going off and then all of a sudden boom they start on fire and the plane goes dark cuz it just damages the plane I mean the explosion was probably huge but somehow miraculously not enough to take the plane down yeah and that's the crazy part is like I watched all these videos like in

(2:05:15) the last several years of all these you know B these phones burning up and what have you Tesla's burning up Samsung Notes burning up I just never connected to me that like wow

these are actually super dangerous like really really dangerous and there's actually still like a Espionage aspect to this like we don't know if those batteries just ignited because of like the heat I mean it was really hot so can I say this I think I can say this I lived in Singapore for a while as well which is right next to Malaysia actually

(2:05:55) I've flown out of qual lumur myself before and it's really hot down there it's right next to the Equator so it's like 80° every single day and sometimes it it you know this day apparently it was like K T said it was like almost 100° like when these batteries start to get above like 160° like this is starting the point where they're going to start you know getting really dangerous and the way that these were packaged seems like it could very easily easily have been overheating especially if they

(2:06:26) left them too close to the landing gear cuz when this plane takes off the landing gear is heating up so this landing gear is super hot and then it gets retracted up into the cargo bay and if these these batteries are next to it it's not looking good for those batteries they could easily heat up and then if they had any defects Kaboom man uh I'll probably upload it but you guys can actually just watch like apparently all the live streams automatically upload I found out so I was uploading the other one that's why I was wondering

(2:07:01) people are telling me like why does this one not work why is there no sound and I'm like huh why is that I go look back it turns out like those couple streams I was doing right in the beginning when I was setting my stuff up those got recorded and people were looking at those even though they were like only a minute long and they were getting confused so I deleted those I'm learning how YouTube Works guys I'm pretty sucky at it but I'm [Music] trying yeah the batteries could get real hot or they could have just been

(2:07:30) defective or it could be a combination of two I mean I'm like 100% sure this is a lithium ion battery fire oh yeah the witnesses let's just do that part and then I think we're going to call it after that we'll come back to this tomorrow and we'll probably finish it up we got a lot done here though my God there's still a lot this part I got to rewrite [Music] here although I think this is still pretty relevant this is actually going to be evidence against the suicide oh yeah it's right

(2:08:07) there God this is the worst this narrative that they Tred to invent he's saying goodbye to his hometown this is honestly like people should be embarrassed for falling for that say okay okay guys I'm going to take the plane we're going to go on an 8 Hour joy ride on a suicide route and I'm going to go say goodbye to my hometown in the middle of the night at 2:00 in the morning where it's pitch black to say goodbye to my hometown while there's like 200 people theoretically trying to bang down the

(2:08:36) door it's it's ludicrous it's ludicrous like has anyone ever heard of ua93 like those people banged on the door and prevented the plane from crashing into whatever it was going right I don't know it's wild thanks William I appreciate it and I appreciate everybody who's been you know supportive of the situation uh I do want to address a couple things as well is that we have not stolen any information from anybody or plagiarized anybody uh that's definitely never

happened like when people post something

(2:09:14) online you're posting it publicly and unless it's like a story that you're written like then no one's taking it so with respect to how this works like if I Source somebody and Source their evidence that's not plagiarism right and i' I've offered that people can use my evidence to come up whatever story they want what I own theoretically is the copyright to the story that I've come up with right so if you were to go out there and say that oh this was this lithium ion battery fire

(2:09:42) and blah blah blah that would be copyrighting my story especially if it's not real but either way like you can't copyright someone's story but using evidence to build your own story is of course free game uh so I think that when people try to say that I'm stealing stealing someone's story like they're just it's that's just jealousy for sure cuz everybody everybody's had the opportunity to do this like literally they could be doing it now if they want to I'm just literally the only one which

(2:10:08) kind of surprises me you know like why are other people not out here trying to solve the mystery right other than the people who are you know in our Discord or the MH 370x investigative team I want to thank them as well in fact I might name a few people right now uh let me take a look oh boy I have all these messages I did not notice this okay uh oh I'm in streamer mode so I can't even read people's names that's annoying oh even when you click on it you can't read their name dang that's makes it hard guys uh H

(2:10:44) I'm going to disable it okay I want to thank my admins these are the people that are my core crew uh Jay Brown JK Philly fan Lolly Hall Sun goblin synonym and wind Winden heo you guys appreciate you guys helping me out in the Discord uh keeping it regulated malite you as well Mau who is the guy who helps set up our Discord and War nugget um a lot of these people have put in a lot of work specifically I would say synonym JK Philly fan Sun goblin these guys have put in a tremendous amount of investigative work absolutely

(2:11:28) and I hope that one day that if this pays off for us I can give back to these people they deserve it 100% they deserve the recognition uh some of them have put in so much investigative work pulling back old news articles and sources uh it's incredible I have to tell them to stop like you know take a break too cuz uh you know they've been working just as hard as me in some cases so um it's it's been incredible having the team kind of work together and we've been a very close-knit team cuz reality

(2:11:57) is when you are disclosing something this big you have to be skeptical of everybody and along the way you know we've lost friends uh that are you know that were close in the team that broke away from us for personal reasons for differences and all that and I don't have any hard feelings against any of those people I hope that they don't have any hard feelings either uh but again just the reality of the situation is that like you know we have to be we have to um apply the rules to everybody you know

(2:12:29) equally uh and that's what's important to keep the Integrity of the investigation right so people that have come out and said that oh I don't think the videos are real anymore well you know you missed your chance right like we haven't wavered at all on these videos um and that's what's required is if you want to have integrity right if you're going to just hop back and forth and flip-flop on your opinion then you lost your chance to be the person that's the spok person of the videos right uh

(2:12:56) so you know that's just how it is but I thank everybody who's been here and following and kind of you know getting the word out you know we're getting bigger and bigger and we're going to get to a point where you know maybe we will get to Joe Rogan one day you know and if he's listening then you should give me a call cuz I'm a chill guy and I think we'd have an awesome show same with some of these other big people too you know Shan Ryan uh and the other people that I've thrown out there I would love to talk

(2:13:24) with people like Bill Maher you know I'm I'm knowledgeable enough politics I could hold my own I'm not going to look like a fool out there uh I'm not going to pull up Brian Griffin if you guys have seen Family Guy you know what I'm talking about um and then of course people like Tucker Carlson I mean Tucker Carlson is the type of person who I'll be honest with you guys um you know I thought he I didn't respect him when I was younger right I thought I didn't but I didn't give him a chance either and The more

(2:13:53) I've watched him the more I found him to be a respectable journalist uh somebody who actually has Integrity that you don't have to agree with him but he believes in what he says right and he's consistent uh so and that's the type of person too that I think would be hard to convince right like some of these Old Guard people are going to be really hard to convince on these videos uh but it's important that we try to reach them because they have huge audiences and if we can convince them then I think we can convince

(2:14:22) everybody yeah Russell Brand I was actually I think he would be somebody who would be easy to convince uh but the problem now is like he's under heavy attack right like they're definitely they've aimed their sights on him uh in terms of discrediting him and unfortunately he's made it very easy for them right part of the reason why I wanted to be the spokesperson is that it's very difficult to discredit me I don't have any uh major skeletons in my closet right and that's proven based on my security

(2:14:54) clearance CU When you go through security clearance then you know they review everything you can't be have like the types of things that he has in his background and and get a security clearance like that's the type of stuff they're looking for right uh any kind of legal issues related to stuff that's very serious and crimes like you're not going to get a security clearance any crime at all you won't get a security clearance um so that's part of the reason right I knew that we get attacked

(2:15:20) but I knew it'd be very difficult versus you look at some of these other people like Russell Brand unfortunately is that you know they go dig up some old cases you know he was

known to sleep around or what have you and you know slept with some girls who were you know a little bit too young or you know not necessarily like too young legally but you know they were able to easily show that he seemed manipulative and was kind of acting like a skis ball and even if he changed which I'm sure he did right Unfortunately they still were able to

(2:15:48) use that against him and that's why you have to be very careful about your history so I mean I think that it the problem is it just like what we've been dealing with it shouldn't take away from the content that he's putting out but that's how discrediting people works you know yeah Tucker went through the ringer I mean I I think back to when John Stewart just like put him on blast on CrossFire and like it's like night and day compared to what he used to be at least in my mind but that's probably not

(2:16:19) his fault a lot of it's probably my own fault for you know believing a little bit too much in the media myself at the time and I think that that's why it's important is we have to realize that everybody's going through a journey in their life right and while they're going through that Journey you know they're going to change as well so even the people that right now are against us that are closed-minded and don't want to look at the evidence they'll change too potentially I mean they have the

(2:16:44) capability to change and we have to think that they have the capability to change so that's why it's so important that we try to be as good as we can be and if we can't be as good as we can be then we can at least ignore it right we can at least do [Music] that I probably have a speeding ticket out there so they want if they want to get me on the speeding ticket okay sure I'm sure there's one out there somewhere but that should I don't think the speeding ticket would affect your security clearance it's not it's got to

(2:17:13) be a little more serious than that that's just like a point on your driver's license uh does talking about uaps have a negative effect on a security clearance why would it of course not I think that to have it to your SEC have your security clearance revoked you've got to do something that's an actual crime uh you know just talking about stuff in an honest way is is not going to get that to happen I mean there's tons of people security clearances that talk about uaps right that's why like I

(2:17:43) think I saw some of the attacks about people like trying to attack my security clearance or whatever like I would just warn people don't do that you're going to get yourself arrested that's what's going to happen right they the government takes that stuff very seriously if you start trying to file false reports against people you're going to find yourself in jail very quickly so don't do that guys don't be like that and if you're worried about like you know I think that people need to be very

(2:18:11) conscious about what they say on the internet especially if you have a large following defamation is a very serious defense guys you will get sued if you defame people online especially if they're not public figures like unless you want your stuff taken away from you don't call people out personally and individually or at least make sure what you're saying is factual

right and true and that's why when you see me say stuff out there I'm saying stuff that is technically factual and true the **truth** is the Ultimate

(2:18:41) Defense right now if you start going out there and calling people crazy and making stories up now you're making objective opinions about that person and if those things are wrong then that's defamation I think a lot of people struggle with this is you're not allowed to just say whatever you want to around people right or you can but the reason why people get away with it is they don't get sued you know so you know in general this is part of the reason why we're trying to Build a Better Community

(2:19:06) is we don't want to build a community that's out there you know saying horrible things about one another what's the point anyway right if you think something's fake or it offends you just ignore it just ignore it so let's see what else we got out here and the other thing too is having a security clearance isn't some magical thing right lot people point out a lot of people have security clearances for sure you know I know a lot of people that do it's funny cuz a lot of people don't even know what their level of

(2:19:37) security clearance is I didn't even know till like 9 months ago or something like that we were just out hanging out with some co-workers and like oh yeah you have a top secret clearance like Oh okay that's cool and you go look there's only three levels the really the thing about security clearan is that is that um like having the access to the compartmentalized information right so if you look at that guy Jack Tara you know like that's the thing that was the big revealer where it was like you

(2:20:04) looked at this guy and you found out that like they just had he's he has access to everything he had like access to all the Ukraine secrets and he's like a 20-year-old and like what what how is this information even compartmentalized it had to just be out there where any had access to everything so they definitely messed up and they probably made some big changes after that where you just have to have it has to be a little bit more compartmentalized than that at least but that was pretty eye opening to me made me wonder if like the

(2:20:30) UAP stuff is like that too then how are people not just spilling the beans everywhere John [Music] cin yeah big poo I think you're the one who I if you are who I think you are I saw your uh your your water bottle explanation honestly a lot of stuff goes a little bit over my head but I feel like you understand it better than I do I'm still struggling to get my wrap my heads around like toile forces and what's going on with the orbs there um but I am sure that what we're seeing is electromagnetic forces that I believe

(2:21:12) are occurring based on rotating superconductors that seems to be the way that you can generate those somehow maybe not exactly like that but pretty close no guess I'm not I guess I'm wrong yeah the crop circle thing is another thing honestly like I I think crop circles are actually real at least some of them are and watching the if you want to know about crop circles watch the the Y files one on it that was was a very accurate piece interestingly enough I had gone through the exact like my own personal Research into it from 20 I

(2:21:55) think I looked into it like 2017 somewhere between 2017 and 2019 and I came to the exact same conclusion the Y files came to which was that like this isn't just all fake and if you think about it it's like it makes no sense like who the hell is going out in the these fields in the middle of the night and how are they pulling this off like do they have a drone that's looking from above and they're looking down and like you know creating these perfect uh you know circles and and uh other different shapes and people argue oh

(2:22:30) well you just use a string I mean the other thing I don't think people realizes how much time it would take to do that you need a team of people out there trying to do that by yourself or just a couple people and they've all it's all like the same kind of disinformation right they're like oh two old dudes from the UK were making them and these guys couldn't even recreate One On Demand it's like and they just brushed the whole thing away right and uh you see that a lot so interesting enough with

(2:22:59) these orbs and the same orbs that you see in the ufology sphere these type of engines you see these particle engines and I'm going to pull up the videos again before I go to sleep here these could explain how crop circles are made that was actually early on when I was on the non-human intelligence bandwagon that's exactly what I was thinking let's go with should we look at let's look at this one first when I see these engines like this first thing I thought was crop circles and the second thing I thought was

(2:23:32) contrails that don't have any planes nearby yeah I did a podcast today but it's not going to drop till Monday so you're going to have to wait till Monday for that one but we've got a lot of stuff coming there's I think I've already done like six podcasts this week I'm honestly exhausted that's why I haven't put out much content and I'll probably end up streaming more of my work just cuz there's no reason not to and I think people like to see what I've been doing but when I see these particle

(2:23:57) trails in front of them first thing I think is crop circles like this is how they're making the crop circles if they are is they're using this type of engine so I think it's called like a hydro dynamic hydroelectric something or other I don't fully understand it but that's just the feeling I get the second feeling I get looking at these is these seem to be creating like smoke trails that not like you know Cloud trails that we can probably see that You' like be able to see up there and then with the macroscopic

(2:24:28) decoherence when you see the plane disappear I don't know that seems just very interesting to me because it makes me wonder if like uaps are that's why we don't see them all the time it's cuz when they're traveling they're not traveling in a way we see we can see them so they just appearing somewhere right but that's also part of the reason why when I look at this I just think this is our technology like it this looks like it's an approximation of what we would think the uaps would look like right it's like

(2:24:59) it's close it's close enough to fool people but it doesn't quite look like all the other UAP videos I've seen it looks like it was like our attempt to recreate them just want to look at this

again how [Music] come look at these you can see the heat signature on these orb right here right before they started to flatten and then in this Frame this is the money frame guys look at this the shell of the plane goes cold right here completely different than the frame before frame before boom and it looks

(2:25:33) like it's getting sucked backwards look at that that is incredible this makes me wonder if there's not a shell being formed around the plane here this blows my mind just looking at this blows my mind also goes fuzzy but this is to where Parts where like people are trying to say that the and when this is why you can't use editing software guys someone was trying to do like a slowmo version of this and trying to claim that this gets warped here but you got to look at the original version cuz you can see in this original

(2:26:12) version nothing's happening in the Crosshair here so anytime you use editing software you can't say that something looks weird you got to go back to the original you can slow down the original if you want sorry I want to take a look at yeah temporary temples Professor Jay yes I've watched so many temporary Temple stuff it's actually hard to find these websites that have crop circles on them which is part of the reason why people try to say like oh they're like What's the motivation for going out making crop

(2:26:41) circles like attention money you're not getting any money off it these websites that we're hosting these videos like they can't even make enough money to stay in business to keep the website up but this temporary temples website I think they're mostly on YouTube now they do drone flyovers of these crop circles I might even show one right now honestly they're freaking awesome like the fact that we had started getting drone videos of them really changed the perspective of crop circles cuz I always wanted to go out

(2:27:09) and see one um see I'll pull one up they probably got some new ones recently huh I'm looking for it right oh you know what it's uh it's actually Stonehenge Dron Scapes is the one I remember I think the temporary temples Place went like out of went defunct oh yeah here we go okay which which one should we watch guys interestingly enough they all seem to happen around summertime it's kind of interesting let's look I think I've seen all these actually or most of them let's look at this

(2:28:01) one 11,000 views some of them I think for sure are human made just cuz like they're like a little too on the nose other ones just seem almost impossible you should look up the Julia set if you guys want the Julia set one is one of the most conven never it's just way too big yeah thanks uh fan from cheese I think that we're not going to find anybody who's going to check more boxes than Edward Lynn there's just there's way too many boxes of checked by that guy yeah I've heard about the foo frers

(2:28:35) I've heard about pretty much everything at this point um no I think that we've been able to pretty conclusively show that the plane is getting sucked back into the black hole now that one that I just showed it's probably it might just be the fr the picture moving but there's a frame where you can see the the the back of the the tail of the plane in the black hole which

pretty much conclusively pulls it some proves it's somehow getting pulled back okay here we go let's get into the business

(2:29:09) here let's go full screen on this yeah so first of all look how big this is look how huge that is the thing about it is the Precision and also with these crop circles is this weird Circle you see inside these squares like if they wrapped around and in a lot of them what you'll find like in the middle is you'll find this like almost looks like a floral pattern coming up where it's just like perfectly woven that's the part where I find is very unusual cuz if you're using boards and you're just stomping on it then I

(2:29:44) would expect it to be a lot more crude looking not so very specific in the patterns when they get close you'll see it better and I haven't seen this one yet but this is one too where it's like it seems so complex for some people to be making this especially if it was produced very quickly overnight seems impossible and now if you have like a week or so yeah and you have a team yeah sure you can make something like this no problem but a lot of the is just like they don't even have permission you know

(2:30:19) so let me see if I can okay yeah so you see this right over here like look at this this is spun around right here like if you're making a a box and you are going to use a board why are you doing it in this weird circle pattern wouldn't you just go like systematically like you're you're mowing the lawn right instead here you see this circle pattern that's the part that seems really odd and this one you can see this very like Vortex right in the middle here they all seem to have it so these are the ones where I think

(2:30:54) when I look at this and I think of like how this is produced one of the earliest explanations for crop circles before they got **debunked** by these like old UK guys they were claiming plasma Vortex like weather P plasma Vortex and if you think about that that seems like it could be explained by our videos in terms of what we see from the orbs if they were non-human intelligence or at least you know the ones that might be theoretically the uaps I personally think that ours are you know our engine art technology now but yeah I mean look

(2:31:27) at that look at this crazy Circle that they do here and it's like it's like it's woven over you know like that's the part where just seems really weird that humans would do that it almost looks like they just aim down their gravity engine at the ground and they're like okay boom right and they just had to do like a ripple effect pretty weird pretty weird yeah and a lot of people talk about the sacred geometry messages is that there's a lot of different patterns that are consistent with um like when they talk about sacred

(2:32:01) geometry they're talking about very specific like angles and repeating those patterns of those angles and that they create these various patterns so if you're interested you could check these out I mean I I love watching these videos honestly I think they're really cool if they're fake or not I don't know just I would want to meet the people that made these just cuz this is like Banksy out here you know making these stuff it's like okay damn that's really cool you got a Banky out

(2:32:29) here making these uh crop circles spent 19 Summers experiencing this phenomenon that's awesome I've actually thought about going out to the UK during one summer and just trying to like it's almost like uh weather chasing where you just like hope that you'll find one up the next day right like that would be the perfect like if you were saw the field empty you wake up and then this is out there like that would be to me that would be convinced me I'd be like okay you you got me this non-human

(2:32:56) intelligence are making these cuz there's no way anyone's making this overnight yeah and what I'll show actually real quick is I found the video I think a while back uh let me see this is I think I have it I think I saved it oh I did save it here we go I've been looking for this video this is the supposed video of the crop circles being formed in real time and they they tried to claim that this video we're about to watch was somebody CGI this or something like that back in like the early 90s and

(2:33:43) some guy claimed he did usually this is the way they do the disinfo that someone claims that they CGI something oh okay ignore it how about you show us how you did it right as opposed to like just claiming it so we're going to show the orbs making the crop circles cuz this video is actually hard to find rational explanations so easy to come by so get ready for it guys here it comes Oliver's cast 1989 1989 okay so were they CGI in this in 1989 before Jurassic Park look at these orbs just floating around now look I mean that was an empty

(2:34:26) field what there's an empty field and all of a sudden everything just flattens Out Below comple Circle form really weird this controversial film appears to show strange objects hovering above a cornfield below it looks like they're just painting I mean so if this is fake okay great you got me I guess somebody did a good job I guess but anyway that's that's the old uh crop circle video that you know people try to find and it's pretty tough yeah I guess a guy was out there and he was filming it you

(2:35:09) know and he just caught it on video pretty weird 1989 yeah it's not CGI but I don't know I mean could be fake it's hard to say I think it just looks really cool in general so okay I think we're going to close down for the night there oh yeah it's already 11:30 okay uh I guess that gives away my uh my time zone that's fine people know at this point okay guys well you guys have a good night and uh yeah thank you guys for for being here tonight talking with me uh we will work more on this tomorrow

(2:35:53) I'm probably not going to make any more posts on Twitter tonight I'm just too tired but I will make some posts probably in the morning go over some of the stuff that we did uh I think I have another podcast tomorrow but I'll probably be streaming again tomorrow night going over more of this it helps kind of streaming gives me a little bit more motivation to go through it and then we'll probably work a little bit on salvator Pas questions as well so if you want to take care of the questions what

(2:36:20) I'll say about salvator Pas questions is that he does not want me to tell him the questions ahead of time so he wants it to be just completely mysterious that we're going to

come in we're going to come in blind to him catch him off guard with the questions we are not going to ask him about Malaysian Airlines flight 370 uh not in the first interview hint hint what that means is potentially there will be more interviews if the first one goes well but we're not going to ask him in the first one uh because a

(2:36:52) I want to be respectful and he asked me and B I want to know more about the science so we're going to ask him about the science we'll probably ask him about stuff that we see that we work on the science tomorrow and we get this all beefed up with our new science information macroscopic decoherence I want to ask him about super conductivity I want to be able to explain the scientific aspects of his papers to just the Layman like you and I right to people that can just understand it from a from a basic

(2:37:19) perspective and not necessarily you know be deep into the PHD side of it in the math so that's going to be my goal is for to try to get the it to be able to be explained for us and then when we do follow-up ones with him uh then we will potentially dig into more stuff related to MH370 but that doesn't mean we don't have to dig in like the science aspects can be related to MH370 right we can talk about macroscopic decoherence we can talk about unifying quanta and macro which I think will be really

(2:37:50) awesome we can talk about super conductivity cuz I want to understand super conductivity better I want to understand how these orbs are creating the geodesics so I think he can explain that to us so we're going to be a little bit koi with him potentially and ask some of those types of questions which will help us understand the videos but we're not going to directly ask him about the videos in the first interview so really looking forward to that I'll probably push out another post about that um interview so that people can you know

(2:38:17) put it on their calendar so they have it for Sunday okay and I think that's it guys have a good night and we will talk again tomorrow peace

MH370x Solved - Ashton Forbes - YouTube

(00:48) Marvel me strike Megasaur each Avenger has their own Beast that converts into battle [Music] gear I did

(01:50) wrong okay you guys you guys can hear me now yeah there we go now we got it set up let's get some audio confirm you guys can hear me please okay now you guys are good awesome okay we got a bingo okay sorry about the struggles there everybody uh I was trying to

get everything working camera is also pretty [ ] not going to lie going to try to fix that if I can see if that works better you can tell the camera is like tilting down I don't know how long it's the camera's going to last here um let

(02:30) me get centered okay oh boy poor this camera is not going to last it just doesn't stay here come on God this is so awful man I went to the store and tried to find a new camera and they're all this same crappy camera that just like you put on the top of your monitor that just Falls right off okay um what I wanted to do here with you guys is go over the evidence and I'm looking at uh the questions here in the chat to the best of my ability as well I'm going to try to pop this out if I can there we

(03:08) go okay so I will follow the chat and try to answer any questions that you guys have in the chat as you know we were just a lot of reddit's threads going on everything like that I can't keep up with everybody and I can't keep up with uh even the Twitter as you can see I've got a million messages going on here at the same time as well um so it becomes too difficult at the moment so what I'm going to do is go through some of the evidence with you guys um show the videos answer whatever questions you

(03:36) guys want and yeah that sort of thing so let's go ahead and start with the videos so if you guys follow along at home you can see we're at uh all my works here to date uh right now so uh let's see we Intel yeah so the best thing to start with is the videos right where these videos come from everybody wants to know where the videos came from so this is a link right here oh it's cutting out yeah well we'll have to deal with that unfortunately I don't have a way to deal with it at the moment sound

(04:11) is choppy I think that might be my internet connection so if you guys want to wait a second I can try to plug in and then that will probably we're probably going to struggle through it okay if you guys if it if it's really bad just let me know okay um let's go ahead and start with the video so these videos here are let me sure you guys can see this yeah okay um so if we look at these images here these are where they come from the first version uh we can see that this is the Regis side and non account this is

(04:43) the internet archive that we found I'm actually that was the link I just clicked on um and this is just a screenshot from it now this is some of the most damning evidence right off the bat is that we can see the incident the date that the Malaysian Airlines flight 370 was disappeared was actually March 7th 2014 is that when it took off and then the morning that they claimed that it was lost was uh March 8th so this indicates that this person received this file 4 days after the event which goes to show that that's a very very narrow

(05:15) window there's a lot of intention that we can glean from that because when we look at this account this account had other content that they had put like UFO content that was unrelated to this so it's really unlikely that they would have been the one who is uh you know directly involved with this for whatever reason yeah and people are mentioning just ref refresh the stream if there's any issue now the other thing though it says is published May 19th so what

we've gleaned from this is that just like us

(05:43) when we're looking at these videos you know the person that **leaked** them would have had a hard time understanding them to be real as well and probably would have said hey you have to prove to me this is real and that's the idea behind why it would have taken up to six weeks here maybe even longer for them to convince them so that's the first clip from the first video now let's look at it here's the internet archive link right here you can see this so again all this information can be found in my all works or starting

(06:16) just right from the top and we're just going to go through everything here uh until I get tired so here's the actual video you can see here's the information I was just copy pasting right and now let's watch this video now if you have a problem pulling it up realize you cannot pull up just the YouTube here you have to pull up the archive link the YouTube is gone so looking at this what we're looking at here is stereoscopic um give me one second I'm going to see if I can plug in it might help the issue

(06:44) hold on I'll be right back okay okay I just plugged it in uh so that I think I'm connected yeah I'm hard connected now so the connection should be better I was getting um a warning on OBS saying that we were dropping so maybe that will occur that will fix the issue there so if you guys have problems go ahead and reset the stream or refresh and it should fix it feel free to put your questions in the chat so we're looking at the uh oldest version here of the regist side non account account I'm going to pause it

(07:46) real quick because what I want to point out here is that we're looking at side by side video here and when we're looking at this and it's scrunch down it's very unusual you'd wonder why would you duplicate this right doesn't make any sense but this is where we realize it's not duplicated what we're looking at is actually two different cameras that are looking down to collect this data at the same time and they're from slightly different angles so I'll show you guys the proof after that and notice that's

(08:13) mouse that just came into the screen over here when this mouse moves it doesn't update these coordinates we see in the bottom left these coordinates we see in the bottom left are not being updated by that Mouse they're being updated by some other analog that's coming into play here and we can actually see like right there very briefly might be like a like they're locking like they're unlocking something and then they're moving the screen around right because the mouse stays still and then they move the screen

(08:37) around and that's why we think they're using this plural view 3D uh like Mouse now this first orb comes in this is coming in at like Mach 3 this plane's going 150 200 miles hour this orb is going 10 times faster than it it's going at 2,000 mph now it it interestingly enough it Ricochet past it almost looks like some kind of homing device right it shoots past it and then it comes back and watch what it does over here it kind of goes around the side of the plane it doesn't stick right on top of the plane right

(09:09) away like it's trying to figure out where the plane is and then it homes in and locks in on the plane now this second orb is really interesting if you watch very closely you can see the second orb right there where it's coming down through the water or across the water and then it shoots up through the cloud there it is so watch that again so this second orb is going to shoot across right here right now there it is and there's shooting up through the cloud and now it's connected to the first orb

(09:36) and now the third one comes in from the side as well now look at this smoke trail that we see the very very clear smoke Trail here these clouds in the background are culus clouds which are very low to the ground so and we'll get to the stuff about where the plane went so if you want to ask those questions feel free but that what that means is this is not contrails and I don't think we could see exhaust either if you look at other planes exhaust is not really visible in any Spectrum this this is smoke that

(10:05) we're seeing here coming from this plane and that's why the **debunkers** were trying to prove that this is in Smoke because this is super damning because this means that the plane's on fire now and again when we're talking on fire it doesn't mean it's like actively burning up it means that there's a fire contained in one of the cargo Bays potentially that has broken containment and they're trying to battle this fire right now once the third orb gets into play here they lock in and then their pattern

(10:33) begins and when you watch this pattern it's super weird this is where initially even I'm looking at it I'm going this has got to be you know non-human intelligence because this is a triangle pattern right but it's actually quite if you think about it and look at like the black triangles that you would see out there in ufology it's quite a bit different um so it like it's not exactly like those triangle patterns that you would normally see um at least from the ufology perspective and now right here you can see the

(11:03) orientation changes now it's vertical they're completely vertical now you see this vertical pattern now that they're not circling around anymore so they first circle around the plane and then they start this this pattern where they're now in a ring formation vertically around it and then Watch What Happens here with the zap poof right and when we look at in the thermal which we'll look at in a second we can see that that they're closing in at the last second now the smoke Trail just stopped right there now

(11:30) if this was some type of Illusion or magic trick or cloaking we'd see the smoke Trail continue on the leaker wants to prove it to us just show us it's not off the screen so they scroll over to the right show us yeah there's there's no smoke Trail there's no more plane it's just straight up gone right and then they close the screen out which would indicate that what we're looking there is a bigger field of view and it also indicates that uh um that they're doing this on a recording

(11:58) essentially uh we just started Alexi so there's probably going to be more people joining in here very soon um let me see so I'm going to answer a couple questions very quickly in the

chat and then we're going to go and we're going to look at the second video okay so that was the first video now look at this thermal this is a thermal overlay of the second video of the image in the second video it's an exact match to Malaysian Airlines flight 370 and I was actually pretty embarrassed yesterday when I

(12:24) realized I knew that this this heat signature was down here and you can tell it's completely different than the Heat sign signature of the engine not even close to the same right and I had been staring at this and I didn't put two and two together that this is actually in the same location where the landing gear is and if you look at the piece that I just did today or yesterday you'll see that the situation with this is that there are two vents right here two exhaust vents those are the exhaust vents where we're seeing the smoke come

(12:52) from it's not coming from the engine it's coming from the belly of the plane so let's go ahead and just answer a few questions Okay blah blah and I'll answer all of them I'm not really afraid of answering any questions here um so where could the plane have gone so the places where the plane could have gone if when we dig into the science the options are it could go um to another dimension it you know if you believe in multi-dimensional theory and what have you it could go to somewhere else in the

(13:21) universe really far away cuz when we're dealing with teleportation faster speed of light travel you know now opens the the skies the limit it could go to the Future time dilation is real and we'll probably talk about that in a little bit as well so when you travel at the speed of light if you are your frame of reference you will not like let's say you travel a thousand light years away at the speed of light in your frame of reference you're not going to it's not going to take a thousand years to get

(13:47) there um especially if you can teleport faster than the speed of light however when you show up it's going to be a thousand years in the future so for everybody who's there it'll be a thousand years later but for you you won't of Age A Thousand Years pretty weird but time dilation is real and it's been proven to be real uh so that will come into play later on now with the [Reddit](#) post here let's let's go ahead and just address that one real quick okay guys so I'm going to scroll down to

(14:15) this the VFX [debunk](#) okay I have a whole series on the [debunking](#) because that's how important it is to [debunk](#) this myth that's been posted by [Mick West](#) which he has no credibility to begin with like the guy is a complete clown show um but let's just go ahead and you know prove that it has no credibility so we can let's look at this cuz we're going to look at the video here in a minute this is the supposed VFX [debunk](#) that supposedly matches you can see first of all it does not match you can see that

(14:43) it's not even an exact match to our effect even on a single frame it's also not even the same color the effect doesn't even match here as well what happened here is we just they just took two things that look similar laid it over the top and said these things must be the same right we call it prosaic [debunk](#) and that's what [MC West](#) usually does it says these things look

similar therefore they have to be exactly the same but that's not how any of this works okay if you are doing a visual effect where you are why did that not

(15:10) work where you are copying something then you're not going to go ahead and modify it the whole point is you would take an asset that exists and you would simply put it into your uh graphic now looking at this here you can tell it's not even close to the same this is actually the real effect is in the background here and you can't even see it because the this fake VFX is so different and so on top of it that it just consumes it it's not even close to the same as our effect not even similar honestly I mean okay I'll say it's

(15:40) somewhat similar but not really it's not even the same color Okay um the other thing about it is that if you were to fake this you would fake it with white like you're seeing here with this explosion from this VFX you would not fake it black because there's no basis for that you would fake it as an explosion but what we're seeing is not an explosion it's an endothermic event versus an exothermic event what we see with this white explosion is an exothermic event our event which we'll show in the video in a second is

(16:09) endothermic so we'll we'll take a look at that in a second here let's see what else we got to answer um okay why am I blocking people who ask questions because people aren't just asking questions is the answer so if you go onto my Twitter and you try to be rude or condescending you're going to get blocked immediately I can tell the difference between people who are honest and people who aren't in about 5 seconds I grew up in the internet age so I'm very familiar with it so don't try to

(16:35) fool me don't try to act cute whatever if you want to ask honest questions then ask honest questions um next question here uh um yeah the plan's not edited out in the footage editing it out from a footage like that would be extremely difficult plus the the rest of the footage would just be real anyway right and so that's the same thing about the VFX is that if you're trying to claim that this VFX **debunk**s the footage well you've only **debunk**ed the end of it you know the rest of it still real footage

(17:05) so the the whole idea of it being fake doesn't even make sense right so in no way does that **debunk** our footage our footage is 100% real um let's see what else we've got here the fire did not it could have potentially started before the plane goes dark with the fire and we'll go through the uh flight path because these lithium ion battery fires they start up but they don't immediately cause the alarms to go off so probably what happened is this this thing was building up and it gets to the point after about

(17:36) 40 50 minutes when this plane is taken off and then boom all the alarms go off fire potentially even there's a minor explosion that occurs that causes our significant event so um yes and you can change the color of effects but why would you again let's be honest here you're not matching something that already exists this footage you there's no it's like if I'm copying a painting then yes you can copy something to make it look like a painting but if you were if you're arguing that someone faked

(18:04) this they didn't copy it from anything else it's an original work if it's an original work you're not going to modify the effect you're going to put the full effect in there again this is very important to understand and very simple okay so let's go ahead and look at the original videos again uh so now that we've addressed a couple those questions and we'll come back to some of that stuff okay so the second video let's pull up the second video here come on internet there we go okay so this is the

(18:41) second video we just showed the uh satellite stereoscopic and the stereoscopic we'll prove here in a second let me pull that one up too stereoscopic proof of stereoscopic we're going to pull this one up and have this be up ready for to go as well okay so this is the Drone okay so here we're looking at an mq1 C Gray Eagle and the mq1 C gry Eagle let's just pull that up let's do new window oops let me see if I can get this okay so this is what we're looking at here guys we're looking at one of

(19:20) these bad boys uh we need the one that's got the cameras now let me see there's this one right here there's a good picture of it can everyone see this y okay good so you can see these huge cameras are right here right and they're on both sides potentially so let's go back and take a look here so this is what we're looking at we're looking at an mq1 C Gray Eagle and what we're looking at here is an advanced Electro IR camera okay so the electro IR camera has been thermal they've added a thermal layer to the top

(19:51) of it so this actually indicates that the person that **leaked** this was knowledgeable about the systems as well we can see the same smoke Trail it actually goes right underneath the smoke Trail as it's trailing the C trailing the plane and then it zooms in and we're watching it here so this is real footage here this is and we would have no idea to understand what this would look like without having seen those 2007 DOD Navy leaks that showed what a Flier footage might look like now look at this when we're looking

(20:21) at these orbs you can already start to see the black trails but watch the black trails closely they're actually in front of of the orbs so you can see this black Trail is actually leading the orbs slightly here and as as black Trail is leading the orb uh it's it's pulling it forward and these these orbs as well are not being affected by gravity they are just flying along there's no visible propulsion that we see coming out of the back of them they are just floating along which would indicate super

(20:51) conductivity in general now you see these trails are in front of the orbs there this is some of the weirdest part for me is that you look at this and you can see the trails are in front of the orbs in this triangle pattern we can't see this from the satellite footage we can only see it from the Drone footage and they're yanking them forward almost like they're on train tracks here now we're going to see that same orientation shift where they become vertical here right now they're vertical

(21:15) again on the plane from a different angle we can clearly see this heat signature in the belly of the plane here where the um landing gear is and it's we can again clearly see that it's not

the same as it the engine here and we can also tell that it's not from the other side because the V our vision of the other side is obscured by the plane so this is coming from the belly of the plane now again this heat signature does not mean that what we're looking at right there is active fire it just means

(21:43) that there's a heat signature coming from it the idea being that and you can see this this Trail coming from the back is that this is hot air coming from the fire that's in the cargo bay and what we're looking at here is where the exhaust ports are and these exhaust ports for the heat are where this heat is coming from I'll I'll answer some questions in a second here I want to do the video so you see them zoom out right here as well they were already zoomed in got a real good look at everything and then they

(22:11) zoom out and they zoom out at the exact right time here like that's the exact moment the zap's going to happen which to me indicates that they know from the pattern what's about to occur now also look at this here you can see the heat signature in the orbs see that heat signature in the orbs there so again there's no basis for anyone to even begin to fake this there's no there's nobody to copy it from no one even knows what this would look like right so you can see these heat signatures and

(22:39) they're spinning they're spinning around as well which would indicate that what we're seeing here is super conductivity super conductors that are spinning that are creating what we call geodesics and geodesics are basically the path that an object will fall through so think of it like gravity so and because it is essentially gravity is that if you throw something in the air it's going to follow follow the geodesics of space and time what they're doing here is they're creating their own

(23:07) geodesics now the zap you can see here is a cold event this this dark event that happens here and you saw at the last second there and I'll I'll pull up to Super slowmo it's a dark cold event that only could be seen in the thermal like this which indicates this is more equivalent to a black hole it's not an explosion it's an endothermic event energy is being absorbed as opposed to uh uh shot outwards I'm probably not saying that correctly so let's look at some other videos here as well of this and we can

(23:36) also take a look real quick at the time so that second video was received June 5th and it was posted June 12th so this tells us a little bit of information as well the first video did not make enough of a splash that was May 19th so 3 weeks later they send the second video previously submitted satellite footage so they're showing us another Angle now and this one that didn't take long from the post at all so he was already probably convinced at this point that the footage was legitimate and just needed to be told okay here's a second

(24:06) video go go shoot this one out there as well because it's absolute proof and keep in mind this was May 19th for the first one now take a look at this Regis siden on makes a Twitter account May 22nd three days later hello Twitter my first tweet 3 days after the footage was uploaded please spread this video before it pulled and what does he tag MH370 Bingo look at

the first things it just says airliner and UFOs he just left out the MH370 in fact maybe he wasn't even told that this is MH370 cuz reese on again would be like

(24:45) us have no idea what we're even looking at real have no idea what the context is probably didn't look at the satellite coordinates that we saw in there to be able to know where the location was the nicobar islands so let's look at this version okay so this is I can't stand the on this we're going to have to turn that off okay so uh something something be who's a redditor uh created this uh visualization here which will prove to us that what we're looking at is 3D stereoscopic meaning

(25:15) two different cameras you'll be able to see The Parallax effect very closely so what they're going to do first is assign a side A and B side here and so that we can flip between them very quickly so first of all overlay them over top of you each other boom now we're only looking at the a side okay so in order to do this he's going to basically switch quickly and now look when you switch you can see The Parallax effect right very obvious Parallax effect right there this tells us we're looking at two different

(25:46) angles okay so we're looking at two different cameras here you can even see it and he Zooms in here to make it even more apparent that when you switch back and forth between A and B you can see that the plane does not move but we can see the motion of the parallax effects right so this proves to us that what we're looking at is 3D stereoscopic imagery which at this point I don't think I've ever seen anyone even try to fake something like this and again they're showing you that The Parallax

(26:16) effect by switching back and forth here so this video absolutely proves that what we're seeing is two different cameras shooting down notice as well in the background of this footage there's no shadows anywhere we don't even see a shadow from the plane which would indicate that what we're looking at here is nighttime in a false color IR so a lot of these capabilities are capabilities we didn't even know about especially not in 2014 we would never been able to guess in 2023 we have a little bit of a basis and

(26:45) so the rest of this is pretty much him just showing all the Parallax effect which is very obvious I mean we can see the cloud volume change and the angle change based on which camera we're looking at here so again proof that this is 3D stereoscopic so the leaker when they were leaking this they knew from the first video they had absolute proof that we would be able to figure out what two satellites have to be right next to each other in outer space to be able to provide the data to create this 3D stereoscopic Visual and we did it's USA

(27:14) 229 NR 34 it's a NOS ocean surveillance satellite so again we've see that parallax effect okay so let's answer a couple questions and see what we got going on here um so I think we just showed you where the camera came [Music] from in terms of shakiest evidence at this point all the evidence has been pretty much conclusive uh I think we've proven every aspect of the videos uh to be real including the the fire um we've got all we're using all of the witnesses all of them all the witnesses point to

(27:50) the fire scenario and it blows my mind that that was missed um I think the Ping data might be the sketchiest part but we can look at that as well weirdly enough at the exact time where this happens there's a huge anomaly in the Ping data there's two smoke Trails because there's two exhaust ports um on uh at the uh landing gear Bay for the heat exhaustion um let's see what else uh okay so why did it get not get attention so if you're like me some people actually saw some of the footage I saw the thermal footage uh back in

(28:26) 2014 and I just didn't think that it could possibly be real because I didn't have any I didn't even know what Drone footage looked like you know so when I was looking at this in 2014 I I didn't know I just closed it out I thought this is like what is this supposed to be right but now in 2023 we have a huge basis to understand that this could be real because we've seen the 2017 leaks we've seen the Trump satellite picture that he posted in uh 2019 and that told us what satellite capabilities might be like we know that

(28:56) superc conductivity if we are not at it we're at the verge of it from a public perspective looking at Ik99 and I know that's very controversial for some people but I strongly believe that we are at least on the verge of super conductivity if not already there from the public perspective and then AI when we're looking at that triangle pattern and those orb movements uh you know that does not look like something that people are flying it's not aliens flying around in that that's a computer program running it so

(29:20) let's look at this version real quick of that same thermal but with the uh thermal layer stripped out manually by editing software now you can clearly see these trails and you can clearly see they're in front of the orbs pulling the orbs forward here how would someone even think to fake this you know why would someone even fake it like that that's just too unusual this is what we're looking at here is super conductivity and these orbs are creating their own geodesics their own gravity essentially and that's

(29:53) why they seem to just be free floating throughout the sky and that's why they can travel at Mach 3 speeds with no um significant uh resistance so that's really impressive stuff just watching it now we've took the 3D satellite video just to even prove it further and we actually were able to convert it to 3D you can put on blue and uh red glasses and you can watch this in 3D if you want and we actually were able to show that these are how the systems work they actually do 3D when they're the intelligence

(30:20) people are watching this tracking planes because it gives them depth perception it helps them better to understand what they're looking at and we're they're looking at a much bigger field of view here so they would see the Drone the drones just cropped out of screen there at the beginning there might be other assets too so this is what the military uses when they are doing you know Battlefield awareness for you know whatever operations they want to conduct and this user here just cropped it out for the most part you know it's hard to

(30:47) see here but in the very bottom there are some satellite coordinates as well those satellite coordinates IND indicate the nicobar islands so let's answer a couple other questions

yeah so deployed to save the plane um we'll get to that we'll get to the plane stuff and in terms of deploy to save the plane uh so widespread AI is what's basically it would take so much computer processing to create that triangle pattern and what they're doing there is it's tracking the plane the center of mass is the plane there so it's clearly

(31:27) involved in the zap that we see later on the amount of data the amount of control to have that Precision to me requires AI the type of processing that we see right now are people use chat gpt because humans cannot process that information that quickly um good questions though yeah none of the big ufologists have touched this that's a good point and I think the longer they stay silent the more credibility they lose because the reality is if anyone's for disclosure I mean you're looking at it straight in

(31:54) the face you know what I've been doing here is how disclosure should come about about shouldn't be any [redacted] of stringing people along or what have you it should just be a matter of here's the information I'm going to spread it far and wide right and here's the proof I'm not going to make you go search for buried UFOs and other kind of nonsense like that I'm just going to tell you straight up what I know right and what we can prove uh let's see what else we got here um I've reached out to everybody that I

(32:20) have access to on Twitter what have you and sent them messages so far none of the big people have replied at all and again like I said the longer they stay quiet the more credibility they lose because why would they not be interested in this especially people that are like looking at all kinds of esoteric stuff but for some reason they don't want to look at this okay I mean we're looking at three orbs going around a plane here like what more do you really really want at this point from two different cameras

(32:44) that are the most advanced military cameras in the world for 2014 uh metabunk have they reopened the case they're not going to reopen the case because they gave up most of the reason why they gave up is they confirmed so much of the videos to be real uh we had somebody there confirmed the satellite was correct we had them confirm that the turn was accurate as well in metabunk uh one one person in metabunk actually confirmed the smoke as well and they got Mass downvoted because presumably the Liars of metabunk knew

(33:13) that what we were looking at was smoke and they didn't want people to realize that what we were looking at smoke they wanted to argue that it was contrails um and again just for the uh you know the smoke again is coming from two exhaust vents that are near the uh landing gear right and we can see that from the heat signature in there uh what about the Reddit post it exhibits 30 to 24 frames per second while the orbs do not that sounds like nonsense the answer is you can read that part right at the beginning where is my

(33:44) thing um it's not CGI here so how did we prove that it's real this actually happened really early on you can see that the date here is August 17th this is 2 days before the videos were banned off of red reddit for being discussed we already proved that they were real and what this proof does is it proves that you can't debunk these with prosaic debunks by claiming this looks

like this because what we proved is that the satellite footage is a Centric session connected to the actual database what that means is we're looking at real

(34:14) footage no matter what so and this is also pretty important KC IMC who's also a **debunker** who actually connected on this they they were so upset that they put a disclaimer trying to claim that the videos are fake that's how set this user got despite the fact that they help prove it to be real the zap is real too the zap is accurately illuminating the clouds in the foreground and in the background so this basically shows that what we're seeing from a zap effect here is also real as well um so that's a huge

(34:44) component to this whole thing uh because otherwise people want the government especially wants people to con be convinced that somehow that uh the zap is not real so that they can come out and say yeah this footage is real and come up with some excuse for why they haven't why they've been sitting on it right we're not going to let them do that it's all real unfortunately you know es especially unfortunately people who don't want to believe so uh without going through all of this here what I'll

(35:07) say is that this kind of proves if you want to go through all this digital forensic stuff here there's a ton of stuff that it would had to do to make this um and if this will then be corroborated by both the mar Marvel visual effects expert who we have on the record and the mavel top gun Maverick uh expert who actually posted on read it as well how they actually had to cheat in the movie they made in 2022 and they're not sure how someone would have been able to create this in 2014 now here's the part where you

(35:36) wanted the the video is encoded in Standard 24 frames per second and the difference here this is what proved it to be real is that the background's six frames per second so people actually thought that uh this might be a situation where because there's a difference that it might prove it to be fake and again the **debunkers** thought this as well and this ended up proving the videos to be real is that you can also see the mouse situation here people point it out it's like a strain gauge type joystick or

(36:03) really someone's like uh holding something down to move the larger screen and not have the mouse move and then tacky ngi who's somebody who you know I don't necessarily get along with anymore uh because they were trying to tell me that you can't prove anything to be real or not and that's not how anything Works yes we can prove things to be real uh and that's how investigations work all the time that's how we convict people of crimes um basically went ahead improved took all that information up there

(36:29) improved the campy CGI so that the citric session is running at 24 frames per second there's a screen capture terminal running a resolution of 30 frames per second but that the streaming remote virtual sessions at 24 frames per second which pretty much makes this convert down to 24 frames per second and then we can see this remotely navigating around this very very large field of view which is what a satellite would be able to do right very large field of view six frames per second so what this does is this proves that what we're looking at

(36:57) here is a connection to a citric session that's looking at a real satellite spy database and it's got the 3d stereoscopic effect that we've already proven as well so that's very important it proves that what we're looking at is legitimate um now let's see what else we've got here um yes if Joe Rogan wanted to get on this like that would be the ideal situation right because he's got I don't know 10 million people that follow the point here is we've proven it to be real the reason why I'm throwing

(37:24) myself out there is that I can easily convince anyone that it has a relatively open mind that what we're looking at here is real I mean look at all this this proof that we've got right um I would not be able to come up with all of this if this was somehow a hoaxed video that we wouldn't be able to glean all this real information from it um so if we get to someone like Joe Rogan then the whole world will know it's true and the reason why I'm 100% convinced of that is I already went on uh the

(37:49) confessionals which is a very was a small podcast it's probably getting a lot bigger now and I did my whole video appearance with them and the response is overwhelming even people that were Skeptics have come to me and said wow you know you were able to present the evidence in a way where is you know it's damning and so imagine we scale that up times a 100 right that video right now has over 120,000 views on YouTube imagine if we take that to Rogan who would have millions everybody will know that the government lied and I

(38:18) think that's probably why he would you might might be afraid to push push this right like the government will actually push back on him for trying to expose this potentially Maybe try to deplatform him for it because what we're looking at here is this this is most likely classified footage that the government has not officially Declassified so for anyone who has an NDA they can't talk about this footage they're legally not allowed to and that helps to explain why so many people are quiet on it they're

(38:44) not legally allowed to talk about it I don't have an NDA uh I and until somebody tells me this footage is real and I'm not allowed to talk about it then I have no reason to not talk about it um so let's see see what else we have on questions here yeah so if for somebody to have fake this cuz like a lot of people want to say well I could have made this I could copy this right but again there's nothing to copy it from this is an original work it's not like it was out there and somebody just recreating it

(39:14) it's not out there at all and the reason why it's not out there is because this is real classified footage so good question on that one um have I been threatened no I have not been threatened although I have had a group group of an extremely coordinated group of people who have been trying to dox every aspect of my life to try to figure out if they how they can cast uh you know discredit me in whatever way but I completely expected all of that everything I've done up until this point has been um you know measured from my

(39:44) respect and I knew how this would play out you know I saw people like Bob Lazar come out and personally I believe him you know I don't know that he can prove his case but I I

personally believe him and I saw what they did to him right they just completely discredited him and uh go ahead and refresh by the way if you guys are are not able to see so they discredit the hell out of him so when I saw this proof and I realized that I have a security clearance that makes it almost impossible for the government to discredit me not totally

(40:09) impossible they'll try to find a way right um and so that's part of the reason why I decided to be like the person who's the spokesperson for this you know for a lot of other people there might be easy ways to discredit them and then they'll discredit the footage they'll discredit the case but for me it's a lot more difficult so what they've tried to do there's been a literal coordinated group of at at least 15 to 20 people perhaps more who tried to go through every aspect of my social

(40:32) fingerprints anything they can try to find to try to discredit me they tried to use a GoFundMe I address that uh they've tried to claim that I'm harassing family members which is total nonsense as well um so these people are coordinated and their whole goal is to try to discredit me which goes to show their intentions right they they're not trying to discredit the evidence they're trying to discredit me personally um but I haven't been I have not been threatened um and I haven't been afraid

(40:58) of the government for since the first week after I started getting the evidence out there to the wide audience uh you know I realized that if they did do something to me then it's just going to prove everything to be real and that's still true now as well uh but even if something did happen to me I would not be uh you know I would have no regrets you know this to me looking at this and what this all implies is absolutely worth my life or anything that anyone would try to do to me um yes it looks like a targeting

(41:24) system I agree uh buffer not working um I had tried to fix that but again I'm I'm not great at this stuff so we might just have to try to make do for this for this stream right now um yeah so a lot of people want to think that what we're looking at is non-human intelligence so let me pull up another video here again let's look at this is I think the higher version of higher quality of the satellite one so this is the one that doesn't show the 3D stereoscopic oh this is the that is the 3D stereoscopic one let's

(42:04) see wait why is this not working okay well we'll just look at this one again so a lot of people when we look at this want to think this has got to be non or you know aliens right but you know bad news guys it's it's not um they're filming this before these orbs even show up so they either got really really lucky or this is just a US military operation and again what we're looking at here there aren't little aliens flying around in these orbs these orbs are actually likely having a what we're seeing is an

(42:38) orb is possibly just an energy field around them these are not the same as the metallic orbs you guys are seeing in ufology these are different what this is is some type of probably very small device that has an energy field around it that's allowing it to float freely throughout this air now it does it is a trick because when you look at you see this triangle pattern everyone thinks

that because we see that triangle pattern so often and I think that when we do see that triangle pattern you know those when we see that out in ufology

(43:06) you know you kind of see them blink in and out and all these videos and I've seen a lot of those videos that's not like what's going on here this is a targeting system that we're seeing here and this the pattern is too exact to have anybody flying this non-human intelligence or excuse me or not so what all the evidence points to is that this is actually an operation and again the the P um the fact that it's a fire and we've proven that it's a fire also indicates it's an operation

(43:34) you have to be very careful about ascribing human motivations to a non-human intelligence I think that the biggest mistake people make is that they think aliens non-human intelligence are going to act like we are they're going to think like we are you know um if a being was uh evolved on a different planet there's no reason to believe it's even going to have like a conscience and believe in Morality right so this idea that these benevolent being are coming down to save the plane there's no basis

(44:01) for it um but more importantly there's no evidence for it either we do have evidence that this is potentially us you know us technology and we have a motive the people that were on board This Plane the 20 uh freescale semiconductor scientists they have been linked to superconductivity which is the technology that we see on display here so there's a lot of evidence that what we're seeing here is somehow our technology now whether or not we've come about that and the military just happens to be 5050 years more advanced than the

(44:30) public is or it's reverse engineered I leave that up to you my personal opinion is that this has to be a reverse engineered technology for the same reasons why people think it's non-human intelligence it just looks much like what we would see from UFOs right and so I think that that's very important um so let's take a look at some of the other questions and then we'll move on to some of the other parts yeah no they're not going to be happy that I've uncovered this for sure but again if they do anything then it'll

(44:56) just prove everything to be real right I've put myself out there on so many spaces podcasts you're listening to me now you can tell that I'm a you know just a normal person um so if anything were to happen to me it would just prove everything to be real and I would have no regrets um oh boy so yeah okay people that are claiming that their brothers or their cousins or whatever are work with satellites are full of crap so don't listen to that um because first of all they wouldn't be able to tell you if

(45:23) they were real um this is classified information they literally cannot tell you that if they told you that what they were looking at was real they would be arrested just like um just like Edward Lynn was so um be careful of people who are lying uh especially you know in our chat on [Reddit](#) Etc you know there's a lot of people that are going to try whatever they can to cast doubt on the videos but the evidence speaks for itself and that's what we're going to follow um let's see here let's see now let's see what else we've got

(45:54) here okay um um where are the people that were on board okay so we don't know where they went right we don't know where the people went the problem is we're seeing this plane disappear and let's look at the slow-mo zap here of this as well while I'm talking about this we we see the plane disappear but we don't know where the plane's reappearing and that's something that's still like you know do you have to have orbs on the other side to make the plane reappear or not um really hard to tell

(46:22) now looking at this we can actually see in the last frame the plane gets dark along the edges here as well which I think in my personal opinion may indicate that these orbs actually are creating some kind of field around the plane which is allowing for the whole plane to undergo what we would call macroscopic decoherence um and we'll have to take a look at the double slit experiment for you guys to really get a better idea of what macroscopic decoherence really means but the idea behind macroscopic decoherence is that the plane is being

(46:51) reverted back to a wave function it's going from a definitive point in space SP time to a probabilistic point in space which now allows it for traveling faster than the speed of light which is how we come across things like quantum entanglement quantum teleportation uh non-locality is what they call it and all these things emerge from the double slit experiment is realizing that if we look at the particles being shot through the slits it changes the way they act the only way I can be doing that is that they're acting they're somehow acting

(47:25) faster than the speed of light and what we call that is the wave function collapsing so what we're seeing here is the opposite of that we're seeing the wave function be rebuilt which is really far out there science but it is supported now only in the last few years supported by actual science actual scientific papers and experiments that have been done in the public now has it been done to a 777 you know we're looking at the first time right here but notice these things are converging these orbs are converging

(47:56) you you can actually see them flatten right right about here look at them flattening this could indicate that this is uh gravitational lensing at play personally what I think's happening here and this is my own interpretation just my own interpretation I'm not an expert is that like if you take two magnets and jam them together really hard those magnets are going go flying AC apart you have three magnets three is the minimum number you need to be able to create a flat portal effect essentially in two in

(48:26) uh 3D in 2D space um and so I think that that's what's Happening Here is they're somehow using some type of amplification as they converge like this to create the zap and then there's actually a frame let me see if I can pull it up uh it's hard to see well we'll have to show it but there's a frame where you can see the tail of the plane sticking out before the whole plane is enveloped by this whole zap that we see here and again point out this zap looks nothing like the VFX nothing at all like the VFX

(48:56) effects it was a very sloppy attempt to lie and the way that they did that is they tried to compare one frame because if you tried to compare the whole effect it'd be extremely obvious

that it's not the same so extremely disingenuous attempts to **debunk** the footage uh let's see what else we've got here yeah so if it's superconductors what are they doing it's basically teleportation you know in layman's terms what we're seeing is teleportation um and again it's rebuilding the wave function and that

(49:24) rebuilding of the wave function now gives the plane a probabilistic point in SpaceTime um and that's what allows what we would see as teleportation now if you want to be really detailed what's happening is the plane is somehow being converted to a Bose Einstein condensate the idea behind that is it's going from fermion which fermion are everything you see is basically made of fermions and the reason why we would see something like this cup here is that all the fermions have to be in different places in space and

(49:54) time but bosons don't have that requirement bosons can be crunched down into a single point and that's why we have things like lasers okay um and so if we have a laser those are bosons so there was actually a YouTube video that was posted by Anton recently that prove that you can convert fermions to bosons now only certain elements are supposedly able to do that but I think the science we're seeing here is now showing there's another way to do that where you can do it at a macroscopic level and that's what we'll be digging

(50:23) into more let's see what else we've got here the vacuum force of the orbiting objects uh I don't I can't speak too much about that and the Twister and the spinner effect that we're seeing there I think a lot of people mentioned that's a a Tor dial I'm probably saying that wrong effect um but you know I'm just an amateur when it comes to physics I'm learning a lot but uh I'm certainly not an expert especially when it comes to stuff like math and mathematical proofs I do have links to some of the ma

(50:51) mathematical proofs I do um and we can look at those later but you know I'm not an expert at those uh I won't be going anything psychic related or anything remote viewing uh that's not where I'm at personally in my uh you know um kind of life at this point uh I there's not any way where you could even really you know link that directly evidence-wise to our case so you have to be very careful because how do you determine whether or not someone's telling the **truth** or whe they're just making up a story right um

(51:22) it comes down to belief and I'm not into belief what I'm into is hard evidence and stuff that we can see and we can confirm um in terms of contacting Edward Lynn I don't really want to speak too much about that I don't think we should be trying to harass anyone like that keep in mind this person took a plea deal they're likely legally not allowed to talk about the videos okay so if we were to bug them we're putting them in legal jeopardy so we do not want to be harassing them in general although what

(51:48) I would say is that if Edward ly's out there and can find a safe way to get information out then he should because as we can see here we've already uncovered everything and we need to get this guy a presidential pardon okay um let's see what else we've got here yeah and just be clear this is not conjecture this is hard evidence that we're looking at here this is proof okay this

is not conjecture in any way shape or form um so a lot of people want to claim that you can't know things again

(52:15) that's not how it works we have hard evidence we're looking at it we've built more evidence here than has ever been used in the history of world to convince anyone of murder or probably any crime ever we have two videos we know the location the time uh we have a witness who is there as well in addition to 10 other witnesses will confirm the lithium ion battery fire scenario we have corroborating evidence that the fire scenario is consistent with what would happen in addition to the orange glowing

(52:40) plane so again we have absolute proof that this is what happened it's not conjecture uh let's see what else we've got yes the Drone and satellite footages are both perfectly in sync so where's my side by side huh I actually didn't post the side by side here that's interesting let me pull up the side by side for you guys really quick just so we can take a look and then I want to dig into some of the other stuff um so let's see where's my videos let's see is this one going to

(53:14) work okay oh yeah okay so you guys should be able to see this now so this will let you not see that what we're looking at here is perfectly in sync with one another so you can see that first orbs coming in and keep in mind this was manually put side by side so it might be slightly slightly off but you can tell that they're in sync here I mean the formation here is just so weird watching it right and you can tell these things are not being affected by gravity they are free floating throughout space you can see them again

(53:54) the Heat Signature you can see spinning on their axis there you can see that heat signature spinning on these orbs and now they've got this vertical orientation getting ready for the teleportation and boom zap okay so these videos are incredible I've probably watched them a thousand times maybe more um I recommend you guys watch them a few more times as well if you want now let me answer a few more questions and then I want to look into some more stuff here yeah and again I already discussed the thing about why it's not uaps so you

(54:28) can go back and and go through the recording there but the intention the fact that the orbs are were recording before that the fact that we can't attribute human motivations to non-human intelligence and we've already shown that there was a fire emergency event here everything points to this being humans that are trying to save other humans um and there's there's just simply no evidence that what we're looking at here is non-human intelligence of any for any reason we can actually explain all the science

(54:54) behind it as well so so we don't need non-human intelligent explanations for this and I prefer simpler explanations so if people think that there is a non-human intelligence and they want to try to prove that feel free right I've put all the evidence out there so use whatever evidence you think would confirm that and and make the case for it absolutely you know go for it I want people to be able to believe whatever they want to believe and if people want to come up with other stories please go ahead you know one of

(55:17) the criticisms too is why are we always hearing from Ashton well I'm the literally the only person who's pushing the evidence forward pushing the case forward and building the story if other people want to do that I've always been open that they should do that and I put all the evidence out there publicly so you can use the evidence that I put out there to come up with your own story as if you want as well but keep in mind that my story is my story for how this works out so don't steal my story you

(55:40) know you can support my story but come up with your own story if you want especially the debunkers now keep in mind to debunk this you now have to come up with a story where somehow reeside aan was involved in faking this video because otherwise why would they put that the receive date is March 12th 2014 right the only reason why they would do that is if it's just legit that's when they got it you have to come up with a reason for why they would lie about that otherwise your time to make the videos is four days which no one

(56:06) will every everyone will agree there's four days is not enough time to even barely begin making these okay let's see what else we've got what if it was China okay so that's an interesting thought right what if it's another Nation the problem is kind of the same with the non-human intelligence there's no evidence for it did China just send some orbs out of nowhere I mean the United States government was tracking the plane they had to deploy the Drone to get into position they're the ones filming it so everything points

(56:33) the United States government being the one who is the one who did this additionally China released a satellite picture uh like the next the few days later that almost indicates that like they knew something happened but they weren't able to prove it and the way it was reported in Western media was that oh this might be debris but if you look at the picture it it looks like um it looks like three or orbs so I'm just going to right now quickly Google satellite China MH370 that's all you have to Google and you'll get the

(57:03) picture and I'm just going to press images and I'm going to go ahead and try to link it up here for us let me see did that show up yeah okay now look at this I mean does this look like debris look at that that looks like three orbs to me I mean so maybe this is maybe this isn't I tried to look and see if this Cloud pattern matches uh it's really hard to tell but to me this is chy to going we don't have high definition like you do but we know you did something to this plane that's that's what it tells me when I look at

(57:32) this now back in 2014 I had no idea why they were showing this picture but now with retrospect and knowing what we know about the footage it makes me think that they did know something okay so good questions there let's see what other questions we got because I want to focus on the questions and then I but I do want to kind of go through some more of this stuff um in terms of covert organizations the wakanda theory as I like to call it there's just not any evidence for for why there would be you know this other secretly super Advanced

(57:58) organization that's doing this right that's why I call the wakanda theory there's another organization that's out there I mean they're taking a huge risk to do this so same question

applies why are they doing this right and the United States government has a reason you know they could either be trying to prevent these scientists from going to **China** or like we've proven with the fire scenario more likely they are simply trying to save these scientists they're probably linked directly to the technology that

(58:21) we see the whisper data The Whisper data is basically nonsense um what the whisper data tried to do is take the satellite pings that they know and then try to plan a route out right so first of all the satellite pings aren't accurate then the whisper route data is automatically meaningless the problem with whisper route data is it's like taking trying to follow somebody with a white shirt but everybody's got white shirts in a crowd so you're going to get lost right away I looked through all 300 pages of the whisper route and

(58:48) it does there's stuff in there to make no sense whatsoever it has the plane like hugging the coast of Indonesia you're not on the ground you're not in a boat doesn't make any sense why a plane would be hugging the coast that's not how it works it also has the plane doing a weird cutback looking to see if anyone's behind it this isn't a spy movie you know you can't figure that out from looking at pings that the plane's looking to see if someone's behind it and then probably the weirdest thing the

(59:11) whisper data has is has the plane in a holding pattern for like 25 minutes in the in the South Indian Ocean that makes no sense at all given the story of pilot suicide oh he just decided to fly for 6 hours then do do a holding pattern for a little bit like what what was really happening there is they had no data points so they just came up with fake stuff to try to make it make sense and I was all about the whisper data if you believe in the whisper data then you believe these footage is real because the first piece here Vindication you'll

(59:43) see that the very first proof was that the plane goes right through the whisper route data here it is right here so this is where we were trying to figure out which of these two points is correct we know now that it's the andam and C up here and it all lines up there the witness is there everything lines up the time 1840 UTC initially I thought it had to be down here because I trusted the data so I thought this plane had flown down here and then somehow somewhere down here the video got taken and you'll see if I go back there

(1:00:10) that here's the whisper out page right here and look at those coordinates it's right next to the coordinates if there's a minus sign in front of it right next to it like it went right through those Southern coordinates goes right through these Southern coordinates down here almost perfectly I thought there there's no way that can't be a coincidence it has to be it right turned out it was a coincidence actually the plane this whole Southern Indian Ocean thing is just a complete narrative uh yeah

(1:00:34) complete nonsense now here's a picture of the coordinates or the coordinates that we see in satellite footage right so we can actually make these out so if you look at the **debunks** that are out there the ones that are the ones if you Google them the Newsweek one says it's n77 what are they talking about nr22 you can see it right there and if you try to argue it's a three

well you got to deal with this three right over here that you can clearly see the three right here so that's how we know this is actually 22

(1:01:01) right here nr22 now nrl22 is called USA 184 and this was sent up in 2006 I believe 2005 or 2006 it has a millennia orbit which is a very oblong orbit and it sits around the North Pole most of the time we actually were able to reverse engineer and figure out that this was at the North Pole looking down at our other satellite at the exact time where this happened at 1840 UTC this is most likely command satellite they're logging into the database they log into the command satellite and we've proven that the cber

(1:01:30) system is like a an internet Network that communicates with all sorts of assets satellites drone um as well as other information as well using something called the Sig in signals intelligence system and this is how we found the leaker the leaker has signals intelligence written all over their profile so we were able to rule this out and if you read my story of the evolving investigation you'll figure out that you know we moved away from this when we were able to confirm that the northern coordinates were

(1:01:58) correct okay let's see what else we got yeah converting to panang is definitely definitely an emergency and they flew right over panang Lanka International Airport and then went to andc presumably they actually had Communications and the communications have been classified to cover up the what we see here and that's where they Rond de Vu right is at that point in the excuse me in the nicobar islands um yeah why are all these smart uh folks on one plane that is really big question right that's way too many people to be

(1:02:34) on the same plane right so I'm just going to switch up real quick and show you guys one of the most recent pieces here wow 55,000 views on this one holy [REDACTED] um so one of the ones I did yesterday there's two important pieces and one of them is this one called freescale superconductors okay so this I call it free scale super conductors and being koi there right free scale semiconductors they had 20 people on the plane this is way too many people most companies have like a rule you can only have three or four people on the same

(1:03:03) plane just for incidents like this right and you can see these were very people had a lot of technical background and experience top quality Engineers that we're dealing with here this is a big deal to lose these people and we found a 2005 National Security Agency report that basically was looking into commercial use of superconductivity and freescale semiconductors was called out nine times in this report I put some excerpts here as well they were aiming for industrial maturity by the 2010 to 2012 time frame that's two years four to

(1:03:35) two years before our events and then at the bottom of the conclusion without government investment this will not happen how much you want to bet they got that government investment guys and if they got that government investment now the US government has a motive to keep these people alive here's the report uh super conducting technology assessment by the National Security Agency let's go ahead and look free scale nine times free scale semiconductors producing commercial pre-production at free scale I mean

they're looking into

(1:04:10) what free scales doing and they're trying to figure out how close to Super conductivity they are look at all this also look at this motor Rola semiconductor sector now called freescale semiconductors Motorola is the company they split from Motorola the ones whose batteries lithium ion batteries burnt up I mean it seems like a lot of coincidences to me guys um but that's just me okay let's see what else we got here um what other questions they claim the comms were shut off but do we really know that the comms

(1:04:41) were shut off you know that's a big thing um so it's pretty interesting yep and good points there so rotary motion has been in our Discord so if he wants to help out with some of the information please do so let's look at some other information that we've got out here how did we prove that nicobar Island's location was correct so this is another one where we able to prove and we moved away from the southern route okay um so initially a guy named Mr gwon had originally kind of tried to show

(1:05:08) that it was the northern coordinates but he did so on a pretty awkward way so I'd try to do it in a much clearer way first we could see all the coordinate shifts here okay so if we map these coordinate shifts on a graph you can see the problem down here these are the two options oops okay so either the plane is turning South into the East here or it's turning North into the East here this is the inverted part if there's a minus sign so can you guys tell what the problem is right away this one has the plane

(1:05:40) turning right right this one has the plane turning left what direction is our plane turning in our videos it's turning left in both videos what this means is this is the only one that can be correct the Southern coordinates or sorry the northern coordinates this route right here so this indicates what we're looking at is the northern coordinates and then what we're looking at visually is actually visually accurate to the coordinate shifts it's going south into the East here so this proves that our location is

(1:06:10) the nicobar islands and also then we found a witness who was at that location who reported seeing the plane what time did she report seeing the plane 1840 UTC everything lined up to 1840 UTC so let's go ahead and take a quick look at the initial reports that came out right after the incident so initially reports all the initial reports said radar contact was lost at 1840 UTC that changed weeks later when they released the radar data they claimed it was 1822 all the initial reports at 1840 right at the end that's the time our

(1:06:47) videos are happening that's the time the witness saw the plane um now if you scroll down here I'll just show you the images I mean look at this image lost contact at 18 at 240 this is 1840 UTC this was the next day the all the initial reports were claiming that they lost contact 1840 they had to lie they had to cover it up they had to pretend like it wasn't there here's the an image of the satellite overlay from that so I'll show you guys the the video the satellite video uh fly over as well

(1:07:20) so we recreated USA 229 and it's exactly correct in the right spot but before that I want to show you the Ping data look at this ping data I went and looked at the real ping data the official ping data on the Su log tab you can look yourself all the data is legit like all this data above here there's dozens and dozens of rows that all look complete like this you get to 1839 1840 here boom it's just zeros nobody can tell me they looked at this data and went no they're nothing happened here this is just normal no

(1:07:50) chance something happened right at this time and it all lines up to 1840 UTC so let's look at the some media real quick I'm going to do the flyover for you guys so let's look at the flyover okay so here's a recreation of the fly on the top of the screen up here you can see the time let's watch this time so we're 10 minutes before our event you see this bubble over here most likely this satellite sees way bigger than this bubble much much bigger than this bubble okay this is just we I

(1:08:26) think we made it a thousand kilometers this probably sees many thousands of kilometers because it can see a very wide field of view notice there's these two satellites USA 229 has two satellites that can create that stereoscopic effect that we see so our satellites are floating along here 1835 and now we're going to hit 1840 right in about 1 minute here or 1839 that moment like right here so we're getting there and we're now we're looking right down at our point at the same time that ping data happens right here boom there it is

(1:08:59) Smoking Gun right here you're staring at it folks satellites were in the exact right location to pull the data they need to be able to build the satellite video that we see 3D stereoscopic staring right at the coordinates now the plane is actually probably slightly outside this bubble and that's why this bubble the battlefield VI is much bigger the plane's probably right here where my mouse is this is where KT's boat is and so she sees the plane going right around her so it's right about here

(1:09:28) probably and the other thing too about this is I want to show you the cbers system so people will say well why is it not why is there not more apparent movement you know if this satellite's moving that quickly you know how are they cheating it to make it look like it's kind of like more stationary than it really is we found that out too uh cbers Mission I love the cbers video this is like my favorite video Global persistent infrared surveillance continues to be a critical National Security space mission the Cold War

(1:09:55) Focus on this is what they're doing all the time on the these outside ones these are geostationary satellites these are super far away so I'm just going to pause it right here these are geostationary these are 40,000 km away these are your Millennium orbit ones with these oblong orbits that are command satellites and then you have the low earth orbit ones that aren't really present here that are ones that we see that are low earth that like are USA's 229 and look at them scanning look at the huge field of view that they can

(1:10:22) scan systems has EXP what they're doing here is they're scanning this information and they're building what is essentially like a Google Earth 3D stereoscopic in some where they can

then track missiles planes boats anything they want in a huge Battlefield awareness already provided to in so look at this I think this was actually I don't I think this video is kind of old in general look at what they're doing here they're just doing IR video scanning of the whole planet Earth Orbit so this explains everything about our

(1:10:52) satellite video EXA why it looks the way that it does how they're able to get it so that it do you remove the atmospheric interference they're using the C system they're basically using a computer program that's taking the data from the satellites and putting it together of sensors simultaneously and independently am I mean it's scary because this was 9 years ago so every time I walk outside now I'm like might as well wave up to the satellite they can be watching you and here's the thing they can pull back

(1:11:17) the video recording anytime they want they don't have to be actively looking at you like hey what was Ashton doing you know last week loc uned this this is full GL this was whenever they set this many times uh many years ago so we think that that system went online back in 2005 uh so pretty early on 2005 that type of time frame um and so that's our Smoking Gun right there is the USA 229 fly over that we saw okay so let me see what else we got here let's see they're they're not contrails again guys

(1:11:56) we're looking at smoke okay um so smoke is going to dissipate and move around in the air right so that's there's nothing unusual about the way that the smoke moves it's uh definitely 100% legit some people tried to claim that there's some sort of weird jitteriness um and that's due to the fact that people if you use editing software to stabilize this then you're going to have artifacts happen and that's what occurred with the jittery motion is people use stabilizing software and then they try to claim that

(1:12:23) that **debunks** it you can look at it in the like we've just looked at it three times there's nothing that's unusual in those videos and again we've already proven it's a citric session logged in so prosaic **debunks** don't work there's no such thing as it doesn't look good enough to me we've already proven it's a real citric session logged in um so let's see what else we got here um radar range on Diego Garcia good question it's been reported that Diego Garcia has radar range of 3,000 miles

(1:12:55) what that would mean is that they could track this plane easily from the point it took off the whole route right so that's another reason why there's no chance that they weren't tracking This Plane even before I saw these videos I knew the US government had to know more about it okay um let me see now okay let's talk real quickly about why this plane did not crash into the South Indian Ocean okay and do I have that I think this one will do have the information on there So This Plane objectively I'm going to

(1:13:25) State this as a statement of fact did not crash into the South Indian Ocean so the first reasons right here the Sosa system which is the system that heard the Titan sub pop and the Navy lied about it for 5 days while on CNN you're watching oxygen counters go down and then after 5 days later oh yeah we heard it pop you know immediately the Sosa system would have

heard this if they're detecting a tiny sub pop near the Titanic they're going to detect a 777 crashing into the ocean guys so they would have heard it they would

(1:13:55) have known right away where it happened and when it happened it would have been no question we would have found it right away you also cannot have a no debris field for a 777 crashing into the ocean 777 crashing into the ocean there's going to be bodies everywhere luggage everywhere pieces the plane everywhere we would have seen it the next day from our satellites and various other things remember that Wagner **Russia** guys jet he had a tiny private jet they had the debris field the next day on satellite imagery okay so they definitely

(1:14:24) definitely we're going to catch a 777 crashing into the ocean not possible for it to not leave a debris field sosus system doesn't detect it now I said the wrong system here Jordan is actually the radar system in Australia the radar system in Australia though should have seen the plane if it went to the South Indian Ocean they didn't see it either Indonesia also had a radar system that should have seen the plane also did not see it Western Australia has hydrophones and so does Diego Garcia none of these

(1:14:51) heard the any type of impact into the ocean so again completely impossible for this plane to have crashed into the South Indian Ocean they would have detected it on radar they would have detected on three different Hydro two different hydrophone systems and the Solus system would have detected it not just that there was 19 19 family members that claimed that they could call the cell phones of the of the passengers 19 not one or two 19 okay so let's go to this one proof that the satellite and one person proved it right

(1:15:23) here they're calling the phone this is a recording of them proving it the phone's ringing in this this is a Chinese only reported news station they calling their passenger phone it's ringing you know that doesn't work you guys want to test it out go ahead and have somebody turn off their phone and give it a call it doesn't it does not ring CNN tried to have some expert come on and claim that this could happen yeah go ahead and prove it okay total **[REDACTED]** um if a phone is underwater for even like I

(1:15:49) think 30 minutes or so uh especially in salt water it's going to die and I believe after it go goes underneath like a couple feet of water you're not going to be able to get a signal plus I actually have images of how far the satell or the cell phone towers extend they don't extend out into the South Indian Ocean so there's no chance that you would be able to call phones like this if they're in the bottom of the ocean and especially not 19 of them and they signed a statement so if you go

(1:16:14) down here 19 families signed a joint statement confirming they were able to make phone calls that were connecting to the missing passengers without an answer that's a lot of phones calling guys why would they not look into this you'd be able to trace this and confirm that this is real right so the fact that they didn't look into this super sketchy and again it all points to the same thing the cover up right okay good question let's see what else we've got here um sorry I don't know what program

(1:16:46) you're talking about the orange lights flashing around taking pictures oh yeah so the large scans yeah probably those large scans are more General generalized the ones that are super far out from that cber system compared to the low earth orbit ones right we probably much higher quality that's probably how we're getting that 3D stereoscopic uh visuals from those low earth orbit USA 229s that are going down very low now since then they've added a lot more so let me show you guys this as well and this is how we were able to

(1:17:11) find out Naval ocean surveillance so if you Google Nation o ocean surveillance satellite I'll go ahead and pull this up I was trying to figure out what satellites it could be while people were modeling them and so we were kind of working in tandem to figure out what which satellites this could be cuz I knew that we'd be able to figure out the satellite situation I didn't know we'd be able to figure out as much as we did um so you you can find out these no Naval ocean surveillance satellites and

(1:17:39) what are they use for electronic Transmissions from ships um and they're in low earth orbit here cluster satellites so these are generally more than one satellite right um now if we go down and scroll down here you can look at all them these these are the older ones we needed something a lot newer and these were the ones that were in triplicate so we really need ones that are in 2000 and Beyond and probably even like 2010 and Beyond because we're seeing some pretty Advanced capabilities here so we looked

(1:18:05) at some of these as well we looked at actually all of them in general uh but notice there's not that many like this is not a lot and once we got down here we pretty much narrowed it down to one of these two right here USA 238 or two USA 229 these are the ones we were thinking because we looked at the Trump leak which let me pull that up as well so you just Google Trump satellite leak and I spelled it wrong but it doesn't matter let me pull this up here look at this so This satellite they were able to figure out is USA

(1:18:37) 224 and USA 224 was also sent up in 2011 so when I saw this I said wow that looks very similar to what we are seeing in terms of optical capability or IR capability now the big thing here is you can see a huge Shadow on this we can't see any big Shadows or any Shadows at all in ours which indicate this is daytime but ours is not daytime so the people that reverse engineered this had a much easier job than we did because they could actually tell the time of the day based on this Shadow here versus us we had to like literally look up every

(1:19:06) single satellite that's out there so if you look you see USA 229 there it is right you can see it has an unnamed satellite right next to it as well this is launch NR 34 so this is our satellite that we modeled this one 238 is not in a different location and then the rest of these are from 2015 or Beyond so going back to that **debunk** the one **debunk** said NR 77 that is obvious nonsense we're looking at 22 the **debunk** that that copied from claimed it was NRL 33 that's also incorrect because we could tell it's not threes it's twos so

(1:19:38) all the official **debunks** if I go Google them right now MH370 uh what do I look up **debunk** or something like that yeah let's pull this one up here let's just look at this art together

this this was the first one that was out there before we started investigating this France 24 one right so if you look at this **debunk** they try to claim that this is fake but if you look at that actually read it and this is why people it's just so embarrassing how silly people don't have any critical thinking skills like just read what it

(1:20:08) actually says okay let's not try to just wait where is it they delete it where is it interesting uh let's do mh37 videos oh wow okay so that trans 24 one was out here I don't know where it's gone now Google's been playing around with it a lot but if you go to do the video show it being teleported this Newsweek one right let's look at the Newsweek one I **debunked** this so this is August 9th I **debunked** this the same day within one hour of it coming out and I have absolute proof that I'm the one who

(1:20:40) **debunked** it this was before anyone knew who I was I still had 30 followers right and I **debunked** this video on Twitter have absolute proof now if you go look at it here it just basically quotes some people saying well this doesn't look right to me um comments suggests that it could be linked to MH370 it was **debunked** several months ago see now it goes to France 24 article so let's look at the France 24 article here and why it doesn't show it if you only have one minute doesn't have any factual reason for why it's **debunked** you go down

(1:21:13) here because it' be found in Google this isn't even the same as our situation this is not the same thing either uh why is in the middle of force again this isn't even our videos this is not even related to our situation here this is not related either uh so where's our thing um the three orbs one here okay let's see so we can see this actually they do get this part right it's from Regis sideon on right and that's the only thing that I think factually they even get correct Scott Brando who's a

(1:21:42) **debunker** who is somebody who has a **debunker** account that runs Bots that we've proven that they run this UFO interest bot situation tries to claim that this was edited by a visual affecting enthusiasts there's no factual basis for this statement here this is an opinion by somebody who's not qualified but they're going to run with this in this fake **debunk** anyway inconsistencies again this is nothing that has anything to do with **debunking** our videos that's not that's not factual all here's the only factual basis hoaxy

(1:22:11) another **debunker** account that's probably just a bot not even a real person they downloaded this and they say it's NR 33 this is not NRL 3 you can see right here this is a two the this is the only piece of supposed factual evidence in the whole thing it was launched after the event yeah you're right because that's not what we're looking at right here this says nrl22 so the only factual thing in the entire **debunk** is factually incorrect that's it so that's that's it that's that's all

(1:22:41) there is to this **debunk** that's the only factual piece in this whole **debunk** and it's wrong objectively wrong now what did let's take a look at what Newsweek did so there's only one piece of factual evidence let's try to find it the hoax side oh they changed it so this used to say NRL 77 they've edited it now so they had this originally Incorrect and it used to say 77 which

I have proof of um as well I bring the receipts guys every single time so they've edited it now because what they used was an AI to just

(1:23:11) copy the article into this new article and the AI screwed up and copied the NRL part wrong so they've changed it to this and again this is factually incorrect it's nrl22 which was launched in 2005 or 2006 so this **debunk** is factually incorrect and the fact that it's still up tells you that they're trying to hide this information you know otherwise this would have been deleted a long time ago you know these people should probably be sued in my opinion for continuing to support this factually incorrect

(1:23:36) information and hiding the true events and here you go you can see they updated it so a week later after I proved this wrong on the Twitter uh they went ahead and changed it to 33 so this is straight up clown shoes Newsweek delete your fake **debunk** because this is not real now what we is happening here is this is the satellite that's taking our video as we as we've shown here now if you click on this as well I believe uh let me see did they edit this at all I have older screenshots of this I believe it mentioned signals

(1:24:10) intelligence yeah tracking ships and aircraft look at this used to track ships and aircraft from Radio Transmissions they admit there we go guys Bingo we got you so we have proof here and what they using something called sigint so if I search search sigint payload Watch What Happens just Sig in payload okay what's the first thing that pops up mq1 C gry Eagle that's a bingo guys that's a bingo okay so everything is lining up we're looking at our assets they're in coordination using a signant payload and if we look

(1:24:44) at this image here I think this is the one look at that look at this image over here on the right boom there's our interconnected satellites there's our 22 communicating with our other satellites here communicating with our airplane communicating with our drone this is an interconnected Network we've been able to figure out everything about how these videos work okay let's see what else we've got here um okay so let's see what else we've got um we're not going to talk about any

(1:25:12) other conspiracies but in general I don't really believe in any other conspiracies if you guys want to know the honest **truth** um this is a verifiable conspiracy which blew my mind because I was never in the UFO community I was never in the conspiracy Community um as you guys can see from the investigation I believed all the official data originally right I thought this plane had to be in the South Indian Ocean but as we've dug through it we've been able to prove that no this is just the biggest conspiracy of all time they

(1:25:37) covered up a very mundane event a fire and the only reason why you would cover cover up something that basic is what we're seeing in the videos classified technology that is unknown to the public from nine years ago um let's see what else we've got okay taking a look at some of the comments real quick the black and white Fleer version of it appears to be a mirrored version that they put in black and white so I've seen it it doesn't really add anything to our situation it's really just the same um it's the same Drone

(1:26:10) footage that's been mirrored but that's good let's see what else we've got um yeah you can tell that the three looks completely different in the satellite footage so it has to be a two that we're looking at people are saying that I'm toxic and threatening them by private message uh that's categorically false uh if I think that people are trying to discredit me in whatever way they can um I I messaged a couple people early on that were lying about the videos trying to claim that they were fake and said that if they

(1:26:44) keep lying about the videos I will expose them that's not a threat guys that's called Don't Lie To people otherwise they'll prove that you're lying okay so they're trying to Mis categorize that as a threat for some reason I've actually been threatened you know one of the people on Twitter literally told me I have to be careful of what's coming next what exactly does that mean right so you know telling people that they're liars and they shouldn't lie that's only a threat to

(1:27:07) people who are liars um and it's only you know because it can only damage them if they're lying so the answer is pretty simple don't lie about the videos we know the videos are real we've proven it if you lie about them we'll prove that you're a liar you know if you think that that's a threat take it the way you want to take it just don't lie about the videos there won't be any issue uh with respect to being toxic in general I would say that the people that I've been blocking are

(1:27:32) people that have you guys have to realize you know how many people have tried to come into my DMs to try to tell me what to think it used to happen like five times per day people that are lying to me telling me that it can't be smoke that I have to believe that that I can't believe that anything's real that I have to act certain way or not a certain way I'm running an investigation that I don't know who I can trust the last thing I want people doing is trying to come to me privately and telling me how

(1:27:56) to think and I that's why I set rules very specifically in my TW in my Twitter in my Discord do not come to my DMs and tell me what to think you can feel free to post your own opinions whatever you want do it publicly so that everyone can assess it so that there's nothing sketchy happening right people constantly broke these rules almost on a daily basis and constantly came there to try to tell me how I should be thinking the amount of entitlement that someone has to have to think that they should come to my DMs and tell me how I should

(1:28:26) think is quite astonishing right just don't do that okay either keep it to yourself or post it publicly where other people can vet your information don't try to come tell me what to think and it's gotten a lot better honestly so since then you know I've blocked those people and I'm not anyone's side some of these people were supporters of me um you know some of the people were part of our investigation right that's not how I judge people I judge people based on what they're telling me and so if you

(1:28:52) come there and try to do that I have to be I have to be fair to everyone okay and that's how we have to go about it so what happens is some of these people got blocked they got

extremely upset about this right and now they want to claim that I'm toxic or whatever I don't care what people think about me the point of the **truth** is getting to the **truth** and solving the case and the Mystery okay so what we're building and what I decided from that is we're going to build a community that does not adhere to this

(1:29:15) toxic standard that you see on **Reddit** where everybody's just cutting everybody else down Non-Stop and if you look at a lot of threads that's what you'll see right this person's terrible don't listen to them this person's awful like Jesus people like that kind of stuff shouldn't even be allowed right attack the evidence not the person if you can't attack the evidence don't say anything at all if that's too hard for you then you're going to be excluded from the community simple as that guys so you

(1:29:41) know a lot of no most people don't have any issue with that the people that have issue with that are the kind of narcissistic people that feel like their entitlement is so important that they have to that you should have to listen to what they have to say and that's just unfortunately not going to be the case um so let's see what else we've got but that was a good question in general how do we verify it's us technology um we can really only speculate that it is but again the evidence points to it

(1:30:05) being United States we have that they're on the camera there's no reason to believe that we have to include non-human intelligence in this at all there's no reason we have to include any other governments at all in general is the heat signature from the windows normal um hard to tell there aren't really a lot of videos like this that are thermalized from drones of flying airplanes people have tried to compare it to planes that are on the ground it's not the same it's much colder up in the sky at thousands of

(1:30:33) feet in the sky um so we we don't really even have a basis to compare that type of stuff too um the videos okay that doesn't make any sense let me see what else we've got here one of the UFO mods is in my DMs uh no that doesn't sound right there is one of the UFO mods in my DMs though actually if you want to know the **truth** and um yeah I mean I think the reality is that the UFOs sub**redd**it is 100% compromised there's no question about it the government controls **Reddit** if you guys don't believe that then just go

(1:31:12) look at the ebo scientist who was deleted in real time by the admins while they were posting a full physiology of a supposed extraterrestrial body or whatever there's no reason for them to have even deleted something like that unless it's real and unless the government has control of it so one thing you guys need to know about how the disinformation works is they try to throw out a bunch of fake stuff out there so that no one can believe anything to be real and I think a lot of you guys have been susceptible to that

(1:31:37) as well but that's not how the real world works we can prove things to be real as well now if you read the Twitter files you know absolutely that the government controls social media and when Elon Musk took it over he ripped that away from them which is why they hate him with the passion of a thousand sons and which is why been posted on Twitter because that's the

one place where I won't be banned by the government under the old Twitter I would have already been banned by the government 100% Okay the reason why they

(1:32:02) banned my subreddit on Reddit with no explanation whatsoever with no warning whatsoever is because they have to control the narrative the reason why the debunker subreddits is called Alien Abduction 2014 instead of MH370 is because they have to make it confuse people right they have to make it hard the whole point of that subreddit is to kill the story off nobody in there is trying to solve the case not a single person in that subreddit is trying to solve the mystery what they're trying to do is they're

(1:32:29) trying to debunk the mystery that's why it's a debunker subreddit okay and you can't have somebody who's out there telling the truth like I was doing if you're going to try to accomplish that that's the reason why they banned my subreddit okay they also banned me like for like six days two different three-day periods despite me doing nothing at all for just messaging the moderators I messaged the moderators one time the moderators were extremely rude and responsive and I got a 3-day

(1:32:53) ban for harassment one of those was literally telling the moderators if they don't stop tagging my content with uh possible scammer they were tagging all my content that people were posting with possible scammer to discredit me that I would sue them individually which was a factual statement if they kept doing that I would and I sent a cease and desist I did do that and the same day the CE and desist arrived to Reddit they took down the tag so I want to be clear that what I was sending is a factual statement

(1:33:21) that I was telling them not a threat threat unless you think that lying again threatens you and if it does then the answer is stop lying um let's see what else anything else um yeah so the person who's still talking you're probably going to get blocked here as well so if you've been blocked you know why you've been blocked okay it's not a mystery you know why you've been blocked act better in the future otherwise you're going to find yourself getting blocked further okay um so I just want to be clear about that as

(1:33:54) well so there's nobody out there that doesn't know why they got blocked they know why they were either acting like a dick they were being condescending um they were trying to tell me what to think any of those types of situations are going to get you blocked the way you avoid that just don't act like that so I don't want to go into too much more of that I want to get into the case as much as we can uh okay yeah so let's go ahead into the flight path here guys um and again so people like I won't

(1:34:20) call you out here but if you're trying to tell me what I should think and what weakens the argument you're going to get yourself blocked don't do that if you want to build your own case build your own case okay don't tell me what I should do with my case got it it's pretty clear guys if that's too hard for you you should look internally at why you're so egotistical and why you think your opinion is so important okay so just keep that in mind again you've been you've been empowered with all of the

(1:34:44) evidence guys so if you want to build your own case on what you think is really happening do use the evidence and do that don't tell me how to run my case okay now let's see can how can teleporting save them so this is a really good question too how can teleporting save them guys um no I'm not telling people what to think what I'm doing is telling you my opinion and you guys are here listening to my opinion because you want to listen to it I'm presenting the evidence okay I've been clear that

(1:35:11) anyone's free to think whatever they want build your own case that's the difference guys so it's pretty significant one that you guys need to understand um so let's go ahead and go through the flight path and again no more crying about being moderated guys if you keep crying about it you're going to get blocked again so you know this is a opportunity for you now to have a voice don't abuse that opportunity if you want to keep talking um now let's go through the flight path here what we think with

(1:35:40) respect to here's the flight path I think why would this save the plane well we see this zap is extremely cold in the thermal we just saw it right so potentially that might be zapping the energy out of the batteries these batteries are very energetic that's what causes this Runway effect so it could be possible that somehow that saps the energy when it's absorbing that that to pull that out of there the other thing it could be doing is because it's so cold it could actually just be putting out the fire directly from the cold

(1:36:06) effect that's happening in that thermal so that's our speculation right now as to how that would be saving the plane but again it's speculation we don't know where the plane's going or what happened to it we just know it didn't crash into the ocean at least not in the South Indian Ocean now okay flight path being solved so when we figured out the north the northern locations now everything started to add up because all our plane needs to do now is fly a little bit more to the West so here's an

(1:36:33) example so here it is and I'll pull up the video as well so you can watch along because I actually have a video of this too which is pretty cool okay we have a video as well so I'll flip over to the video in a second but so let's go through the flight path and what happens here the plane takes off from koal lur it's going up here to the east actually I'm going to just use the media one it's just better than this this one's kind of this is really janky and I don't like it this one's pretty nice um the Noto

(1:37:04) deep podcast made this one so the plane takes off at 1642 UTC it gets to the it it goes pulls back at 1630 takes off 1642 UTC so about 40 minutes later it gets to the agari way point up here which is where the plane goes dark this is 602s 64 seconds after the plane says good night Malaysian Airlines flight 370 this is the first event this is when the batteries the fire probably already started here and gets to the point where a minor explosion happens the plane most likely gets depressurized at this point um but possibly not maybe not but a fire

(1:37:40) definitely breaks out at this point this point 1721 is the same time where Mike McKay sees the plane on fire from his oil rig 300 miles to the Northeast okay he saw the plane on fire

he lost his job over it because they had to cover it up and discredit all the witnesses a bunch of people along the coast here nine of them along the coast here a loud bang at reportedly 1720 UTC this is indicative of this fire breaking out right so at this point the plane turns around okay and what happens here is it turns around 10 minutes later

(1:38:13) while this plane is turning around here there's some people who are on the coast right here fishermen they see the plane flying very low unusually low this would be indicative of the fact that the plane is trying to fly low so that the passengers have enough oxygen to breathe so this turn that the plane makes it's going directly panang Lanka International Airport if you read the wired article this is the correct location for the plane to try to go to it's slightly closer than koal lur the terrain is better so that if this plane

(1:38:40) has to fly low this is going to be the correct location for it to go to you can read the wire article if you want which will outline this I'll pull it up here in a second as well so this is like very clearly here an emergency event you're flying to the next airport this is not what somebody who's suicidal would do this is not even really a situation if it's a hijacking if it's a hijacking you're going to go direct route to whatever your rendezvous point is you're not going to try to fly over a

(1:39:02) commercial airport so right when it was about here is where the P the fishermen are seeing it now so we had people hearing it on the coast we had Mike McKay seeing the fire here but he did not see it crash and he was clear about that I just he thought it must have crashed because he saw on fire but as I found out yesterday from talking to my sources it is consistent and possible for this plane to last all the way over here to the west where the boat is while on fire because the cargo bays are made to try to contain these fires the fire

(1:39:36) suppression devices can temporarily stop the fire but they're not going to be able to permanently stop the fire okay so this plane is flying over here and it gets to panang 1752 it gets over panang the co-pilot cell phone pings the tower this tells us they're probably trying to get help at this point now does it mean the communications are out it kind of indicates it but it's not a certain thing at that point okay so what does it do at this point it turns so this is where I would presume they made contact

(1:40:04) with the government right why are you going to this random Waypoint over here unless you know that you're going to meet up with somebody and probably the idea is that the assets had to be out here somewhere to rendezvous with them otherwise you would probably just try to land the plane right here in the Malacca Straits as opposed to trying to uh you know go all the way out here to the Nicobar Islands now this is where the radar data had been most likely modified so that they would throw us off the trail and they said this is the last time they

(1:40:30) talked to it but when we looked at those reports just now we know that 1840 was the last time they had contact with it which is where Kate's boat is at so our witness we have this witness out here Kate T so she's on a boat going from Phuket or from India to Phuket over here and she sees now the glowing orange plane and if you there's been a recreation of her sighting and the sighting is consistent with basically the direction of travel of the plane circling

around her boat now interestingly enough she got really

(1:40:59) unlucky and did not see the orbs or the zap effect because she went to go put the kettle on probably at the worst possible time and when she came back out there was no more plane anymore I've talked to her personally um so interestingly enough what happens here at this point then is the plane is coming over here and now our videos come into effect and now we see our videos remember we already proved that the plane our video is traveling south into the East baboom that's consistent with going around here in a circle around this

(1:41:27) location right here so when she sees the orange glowing plane this is indicative of the fire having broken out and the bromine gas in the hon fire exting machine uh device having that chemical reaction that causes the plane to glow orange again I've had a source corroborate that this would be consistent with what they would see keep in mind now it's pitch black at this point okay so the reason why Kate can see it is probably from the glow of the plane I mean you probably see the plane anyway but you can see that glow

(1:41:55) very clearly from it um if they try to land in the ocean most likely the plane is going to break apart and everybody's going to have to start swimming and that's if they survive the impact right even on controlled descent the planes are moving really fast when they land guys it's not just like it's touching down even the Sully sullenberger on the Hudson River which is very calm um you know even that was relatively miraculous I think people thought that it would the plane would break up trying to do that right so he

(1:42:22) was a hero in terms of Landing that plane um so most likely this plane was going to be doomed and most I don't know if a lot of people know this but most Mainland Chinese don't learn how to swim if you're a Westerner or an American almost everybody learns how to swim I lived in Singapore which you see here on the bottom right I lived here for a few years and I went to school with a lot of Chinese students and I remember very clearly when we had uh swim class in gym none of them got in the water and I

(1:42:50) thought why are these people not getting in the water so I asked them oh we don't learn how to swim Chinese don't learn how to swim so 70% or so of this plane was Chinese including I think like eight of the semiconductor scientists so if this plane crashes into the water even a controlled descent everybody's going to die so this plane was doomed everybody and most likely the reason why I didn't land at panang based on what we saw in the thermal is that the landing gear was probably damaged the landing gear is

(1:43:17) damaged there's no safe way to land it on the ground you could try but it's blow up when you try to land and again the plane's also full of fuel they have this plane flying for another 6 hours so this plane is completely full of fuel so you know you guys have seen 911 um you know this plan's going to explode if it hits something so this is an extremely dangerous situation for this plane it was almost certainly doomed at this point and this is why you break out the technology right we have to save the

(1:43:44) plane save the people whatever motive you want to believe in again I don't care my personal belief as we've been able to connect the semiconductor engineers and scientists to Super conductivity which we believe were seeing in those orbs is that they were saving the plane because these people are directly connected to the government technology that we see um and to me that wraps everything up in a bow in terms of the motivation behind why you would do that so let's flip it back over okay now let me answer some more

(1:44:14) questions in here because I think that was quite a lot uh I don't know much about some of the historical cases so one thing I want to say here too is that a lot of people send me videos historical cases I find it interesting but I'm really just focused on MH370 there definitely could be similarities you know I think some of the biggest things like the Philadelphia Experiment where they try to like make a whole boat disappear um whole you know big Navy ship a lot of that stuff I think is pretty interesting in context

(1:44:42) of what we're dealing with here but what's really big here is that we have two videos right um how can we prove that the drones faked in okay let's let's take a look at that as well so the only way where this any part of this could be faked is somehow the US government is involved and that's because the requirements we're looking at classified Military Intelligence so this would require a team to put together if so let me see where's my list what it would take to hoax the videos okay this is a pretty

(1:45:14) comprehensive list here that I like to go through and I'm going to make sure I add this as well to um I want these ads so I'm going to flip up here I'm going to make sure I add this to my all evidence that I'm working on as well okay why does that not work it's like it didn't copy correctly okay here we go so between 4 and 72 days to create remember based on our our images that we have of the first archive it's an original work there's nothing to reference copy it from you there's

(1:45:46) nothing like you're copying a painting that already exists out there You' got to create from scratch and kind of come up with how it's going to look you have to know how to create these realistic volumetric clouds we're looking at clouds in the background that are perfectly accurate You' have to know how to animate them how they look from the low altitude which is those cumulus clouds you'd have to be able to accurately light them remember when the flash zap goes off it accurately illuminates these very artful very

(1:46:12) detailed clouds you have to be a to recreate exactly what MH370 looks like a 77720 you're going to need to know the turning radius so that you can make sure that when we're creating the video that it's perfectly accurate to the maximum capabilities of a 777 in descent which we've also been able to prove so we're already at a point where it's in my opinion essentially impossible the top gun Maverick people this is where they kind of chimed in claim that this is beyond what they would have been able to do um where the

(1:46:41) plane would have been at the exact time the time is on the exact flight path at the exact time in our satellite coordinates how to accurately uh accurate coordinate shifts relative

to the location so you'd have to build a program to do the coordinate shifts that we see and then overlay it over your hoax and have it animate properly as well you'd have to know what the weather looks like we've proven that the weather had these cumulus clouds very low to the ground using the NASA satellites so you'd also have to somehow

(1:47:08) know that information as well You' have to accurately create the smoke we've now confirmed this is smoke this is outdated we are speculating before but now this is smoke trailing the plane so you'd have to have that using particles in two different videos you'd have to know what the thermal looks like to a level that would fool experts a lot of people have a hard time even believing that it's real um better visual effects skills than top gun Maverick artists who we have a a testimony for which I can post later you

(1:47:35) need the knowledge of these military classified systems that were completely unknown to the public even now people don't really even know what this capabilities are we had to deduce so much information to really understand these capabilities um you have to know that the military is using a Citrix environment which it's not that unreasonable I think that almost every business does use them but I think it's a little surprising to me that the military is using it for they highly classified uh systems but I guess what

(1:47:58) else would you use uh the frame rate difference you'd have to build that frame rate difference into the mouse and to the background uh you know that doesn't make any sense of why you would do that right unless it's just a real video you have to know they're using that specialized Mouse because the mouse doesn't move the coordinates it's the coordinates are only moving when they're like either using a different mouse or when they're like pressing down on a button or whatever it is to move the

(1:48:19) coordinate view around you'd have to know what the satellites are in operation and what their payloads are to know that they could create this 3D stereoscopic video and that that satellite was there in the right location at the right time you'd have to know what the false color IR looks like so when we're looking at this over here guys this is false color IR that's the reason why the zap in the satellite is white is that this is nighttime and they're recreating it to make it look like daytime so the color that we're

(1:48:45) seeing here is not true color um now some of it of course is true uh you know it's accurate like white you know when we see the clouds are you know white but if you were to look at this at night time you might not even be able to see the clouds cuz it's going to be pitch black right and that's also part of the reason why the plane is so bright is because they're creating this false color IR at night time so they need it to stick out really well now the reason why we know that they have to have that capability

(1:49:08) is these low earth orbit satellites Traverse around the world every 90 minutes if it can't see in the dark it's useless half the time oh no I didn't want to close that let's just pull that back up you'd have to know how to create that 3D stereoscopic imagery how to animate the orbs the orbs also go through the trails of the plane accurately as well they get distorted accurately I

have a visual effect of that as well you'd have to know how the particle system where we're seeing in front of the orbs

(1:49:37) pulling the orbs forward we have to some reason how to know how to create that and even come up with creating that right there's nothing to copy that from at all not even in ufology You' have to know what the mq c1c Drone looks like like it's payload where that payload is located um one of the ones that's a little bit cute is to not use a 2d visual effect from a 9s video game that's low quality in a 3D environment we have a 3D environment guys so you're not going to be using a 2d visual effect you need to have it

(1:50:06) from multiple perspectives so you need a 3D visual effect in order to put into our 3D environment this would require a 3D render in order to get the multiple perspectives that we see from the two different videos so the **debunk** breaks down on basically every single level which is is not uncommon for **Mick** West his arguments make no sense at all most of the time and I really hope people stop falling for his stuff because he's an idiot and he's a fraud and really no one should listen to anything he says um

(1:50:31) perhaps most importantly is that they would have to know we would never find the plane even after nine years because if we find a plane even tomorrow the hoax would break down right so again just goes to prove and further prove the authenticity of the videos now let's take a look at this top gun Maverick I was the lead visual effects artist on top gun Maverick I worked on it for 2 years more than a thousand visual effect shot if this is CGI whoever made it front ran all the work that we did by about four years meaning

(1:50:58) that they somehow were doing better than they did uh you know four years ahead of when they were doing it and did a better job than us Apparently one of the biggest advantages we had was to cheat the speed of the Jet's scale through different shots for cinematic effect even in the dark star sequence the actual speed of the 3D model was moving through our environment wasn't anything close to mach 10 whoever made this animation made sure that the scale and speed is accurate between the two cameras which would mean that it's

(1:51:24) animated and scaled to real world speed I don't know if it's real it could be made using CGI would require a considerable amount of effort and again the Marvel VFX expert said it would take minimum of six months that's using today's technology the camera Distortion and rolling stutter all would have had been recreated the clouds and lighting look correct based on the visual light rays the trails following the orbs which are not following their in front of them are also accurate and every everything

(1:51:50) in the seam seems to be physically correct the idea that the Drone would be randomly following it seems a bit unrealistic well it's not remember we've proven that it's actually intercepted with it so this is another piece of strong evidence that goes to show that what we're looking at is fully authentic not to mention the fact that probably hundreds of different **debunkers** visual effects experts have looked through it frame by frame and they can't find a single discrepancy anywhere so our videos are real folks

(1:52:17) they are 100% real and what comes along with that is a lot of baggage right let's take a look at a few more comments and questions okay um sorry if I'm going to miss some of these uh if we have that technology the answer is because they would need to deploy that technology where the assets are that's why they would fly out there why not land on the land on the land you're going to plan's going to explode if you try to land on the on the ground it's full of gas and landing gears damage there's no safe way to land

(1:52:52) um yeah at this point making this for a hoax is more of a stretch than it being real honestly um it makes there is no logical story that would make any sense for this to be hoaxed and that's biggest problem so if there are **debunkers** that want to give it a go you need to come up with a full comprehensive story for how and why they did this you somehow need to incorporate all the evidence that I put into your story for why they would hoax all that information and right side of non has to be involved otherwise you

(1:53:16) only have four days so good luck with that there's no chance but I you the best um let's see uh we talked about the free scale semiconductors already um but and I think I already went over that um I think I mentioned that so I'm not going to speak out to the names of any people out there but um there's a lot of people who are completely discredited and they have discredited themselves on social media and uh unfortunately due to that you know they're you can't take anything they say

(1:53:47) very seriously um I have not discredited myself in any way shape or form I've put all the evidence out there to be vetted and reviewed um and my case has been built and I've been 100% honest about it I'm not married to any of my positions as you can tell my thought process has changed throughout the course of it there's a lot of people out there that they already think they know what happened and they're trying to take the evidence to make it fit what they know we took the evidence and we built a case

(1:54:09) around what the evidence tells us that's why people are following me and listening to me because you know the evidence that we've built has built a comprehensive case that essentially is Rock Solid that at this point really can't be um let's see what else we've got the leaker has not come forward at this point but I think we've nailed it down let's go ahead and take a look at the leaker now too so we've talked about the cber system Sig in how all this stuff comes together so what I did then is I

(1:54:34) thought about it I thought we have a pretty good psychological profile what happened here we said this person stripped all this data from the HUD they they made sure they cropped out uh important assets from the satellite footage so it doesn't seem like it's a spy a spy is just going to give this information to **China** they're not going to post it on the internet internet they're not going to crop out remove all this HUD data they're not going to colorize the thermal right um this told me that it's a US military uh person and

(1:54:59) the fact that they were able to colorize that thermal also tells me they're probably an operator as well as you imagine someone have an emotional reaction to watching this like kind

of we have as well and going we're never going to find the **truth** unless this gets **leaked** told me that what we're looking at is somebody who was probably directly involved in the event somebody who had have a high level of clearance in order to be able to pull that off and was probably there on one of these spy planes you know watching the event

(1:55:21) happen maybe controlling the Drone or potentially watching on the satellite footage so knowing all that information I thought Wella huh I wonder if we could figure out who this person is right like first thing I found out is that if they were uh if unless you're under martial law you can't hide these charges from the public they have to be out there somewhere and when I realized that that there's no way to easily hide it I thought okay well I'm just going to look up everybody so I Googled everybody who

(1:55:47) was charged with SB I just went down the list right and I kept my range really open everyone from 2014 to like 2020 and even Beyond I looked up all the big people that have been charged out there none of them really fit the bill right and then we got to my man Edward seedin when we got to Edward sein I knew right away we were on to something okay so I searched every person that's out there and I couldn't find anyone and then I started searching like past historical date ranges and that's when all sudden Edward C Linn showed up

(1:56:17) there's nothing about him after 2017 at all but from 2014 to 2017 there's a lot of articles about it one of them is called The Strange Case of Edward C Lyn the whole situation was weird about this guy to begin with right so he was a naval flight officer with experience in signals intelligence once I saw that right away I went what okay this is the first person I looked up that had said signals intelligence anywhere right in their bio and he flew this ep3 Aries 2 spy plane I looked this spy plane up one

(1:56:46) of its capabilities real-time video playback um this is where I went immediately started getting very suspicious he faced several charges he was arrested September 11th 2015 this is within time frame that I would have guessed somebody to be arrested they're not going to get arrested right away they have to build a case against them all this stuff they even ran a sting operation on him the month beforehand in August they were trying to prove that he was a spy because there was no evidence of him being a spy and they wanted to get him

(1:57:12) for life in prison right so you can see here they they threw him in prison in jail right away they didn't want him talking to anybody they didn't want him talking to the media um and they kept him in pre-trial detainment for 2 years so they tried to get him for life in prison that's how serious the charges against him were this was the first major incident of Espionage by an active duty member since the Cold War this is the most serious incident that had happened before 204 since 2014 or you know before that for 30 or 40 years so

(1:57:42) whatever happened to this guy they were trying to throw the absolute book at him you know that is fully consistent with what we're dealing with in these these videos they redacted his charge sheet heavily including the dates so unless there's evidence in those dates they're going to be able to tell the public what really happened there's no reason to hide that

information was really suspicious I mean compared to like the Jack deara guy who recently was you know blowing up all the UK Ukraine information from Discord and

(1:58:11) all this stuff they have way more access than he should have had you know they're not redacting all his stuff I imagine right so this is pretty odd they redacted we looked at the charge sheet I pulled it up as well it's actually Linked In the next uh post here you can't use AI to figure it out the date ranges are all like you know there's no there's no way to cheat it by telling how long the boxes are we tried um so they tried to accuse of him communicating information they threw some extra charges on him too like

(1:58:39) prostitution all this weird stuff because they were trying to obfuscate this guy's charges so again he was in the surveillance aircraft Gathering signals intelligence everything we know about this situation now has signals intelligence written all over it very little evidence of Espionage and growing doubt that the government would be able to prove he's a spy from one of the Articles he had a high level of clearance he was on the Navy's most sensitive intelligence gathering aircraft he had previously worked for

(1:59:07) the special or uh special project Squadron with specialized signals intelligence aircraft he had a secret clearance higher than top secret so I have a top secret clearance that does not mean that I have access to everything there is in the world it means that I have access to some information that would be very damaging if it got **leaked** but doesn't mean that you know about all the secret stuff out there it's all compartmentalized meaning okay you need access to this you need access to that right and it depends on

(1:59:32) what your job is so he's obviously somebody who would have access to like the most secret stuff that's out there right and he worked in the Navy as well so he was at the time as Arrest part of this airb special project Squadron called the special project squadron 2 so you know if you're deploying your super secret technology it sounds like this would be the kind of s Squadron that would be the one that taken charge of it right he knew their most sensitive Secrets Navy's Black Project program

(1:59:56) portfolio right so we had access to the type of Technology theoretically that we're seeing his knowledge could be extremely useful potential adversaries so they didn't want him to go talk in other countries right because if he knows about this type of Technology that's extremely dangerous part of another reason why they would come down on him so hard look at the time frame in which he was deployed there he went out he was deployed in the Squadron February 2014 when did our incident happen March 2014

(2:00:22) the next month he was arrested September 2015 he didn't even finish this Squadron out so again this is where they ran the sting operation on him from August to September right before they arrested him they had no evidence that he was a spy so they tried to run a sting operation to try to prove that he's a spy but that didn't work either right um here's a quote and this is not this is from a lawyer not even from his defense this didn't turn out to be related to for intelligence not really a spy case it

(2:00:51) still sends a strong message about care and Safeguard of classified information this is a former military lawyer saying that and then what's clear is that last year Sensational headlines were far from accurate unnamed government officials said that Lynn was uh suspected of spying for **China** and Taiwan despite there being no evidence in the investigation that he ever exchanged any sensitive information with anyone from **China** so basically they were trying to come at him hard they had no strong evidence for it the defense lawyer

(2:01:22) argued that the classified information in question is available on the internet okay so we have access to the information that he got charged with and they and they try to throw him in prison for life what do you guys think how that that information could potentially be I think we're looking at it on two videos right the government came back and said just because it's available on the internet does not declassify it so why is everybody saying silent right now about the videos because the information

(2:01:47) is not Declassified this is the Missing Link is why everyone's being quiet about the videos people who out there have ndas people that have connections with the government they're being told not to talk about it because it's classified they're not allowed to if they do they're going to lose their connections they're going to lose their NDA they might even lose their clearance I don't have an NDA nobody's told me that this video footage is real that I should have to take it seriously if they were to

(2:02:09) have reached out to me maybe I wouldn't have been blowing it up but until that happens we're going to keep talking about it so um whether or not the US government P public uh you know is the only thing that matters not whether or not somebody else made the public so he ended up pleading guilty to just the two instances of mishandling classified material which they're probably again just trying to OB fisc what he was really charged with here right he **leaked** these videos potentially in 2014 he had accidentally left two flight manifests

(2:02:38) in his flight suit including search and rescue code names this is another Bingo here there's nothing else that I can even think of that would have search and rescue code names from 2014 and remember His the time of he he was deployed February 2014 you know give me another situation within that small of a time frame where this could be possible this is MH370 right here in addition to admitting the Lesser charges he did not face the two charges of Espionage so they made him take a plea deal convinced him what he

(2:03:06) did was wrong right and he's screwed up because they also don't want him to go talk to other countries either so they actually have to probably scratch his back a little bit too at this point um they still gave him nine years he took a plea deal and they still gave him nine years so they came down on him hard if you look at other people they did not get this much of a punishment they got like a slap on the wrist compared to this guy you know they came out hard and they've had him in jail already for 646 days before that plea

(2:03:32) deal I didn't report this on here but they also were abusing him while he was in this pre-trial detainment he reported it several times make him go out in the cold take his in take his

uh book that it was like uh you know confidential information between him and his lawyer they would rummage through his uh cell all the time time he and another person basically got abused non-stop by what they called the goons Squad this person deserves Vindication more than probably anyone else in this whole country to be

(2:03:58) honest with you so this was a quote Lieutenant Commander Ed Eddie Lynn never spied on his country he served Faithfully in the United States Navy for over 17 years so this guy was a patriot becoming a highly regarded and decorated officer he accepted responsibility for the offenses he was actually guilty of and agreed to debrief and further assist the FBI at NCIS So basically says yeah I leaked those videos I'll give you all the information I need about them I shouldn't have leaked those I see how that could have damaged us China and

(2:04:27) Russia are now going to know about this technology um you know and then he says I get physically ill when I think of the damage I could have caused my actions Lynn said I'm exhausted and broken in spirit the best thing I could do is serve as a cautionary tale for others you know let's just tell Lieutenant Commander Edward Cen if you are agent 370 which we strongly believe that you are you are not a Trader you are a hero we salute you sir in addition to that I want to go ahead and just throw out here that President Joe Biden or whoever

(2:04:55) becomes president next give this man a pardon he does not deserve what happened to him he does not deserve to spend seven to nine years in prison over this for doing the right thing which is telling us the truth about Malaysian Airlines flight 370 which we would have never known without these videos never in a million years more importantly the technology that we see in the videos that's being hidden from the public is absolutely criminal this man right here is a hero my hero Okay so we've addressed that okay let me just take a look at

(2:05:32) what we got going on here sorry okay we got 49 viewers cool okay um what else questions you guys have uh I wanted to go through that information let me see what else we've got we talked about cers satellite hydrophone data the Ping data okay let's look at the Ping data again too ping data sketchy ping data so I looked at this ping data myself and you get down here in this ping data and it is just suspicious as hell there's no way anyone who's ever looked at Excel spreadsheet is going to not notice this which makes

(2:06:05) me question whether or not the people that are involved in looking at the data are corrupted or if they're honest people in general so you can see here weirdly enough I already showed like if I go back and think this is the one where you can see the zeros just start happening at 18:30 everything before this there's pages and pages of just perfect data you get down here and all of a just Zero's time going down looks like something just aired out right here right and it goes down a little bit further um and

(2:06:34) then when you get down to the after 1840 the next ping is 1941 look at this that's five hours of data right there 10 total rows right here five hours of data and look at this obvious pattern change goes from this channel six all the way down this satellite here is the same and all of a sudden it just rotates between these two 10 and four 10 and four 10 and four 10 and four

this is just looks like they just added 10 rows of data in there to me I mean before this keep in mind there's dozens of pages for every ping

(2:07:06) now there's just 10 rows for five hours no chance anyone looked at that and did not realize that there is something completely suspicious going on let's also look at Victor's here's flight path that he created where does the South Indian Ocean turn happen oh look exact location where our videos happen 1840 UTC oh so instead we're supposed to believe there's this exact weird just turn out into the South Indian Ocean I've got a better idea how about our videos happen right here plane

(2:07:35) disappears off the face of the Earth you know that's what really happened here right guys and over here you see the line where our satellite is at this point this is a little bit inaccurate but close enough so we've got independent corroboration of the satellite we have um a time everything lines up to 1840 UTC you know what let's get a signal out there as well is there any Communications there is a communication SOS signal only reported in Chinese news reported to be intercepted at 1843 UTC Less Than 3 minutes after we think that

(2:08:10) our situation was happening what is the distress call say the cabin was facing disintegration and attempting an emergency landing facing disintegration and an attempting emergency landing well we've already proven it's a fire and we've already proven in the video and from the witness that the plane was landing and that it was descending so why would we not believe this reported time that if you convert 23043 a.m.

(2:08:38) you get 1843 UTC only reported in Chinese news not reported in the west interestingly enough but we were able to find it cuz MH 370x investigators are extremely good um um also want to point out here in this picture Katherine T reported seeing black smoke behind the orange glow resembled a contrail but black it can't be a contrail because the plane is too low this is consistent with the lithium ion battery fire it has very black smoke and again what's happening is is coming out of the exhaust ports on the plane so let's see what else can we

(2:09:12) prove here guys we Vindicated all the witnesses we got the that we got the weather analysis uh yeah I mean I think you guys can trust me on the weather analysis but you can click on that one if you're curious some of the family victim stuff what happened to families they were told something uh I'm confident they were told something at this point um if you watch these videos they never believe the official narratives they're on CNN everybody just thinks oh well they're just in grief that they can't believe it

(2:09:40) no no they're just logical people they realize this is all nonsense this whole pilot suicides nonsense this idea of the plane crash in the South Indian Ocean is nonsense and they've all gone dark they've all gone dark nobody's tried to reach out to me I've got probably 20 million plus views blowing these videos up on social media if it was my family I'd be running to get to somebody like that especially if they're in this grief state that people claim they're in where they want to believe anything that they

(2:10:02) that's out there right I don't know that what they've been told I don't think they've been told that their family members are alive I don't think that their family members have been reunited with them because some of them have remarried I think that they've been told something that gave them closure like you know this certain thing happened we know what happened we can't tell you but you know your family members are gone that's what I think they've been told I have no way to prove it it's completely

(2:10:22) speculative but from the psychological profile of these people that's kind of what I'm getting from the situation let's see what else we've got here yeah problem with the live stream is pretty weird um you should be able to refresh it but when I do the next one when we get the next one we'll figure it out it'd be funny if the government was trying to inter interrupt with here yeah and I'm going to have five more podcasts this week and probably more I'm getting a lot of requests uh I probably won't be able to

(2:10:56) do them all but I'm going to try to do as many as possible because again I'm an honest person who's trying to disclose the **truth** and that's what somebody who's trying to do that does try to get the information out there I'm not trying to string anyone along I want the information to be out there as many people as possible best information to share I'll get to that part in a second here uh the radio intercepted communication is right near the time of our videos so presumably they are

(2:11:19) telling them hey I'm going to land in the ocean plan's about to disintegrate we're barely able to keep this fire contained and then **China** intercepts that right um so one is pretty interesting a lot of people that think that the videos are fake and they look fake take a look at the reception the reality perception test does this look real to you guys what do you guys think does that look real tell me in the chat I want to hear yes or no is this real or fake what do you guys think think this is real

(2:11:56) Curious uh is this you guys should be able to see I think that's CGI this is real this is real this is that's a real Landing right there so again this is why we can't always believe what we look at people think this is fake this is actually real video here believe it or not this is real video this is I believe space yeah this is SpaceX this is a real video of SpaceX just goes to show you that things that look fake aren't necessarily fake they can be real as well pretty crazy right um so yeah again just just

(2:12:31) because something looks fake doesn't necessarily mean that it is um and I'm probably going to have to stop streaming here for a little bit I may stream a little bit later here and maybe I'll try to fix my situation uh I want to get my second monitor working that's why I was a little bit late I was trying to find a cord and nobody has them um so let's do okay before we get into the science we're going to close out with a little bit of the science uh but before we do that I want to show you guys where you

(2:12:55) can find some of the content right uh so if you go down here to this where the part of the **debunk** series are and you get to the bottom here you will find all the spaces that I've done

the space that you want though I don't have on here the newest one that I did uh but it's on my YouTube you can find the newest one I did on my YouTube that you guys are watching right now these are a lot of the podcasts that I did um if you want one that's short the Leto the one with um Chris Leto is probably pretty good it's only like 20 minutes

(2:13:25) the best one to watch is the confessionals video the confessionals video that you can find right here this one is two hours but everybody has watched it said wow I couldn't believe I got through all the two hours like this was really compelling and this is where I break it all down right so this is me going back and forth with uh Tony Merkel who's a really nice guy really good interviewer we go through all the evidence similar to what you and I just did now now you want to show people you want to have a good 2hour session with

(2:13:51) then you know go through all of this information we we just break it all down systematically destroy the N this has 128,000 views in just three weeks this is already his second highest one ever I get a lot of people come to me and say I watched the confessionals it was really good the thing about the confessionals one is that we hadn't figured out the fire scenario we hadn't figured out I don't think Edward see Lynn yet so there was a lot of stuff that came after this but you know this is a really good one

(2:14:18) for breaking down the official narratives so highly recommend taking a look at that one um the UAP podcast was really good as well so if you want to listen to one that's about an hour long this one's really solid uh with Stephen um and we and he asked a lot of information here as well and this is a one where it's fully public right so you can listen to this one so if you're just trying to convince somebody a little bit longer I would say listen to this UAP podcast and then atw unleash if you want

(2:14:46) another 30 minute one that I did um this is another one where and I think I yeah so this one right here as well will get you to the parts where I only had about 30 minutes but we kind of got through all the information pretty quick on this one and he was pretty skeptical of the whole situation so if you have your skeptical friends that want to dig through it uh this is a good one to watch as well the ones coming up will obviously be really good um because you know we have all this new information to go through as

(2:15:16) well oh really problems with the stream okay I'll take a look at the stream issue guys later and I'll try to work through it so that it's working out better it's pretty odd that it's happening I I plugged in so we shouldn't be having those types of issues I can tell that I'm plugged in correctly to the internet here as well but I'll work on that so um yeah and I'm recording it so I'll post this on YouTube for you guys as well if you want to watch the recording of it that's pretty odd that it's not

(2:15:40) loading correctly um so let's go ahead real quick I want to talk about the science just very briefly I'm looking at OBS drop frame says zero says 0% weird we've been live for 2 hours 16 minutes the 0% drop frames odd that's really Biz that's really bizarre maybe I have to disable the Wi-Fi and make sure it's only on the the Hardline it shouldn't have to do that so I want you

guys to watch the science on here as well this is the stuff that really started blowing my mind  
okay gravity is

(2:16:13) the most important one that you have to watch and on the gravity one here here I'm going to go ahead and just fast forward it a little bit but gravity does not work the way we would imagine so you can see that this is really how gravity Works in general is that the mass is displacing spacetime like a sheet and what this means is with the Apple now the Apple's going to fall towards the Earth right so this part I think people understand but why is the Apple Falling Towards the Earth the answer that is

(2:16:41) because time is moving forward so when time moves forward it's going to fall along the curvature that's created here this is the curvature okay so if we take this to its logical extreme then what you would see here is what's really happening is as time is moving forward the apple is converging on the Earth right just like we see in this vid this image right here it's not that the Apple's falling straight down is that the apple is following the curvature towards the Earth itself through the movement of space as time is

(2:17:11) moving forward so really what does this mean this means that gravity is not really a force I mean you have a force essentially though that this is kind of moving in on the Earth but what's happening is time is moving forward and then objects are converging on one another so if you want to visualize this imagine that we're both in our current locations uh we're in different points of the earth and we both walk towards the North Pole despite the fact that we're both walking in a straight line we're going

(2:17:38) to converge at the North Pole no matter where we are on the planet right that's the same idea as what we're seeing right here we're following the curvature of the Earth in order to get to the same point so we would see it look like this instance after instance right but that's just because of how our mind perceives time right but what's really happening is the curvature of the earth is passing through so when you want to try to visualize it then you visualize it like this right where you're seeing this

(2:18:03) field of war the geom so this is actually more accurate to how what's really happening here space time is being warped around the planet and then the best visualization then becomes something like this curvature that the curvature is Con beinged so if you have a satellite you have to account for this curvature otherwise your satellite will crash down onto the Earth over time and so again if you put the Apple there now you can see how visually this works out right Apple falls down but it's falling because it's following the

(2:18:33) curvature of the earth and then you have that counter forces from the earth pushing back all the time velocity no and so if it's following without a force you can see that this is how the satellite is automatically going to rotate so this actually explains gravity in much simpler way right and if we didn't account for this then we wouldn't be able to orbit correctly and now you see they've turned it into the moon still still doing the same thing right this also explains how the Sun how we're

(2:18:59) orbiting around the sun it's all a matter of mass which is displacing gravity causing or displacing space time causing curvature so that's a really good one to watch and really important to watch yeah I have zero drops it's super weird um but I'll I'll save this on YouTube for you guys as well so don't worry about that at all um the other one you guys need to watch is the double slit experiment okay a lot of people don't understand the double slit experiment which is fine but what I

(2:19:30) don't like is when people try to tell me that I don't understand it which is just comical uh I have a very very good understanding of the double slit experiment uh because it's probably the most amazing science that's out there so let's go ahead so if you're trying to send something down you know matter through slits this is how we would expect it to happen happen right we have two piles right so if we just shoot one thing at a time we would expect there to be two piles to form right um let's go

(2:19:57) ahead and fast forward so if we do the same thing here right if you were to close one of them off and you were to shoot then we're going to get one line right now if we open them up where is it here's what happens though if we open them up and we shoot one thing at a time for some reason we get this pattern it's a wave pattern which is wait how's that happening we're shooting through two slits it's got to go through one or the other how is it creating this wave pattern right this is what they call uh

(2:20:27) particle wave duality of light is it can act as both but if you try to figure out why it's acting as both and we say okay well why is it acting like a wave here when we're just shooting one Photon through at a time what if we add a detector and have it look and the detector tries to figure out which slit the light is going through which slit the photon is going through what happens what do you guys think will happen let's go take a look okay so we add the detector right there right now we add the detector what the

(2:21:05) wave function breaks down all of a sudden now we go back to two slits now all of a sudden it's just going through one or the other the only thing we did was we added a detector why would the detector change the experiment observations why does that happen this is very difficult to explain this is the most mysterious thing in all physics that no one can adequately describe sure there's people that have theories but no one can prove what's really happening what we've been able to show now is that

(2:21:33) this creates something called non-locality the way I look at it is the universe is aware of itself the universe knows that you're looking at it and it's changing how it acts which is pretty a it's kind of a spiritual understanding right which helps you guys understand why I myself become more spiritual the more I look into science science isn't as simple as we thought if it was we should just always see the double P this pattern like this instead we get the wave pattern breaks down they call it

(2:21:59) the wave function collapses why is that important because we're going to rebuild that wave function now when the wave function is doing this What's Happening Here is that due to

the fact that the speed of light exists this is reacting faster than the speed of light this is what has caused the emergence of non-locality which is that's that means non-locality means essentially information moving faster than the speed of light also known as quantum entanglement also known as quantum teleportation information being

(2:22:27) teleported faster than the speed of light so now you kind of understand why this is important right because if we can do this and the information can break down then what do we need to be able to do to our airplane in order for it to teleport we need to have it convert from this two lines back into our wave function now if we convert our airplane back into our wave function now we don't know which slit the way the airplane goes through anymore the airplane can be anywhere it moves from a definitive point in

(2:22:58) time this point where is it it moves from this point definitive location to a probabilistic location that's what this is It's a probability chart right essentially what saying here is it could go through either of these it's Crea a wave function so if we break it that down into a wave function now we've enabled quantum teleportation of a macroscopic object and what is quantum teleportation of a macroscopic object macroscopic decoherence that's what that term means macroscopic decoherence is

(2:23:32) essentially what I'm describing there so macroscopic Quantum phenomena become apparent so if the idea here is that we can convert this to a Bose Einstein condensate which is moving from fion to bons where they can share the same point down into a single point we can create a situation where a macroscopic object has the properties that we would see from the quantum world and why is that important because now we've merged Quantum and macro now we've allowed the double slot experiment to apply to macro

(2:24:04) phenomenon or in other words rebuilding the wave function by turning the plane into the wave function now we've reversed the double slit experiment now we can have spooky action at a distance as Einstein called it which is essentially faster than light travel so this is how the plane is consistent with physics and science teleporting pretty insane now if you watch this video he kind of described the PBS SpaceTime guy who I like a lot explains this phenomenon as well and there have been scientific papers that

(2:24:36) have shown that they've been able to have macroscopic decoherence on um atoms groups of atoms large enough to be able to see in a microscope now doing it to a 777 that's a whole another story uh and so we still don't know all the mystery around it like how are they pulling this off for an object that's people inside of it are those people able to live in order for those people to be able to live there has to be a shell somehow around the object causing the overall object to decohere to macroscopic Deco here but somehow you

(2:25:05) know the people inside are not being affected by that and to me that's very difficult to understand so which is why I don't want to give the families the victims of the families any false hope I think that we're talking about a lithium ion battery fire we're talking about quantum teleportation where the macroscopic object has been converted down to a wave function you

know it's very possible that you know this is a doomed event for all the people on board very still very possible that they did

(2:25:30) not make it through um but what we do know is that the official narratives are a lie that there was a fire on board This Plane it was an emergency event the pilot is not a suicidal pilot that is a fiction did not go into the South Indian Ocean also fiction as we proven um the technology that we see here is real it explains everything why do they find parts of the debris uh parts of those debris actually had burn marks on them that is consistent with this fire event that we see it's also consistent with teleportation if they teleported This

(2:26:00) Plane somewhere else there's no issue with the debris debris can just be after it was teleported somewhere else on Earth so everything that we've used is more evidence than anyone else's theories by far we've used the witnesses we have a scenario that makes sense from an emergency perspective we are consistent with the debris and the lack of debris we even found a leaker guys we have more evidence than anyone okay by far and we can explain the science we can actually explain the science I didn't think we would ever be able to

(2:26:30) explain the science you know you go back to me like eight weeks ago looking at this I would have said we're never going to be able explain what we see here scientifically now I've got physicists tutoring me in my DMs trying to teach me how to understand it better right and it's blown my mind absolutely blown my I can't believe I'm in the position that I'm in where next Sunday I'm going to be interviewing Salvatore Pas himself potentially multiple times and we've confirmed that it's going to happen so

(2:26:56) 2: p.m. Eastern I got to get my Internet fixed so that we don't have to deal with the BS that we're dealing with right now we're going to go through the science we're not going to go through the videos on the first call I'm going to go through the science with him about these effects mezer effect as well you guys think the lk99 is not real okay well tell me how this is happening then this is a rock floating in space okay floating freely floating with a magnet on its side the reason why this happens is

(2:27:28) something called flux pinning what that means is that it's not pure that there uh and so what happens is that it gets stuck because some of the W the magnet waves are trying to get around it and other ones can't get through so it creates a situation where it's like you get it stuck in space where it can't move and they just to prove that it's real they have a they'd have this ring go around it just to prove there not a trick this isn't even the only video this is just one of them I

(2:27:56) mean you tell me super conductivity is not real and this is a room temperature rock this is not being super cooled or anything like that which is how we could create these properties if we super cool them having to be at room temperature enables a whole lot more and just to prove it they show you know here they go that's a magnet that we're looking at right there and this is essentially freely floating outside of the magnet which shows flux pinning so you know look at the videos uh if you don't think lk99 is real uh

(2:28:25) you should probably just look at the videos and try to explain those um because even if it's somehow we haven't fully proven it and the reality of this is that there's a lot of people that try to disprove it I'm pretty sure that's also been disinformation and just because someone has a recipe for lasagna does not mean that everyone's going to make perfect lasagna right you have to know how to make it properly so just because certain people were not able to make it does not mean that it doesn't work at all just

(2:28:51) means it didn't follow the right recipe very important okay let's see what we got okay I'll see if we got any other questions blah blah [Music] blah I'm just trying to look and see I missed a lot of the questions I think we talked about saving the plane due to the passengers who are the freescale semiconductors who we directly linked again to the technology via my piec yesterday or two days ago right here freescale superconductors guys 2005 National Security Agency report super conducting technology

(2:29:36) assessment free scale semiconductors is listed throughout it this directly links the government to the company and to the technology that we see Smoking Gun the batteries how do we prove that this thing came down well let's look at that this is how many lithium ion battery fir situations are by the FAA there's one per week more than one per week these things are extremely dangerous this scares me more than orbs teleporting my plane by far this is very dangerous right here um and look this is how they

(2:30:08) packaged them does this look safe to you guys does this look safe they missed two security screenings that were not done they packaged them the same day the plane took off This Is How They packaged them this looks extremely dangerous to me this really I mean come on guys and this is how they put them Just in boxes like this yeah no this on on just on pallets I would not feel comfortable if this was on my plane in my cargo hold not at all so yes we are extremely extremely confident in the fire scenario it was a lithium ion battery

(2:30:42) fire um okay let's close it up here here so I got to go get some food and do some other stuff I'm sorry the video is being disrupted I I will re-upload it U not sure what's going on could be my internet I'll try to get that fixed for the next time yeah criticisms on how I act you know I just don't really care guys um look at what we're dealing with here guys it's the biggest conspiracy in the history of the world of course people are not going to be able to deal with it I cannot baby every single person who

(2:31:15) wants to act in bad faith or be rude or whatever right I'm a real person and you can tell my real personality um you know I would say compare me to other people you see on TV they're stringing you along that don't answer any questions what you're dealing with here is the real deal of somebody trying to tell you the **truth** as opposed to people that are out there who are you know trying to deceive you or you know kind of be koi in the information you know I'm disclosing every single thing I

(2:31:41) know as honestly as I know it and I'm giving you access to the information firsthand so I hope you understand that what that is for me to build my credibility so that you understand

that what I'm telling you is real as far as I know it um and again we've gone through I think most of the evidence if not all of it here at this point Y let's see so I think that's about where we'll stop for now I think we'll talk a little bit more later but I'm not seeing any other relevant questions but look through the evidence

(2:32:10) here guys if you have questions on the science read that stuff you know get up to speed with it you know I think that's what we need people to be doing is informing themselves that's what I did a lot of this stuff like I kind of understood right but it wasn't until I dug into it more that I realized like oh wow this is how gravity really works okay that that makes a lot more sense looked into the mezer effect looked into the lk99 thought wait a minute why was this dismissed so quickly I'm looking at

(2:32:31) multiple videos they're showing flux pinning you know how is this just dismissed as not being real it's not being dismissed as not being real in **China** and Korea I'll tell you that much it's only being dismissed is not being real in the United States um VM teleportation found an article about that we actually found if you Google Popular Mechanics traversible wormholes could really exist this is the one that probably blew me away the most I didn't think there was going to be anything that supported wormholes and

(2:32:59) teleportation oh yeah sure they can exist not only can they exist they don't require exotic matter they will survive humanly traversible you could survive them and then the last part says they could build a double layer shell around an object which is somewhere down here I think so you know check this paper out Popular Mechanics if you want and again if you don't like Popular Mechanics that's fine because they have all the papers linked in there which I didn't I don't ever trust like just an article

(2:33:26) like this I actually go click and I find the papers myself and I want to read the paper you know and you can actually click and you can download the PDF over here you can see I've already done that you can read the paper yourself you know it's a hard read you got to know some physics and I kind of skip over a lot of the the math right you got to presume that the math checks out but you can understand the basis of what they're talking about in General this takes a long time to get through so I've read

(2:33:49) all these myself cuz again we need to be more critical thinking not just reading believe whatever we read uh as a headline let's dig into it and say does that really what it says is that really accurate and if we do that we'll become better people and we'll be create a better community so um okay pieces of the plane they found in the only piece of the plane that has been conclusively tied with a serial number is the flaperon that flapper on was missing the unique serial number plate so you want me to prove

(2:34:24) that just watch in real time missing ID plate delays confirmation critical identification plate was missing they use a non unique serial number to match the ID to match the wing to the flap Ron they don't tell you that in the media so instead they just use a Boeing part number that's not a unique serial number guys just confirms that it's from an MH Bo 777 well I'll tell you

what there was another Boeing 777 that was bought by GA thesis in October of 2013 that's an exact match of MH370 this does not confirm that this

(2:35:02) comes from MH370 so I mean maybe it do come from it again we're dealing with teleportation so it's not really an issue but I just again want to point out you can't believe everything you get told on TV the real **truth** is usually buried slightly below the surface okay how does a Serial plate that's bolted into a a fla Ron come off how does it come off in the water makes no sense whatsoever so you know use critical thinking when you look at the evidence um so I'm not going to should I go full

(2:35:36) screen no full screen uh you know I gotta get a better camera for that you're seeing too much pores so again guys um thank you guys for listening in here today and going through this information with us um I will add more uh you know answer more questions the reason why I've been on **Reddit** trying to answer questions is because I want to be able to show people that I'm out there as a real person and I can answer as many questions as possible I can't address every single person individually which is part of the

(2:36:02) reason why I'm here on this uh stream because I mean you guys could see probably from my Twitter I have 170 notifications uh if you I pull up my **Reddit** I'm sure I have 30 or 40 I just can't reply to everybody so I want to I wish I could but we've just reached a point where it's impossible so hopefully this will arm you guys with the information and then you can go out there and tell people you know the information and help out because I need you all to help with disseminating this knowledge to other people I can't be

(2:36:28) there answering every single person so you've been armed uh I thank you for listening right now and we'll talk again soon guys have a good day

(04:28) rocking my new shirts we're looking good tonight chat we're partying we are celebrating guys uh this has been what a journey holy [REDACTED] what a journey everybody thank you everyone for being here early I appreciate it uh everybody on X everybody on YouTube right now watching man just thank you thank you for being here it's absolutely incredible what we've been able to do uh as a cohesive unit uh people that have been following along sharing information finding out new information that I didn't even know was out there

(05:05) and we had that happen again today that's why we're in such a good mood right now uh that's why we're partying although I'm not drinking tonight but we're just hanging out and chilling uh holy crap I just I can't believe it guys I was just getting ready and I was just sitting there going how the hell is this all real how in the hell were just some random social media people able to reveal the biggest conspiracy in the history of the world biggest conspiracy in the history of the world

(05:37) anti-gravity uh gra just space-time manipulation like literally just random people figured out never it didn't come from any of these UFO celebrities or anything like that we just figured it out through a crowdsourcing investigation on social media on X Twitter nobody in the world could have ever expected this never I just can't believe believe it man 10 years later after the plane disappears uh we have I mean more evidence than any court case ever I think um we have what constitutes as AB absolute proof uh and we're going to go

(06:14) over that tonight that's why I jumped on early on the investigation um and of course as uh Joe just pointed out here in the chat this is just the beginning uh even even just solving the case of MH370 is uh just the beginning cuz then we have bigger questions to ask like where the hell did this technology come from how long have we been hiding this and what does this mean about the nature of our reality in general uh this is absolutely incredible and uh let's just opine a little bit about how we got here let's be thankful

(06:52) to uh whatever um you know whatever you believe in whether it be God whether it be uh some spirit understanding that you have let's be thankful for being here right now I just want to appreciate all the time that I have left on Earth uh with everybody else that I've met and discovered uh along the course of this investigation uh because holy crap this is this is really really really big guys uh wow I'm just blown away life life is honestly Stranger Than Fiction so

how are we going to start tonight um

(07:30) let's start by looking at the videos uh once again I think that we we can't look at the videos often enough people that have just been catching up on this investigation if you just joined us recently over the last few weeks uh it never ceases to amaze me how much stuff gets uncovered I guess the way I want to start is first of all I want to shout out to the person who made that new song The Ether Bunny The Ether bunny thank you very much for making that rock song we now have three three songs they're

(07:59) all really good uh about MH370 which is amazing um after that I want to thank Bobby O uh Bobby O put together this video on um YouTube today somebody sent me the video in our Discord and said to take a look at this and I start watching it and I realized when I'm watching his video I'll pull it up here so you guys can see what I'm talking about um let me I have to separate it out so you guys can hear the uh so I'm watching the video and I'm realizing he's talking about he he had pinged me asking me for um some

(08:42) information about the evidence and what have you and he he pinged me a while back saying he wants to get involved and he wants to look at the case and he wanted to listen to the **debunkers** and what their arguments were and he realized right away that **debunkers** didn't have any valid arguments and that their arguments were all based on uh false methodology that they were using in terms of comparing some VFX to uh the videos and so he started engaging them I don't I don't have any Formal Connection to him he just one one of the followers

(09:11) who decided to get along um I'll share the link to the video so you guys can watch yourself I've already posted it on Twitter so you can check out yourself um and I started watching the video here and he starts going through the data here Malaysian a play 37 satellite data released after long wait Tuesday May 27th 2014 so it looks like I was off by one day uh 27th not the 28th but either way why is this day important the MH370 videos did not get published until May 19th 2014 that is nine days eight or nine

(09:51) days before the rod lemy data was released so the satellite video is published before the raw Telemetry not even the experts knew where this plane was before this date I have Mike exner who's actually quoted in one of these articles saying that he did not even know if the data was legit until June when he flew out to imrad or something to look at the data himself um so I'm not going to go through all of Bobby's video here you guys can watch it's only 12 minutes long but the part that I want to get

(10:24) to is where does he mention it yeah about right here I'm going to I'm just going to guess I think this is about the right time public and from the families even though they were demanding you have to take it to the plane went miss and gathering information so Malaysian Airlines flight 370 satellite data released after long wait this was May 27th 2014 so this was over two months after the plane went missing data from Communications between satellite and missing Airlines flight 370 was released Tuesday more than two months after

(10:57) relatives of passengers say they request that to be made public it's very important that's important context to the broader story this data was withheld from the public and from the families even though they were demanding so just like what he said there first big thing was that the public and the the families had demanded this data for months and they wouldn't release the data they refused to release the data for months of course it's because they were covering up what really happened on this

(11:25) plane that's the only explanation people could have literally been in the in the ocean on some Island somewhere on a raft or whatever and this data would been crucial to saving those people's lives and they didn't release the data and it's obvious why because the United States government took the plane and they needed to develop a cover story so they didn't release the data to the families the families were demanding it we have Sarah Bach the girlfriend of American passenger Philip wood literally

(11:56) quoted in here saying why did they have to massage the data why were they waiting so long to release the data you have to be an absolute idiot or just completely naive to not realize that this plane was taken by the United States and covered up it's the amount of inform the amount of proof is overwhelming at this point you have to take into account the amount of chaos and confusion that was happening in the first 30 60 days of this whole situation and how it wasn't normal at all and why it's largely considered one of the great

(12:28) mysteries in modern Aviation but criticism quickly emerged suggesting that the information provided lacks important elements that would help outside experts put the official version of events to the test so as we're going to see here and hi uh Ruby Ruby Pearl appreciate you so some people out there like Ruby for example were very skeptical of when I was coming out originally um because I mean I'm making pretty insane claims to be honest with you that these videos are real Etc uh and but then once they've looked at the

(12:58) strong evidence then they realize like oh this guy's not messing around this guy's like doing conducting a real investigation here and for those people it's not too late as well for the people that are on the **debunker** train that think these videos are fake it's not too late for you to turn a new leaf and admit you were wrong and get on the train of solving the mystery what Bobby did right here is why early on I wanted other people to look into the case because he found evidence that I just completely overlooked that we completely

(13:27) overlooked as a group this is why wanted other people to try to solve the case this is why the **debunkers** wouldn't try to solve the case because if the **debunkers** had actually gone out and tried to solve the case they would have found this additional crw and evidence that proves the videos to be real they've never been trying to solve the case this is why in addition to the evidence that I put forth uh yesterday related to **debunkers** nothing the **debunkers** should say should be considered in any with any level of

(13:51) credibility whatsoever they are willing to lie they're willing to fabricate fake evidence as we're going to talk about later tonight as well uh the **debunkers** uh w in particular **Mick** West

has fabricated three fake **debunks** around this plane including one that predates the investigation by nearly 10 years uh all of the **debunkers** are linked directly to **Mick** West uh I will be uh formally accusing him of uh criminal conspiracy later on in this and recommending that he face criminal charges for what he did

(14:21) to try to cover up these videos and make these videos go away along with anyone who is um uh a co-conspirator with him as well I think the Department of Justice should be looking into all the money he's ever made uh who's been paying him the money and who's been paying him to lie about these videos and lie about what happened to MH370 um it is absolutely disturbing how evil the uh people that have been trying to **debunk** this case are um and they should be ashamed of themselves 100% the people that tried to solve it

(14:53) like Bobby people that come into the case with an open mind that go look at the evidence themselves and find new evidence like this they're the real heroes of this investigation this is what we've needed for months and months and months so once again Bobby thank you very much man I appreciate you um and what was this uh blae says I've been here since day one brother uh this is it no more lies no more **debunkers** it's time to show the world they cannot hide this information anymore glory to the people

(15:22) Amen brother amen um yeah we're not going to be entertaining any more **[ ] debunk** stuff I've already made posts about the very **debunks** that are out there if you guys want to see my comments on them you can go to that I won't be addressing more of that stuff in the future um unless there's some new update related to it uh it's it's obvious that those **debunks** have been falsified and fabricated to cover up these videos the proof the videos are real is undeniable completely undeniable unless you think that the the person

(15:50) that hoes these videos that never came out for \$150,000 has psychic abilities and precognition and um you know somehow also IM that just conveniently forgot to post the 5 hours of data after the planes getting warped out of the sky um you know you just you have to be completely delusional to think that the videos aren't real at this point regardless of how crazy is I mean like it's actually significantly more crazy to think that this was a suicidal pilot that crash into the South Indian Ocean without leaving a debris field then it

(16:18) is that the United States government has warped technology that's where we're at now with how strong the evidence is it's more insane takes more of a conspiracy to believe that than it takes to just believe that we literally have magical technology that's how powerful the evidence is so here we go that's important so data was one withheld from them two once it was released it withheld important information that would have helped experts test the official story that's from CNN from May of

(16:50) 2014 now what are they talking about they're talking about the emstat data and if you want to look at the emstat data you can go to this very article and download it because what I did now so right away here too he went to the article and downloaded it and I was confused because he was messaging me um the other day and he said hey is there anything else I'm

missing so I sent him he said where can I find the evidence so I sent him the link to Victor ilan's blog which has the raw data on it and I was confused because I was watching this

(17:22) clip earlier and I'm like wait he's not looking at Victor ell's blog and I realized he was looking at the raw data from or not the raw data but the Telemetry data that they released uh on May 28th and I went wait a minute because you're about to hear something very interesting let's go over the general timeline here and the flight path so the flight took off at 1641 UTC flight goes dark about 40 minutes in because it turns back around so right here takes off turns back around and then it kind

(17:55) of veers out here into the Mala straight all right now on the emstat data there is about 25 rows of data over so he's he misstated 25 rows of data wa here what he means is 25 pages of data it's not 25 rows it's 25 Pages full of data so it's a very very big difference now that's fine he misstated the terms here I was confused because he said 25 rows and I was like wait no there's way more than that it's 25 pages of data from the before the flight took off around 1,600 UTC until 1840 UTC there's

(18:38) 25 pages of data over the first two hours or so and again that 25 pages of data is just the first two hours of the flight so two hours of the flight up till 1840 UTC 25 pages of rows of data 25 pages and then two hours in the data stops reporting for four and a half hours once I heard that I went wait what two hours in for four and a half hours the data just stops reporting and I went wait a minute really I thought that the Telemetry data they released on May 28th had the time between 1940 and 23113 I thought it had it in there I

(19:26) just I it just slipped my mind I didn't think that even just look at it and scroll down and see he when I heard this I went wait a minute is that right or did he mistake that so I went and looked at myself yeah Woe Is Right Jay wo is right I went and looked at it myself guys I'm gonna flip over real quick to show you let's look at it ourselves here so I don't want anybody to be confused about this we have absolute proof these videos are real no denying it whatsoever it's game over um let's go ahead and

(19:57) share the other screen this one's not going to have sound okay so this is the article that I linked to okay you guys can find it yourself it's some CNN dog [REDACTED] uh but here's the the link right at the top Malaysian authorities published a 47 page document this is the Telemetry data that was previously unknown the date on this article near the top here May 27th 2014 Again the video the first video was published May 19th eight days before this article was even written okay and here it is here's the data so I looked

(20:32) at it May 27 so I've got the wrong day by one day whatever you guys get the point uh point is that it was published after the videos like over a week after the videos now I started scrolling through it and you can see right away so this is not 25 rows this is 25 pages of data maybe even more than 25 Pages look at this uh let me Zoom it in a little bit can I make this bigger or what's the deal here here we go yeah let's go like this there go okay here we go now you can see uh and I'll Zoom it in more we don't

(21:04) need to see the right side we don't really care what we want to see is this time over here on the left okay we care about this time on the left 1630 this is when the plane pulls back look how many rows pages of data there are I think maybe he meant 25 pages from when the plane took off plane takes off at 1642 UTC this is when the plane's taking off right here look at how much data there is it goes on and on and on and on and on 25 page pages of data 1707 1707 the plane goes dark at 1721 here's the last acknowledged uh

(21:38) message right here they say that sometime link loss sometime between here and 1803 UTC so they don't even know how when how this all the data was lost here they don't they can't explain anything what's going on 1805 UTC 1828 1827 data still good now oh wait where there there maybe I'm wrong actually hold on this is where uh the handshake responses right here this is actually it looks like I'm incorrect they actually do have the data right here this is the data here though that you can see that there is just this

(22:17) handshake request now if we scroll down here though I'm not sure why that's mistaken here because the the raw data right here as it goes down here just cuts right off so 1840 UT TC here's where it cuts off right here and then you can see right after that the next link is 2314 so this data here actually is where we don't know what's going on the data just stops right here so I'm guessing that this is some kind of like the the handshake request but it doesn't connect or something like

(22:48) that um so we can see that information right here 1941 so at 1840 it just stops and then now what does this say right here the C Channel and two P Channel messages moved into separate table below to ease the reading of events c channel message has no BTO values so these messages here has no BTO values um and so this is the part where these five these 10 rows of data right here uh there just there's no explanation for them whatsoever they actually have a completely different uh Channel 104 104 104 right here compared to everything

(23:33) beforehand that we see where we can see it's just everything is completely solid data and so this is what I think he noticed as well is that when you look at this data here there's just this complete cut off between 1840 UTC and 2313 now the proposed answer here is that they fabricated those 10 rows of data that they manipulated them that this is where the plane disappears at 1840 or right after 1840 and that at 2314 this planes in Diego Garcia or you know somewhere else wherever the hell it is five hours later and the reason why

(24:09) this is compelling is because this is when it lines up with the sighting in the Mal Dives like four five hours later later in the morning um so completely nuts uh that the person somehow knew that this data here in terms of the location of the plane matches up the real location of the plane in the nicobar islands where none of the experts had figured out now let's look back and watch what he was saying just there there's a four and a half hour gap between the next reported data at 234 oh okay yeah so I get what he's

(24:53) saying so he's saying those 10 rows of data aren't sending all the information so this is what I had figured out before is well so this is why when I made my my post on Twitter I had

already posted about this weird 10 rows of data there that don't aren't sending full data anymore 14 UTC when I confronted all of the experts about this they wouldn't give me any answers other than they just kept saying it's normal it's normal it's normal it's obviously not normal uh there's obviously something that

(25:19) happened at 1840 UTC you guys just saw the 25 pages of data and then there's just this weird thing where they're like oh handshake request handshake request for the next five hours and then the crazy part is the data comes back again after that 2313 now all of a sudden data is reading fully again so there's this like either log on log off whatever is happening here something happens between 1840 and 2314 and this just coincidentally enough is the time when the plane supposedly was flying in the South Indian Ocean in

(25:54) a straight line well obviously that's just a lie because we looked down in the location where those pings would indicate and there's nothing there there's nothing at all there um in addition to this it's weird because I think he's going to show it actually this one doesn't have it there's supposed to be there's supposed to be a 009 ping yeah um it's very weird there's like a 009 or a 0 019 supposed ping which shouldn't be possible because they weren't receiving like the full data at that point uh and

(26:37) we'll look at that in a sec but let's go back to his uh post let's watch the rest of this and so this data was withheld from the public for over two months and then when it was when it was released it was heavily criticized because there's this 4 and a half hour period where there's nothing now the official story in the official flight pack that was told to the public this is what was told in the first 30 days that the plane went missing plane took off turned around drove off down here south into the

(27:12) Indian Ocean and that was it that was the that was what was told to the public that was the official story okay now emstat data reports for two hours 25 pages of reporting data and then all of a sudden two hours in there's a four and a half hour gap why is that important well that's important because where was this flight at two hours into the flight per the official flight pack where was the flight where was this plane at the plane would have taken off 40 minutes in turned around veered off here into the

(27:52) Mala straight and about two hours into the flight they would have been somewhere in this General area okay why does that matter well in the satellite video that there's a lot of interesting things about these coordinates if you start really examining them one the nr22 so this hoer would have had to have known that this is an yeah and so then he starts talking about the stuff that we've talked about here the nrl22 listen satellite two they would have accurately placed this plane in the nicobar islands this is eight

(28:31) this eight this is a 3 43 01 9319 you have to learn how to differentiate between a two and a three and a eight and a nine you can differentiate between the eight and the nine because the eight the top circle is smaller okay this video the satellite video the coordinates in the bottom leftand corner put this plane in a general sense in the nicobar islands when it just

vanishes in the video and in all reality that's what the public was told about MH370 that it vanished right so this video takes place per the

(29:12) coordinates near the nicobar islands and the nicobar islands is the exact same general area where the plane would have been her the official flight path when there's all of a sudden four and a half hours of missing data from emstat that was withheld from the public for two months and then it was heavily criticized after it was released because experts couldn't put the official version of the story to the test perfect okay so right as he said there this data was held from the public for two months and then it starts

(29:46) getting heavily criticized because nobody can put the data to the test no one can understand why all this information is missing on there uh makes no sense whatsoever now let me go to the Twitter post about it next okay and if you guys want to check that out there's a link to that on my Twitter page as well so you guys can see for yourself how sketchy the situation is let's start by looking at the pinned uh the quoted tweet that I put on here um okay here we go okay so this is the quoted tweet on the

(30:38) phony ersat data I want to start with this one because this is one of my older posts um but we found some conversations where Mike exner had said that they couldn't fit the data the data to fit the Norther Southern routes he actually ends up replying in this post claiming that he never said that and I showed him an exact quote from him uh which was really awkward and then he basically said that he had ended up admitting that he didn't know if the data was real until June of 2014 which again means there's no way the hoaxter could have any

(31:10) idea in May uh and then he went quiet and all of these people have gone uh all these supposed in independent group fake experts have all gone quiet because the evidence has become overwhelming and undeniable um let's see uh the iMat VP said this disclaimer about the data was good if it hadn't been spoofed uh the iMat engineer Alan Shu bruer told the BBC they were concerned someone was playing a hoax on immat uh Victor was given the raw data in 2017 by one of the family members that's when we got to see it for

(31:47) ourselves without iMat having you know been in the middle of it uh let's see there's some direct quotes here's another direct quote as well just in case you think I'm lying about what I said we have all these direct quotes from these guys as well um oh yeah okay yet experts who have analyzed the report say that it is riddled with inconsistencies and the data presents uh to justify its conclusion appear to have been fudged this was from the original uh link to the they had this like graph the graph

(32:20) made no sense whatsoever no one could figure it out um and here's the quote from Mike exner again direct quote found however no matter how he could try it he could not get the values to match those implied by the possible routes shown on page three the annex they look like cartoons to me was what Mike exner said and then here's the direct quote from Mike exner right here neither the Northern or Southern predicted routes make any sense direct quote from Mike exner he was one of the experts now this was the data that I

(32:47) showed people supposedly these zeros here were the phone call so also they call the plane at 1839 UTC and they they claim they don't get a response which this is part of the reason why the Malaysian Minister of Defense has nothing to say regarding uh like uh why they didn't tra like they knew the plane wasn't hostile they didn't send up Jets about it why did they only call the plane at 1839 UTC like an hour and a half after the plane goes missing and then they call it one more time on at 2313 in between the missing data the

(33:23) data is full and complete here until then uh and then here and this is from Victor's blog in 2017 this is the raw data not the iMat stuff and this is where you can see 1840 UTC again there's like 25 30 pages of data before this now all of a sudden there's just these 10 rows you look at these 10 rows of data and sorry for the low resolution here and you can see the very clear pattern change in this data you can see that it Go the channel just goes 104 104 104 here and then that's it compared to

(33:53) before and after this the data is full and complete it's completely undeniable it's clearly something happened around 1840 UTC that nobody's been able to explain um anybody that looks at any kind of data in general should be able to pick that out now if we go back to the new post okay and I may have to correct some of this because this seems to be the appendix although it does have the P channel in here so I'm not sure why they put this in the appendix but it shows the data complete before and after those

(34:30) 10 rows here um and this was the call here it looks like the c channel call so I may have to correct this and post uh new screenshots but when we look at this article here and maybe I'll just pull up the real article maybe that's the best thing to do here yeah let's just pull up the real article **I want you** guys to see how Bonkers this article is can I not get this thing on the top to go away I can't huh okay whatever okay now it says they released this article and then people start there's

(35:03) some quotes in here as well that are just incredible uh Mike exner there's Mike exner right there he was calling for the release of the data to answer a few questions many questions unanswered uh there's not enough information whether to say they made an error I think we're gonna have to be looking for more so this is already May 27th already quoted saying there's not enough uh answers here um so even after they released this data the experts still didn't know how to interpret it they did still didn't

(35:32) understand why it was incomplete um you shouldn't this is the craziest clip right here read this direct quote you shouldn't read anything into the gaps in the data iMat senior vice president Chris mlan Clon uh Chris mcclanan told C Aaron Bernett out front on Tuesday this is a very good willll and focused way that we are trying to communicate our best impression of what happened this is obviously complete [ ] because they could have released the data two months before this but they didn't and it's not

(36:13) Goodwill at all you've got a huge gap in your data from 1840 UTC to 2313 UTC and no explanation whatsoever that's it makes any sense at all why does the data stop at 1840 why

does the data restart at 2330 no explanation is given nothing that makes any sense whatsoever here's Sarah Bach whose partner Philip wood was on the missing jet she was annoyed that immat and Malaysian authorities hadn't released everything they used used to reach their conclusions I see no reason for them to have massaged this before giving it to

(36:47) us so of course they were massaging the data they were trying to make sure they couldn't get caught they were trying to make sure that when anyone looks at the data they're going to not be able to figure out that there's some videos on the internet that prove what happened to the plane yeah this is this is literally the opposite of good faith selectively releasing data at a later time is the exact opposite of good faith uh by definition so and then down here it says uh the satellite handshakes blah blah

(37:18) blah [Music] um they claimed that the satellite handshakes continued uh to take place but we have no data for the 4 and a half hour hours of missing information on there um so here's somebody else uh who is a family member I think far too much has been left to experts who have remained behind the curtain says uh I'm gonna probably butcher his name so I'm not going to say it here but says this guy here whose wife was on the plane and this is the part two the experts that supposedly massage this data they they never made

(37:56) themselves publicly available they just said oh we're going to have some secret experts reveal the data and then we'll have these independent group people they basically tricked the independent group people like Victor ananello and Mike exner who are like CNN brain type people they put on a show for them Mike exner told us he went and visited imet multiple times they convinced iMat that the stuff was real and obviously had been fabricated um and this was how they were able to get like experts out this

(38:21) is how the intelligence Community works right is they uh convince innocent uh ful idiots to push the information out there for other people and that's what gives it the appearance of having authenticity to it uh this is the same thing they did with the cloud picture that they fabricated to the guy Jonas as well Jonas was just probably a useful idiot and that picture came from the original satellite video uh probably before it was even recorded and they pushed that and they made this guy think that he took a picture and had him put a

(38:51) debunk out there it's the same play over and over and over again they did the exact same [ ] to these guys um and anyone can see through it that just reads for themselves it's undeniable um yes to a high degree of probability we are certain that our data is right this is the same guy that just a second ago uh claimed that you shouldn't read into the gaps in the data with a high degree of probability uh we're we are certain that our data is right what what do you mean with a high degree of probability I mean

(39:23) the data is the data right it shouldn't be a matter of if it's right or not it should just be like here's the data there you go right crazy yeah yeah these useful idiots are incredible man and like the fact that redditors are so stupid that they lashed on to this these stupid stories and didn't use any critical thinking whatsoever this is the problem with humans in general but

definitely **reddit**ors is that they don't do any thinking for themselves at all like I don't think **reddit**ors have ever had an

(39:55) original thought I think they're just literally NPCs that just believe whatever they're told at face value and assume that some magical expert will do the thinking for them like this is why we're in this situation to begin with if you look at the MH370 sub**reddit** which is the one that was the original sub**reddit** for this case you find all the independent group people on it Victor ananello is on there Mike exner's on there they're all just morons and they were just promoting [ ] to masses of additional morons

(40:26) this is why we had invented this completely fabricated stupid story that has no evidence whatsoever for some kind of pilot suicide scenario with no debris field and no plane found like no common sense whatsoever none at all like you guys pointed out um so here's Mark Dickinson yet this is the best part no one has come up with a reason yet for why it shouldn't work with this particular flight when it hasn't worked with others well we have them on record in terms of there being another scenario where the plane was

(40:55) actually on the ground and their dad said plane was in the air so that's a pretty good reason why it shouldn't might not be accurate is there's a literal another scenario out there where the plane was on the ground when they claimed it was in the air as well um it's very important that this isn't just an immat activity there are other people doing investigations experts who are helping the investigative team who have got the same data well that's the whole point it's all the same data everybody's

(41:22) working off the same faulty data that doesn't make it any more credible the data was never corroborated so this data that you guys are looking at here was never corroborated by a third Part Source there was no other satellite communication people that said oh we've got some satellite data that corroborates that no this data is completely uncorroborated all the same people are working off all the same falsified data and this is how they trick people into thinking that it has some reputability to it as they well

(41:48) five people all came to the wrong conclusion off the wrong same wrong data that doesn't make it right makes it just all those people were wrong um they made their own models and came up and did the same thing yeah well you're making models off of a faulty data set it's pretty simple basic logic um we have we have actually the messages from the ground station to the plane and back again that essentially tells you the terminal is switched on and powered up we have some timing information in addition to uh that the frequency

(42:21) measurement yeah except for the four and a half hours where all the data is missing other than that it's great in fact the data 1840 is probably legit that's when the plane's getting warped out of space by three orbs from the United States government filming on two military cameras from two different perspectives in perfect synchronization with no discrepancies on a single frame uh let's see okay now here's some more stuff this is all the data we have for what happened in those six hours or so

(42:56) so they're claiming this is all the that they have um and then Richard Quest comes in it's up to the detractors and doubters to come up and say why they believe it's wrong not the other way around I couldn't agree more Richard Quest absolutely it's up to us to come up on why we believe it's wrong you want to know why we believe it's wrong because we have two videos of the plane disappearing out of SpaceTime this is why we believe the DAT is wrong I mean mostly it's right but up until 1840 when

(43:23) the data cuts off that's where we have some doubts now we have some doubts because all you're showing us is 10 rows of data that has no substance to it whatsoever like at all so here is where is it this is why we have doubts because we've got coordinates in the bottom left of this video that say the nicobar islands we've got an eyewitness that sees the plane consistent with this plane right here at the exact same time and we have a Chinese only reported Mayday call also at the same time so

(43:55) we've got three independent corroborations of this data this data this video we're looking at here has more independent corroboration than the satellite pings that uh the imrat data has pushed out crazy so again doesn't matter how impossible it seems what you believe with what you see with your eyes what matters is what the data and the facts show the data and the facts show that no one could have possibly known to put the plane in this location on March 19th or before March 19th uh in the window in which somebody would had to

(44:28) produce these videos the data was only publicly released May 27th May 28th uh 8 to 9 days after this video was already published on the internet the counterargument seems to be that somebody just guessed the right location of the plane they just guessed it out of all the locations to put the plane they could have hoaxed this video put it in the South China Sea they could have hoaxed this video putting it in uh the South Indian Ocean but no they hoax the video in the one location where the data from imrat stops

(44:58) what an incredible coincidence if this was a court of law with respect to a murder trial that would be absolute that would be considered absolute proof in fact Alex Murdaugh was convicted of murder for less evidence than this they didn't even get it narrowed down that that tight so uh what are the other quotes that it says okay and then here's some more quotes we'll watch we'll watch this thing go down let's watch it get warped away again guys um with science that was previously publicly unknown to to anybody when this

(45:42) video is published nobody even knew what a magnetic monopole was or what it should look like and we're seeing it in the orbs yeah the signal probably stops because this plane gets warped away somewhere else like that's the reason why the data disappears like that should be pretty obvious that's why we can say this plane's probably being warped away at 1840 UTC or within 5 or 10 minutes most likely because that's why the data is stopping the next supposed handshake we have handshake request is at 1941 all

(46:11) of a sudden over an hour later so let's go back to this one okay so then it says again Sarah was once again saying that they asked for the data more than two months ago they

wanted the data back in March and they should have gotten the data back in March there's literally no excuse if all you have is some rows on an Excel spreadsheet I write audits I can write sequel guys I could write this audit under 24 hours that they showed and I could have released it to the families on March 9th 2014 one day after the

(46:42) plane disappeared so why are they waiting until May 27th 2014 to release the data it seemed like a relatively innocent request she said but the authorities refused to release it why would the authority refused to release data that could be saving people's lives that could be solving the puzzle the answer is simple they had to invent a narrative and they had to be absolutely 100% sure that nobody was going to find some issue with the data and they had to be sure that no matter who interpreted that data that they would interpret it

(47:16) as the plane going to the location where they've pushed the narrative because if they had pushed a narrative somewhere else and the data was not able to be calculated in a way that could lead to that conclusion then the whole thing would have on the part that's the only reason why they would wait to release the DAT there's no other possible logical explanation nobody's given a logical explanation for why they waited to release the data at all none at all um let's see oh yeah so here's another quote from

(47:49) imet we shared the information we had and it's for the investigation decide when to wear pans out oh here we go Malaysian officials told CNN earlier this month that their government did not have the data what Malaysian officials in May told CNN that they didn't have the data so how were they able to conclude that the plane ended in the South Indian Ocean if the Malaysian officials didn't even have the data and then iMat contradicts them and says that they the company supplied all of the data to the officials at an early

(48:23) stage in the search so literally the two sides Imad and Malaysia were all AI contradicting one another in the early months and I remember this from 10 years ago people that were alive back then probably remember this uh as well Malaysian officials had told them they didn't they didn't have the data from iMat and then iMat comes out later and says no we did release it to you early on which obviously they didn't because it wasn't publicly available pretty crazy right they can't they literally

(48:48) can't keep their lives in order this is the best part is that people say that I'm a liar but I've been streaming every single night and I've got uh you know 80 podcasts or so under belt and all they have to do is try to find the lie and they no one can find any lies I can find lies from everybody out there all the **debunkers** I catch lying I catch the Malaysian Minister of Defense lying we catch Malaysian officials lying we catch iMat lying um it's crazy we catch the independent group line um literally

(49:18) everyone out there trying to cover this up we can catch line nobody can catch me lying somehow incredible okay we are trying to be as transparent as possible and then let's go look back at my post one more time I think I want to make sure I didn't miss any quotes in here CNN safety analyst David soury said certain key elements which would allow independent experts to

fully test the official conclusion are missing from the data in the document ersat CEO rubert Pur acknowledged Tuesday that the company didn't release the model to which it

(49:56) applied to the data to estimate the plane's path what they didn't release the model they used to determine the plane's path is that normal guys nothing about this is normal nothing about what they're saying here I don't know like I wish the debunkers would actually just try to debunk the fake [ ] here because then they might have some credibility how can anyone believe any of this [ ] that they're mean that they were pushing um you should again you shouldn't read anything into the gaps in

(50:28) the data just ignore the part between 1840 UTC and 2313 guys it's totally normal just completely ignore that don't read into that nothing to see here nothing to see here completely normal everybody uh let's see Sarah box says they massage the data oh and for weeks iMat said it didn't have the authority to release the data I must have skipped over that iMat said it didn't have the authority to release the data why would iMat not have the authority to release their own data just guys just think about that

(51:05) what what possible reason could there be for imrat to not have the authority to release their very own data I mean they're a public company there should be nothing that stops them from releasing their own data the only reason why they wouldn't be able to release their own data is because the military stepped in and said you can't release it because we need to fabricate it falsify it we need to come up with a story that has uh an argument that makes sense this is why all the people in Jeff wise's blog comments say that you can't

(51:39) trust the immat data yeah CNN covered MH370 for 24 hours a day for nearly three weeks pushing a false flag it all felt like a narrated lie repeating the same details over and over just because that's what it was in fact I would be surprised if CNN was not being directed by the government and the intelligence agencies on what to report it's completely wild what what was this post that Claire said in the Netflix documentary the iMac guy looked close to tears because people were doubting the data hurt his feelings

(52:14) obviously a crying man can't be lying exactly oh they the MH370 documentary on Netflix is so garbage it's so bad it's just terrible dude um don't worry about me guys if anything happens to me then you guys know that this stuff's real and that you guys will rise up all the evidence has been made publicly available so it's not like the evidence is going away um and for the record if anything were to happen to me no one should delete any of my content on Twitter um my I want my content to

(52:43) stay on Twitter for all time if anything happens to me no one should delete any of it I would never delete any of it and I've never directed anyone to delete any of my content anywhere also for the record I have a backup storage location that has all of the investigative information as well um and I will set up something so that in the case of something happening to me that that information will be made publicly available um so that anyone can look through all the research work that we've done and had out there includes uh

(53:10) damning information about all the **debunkers** who have uh tried to Pro promote false **debunks** about the videos uh all the records of their lies have been recorded as well um for future use so um yeah just wanted to let you guys know that that's out there just so that people know and and these streams also of course should be considered uh um record as well uh let's see and then they say this is all the data we have for what happened for those six hours or so so they're just staying they have no data

(53:43) except for these 10 rows of data between um 1840 and uh 2313 I'm probably G to have to issue a correction on this though well still somewhat correct but the part about Victor I'm going to have to correct this part because the the 10 rows of data were available in the original post it's just it's a little confusing the way they presented it so I probably will issue a quick correction after we're done here on that part but the summary of the argument Still Remains the Same uh that that data is just not full

(54:23) at all and you can see it right here again this is the 25 data and uh this one actually has a link too if you want to see the full raw data for yourself you can scroll down you can find it's it's dozens of pages and then all of a sudden this is it and then the data starts back up again at 2313 and and is full and complete again okay I think that was any other quotes on there that I wanted to jump into okay I think that's it on that great let's close this out uh sorry I'm trying to see um okay also and I've just because I

(55:04) promised some stuff last night I promised some new clips uh probably going to do that after the stream and I probably will only post some of those clips tomorrow just because of how busy it's been for me today with my work and everything uh it's been hard to juggle all this stuff going on uh so this is what I'm going to say because I don't want to be as rude as I was considering it actually maybe I will maybe I will um so tomorrow as well is going to be the Billy football uh uh interview is going to drop and that's

(55:43) with audio crack so you guys can check out the audio crack uh investigation uh video that I did with with Billy we answer pretty much all the questions that are out there and one thing I bring up is the the uh **debunk** attempts so this is what I'm going to say right now um you know what I am going to say okay here we go so I am formally accusing **Mick** West serial **debunker** of criminal conspiracy coverup related to MH370 **Mick** West is responsible for three fabricated **debunks** not just into MH370 but also just not just oh sorry **Mick**

(56:25) West is responsible for three fabricated **debunks** not just into the MH370 videos but one of the three is also predates the investigation by years where he falsely **debunked** the Philip wood picture that appeared on forchan uh the **debunks** specifically the VFX **debunk** pushed by **Mick** West on August 19th 2014 or 2024 sorry go have to edit this the uh the VFX **debunk** pushed by **Mick** West on August 19th 2023 was also used by the corridor crew the lore Lodge as well as other YouTubers to falsely claim that the MH370 videos had been **debunked** none of

(57:12) those other sources came up those **debunks** themselves they all took them directly from **Mick** West so **Mick** West fabricated a jittery contrails **debunk** where he falsely claimed that the

smoke Trail coming out of the plane were contrails he falsely claimed that the smoke Trails coming out of the plane were offset from the plane this was due to the stabilization software due to the fact that the smoke Trails were slightly blue and it was being considered part of the background this was conclusively proven when we converted the video to

(57:45) black and white and used the same stabilization capabilities to show that there is no jitteriness with the smoke Trails whatsoever **Mick** West lied about this never issued a attraction on it and never issued an apology for falsely trying to **debunk** the videos with a fabricated **debunk** the VFX **debunk** also pushed by **Mick** West does objectively does not match the MH370 videos I have them on record admitting it in Twitter replies as well their argument and their assertion is that somebody changed around all the aspects of the asset that

(58:20) they move the pixels around to get it to be a pixel perfect match this has literally objectively never been done to this asset ever before it's been used in at least five major media and this type of modification has never been done to it in any of them it's not been done in the original Killing Time video game it was not done in the attack on Titan advertisement it was not done in the movie Starship Troopers it was not done in the movie Eastbound and Down where the asset was slightly angled and it was

(58:47) also not done in the movie anchor man where you can see this asset none of these have ever had this asset modified in the way that **debunkers** have asserted and as I said before **Mick** West is also responsible for a Philip wood exf data picture where he falsely claimed that the the metadata in the exf data picture was not consistent with an iPhone 5 using a Picasso app I previously showed technical analysis that proves that it is 100% consistent with an iPhone 5 using the Picasso app **Mick** West is responsible for three of the four major

(59:22) **debunks** against the MH370 videos and the investigation one man you take that how you will I recomment that the Department of Justice look into M West and his connection to anybody who is trying to make the MH370 videos disappear and if it does turn out that he's been paid or somewhat um coerced to **debunk** the case of MH370 he should face criminal prosecution for that also just as a just as a record out there um anyone else who's in co uh a co-conspirator with **Mick** West who is trying to push this they should also

(1:00:02) face uh criminal scrutiny as well by the Department of Justice and they should be investigated that includes uh skeptical inquire the magazine that prop uh supposedly pays **Mick** West for articles and he's a fellow on this uh skeptical inquire Institute or whatever it is um all of these should be investigated because if these people are actually covering up criminal conspiracies for the United States government then that is one of the worst crimes that somebody could commit okay yeah the doj themselves probably

(1:00:40) wants the videos to disappear wouldn't surprise me but that's okay I just want to make sure that I have it on the record so if in the future uh the videos are ever admitted to be real that nobody can deny that I didn't formally accuse these people um because those are the people responsible 100% these are the people who have been responsible for it and I want to

show you guys right now as well um the evidence for how the uh how these videos have been trying to be uh how the intelligence Community has tried

(1:01:09) to hide these videos so I'm going to run through it with you right now so you can see I'm not going to go through the **debunk** ref uh refus all the things I claimed on the **debunk** stuff I'm probably going to try to edit those in later on uh real quick let me thank some people GP thank you for the donation GP thank you for the second donation you're looking at the priest of macroscopic phase conjugation with the white shirt I got my blue Inlet uh in the thing as well pretty cool and then I know Ela

(1:01:36) anyone considered that they swapped out the planes so that they could place the real plane at the bottom of the ocean guys I don't know how they're gonna I mean if I'm the CIA I'm thinking of a way to place a plane at the bottom ocean I don't know how the hell you're G to pull that off like you need to now what have somebody fly a rogue trip 7 that's a Malaysian Airlines Rogue Tri 7 you're going to go fly into the ocean now it's too late they already searched everywhere even if we found the plane

(1:02:01) now like you're going to be able to tell that it wasn't down there for 10 years 10 years the plane's going to be covered with like sea life and [ ] like that they're going to go down there gonna find a fresh plane at the bottom of the ocean there's no chance you also can't throw the debris down there because the only way that there couldn't have been a debris field is if the the plane landed softly and slowly sank into the ocean otherwise where the bodies where's the luggage where's all the stuff that Flo

(1:02:25) it has to be down there in at the bottom of the ocean are they going to find an intact Malaysian Airlines 3 MH370 at the bottom of the ocean guys if they find a perfectly intact Malaysian Airlines flight 370 with sea life on it and bodies inside at the bottom of the South Indian Ocean I'll be the first one to eat my hat I'll literally eat my own hat I'll just whatever you know I'll make I find a hat and I'll literally eat it with ketchup on it there's just no way to pull that off the better move would

(1:02:50) be that they uh try to take the videos that they have access to and edit out the orbs and then try to have somebody come forward as a fake hoaxter like that's that's the better play like they should try that it's a little too late for that because they missed \$150,000 Bounty it's like you got to have some pretty weird excuse for how you didn't hear about this for the record as well I have 170 million impressions over the last SE nine months 170 million just me just me 170 million impressions uh so you're going to have

(1:03:22) to do some real good excuses for why you haven't been made aware of these videos if you're supposed hoaxes or the videos um and yeah it's too late also to come up with new **debunks** as well like what now some new **debunk** is going to appear after I've formally accused **Mick** west of criminal conspiracy yeah good luck with that you guys are under the most scrutiny you ever could be uh and if we were to find any type of I mean we've already got him dead to wrs on at least two two and a half Fabrications unless **Mick** West claims he

(1:03:52) somehow doesn't know who icy slide is the one day old **Reddit** account that posted the FX the same day that **Mick** West founded in some some obscure ass 3dio video game within a couple hours uh he better have some good excuses for the government on that one um now the other thing is the AO has been ghosting me as well so we gave the AO absolute proof the videos are real we gave them Edward C Linn we gave them the videos that they can corroborate and AO went completely dark after they sent me the message saying that they found found

(1:04:26) the US government search efforts after the plane went missing they've completely ghosted me they owed me the uh whatever it's called the uh memorandum of record sounds like a very official government thing they owed me the memorandum of record back in January they haven't even sent me the memorandum of record yet because they don't want this to be on the ao's report they're trying to prevent the a the AO is trying to prevent this mh37 Zer case from going on their next official report

(1:04:58) that's the only reason why they wouldn't have given me the memorandum of record yet because if they give me the memorandum of record now I have absolute proof that they've been given this information so until they give me that record they're going to have plausible deniability that they're going to say oh well uh we didn't we didn't know about it but I have the emails so if they don't start responding to me I'm gonna have to start releasing emails to the public which I don't want to do uh

(1:05:22) because the guy told me not to give his name out but they are literally ghost me about this when they've already found some preliminary evidence related to this this plane and our surveillance capabilities the government needs to come out and admit that we took the plane just do it just admit that we took the plane we know it everybody here knows it you're not even gonna get in trouble no one's going to hold these slimy [ ] to account it's never going to happen most Americans will just say that it was worth it anyway so just

(1:05:49) admit that we took the plane so we can have this awesome technology and we can move into Star Trek world like why the hell are we hiding this man it's time to man up okay so now that we've addressed that let's look at the evidence that this uh was fabricated uh that the the we're going to look at the evidence that the um the **debunks** were fabricated okay yeah this is exactly it so we call them criminal felons in public and force them to respond list them individually and specifically absolute golden move

(1:06:24) exactly I'm literally I'm literally accusing mck west of criminal conspiracy directly I'm accusing him of it 100% I want them to respond I want mck West to respond to the allegations we have I have absolute proof that he fabricated multiple fake **debunks** related to these videos including one that predates this investigation which I most likely will be posting later on in fact let's just show it right now for you guys okay I'm going to show you the first fabricated **debunk** from **Mick** West I want to show you

(1:06:51) how the intelligence Community operates and how they're hiding the videos because not only am I going to expose the videos not only are we going to expose the technology we're

also going to expose how the disinformation apparatus hides stuff like this as well to the world all three of those things we're going to do and I and for the record I said we would do these many many many months ago as well all the stuff that I'm doing right now I've already said that I would do uh so I'm gonna I'm pulling up the link real quick

(1:07:15) so we can get it if you guys want to follow along you can look up my search history for Philip wood and this goes all the way back to like like oh crap this is going to be hard to find huh uh I think it was called the Philip wood picture is real there it is got it okay this got 122,000 views uh way back when I didn't even have that many followers okay here we go I'm G to pull it up for you guys I want you guys to see that I have the receipts as well here we go uh why does this why are you guys not seeing what I'm seeing

(1:08:13) here oh this is the wrong one that's why okay now you guys are seeing it yeah okay we're seeing it yeah Tony Adams you're on the list too buddy don't worry we're going to get you too I hope that's your real name by the way Tony Adams and these other guys who are like literally there's people out there literally paying right now to push disinformation about me and about the case yeah don't worry man you're your name is going to be given to the doj as well so you guys better pray to God that

(1:08:45) the CIA is dropping plane Parts in the South Indian Ocean because otherwise you're going to be trying to explain to the feds why you were uh working with Mick West trying to hide these videos why you were fabricating fake debunks uh so hard it's pretty it's going to be pretty damn awkward also you're going to have to explain it to the world when everybody's looking for somebody to blame about covering up this plane and nobody in the government side's taking blame for it as well uh they're not

(1:09:08) going to be trying to blame the government they're gonna be trying to blame the [ ] who are trying to cover it up they're going to be trying to blame the enemies of humanity that we're trying to hide uh Star Trek technology from the world that's who the government that's who the public is going to uh blame so here's a post that I made on September 26 2023 this was 8 months ago here I'm going to read it out I called it the Philip wood photo is real I have come across analysis that conclusively

(1:09:35) debunks the debunk where none other than Mick West himself claims that the Philip wood photo is fake Mick West would you like to apologize and retract your fake debunk given the following evidence did you know your points were false when you made them here's the summary to blow and the full write up I'm going pull that up here we'll at in a second um so somebody this was a the this is a direct quote from do I have the screenshots down there here it is I created the following website which debunks all of metabunk

(1:10:11) thatorganicmom that the photo was taken by an iPhone app like the Picassa web albums app and it also proves that the photo is authentic and hence the message was genuinely posted from Diego Garcia the conclusions any photo taken using iPhone 5 and later edited using Picassa software does not result in the Picassa aski Str string being inserted into the software

IFD entry data unlike what is seen in this photo I'll show you guys this as well so you can see when non-standard camera app features in a smartphone or the camera inside the app

(1:11:00) like the casso uh Web Albums app are used to take a picture it can result in the shorter two coordinates longitude and longitude format GPS info being stored in the exif data so Mick West claimed that that was incorrect and he was wrong um and again these aren't opinions these are just literal statements of fact here um since the software IFD entry in the data says whatever this number is um the Picassa ask is Str is present as one of the strings in the six string format characteristics of the iPhone the software that inserted the string into

(1:11:31) the image must have been aware that this image was taken using an iPhone and so in all likelihood it was the Picasso web albums app on Philips iPhone 5 which inserted that string into the software IFD so this was an authentic post from Philip Woods iPhone and is in alignment with the fact that the original post was deleted and most likely when the captors found out about it confiscated the phone using which they could have deleted the original post uh let me pull up this oh well by the way this is my subreddit that got banned way back then

(1:12:05) so my subreddit only lasted two weeks and then the debunkers got my subreddit banned uh so just in case they could be any more dishonest they literally wouldn't allow any dissenting opinions so they banned my entire subreddit from the internet um where is the original post oh and then Mick West responded as well so let me see what his response was this is Mick West official response to this no that was it that was it I reposted this in January and Mick West's response was just no that's his complete

(1:12:39) response um and here's Mick West respon exf data can be modified in undetectable ways with simple tools so for the uh people claiming that you can fake all these videos but you can't make a cloud picture uh well Mick West would argue against you there's direct quote exif data can be modified in simple ways I'll post link to this as well so you guys can check out now let's look at this here is the complete analysis okay so I think here is the arguments by blogger let's open this up yeah here it is okay let's take a

(1:13:14) look at this April 2nd 2014 okay edit admin by Mick West April 2nd 2014 this is over 10 years ago we have absolute proof here that Mick West is the one since there since the entire Theory rests on the claim that the exf data proves the location this claim is debunked by post n which demonstrates that exf data can be easily changed summary uh let me see yeah here it is so here's the seven points that were made okay the photo originally post on forchan a notorious source of Internet hoaxes this is an opinion the second post the GPS exif

(1:13:56) data in the photo is Trivial to modify that there are apps that can do that except for apparently for a cloud picture for a cloud picture then these guys say that it's absolute proof If we have a cloud picture of metadata in it so again this is an opinion the third one the GPS exf data in the fake photo this is obviously emotionally charged language being used is in a different format this is objectively false it's not in a different format from the iPhone 5 data the fake photo again Char emotionally charged information here

(1:14:25) again the fake photos GPS is consistent with the format or is consistent with the format used by the Picassa when editing exf data again this is false the fake photo uh lacks altitude data which is consistent with it being edited again this is false the photos taken in the uh iPhone apps includes altitude data this is also false there is no evidence that it is genuine and a vast amount of evidence is fake this is also false so all of these uh all the factual arguments that are made here are false and they are refuted right here in this

(1:14:57) post so I'm just going to SC show you the Picassa here's the iPhone analysis Picassa will write the longitude and latitude and the exf metadata here um says basically the difference in the GPS formats is uh above argument is referring to the fact that the unusual photos taken on an iPhone 5 in all three GPS coordinates longitude latitude and altitude where the above contained only GPS of longitude and latitude so that above here is absolute proof that it does not always include the altitude so that argument that we just heard up

(1:15:30) there uh from metabunk was false here's the absolute proof right here there's no altitude data in this this is a real picture so you took a random real picture pulled up the metadata showed you there's no altitude data in it um and then he does this several times so I've already kind of given you the uh the analysis but you can check for yourself here as well and um um anyway you can check through this yourself uh I've already read through it in the past I I tried to condense it down there so here's the

(1:16:03) conclusions and I wrote those conclusions down there as well uh so this does not necessarily mean that it's impossible to have faked the Philip wood picture because you still have to explain why it was posted on 4chan which I agree is an argument that one can make but it does show that Mick West's Arguments for metabunk were fabricated so so he fabricated this fake uh debunk over 10 years ago and now let's take a look at what happened with the history of this I want to show you guys how the VFX was

(1:16:37) fabricated as well so first thing I'm going to show you is proof that Mick West is the one who's responsible for it let's see um maybe I'll just pull it up actually hold on give me a second guys problem is I have so many screenshots of people who are posting misinformation it's actually hard to find the one I want even when I search MC West I get like 50 responses um where is it okay and then here also uh Mick West here's Mick West claiming he would not look at the M this is not my direct

(1:17:41) message with Mick West I've never direct messaged Mick West but this is him arguing that he would never look into the videos which of course he lied about later on um so I have all the receipts by the way guys um here's Mick West's video that he made uh he made a YouTube video trying to debunk the the video so this is again is absolute proof as well that uh he was fabricating multiple debunks in that debunk he I believe he goes through the jittery contrails claim as well as the VFX claim um here it is okay and now here's

(1:18:26) absolute proof that Mick West is responsible for the uh Pyromania bfx debunk this is the exact same day that a one-day old Reddit account posted the Pyromania VFX debunk the

same day that the one day old account within hours **Mick** West is posting this saying he found it on an obscure 1995 3DO video game this is a full playthrough in one hour this video is an hour long and he randomly finds the VFX in the middle of this video there the only answer is that **Mick** West is icy slide or that someone in his sphere of influence is icy slide and he

(1:19:05) knew exactly where to go searching for this video in this 3 3DO killing time this this links **Mick** West directly to the fabricated VFX **debunk** which under no circumstances matches the videos uh and this is proof that it doesn't match right here this is a direct overlay of the VFX to the video right here you can see very clearly it does not match this is a statement of facts it's not an opinion that does not match our video even this Frame which is the closest frame also does not match very clearly does not

(1:19:39) match in the middle even when you line up the dots as best as you can it doesn't match along the borders this is not an arguable debate uh itely doesn't match so we have **Mick** West right here claiming that he's the one that found this now I'm going to show you where this came from as well okay uh because I want to make sure that I people understand the evidence the full evidence against **Mick** West and why he fabricated multiple fake **debunks** and why he should be investigated under criminal conspiracy for

(1:20:06) this so I'm going to close this out let's go oh here it is actually that was it okay perfect P oh pull this back up okay so this post right here can you guys see that let me let me see can you see this no you can't okay this post is one year old this dates January 13 2023 so this post here was posted by Kudos or something like that one year ago January 13 200 uh 23 this is actually eight months before the videos reemerged well before I knew about these videos and remember them eight months beforehand this uh video here is

(1:20:52) actually posted if we go to the YouTube channel by Ashley bernitz so Ashley bernitz uh was in our was in my streams one time and we asked her a if she was the hoaxer she's not the hoaxer we asked her why she was posting this video and she said that uh she had been like trying to promote this video because she thought that you know there was something to look into here related to this video so if you want to think that Ashley was the hoaxer you can go ahead and try to find Ashley bernitz but there's no chance

(1:21:23) that she is so I wish you the best of that um and here you go eight month look at this eight months ago as well somebody posted this when demo eight months ago posted the exact coordinates where this happened the the digits are written in the lower left corner of the satellite video right next to the last known radar signature of MH370 it's actually 350 miles away but uh close enough pretty close to the last uh radar signature of MH370 now of course if you're the hoaxer you would have if the videos were faked

(1:21:52) and there was a hoaxer they wouldn't have put it in that location they would have put the plane at the last radar coordinates not 350 miles away in a completely different area so this is where this comes from and when you look at the replies we looked at them yesterday I'm not going to read through all of them but there's a lot of people saying that this is some stupid CGI

video people claiming this hurts the families a whole bunch of other [ ] like that so now what I want to show you guys is how after this posted on **Reddit**

(1:22:21) the intelligence Community jumped onto the scene and I'm going to give you evidence for why and how so remember the date here January 13 2023 so let's go to my source here this is the Pyromania VFX we looked through the history of the Pyromania VFX that was uploaded on the internet that everybody was using to **debunk** the videos look at this it was updated January 16th 2023 this is three days after that video was posted on **Reddit** three days after that video was posted on **Reddit** all of a sudden someone decides to come in here

(1:23:04) and update this uploaded uh asset which I'll show you guys the source link for it as well I want to make sure I have all the evidence lined up for you guys oh and by the way here's the full playthrough of The Killing Time video game so **Mick** West says that he went through this hourlong video and found the asset here it is right here here's the clip to it that's it there you can see this is the this is the asset right here let me just click the link again this is what **Mick Mick** West claim to find

(1:23:43) this obviously this is not the same asset that is in our video obviously this is not the same I mean it's pretty goddamn different uh now we have the let's see where is it okay here is the upload we have the uh we have the archive upload here as well you can see right here Wave Rider uploaded by Wave Rider on January 25th 20123 so this is 12 days after that video had emerged we looked at the data right here there it is right there updated 20 January 25th 2023 it looks like somebody updated three days also

(1:24:30) these are the Assets in the zip file somebody updated the Assets in the zip file uh three days after that video emerged that's pretty amazing that somebody posted this on **Reddit** and all of a sudden somebody had the Pyromania VFX getting posted onto the internet now not just that I'm going to show you how they objectively fabricated this okay so we can see here's the the metadata related to it updated um January 25th and then look at the image the image actually took they literally took some of the assets from the MH370 the

(1:25:04) best ones here down at the bottom right this right here is the actual uh image from the Drone video you can see the tail of the plane sticking out right here this one on the right is the one snapshot that they've tried to argue is a perfect match to what we see on the left and I showed you guys the perfect overlay so you can tell right here this is proof right here that somebody was preparing this **debunk** in January of 2023 to be used against the videos you're looking at the absolute proof of that right

(1:25:36) here um so we can actually even figure out where this came from and they pulled this out of their ass because they had it prepared ready to go and then this was used to trick people like Joe **Rogan** into thinking that the videos were fake so let me pull up I'm going to switch over to my other share screen real quick to show you this is exactly what they did so then what they did you can see that this is the real one this is the real one on the left this is the the fake asset they used this and this is obviously doesn't

(1:26:10) match like you can see where the dot has been perfectly lined up right here it means that the the the edge doesn't match at all there's no way to make this a better fit than what we see right here this is the best possible fit that there is I don't know why the L Lodge uses a fabricated comparison but their comparison is not the real asset to the MH370 video uh so what you see right here is they literally took the real where is it they took the real MH370 video and they inserted the frame from it to make it look like it was part

(1:26:50) of this Pyromania asset back in January 25th 2023 eight months before this investigation ever began and Mick West is the one that claimed to find it in an hourlong YouTube video in less than a couple hours after a one- day old Reddit account posted on Reddit to ban the videos from being discussed anymore on on the Reddit pretty incredible right and this one right here where you see my mouse up here this also looks like it was like partially fabricated because there is no blue coloring in any of these assets it looks like what they

(1:27:23) did was they took the border of one of them and they put it around I think I don't know which frame this is from the the Drone video but it looks like they took it from the Drone video and tried to superimpose it in over here I could be wrong maybe this is just incidental uh but this one down here is no doubt this is this is the actual drone video right here that they inserted into this to make it look like it was part of these assets so this looks like this was uh falsified way ahead of time in January to debunk so now we've got Mick West on

(1:27:51) the Philip wood lying about the Philip wood picture we've caught him using the fabricated debunk from the pyromania effects where he was most likely given this asset and told uh to use this because it had been put on the internet back in January of 2023 um and then let's take a look at the last one which is the jittery contrails one sec chat I got to search on here okay um okay yep here you go and then we're going to look at Mick West's fabrication of the jury contrails so that's two debunks that

(1:28:52) Mick West and his supporters have promoted the that were falsifications by pure definition literal definition of falsification is modifying something to uh perceive it as a lie so this right here as well as you can see in the bottom left this is Mick West here arguing that there are jittery contrails in the bottom left down here of this video he argues that this clation software that's the reason why now that was actually told to him in the replies as well um where is it where's the itbs guy here it is the stabilization software

(1:29:36) can make the contrails Shake as if they are part of the background this is what I did with prodad stabilization and you can see that the contrails in the video board are shaking up and down in the same way it is the stabilization algo not compositing you can see my reply this is 100% confirmed to be stabilization software and a low bit rate artifact but debunkers refused to admit they were wrong so this is on no uncertain terms proof now just because this may not be enough we absolutely proved it the reason why it's seen the

(1:30:05) the smoke as the background is because it's blue it's Blue on Blue as opposed to the plane being green so the nail in the coffin that shows and as far as I know Mick West has not um

apologized for fabricating this fake **debunk** or any of the fake **debunks** that he posted out there you saw in the replies about the Philip wood he just said no that was his only response uh he didn't have any arguments whatsoever uh in my opinion uh **Mick** West is a criminal and an enemy of humanity and he should spend the rest of his life in

(1:30:36) prison uh for covering up The Disappearance of 239 people to me that's 239 charges of conspiracy uh should put someone in prison for the rest of their life now let's go ahead and go to the video file of the jittery Contra so this now is going to be absolute proof that it was related to the stabilization software we converted it to black and white and when you convert it to black and white you can see that the jitteriness goes completely away uh the top one here you can see there's no more jittery contrails

(1:31:06) anymore it was just an issue of the stabilization software the bottom one is the original the top one is it being stabilized in black and white no more jittery contrails so what perceived is jittery contrails actually accurate camera Shake from the video and we can tell that obviously it shouldn't have required all this effort because if we just pull up the video file from the Drone you can tell that the camera is shaking like crazy so it shouldn't even have gone this far uh the fact that they are pushing this fake **debunk** out there if I

(1:31:40) just go ahead and zoom in a little bit like this you can tell it's just the camera shaking like you can just tell looking at it it's the camera shaking I don't know why they felt the need to try to fabricate this fake **debunk** out there okay and we'll just watch it get zapped out of the sky one more time cool okay guys that was pretty good um I think do we have anything else I want to go through let me look at this okay so I showed all the proof of the three fabricated **debunks** that are out there uh I didn't plan on going

(1:32:26) through all the **debunks** tonight but uh I'll go ahead and go through the uh what my honest explanation is for the cloud image as well because apparently people are kind of uh obtuse when it comes to some of this right here so let's take a look at that since we're since we're doing it anyway chat we're doing it anyway so the fourth **debunk** which I don't I don't know if it can be attributed to **MC West** I'm not accusing him of fabricating this **debunk** um is the cloud image so I'm just going to read this off for

(1:32:57) you guys in December there was a **debunk** that claimed to find a 2d Cloud image with matching clouds from the MH370 video If You inverted stretched and Stitch the image uh if you read the quoted tweet you'll see that it's impossible for there to be a 2d Cloud image in the video because the video itself is technically authentic the six- day old **Reddit** account claiming to have find the cloud image lied about how they found it saying that they were somehow able to pick it out from the hundreds of th of not thousands of cloud images in 20

(1:33:23) minutes thank it was shown that there's like 140 something sets of cloud images on the uh on the textures website given the alterations required to make the cloud images match this is impossible the user knew exactly where to find this image they then mysteriously anonymously emailed the supposed picture taker to get the person to tie their real name and

make a **debunk** video for them there's a **debunk** video out there I think has like about a million views or something like that uh and that's tied to **Jonas**

(1:33:52) Doo uh the one that wanted to come out and make it and use his real name so whatever happens that's on him the picture taker couldn't even find their own image on the website I'm going to repeat that one more time the picture taker couldn't even find their own image on the website the image in question did not reverse image search to the website it only went back to 2016 in the way back machine which is coincidentally the same time where uh Edward C Lyn was convicted of leaking uh classified information

(1:34:25) that's never been made publicly available in terms of what it was and none of the images in the set exist in any torrent that was a real killer is that the none of the images in the sets exist in any of the torrent so this image does not exist in any torrent that means the only place the hoaxer could have found the image is from that website so why did the website owner not look up who or the **redditors** or anybody who wants to **debunk** the image why did none of them find out who downloaded those images in the in the window of time

(1:34:56) required the website owner should have been able to track who downloaded the images but did not do so instead they actually trolled everybody in the community uh we have two videos in perfect synchronization from completely different perspectives we show that there's accurate three-dimensional lighting from the zap naturally moving and evolving clouds and the clouds lineup in both videos proving a full 3d rendered environment would be required so let me go ahead and just prove all of those claims real quick here here's the

(1:35:24) clouds moving you can literally see the clouds moving up and down here they're evolving naturally uh this is explained in the quoted tweet there as well um in addition to that let's show that the clouds match up side by side here's the cloud syncing up so I showed this the other day but the clouds actually sync up in both videos when you play them next to each other uh you can see the first Cloud right there second Cloud right there you can actually triangulate the position of the clouds from that and then and the third

(1:35:56) image the accurate zap from the clouds as well and sorry for people that wanted to do science I will make it up to you by tomorrow and we will do some science as well uh but I wanted to go over that CNN article that we talked about sorry I'm looking up the image where is the damn image oh sorry it's in my **debunk** list that's why oh and also just real quick for the Pyromania VFX we actually found all the still images uh from the Pyromania VFX and I put them side by side for people so that people can see that there in no

(1:36:50) uncertain terms are these even remotely similar these are obviously not the same assets you can see you can compare the all four frame there's only four frames in the Drone video and there's like what six six frames here that seem to be if you argue they were comprised and put together and you can tell that none of them match I mean you can just look and use your eyes and do a side by-side comparison right there so I'll leave that up while I'm pulling up the the zap image damn why is it so hard to find there it

(1:37:25) is okay and here's the zap oh boy so there's the zap image shows accurate lighting for on on fold 3D volumetric clouds we have no here back lit here front lit here back lit over here on the left and then slight back lit over here as well so extremely difficult to get this accurate lighting like this in three dimensions like we see um now let's go to the next thing going back to this and then I'll answer a few questions and uh uh and then we'll probably close it out for early stream tonight okay uh so the very first thing

(1:38:13) if anyone is being honest then means that they need to uh admit that it would take a full 3d rendered environment I'm not going to listen to any arguments going forward until **debunkers** admit it would require full 3d rendered environment to fake these videos uh both videos are in perfect synchronization with one another as well so that absolute proof uh that the videos would require a full 3d rendered environment no one's producing two 2D rendered environments and matching them up lining them up perfectly uh considering that

(1:38:40) there's no discrepancies at all someone would have made a mistake now in addition to this somebody in the YouTube comments which uh whether or not you want to believe them or not is not necessarily important uh you can argue against the factual evidence they've put forth the same way where the **debunkers** don't ever list their names never list their credentials um they just argue that they know so here's some counter argument this person said i' disproven something that the deunk the doubters had used to

(1:39:06) **debunk** the videos someone combined a photo of the final view of the video with an identical image that contains all of the detail in parts of the cloud that were rendered white when it was enhanced by boosting the contrast to the released video the claim was that the video hoaxer found the original video or Cloud video online and used it to fake the MH370 video with the proof being that the original had all the missing Cloud detail because it was unenhanced and low contrast so it had no real dark and no real light just overall very

(1:39:36) grayish but the MH370 video looks exactly like what boosting the contrast does to imagery which I did to the original low contrast photo and made it look just like the video my takeaway as one who finds the dunny not nearly as convincing as the facts that you have pointed out is that the poster of that photo had access to the original video and that it had been Pro been processed to enhance its dull grayish appearance that high contrast Rich color product cannot be backwards manipulated to restore the Lost detail post enhancement

(1:40:13) because it was blown out as they say by turning those areas Pure White Once Sav to a file that detail is gone forever in that version but whoever released the image of the higher detail but lower contrast version of the final view could not have produced it from the released video It could only have been produced from the original footage what I did was alter the MH370 screen capture every way possible to show that nothing restores the Lost detail and underneath that image I put the results of the boosting of the

(1:40:42) contrast to the low contrast image which I subsequently looks exactly like the video with one explicable difference there's no video there's no plane and no orbs so what they are

claiming here is that the only way someone could have created that 2D image is with the original Source video meaning the intelligence Community themselves and based on that evidence that we had put out there that image uh would have potentially been put online on the internet uh by someone in the intelligence Community who had access to

(1:41:13) the original footage okay this is also I'm not going to read through all this but this was the analysis that somebody did on April 8th 200 23 the day after the videos had reemerged this person was an expert at uh satellite imagery sensor data and they were also a pilot their conclusion was down here at the bottom I'm convinced that the original imagery is real but cannot say one way or another whether or not it had been edited especially considering how extraordinary the content is so they basically looked through all this and

(1:41:47) they showed that whatever we're looking at here is real nobody fabricated this nobody added a plane to it uh all the movements of the plan are consistent with the real capabilities of a Boeing trip 7 uh the movements and the uh the quality of the video is consistent with what are the uh technical analysis of the video is consistent with what the satellite systems actually would have used one pixel per meter I think was the consistent yeah one pixel per meter um so there you go guys pretty crazy huh what a night what a night chat

(1:42:25) yeah so that's why if it ever were to go to a trial I'll just get an expert on satellite imagery like that person and just have them uh testify to the fact that the footage is real and then they can try to get **Jonas** or somebody else to somehow argue that he he knows that a photo from 11 years ago is somehow a photo that he took to not one that was planted on the on the cloud would be pretty impressive especially when I have him on record which I have never posted the clip I have him on record saying

(1:42:52) that everything can be fake so just want people to know that I have a video of him with kim.com where he says that anything can be faked I haven't posted that yet because I didn't want to completely shatter him but that's the **truth** um let me thank a few more people here you guys can ask some questions in the chat if you want I will answer any questions like I always do uh Mr spider monkey thank you very much super sticker I don't know what that means appreciate the Five Doll that's awesome uh BC this is brilliant call

(1:43:19) them criminal okay we already talked about that one uh my channel thank you very much \$2 if the plane doesn't fit you must equ quit yeah and the Recreations that people have done have people argue that people recreated the videos again as a statement of fact nobody has recreated these videos no one has recreated these videos um not Don burges not the corridor crew not uh whatever his name is the idiot Tony Adams or whatever like they they pinned his terrible Recreation on uh **Reddit** of the satellite video and he literally

(1:43:48) just copied all the details from the original except for everything that he got wrong which was the or the zap and uh the plane like literally the only things that he added he got wrong uh he literally just copied the the satellite coordinates and stuff like that without explaining how he would pick out satellite coordinates how he would make a an accurate uh six

six decimal places uh coordinate shifts like that's some of the the best evidence is they just Overlook it and deny it so no as a statement of fact nobody's recreated the

(1:44:19) videos nobody's even come close certainly not Tony Adams certainly not the person who tried to make the Drone video which the the person that tried to make the Drone video the reason why you guys they don't pin that video is because it was so bad that they got laughed off the internet and it actually made more people believe that the videos were real so that's the reason why the **redditors** never pinned the the Drone video that someone made many months ago also none of these people uh streamed any of their work so that no one could

(1:44:44) watch them do their work no one could see how long it took them to do it uh because obviously they're being deceptive uh about it they don't want people to know that it took like days and days and days to produce something was just garbage um while they ignored everything uh Santa filia do you think **Mick** West is deep State I think my true opinion is that he's just a **[ ]** uh that thinks way too highly of himself and that uh he doesn't really have any critical thinking capabilities uh that's

(1:45:12) my true opinion of him I think he's probably a useful idiot like a lot of these people I think that usually the intelligence communities just use these people and they don't even know they're being used like somebody probably passed the pyromania bfx **mcwest** and either he posted on a on a burner account which he's known to use burner accounts he got banned from Wikipedia for using alt accounts uh back in 2007 again that's a statement of fact that's what happened um or and he's the only person that has

(1:45:37) to like use a burner account because anytime he post anywhere everybody knows he's a fraud uh or it was somebody in his direct sphere of influence we've seen that the **debunkers** use many burner accounts all the time the irony is that they think that I use burner accounts and I only have one account uh but they think that I have burner accounts on all these things I have one **Reddit** account and I have one Twitter account I haven't posted anything else except for on those two accounts that are out there simple

(1:46:00) as that and I don't even use the **Reddit** account anymore I don't post anything on it um but whatever it is I mean if I was **Mick** West uh I would be very scared and I would be deleting all my posts around the **debunks** I would be deleting my YouTube video and I would be putting a formal apology saying that I don't know if the videos are real or not but that uh I had no ill intents uh in terms of trying to **debunk** them uh and I would be deleting all the posts and the threads off metabunk as well because

(1:46:28) that's all hard evidence now it's all been archived we have it all on the internet archive so it's never going away so there's no deleting the evidence at this point but that would at least show a good faith attempt U because **Mick** West doesn't know these videos are fake and if he keeps pretending like he knows that they're fake then he's just increasing the criminal liability against himself uh Jake says I wonder if the zap and m370 videos is actually the other side of the portal since it was

(1:46:51) nighttime uh no I think so I mean I don't know what that means do you think the videos are in Reverse or something not really following you uh those videos are at nighttime that you're watching so there is a post as well out there that I showed here maybe I have it um yeah here we go okay so I'm G to show you guys that what we're looking at in the Silent Video is nighttime first of all it's a computer rendered environment so it's technically a false color and they can make it look like however they

(1:47:26) want uh but here is what the uh military capabilities are actually at Jake this is Pitch Black nighttime does it look familiar this is actually pitch black night time that you're looking at right here Blue Sky green ocean pitch black at night can't see a damn thing completely dark outside just to let people understand what the military's capabilities are here that's why I'm posting this showing this to you guys because people don't seem to think that you can make nighttime look like daytime yes they can there's no shadows

(1:48:04) in the satellite video anywhere there's no directional Lighting in the the satellite video uh again the coordinates indicate nighttime everything indicates nighttime there's no evidence it's daytime uh the Drone video as well is grainy and the reason why it would be grainy is because it's nighttime as well uh but appreciate the Don man uh and I'm not against other people posting alternative theories but I'm just I'm giving you the the evidence for why it's not uh thank you Mark mclan uh mandish

(1:48:33) uh get your warp drive on appreciate you uh PJ Mike God you guys are going crazy thanks for the investigation much much appreciated um and then Claire thank you for your perseverance it was originally a skeptic but now I've bought the T-shirt oh did you buy the t-shirt from Etsy is it still up there guys I might have to go look uh Etsy okay I'm gonna go look guys we're gonna give somebody uh the MH370 bump right real quick uh let's look I don't know how how did you find it how do you find the the picture um is

(1:49:09) there a way to search by like people guys I so I bought these the the uh what was it the oh Bo I'm struggling to think right now um the shirt that I wore on Ian Carroll was from Arana on Etsy uh but I don't know how she found it if the Obscure VFX website explosion stock effect video doesn't fit you must AC quit good call I have this uh thing up here but I can't figure out where it is so if you guys want the Arcana thing on Etsy it's somewhere out here I I don't know how to find it um is there a

(1:49:57) way to search it's it's definitely was posted by somebody named Arana oh oh wow look at this this actually isn't even the same one more people are out there okay well whatever um who wow yeah this is a different person so there's more than one shirt guys this one's actually the real thermal on that one the real thermal uh okay I don't know how she found it anyway the other one's called Arana I don't know how to find it guys um but if you want to find it out here that's where I found the other image I bought

(1:50:42) three of those shirts no idea how to get them anymore okay what other questions you guys have before we log off here Ray Tracer says Cameron rad of course I owe you a beer for my

new hobby and a lawsuit for the other stuff why will sue Tony and nobody yeah a lot of these **redditors** like they're real they don't have anything to take anyway so they know there's nothing to take from them Ash Broody your [ ] is like watching an episode from Black Mirror but in live yeah stay strong yeah it really is guys

(1:51:09) this is the craziest thing ever like the we've refuted all the **debunks** conclusively we've shown that somebody seems to have tried to plant **debunks** on the internet months and months months ago oh I forgot the two other things guys damn you guys just reminded me okay have two more things we have to do real quick um where's the France 24 uh I think this is it no that's not it oh where's the France 24 **debunk** guys how come it's not on the internet anymore uh crazy because this **debunk** when you used

(1:51:55) to Google uh you used to Google the France 24 **debunk** and it used to show up first um here we go well I'm going to show you the Newsweek one first I supposedly we looked up the France 24 **debunk** that this video this one we're about to look at here was based off of and supposedly it's been argued I haven't confirmed this yet but that it showed up in January because if it showed up in January that would implicate that the person that posted the fake **debunk** uh on the internet um ALS that maybe even uploaded the assets intelligence

(1:52:39) committee also got France 24 to post a fake uh **debunk** attempt that was objectively wrong as well now this one's interesting this is the news week one so the Newsweek **debunk** showed up on the Internet August 9th 2023 this is days after the videos emerged on **reddit** so some UFO videos emerge on **Reddit** on a on the UFO sub**reddit** and Newsweek is posting a **debunk** within two days why would Newsweek be posting a **debunk** within two days that's extremely fast and then they updated it because I the same day that they posted within one hour I posted on

(1:53:15) Twitter saying that they had they were wrong and so they updated it like six days later they never reached back out to me even though I called them out on it um so this only has one fact there's only one fact in this whole post and you can see here it is here's the sub**reddit** with 5,000 up votes keep in mind Newsweek has never reached out to me to report on the investigation whatsoever but they reported on a random **Reddit** post in order to **debunk** it this shows that the intelligence Community potentially owns uh **Reddit** and Newsweek

(1:53:50) both now oh here's the here's the France 24 one as well we're going to double check the France 24 one right here uh yeah no so this part this was posted in March of 2023 but uh so here we go um hoaxy so hoaxy as well is another one of these fabricated bot **debunk** accounts that's probably run by the government hoax eye is completely full of [ ] so anything you see from hoaxy is most likely fabricated they use these accounts that are like these hoaxy accounts to get people to not look at real videos on the internet so we've

(1:54:25) caught them on that as well so whenever you see stuff by like hoaxy there's a few other accounts that you'll find on Twitter they're really suspicious that try to **debunk** stuff that are most likely run by the government here's where they were caught in a lie they claimed it

couldn't be a military satellite because n 33 wasn't launched until after The Disappearance of MH370 so this whole article this is the only fact in the whole article and the fact is incorrect it was n22 which was launched in 2006

(1:54:52) which was the first launch of the cber system so they literally fabricated a fake **debunk** here Newsweek fabricated a fake **debunk** hoax ey fabricated a fake **debunk** and before they edited this this used to say n77 this is this whole article is a copy and paste from the France 24 article that predates it like an AI basically wrote this whoever this author is we're going to put them on blast as well what was their stupid name again Tom Norton this might not even be a real Tom Norton might just be like a pseudonym or some

(1:55:25) kind of cover name for the Feds that posted this on the internet um I tried to find out who Tom Norton was and I got some kind of stock picture I don't even think they're a real human being now if we go to the France 24 one this was posted on March 23rd 2023 so keep in mind that the uh reemergence of the videos in 2023 was in January and then we saw the Pyromania VFX appear uh on January of 20 either January 17th or or January 16th or January 25th is when it seems to be uploaded um and then when you look at

(1:56:05) this one it's all the same stuff so says stuff about Tik Tok stuff the documentary uh it talks about this weird Google Earth thing which is obviously not the plane and then I think right down here no that's not it here's the one the orbs okay a video posted on Tik Tok which 1.5 million views and um where's the thing here's the thing talking about red deidon non here's the link to it right here they say it's likely a graphic Scott Brando so Scott Brando is another one of these fed bot accounts UFO

(1:56:46) interest I have absolute proof this guy's a bot absolute proof I can I can even show it if you want UFO interest is another one of these fake accounts that is covers up stuff that the government does online so you guys know this guy Scott Brando is a complete fraud he's most likely bought and paid for by the government he uh falsely **debunks** real videos just like **Mick West** does with this UFO interest account we caught him way back in August uh boding and he had no answer his argument after being caught boding like indisputably caught

(1:57:17) Bing was that other people were copying his posts that was his that was his actual argument um I'm actually going to prove it to you guys real quick because I remember I always bring the receipts guys so 100% proof that this guy's a bot and that probably he's run by the government uh called him out didn't have any answer for it looking for that screenshot while I'm looking for that screenshot let's scroll down so and there's no facts here whatsoever he just says uh made by a video editing Enthusiast

(1:57:57) but this is somebody's this is not a statement of fact here in fact he edits out the part here they edit out the part where it says that reeside and nonan argued that the footage was real argued with them that the footage is real the Vimeo account if you read this whole description which is in Spanish it says that ride and nonan argued for the authenticity of the footage so the F the very first uploader was arguing that the footage was real they forget to post

that on this **debunk** as well um and then this is somebody here that's

(1:58:25) just literally says poor exemplifying off editing so this is there's no factual arguments in here at all this is just some nonsense and then look hoaxy again so this Jane alberg person is probably run by the government as well these people are all uh misinformation and disinformation objectively speaking they're they're frauds um and again he made a fake argument right here that's 100% incorrect claiming again that it's n 33 you can just look at it here's a three right here you can literally see the three right

(1:58:54) here 93 these are twos these are twos right here this is a three these are twos three twos so there can be no further argument I'm going to zoom it in for you guys so you can see this is a 93 this is a two nr22 um so really weird because then they argue NRL 33 was not launched until May 22nd 2014 which was after the MH370 incident but it's not NRL 33 anyway it's nrl22 oh and also they say it's not possible because the drone's max altitude is 25,000 ft so this is also false so once again we're looking at very low altitude

(1:59:32) because we could see the cumulus clouds in the background so we **debunked** every single thing that they made that was false so pretty crazy right and then they also put this emotionally charged language in here about it not being a satellite video when it objectively is a satellite video very weird stuff man very weird so let me go ahead and destroy Scott Brando as well because I I hate frauds in general um and I just want you guys to see the depth of deception that the intelligence Community does to uh cover up uh the

(2:00:05) stuff that they do because we're not only are we proving the videos are real uh we're also showing how the intelligence Community operates and uses like useful idiots and their assets to uh post disinformation out there uh about that stuff yeah whoever was asking about the coordinates I just pulled the coordinates up so that there's no denial whatsoever uh about the the footage being authentic um okay here it is so here's absolute proof that Scott Brando is a bot account the the exact same one that

(2:00:37) you see right here Scott Brando of UFO interest here you go there it is UFO interest that's his account right there this is Scott Brando's account if you look this up on Twitter you'll see that it ties directly back to his name absolutely false that's one of the old fake videos created by ride so first of all there no evidence whatsoever that reeside and nonan is the hoaxter no evidence at all it's actually it can't reeside and non can't be the hoaxter because higher quality versions of the

(2:01:01) video were uploaded later on um and that's the reason why the **debunkers** won't argue that reeside a nonan was the hoaxter as well because they know it'd be too easy to prove it's wrong so this guy absolutely posted fake information disinformation about the airliners this guy should also be investigated honestly um because as you can see here the same guy who created the the fake airliner video often related to The hoax promoters by Malaysian Airlines flight 370 really shameful look at all these bot accounts

(2:01:29) posting the exact same thing literally word for word exact same comments multiple times exact same comments by all of these accounts this is 100% proof that this guy's a bot 100% proof and there's even more guys because he argued after I out I called him out on this Scott Brando argued that somebody just copied his comments and repasted them these weren't even replies these other ones were posts nobody's Co nobody is copy and pasting Scott Brando's comments no one cares about this guy this guy has like a thousand followers

(2:02:04) no one gives a [ ] what this idiot says no one's going to the effort to repost his content uh so not only that guys because you want more proof that this guy's a bot here's the exact same comment from a bot account on **Reddit** EX exact same comment oops from a bot account on **Reddit** word for word punctuation exactly the same as well and yeah say thanks if you want to hit the like button I appreciate you guys I prefer if you guys just so I mean what more do you want guys so not only did we out some Bots uh we proved that

(2:02:45) the **debunkers** have fabricated multiple fake **debunks** we prove that the France 24 and Newsweek **debunks** are objectively false uh and those **debunks** were actually tricked people even like Timothy goule I think his name is who's a rear Admiral Timothy gay went on uh Chris Leto and Chris Leto asked him and he went wait I thought that that was like impossible because the satellite was shot up after the the plane disappeared he said that you can go find it on Chris Leto's interview with Tim Gay uh he's a rear

(2:03:17) Admiral in the Navy you think he doesn't know about the cber system so was he lying or was actually tricked by a fake Newsweek **debunk** weird very weird uh so yes uh Prov the **debunker** wrong proved that they fabricated multiple fake **debunks** proved that it all goes back to **mcwest** uh prove that the it looks like they put we didn't prove but it looks like the intelligence Community planted fake Pyromania VFX assets out there to give to **Mick** West later on that he would end up using because they emerged right after those videos

(2:03:52) reemerge in January and we showed that the Newsweek **debunk** appeared uh two days after the videos emerged on **Reddit** while all the world's media is ignoring this entire investigation and the mountain of evidence again verifiable evidence that the videos are real so if the news media in the United States government news media in the United States was legitimate then they would be trying to find Edward C Linn right now to prove these videos are real because it's the biggest story in the history of man they

(2:04:17) would be pressuring the US government for an answer about why we have mil milary footage of a plane that disappeared Without a Trace where we never found a plane but they're not doing that newsweek's not doing that none of the major mainstream media is doing that instead they're pushing falsified fabrication fake uh fact checks on the internet uh with comments from bot accounts why why is Newsweek quoting Scott Brando who's a bot why are they quoting hoax eye which is another fed bot why are they quoting all these

(2:04:47) fake accounts like none of this makes any sense yeah literally had that **debunk** prepared ready to go and this is why they probably had the cloud **debunk** ready to go uh they

probably used the original satellite footage that we've never seen and create used AI to create a cloud image from it and then post it on uh Jonas's uh Cloud uh storage of the pictures and onto the textures website to be found later on uh and that way the people that would find it would think that there's nothing wrong with it

(2:05:19) but if you took a picture 11 years ago how are you going to be certain that's even a picture you took you couldn't be and that's why I have Jonas on the record in a video saying that anything can be faked as well which is true uh the debunkers would have you think that we can fake all this evidence that we've got for these videos being real but you can't fake a CL picture of some clouds well bad news because I got Mick West saying that's easy tools that can modify exf data are very easy when Mick

(2:05:46) West falsely debunked the Philip wood picture so feels bad guys feels bad right okay any other questions um so where is the plane uh obviously I don't need to prove where the plane is to prove that we took the plane because we have two videos of it disappearing from United States assets I obviously can't know exactly where the plane is you could use that same argument uh on the people that claim that the plane crashed in the South Indian Ocean where where's the plane if these videos are fake where's the plane

(2:06:18) right so that's why that's not a logical argument no offense but this argument is not a logical one to say when you say with the followup here that otherwise you are lying that's not how that works so some of you people are frankly people like Jason you're just an idiot I I'm just got to be honest with you there's a lot of idiots out there that don't know how like logic and reason work most of them are redditors that are out there um and so I think that for the people out there that like the debunkers especially

(2:06:43) um this is what I'm going to give you a quick link to you need to learn uh what logical fallacies are okay so I'm going to post a link here for you guys so that you can see it yourself because I think some of you need to be educated on how logic and reason work a lot of you don't seem to realize that you're using logical fallacies all the time and logical fallacies means that your argument has no merit so you need to use stuff that's not a logical fallacy a logical fallacy is an error and reasoning that occurs

(2:07:14) when invalid arguments or irrelevant points are introduced without any evidence to support them people often resort to logical fallacies when they're goal is to persuade others because fallacies appear to be correct even though they are not people can be tricked in accepting them so one logical fallacy is arguing that a uh non-matching visual effects is in our videos because someone could have modified it that's a logical fallacy and when people say like you don't know how VFX works that's a logical fallacy

(2:07:41) that's an appeal to Authority um so strongly suggest if you're a debunker that you take a strong look at this list that I'm posting here so that when we ever talk in the future you don't resort to meritless argu a mer meritless argument is one where it doesn't have no one listens this is why nobody asked the bunkers to be on their podcast about this because when you listen

to logical fallacies it just comes off as stupid um so hopefully that answers some of your questions out there uh let's see what else do we have I want

(2:08:08) to hit up some more of these donos real quick imagine **debunkers** are selling the t-shirts to recoup the losses for doing a shitty job yeah guys and also for the record there's people paying hundreds of dollars right now to promote to buy engagement uh you I guess some of them are doing it through X directly I've never done that before I don't even know how that works uh but supposedly you can boost your own posts and some of these **debunkers** are literally paying hundreds of dollars to do that right now uh why I

(2:08:37) don't know the question you should ask the bunkers is why are you doing this wh why are you even doing this the reason why they won't be able to answer is because in their minds they're some kind of Heroes protecting people from misinformation or something like that because they're just Twisted in in their head when someone asks me why am I doing this I just say I'm doing it to get the answers for the family to solve the case and because it's potentially the biggest story in the history of the world uh

(2:09:01) that's why I'm doing it so that's a noble reason doing it because you're trying to protect people from harmful information is uh that's mental illness like that's pretty much the very definition of a savior complex um so there you go uh any other questions guys the horror crew Jason equals bot we don't need a crap on them too much guys uh the **debunkers** do lack ethics though that that's very true um yeah so **China** reported objects in location guys since we're doing it here I'm gonna

(2:09:39) answer some questions guys I'm going to show you guys the Chinese satellite images as well here are the Chinese satellite images right here uh can I make them bigger can't really make them bigger here so um let me do annoying I'll do it like this chat here's the Chinese satellite images that were reported in Western media as having been in debris in the South **China** Sea we found nothing there and you can see these are also low altitude cumulus clouds in these images which look pretty damn similar to the ones from the m370

(2:10:32) video I just think that's pretty damn weird if you ask me what other questions you guys have if I didn't if you post your question again if I didn't answer it um I did see the orbs over Madrid Spain I have seen that there's other stuff as well that's out there um and again for the record um saying that the plane situation is solved does not require having to know every aspect about where the plane is that's not a requirement by the way guys uh only the only the United States government can answer the question of

(2:11:04) what they did with the plane we've proven that they know what happened to the plane and I think at this point we've proven those videos are real unless somebody unless you think the hoaxer is a psychic who uh is is now dead and that's why they didn't come out or whatever the arguments are I'm not sure uh I don't care about turning people away from the investigation either uh there's a lot of people that will never be able to accept this no matter what people literally told me that they would

(2:11:30) harm themselves before they would uh believe this information I'm not somebody who's trying to convince everybody guys there's no world in which everybody's convinced by these videos that's just not how this plays out guys the way this plays out is we put enough pressure on the government uh to make a statement or it just gets so awkward that they deny this that everybody just knows that this is what happened to the plane and some people always say that these videos are fake uh but they people

(2:11:54) just slowly ignore them like you uh ignore the ranting homeless person on the corner that's just speaking gibberish uh I think it's very likely that the plane exited on the other side intact at least enough to fly but again I can't say with with certainty on that uh I always wondering how you're holding up doing fine man thanks William Bill appreciate you out there brother doing great okay I'm looking to see if there's any other questions yeah there's probably a lot of influencers that have been recruited to

(2:12:34) push a narrative I've kind of learned how the intelligence Community operates and it's not as overt as you would imagine I think it's generally more indirect and that's how they stay out of the the Limelight for the most part can you give me a definition of macroscopic phase conjugation uh you can find my post about it William I'm not going to not going to go through the whole thing there now we've talked about it a lot tonight's not t night for that when we do the science stuff we can go

(2:13:01) through it again we look at Thomas Beard's work again um but you can you can look up macroscopic phase conjugation um there are links about it actually in fact I do have a video image here for it here's phase conjugation right here so macroscopic phase conjugation would be using phase conjugation at the macroscopic level not Optical phase conjugation it has to do with nonlinear Optics so here's a link to phase conjugation you can look up yourself if you want to read about it definitely very interesting concept that I don't

(2:13:32) think a lot of people know is real um just hit that \$550 button yeah one of the debunkers paid 500 has paid \$550 minimum um I don't get enough marriage proposals could use some more chat do my glasses come in men's glasses I don't think these are females glasses man it's a good attempt though as Ed bur I'll give it to you uh you helping with the CIA with their fake war on the alien agenda yeah dude I'm definitely not on the I'm definitely not going to help with the fake alien uh Project Blue beam [REDACTED]

(2:14:13) when they start saying that the alien invasion's coming uh I will be like the the person on the wall uh telling everybody how [REDACTED] that is because we have that technology for sure uh have you heard the new Iranian government official UFO report that just dropped no I haven't had that if people in my Discord want to post that let me know I'm also going to post a link to the Discord right now so here you go here's going to be 25 uses to the Discord it'll last for one day so if anyone wants to join the

(2:14:45) Discord there you go you've got it you got to be on the YouTube in order to see that yeah when your whole sense of self hinges on debunking someone you're officially nuts that's

the sad part right like a lot of the people out there their whole personality hinges on **debunking** other people and feeling Superior to them which is just weird to me people believe in a lot of stuff that I don't believe in and I don't care I don't even I don't believe in Flat Earth but do you see me bothering flat

(2:15:11) earthers no I don't give a [ ] I'm literally everything that I'm explaining requires curvature to be possible it's all based on Einstein physics and uh so and I'm not out there trying to argue with flat earthers I just don't give a crap totally fine if they want to believe the Earth's flat doesn't bother me at all what does AD homonym attack mean it means that they don't address the argument so when you're arguing with someone not just when you're not just when you're fighting with someone when

(2:15:39) you're arguing a point with people you should argue the argument not argue the person and so as you saw we just addressed all the arguments that are out there about the VFX the cloud image Etc we showed the evidence uh a lot of people will attack the person which I I try not to do um uh I'm not that genius guys part of this as well is that anybody could do this and **I want you** guys to realize that you can do this yourself you don't have to be that smart to figure any of this out you don't even have to be that smart

(2:16:12) to figure the science out that's the crazy part it's not that it's not that hard to figure out uh the IR color scheme inversion we don't know what this color scheme is for the satellite video some people ask why is the zap white in the satellite video and black in the thermal well the thermal we know the general heat differences because we can see the engine's red hot which we know means hot uh so we know that the the event is endothermic and it's cold when we're looking at it through the computer

(2:16:40) generated satellite video potentially from the civer system we don't know if it's inverted heat or if it's just a completely false color IR that's used for tracking we don't know but it doesn't just because it's white in one and black in the other doesn't mean that that's somehow fake or what have you again both videos are in perfect synchronization with one another which refutes any arguments of well oh well it's white in this one and black and this one we're not looking at

(2:17:03) conventional off-the-shelf uh commercial IR cameras here guys these are the most highquality multispectral cameras on the planet um oh and also so the stuff that I said I owed you guys uh like the clips and stuff I'll post those tomorrow I'll post the Ian Carrol clip tomorrow and the Bob Greener one I will try to get my post out tonight about what happened to the uh what I think happened to the passengers uh I'll probably keep it relatively short uh but I might not be able to get that out tonight either it

(2:17:37) might be tomorrow so if you're familiar with my work you know that usually stuff gets delayed because I've been so busy I had to work all day today that's why I didn't post until like four o'clock this afternoon um so we'll see yeah so if you if you missed the early part look at the immat data look at how the data ends at 1840 and then picks back up again at 2313 I mean one

more do you want I don't think it was a coincidence any other did not end up in a parallel universe no the phones were

(2:18:14) still ringing so the supposedly the plane was somewhere here as well uh I'm not going to file a lawsuit against say government it has to be the families that do it uh I don't have standing so it it would have to be the families that that do the Govern the lawsuit against the United States government uh did the plane disappear from this altitude or did it go back up uh yeah I mean we can see it disappearing at low altitude in the videos uh so where it shows up on the other side we don't know but I would

(2:18:46) speculate it probably shows up in near the same altitude uh but that's just speculation of course okay yeah we are m370x yeah the officials didn't uh hesitate to vilify the pilot uh but the videos and all the evidence and the witnesses real people not rose on XL Spreadsheet uh indicate that the was a fire emergency uh I will probably issue a minor correction on my post uh and say that the uh well there really there is missing data but it's they do show like some kind of weird partial handshake or something um once every hour on the hour

(2:19:36) which is pretty odd um okay Wang Wang why do you think the government doesn't seem to be worried about nuclear weapons now yeah I mean that's exactly why right we're not worried because we got orbs that will just completely warp a nuke back onto them or annihilate the orb uh annihilate the nuke firsthand guys I don't know if I've how much more time I got in me here I'm getting tired um someone said something about macroscopic phase conjugation uh you guys can just Google the macros phase conjugation stuff uh no

(2:20:10) scar Joe clones yet I have not seen the Lost uh Century maybe I'll watch it tonight um but I've got like five scientific papers to read tonight for tomorrow that we can review so it's going to be it's going to be a busy science night tomorrow tomorrow um yeah we could hear we could probably could heal stuff like arthritis I I mean I don't know for a fact but maybe can you make a video showing the Telemetry coordinates matching the videos um I already did that check out my Ian Carrol post from yesterday or two

(2:20:41) days ago I I put the uh Ken stabby and actually did the math and showed like exactly how far from the last radar ping the coordinates were and how it's consistent with t data um anything else poor Heather birdie getting stalked by lure reviews I feel bad for you okay has Sal P stopped connect connecting with you I haven't talked to him in a little while but I can reach out to him whenever I want he usually responds right away but I think that Sal pasz is is deeper in this than I even I imagined like I think he's like really

(2:21:21) connected to some of this technology uh which is pretty scary like he probably put himself way out there to get this stuff out so Sal pasas probably deserves a huge amount of the credit for all of this yeah reeside andan could have been disappeared I don't know I worry about that sometimes that ride andan got disappeared as well because especially if they knew these videos were real when they posted them or had a reason to believe it like I'd be very scared if I was R decided [Music] on okay yes the United States government

(2:22:05) owns US yes I got my PC back up and running it looked like it was a false alarm it related to my power uh Supply was failing it looks like so I didn't lose any data which is pretty sweet yeah I think that some of them might have lost the wave of their rights to Sue with the settlement but if this is new evidence that was uh previous unknown it might open the door back up to the lawsuit they appealed in the United States government and then the Supreme Court declined to hear it I don't know I'm not a lawyer so I don't know all the

(2:22:35) implications of that but I would bet that if new evidence comes forward that that that that um opens the door back up Lulu is doing great thank you for asking I think that probably the best explanation I have for who leaked the videos is that Edward C Lyn showed them to one of his like Taiwanese counterparts and that they leaked them onto the internet uh because they they saw it and they were like holy [ ] and they leaked him to the internet and then Edward C Lynn gets arrested and he's like wait what and it turns out that the

(2:23:11) videos that he thought he was leaking to his friend ended up getting on the Internet he may not even have known as well um but definitely comes originally from Edward cin there's just too much evidence I'm not hosting anything at the cosmic Summit but I will be there hanging out I'll probably be in one of the the classrooms they call it hanging out with the cool people talking about Advanced science and stuff like that uh wait the USS Hasley was spotted in the South China Sea no they're not planting debris in the South China Sea

(2:23:42) they'd have to be in the South Indian Ocean also if they are uh if they are planting debris in the South Indian Ocean like a lot more people are going to be wondering why they're throwing debris into the South Indian Ocean how do they get it to sink as well I just I don't think there's any chance they can plant the debris yeah we got a lot of people on tonight okay guys um Kimberly Jones says I'll marry you ashton I have to get divorced first but I'm working on it no Kimberly don't get divorced that's

(2:24:17) bad um why do you think defense contractor people are willing to talk about this Tech now like why is it all finally coming out now that's a really good question uh I don't think it's a coincidence I think the Salvador Pas patents got out there and then we've been seeing this escalation of disclosure I just don't think they expected catastrophic disclosure I don't think they expected somebody to find and start reporting on the two most incredible videos ever I think that they were very confident that they could

(2:24:47) debunk them and have people ignoring them um and that this just made it all go faster and I think that's why Salvador Pas wanted to talk to me so bad because he knew like this is maybe one of the only chances we'll ever get for like real disclosure not some [ ] government controlled slow drip [ ] stuff like that um so I do think that there are certain aspects in the government that want the information out because I've been told that directly uh and I think there's certain aspects of the government that don't want it out I

(2:25:15) don't know exactly who's on what side I think that Eric Davis is somebody that doesn't want it to come out because I think that he's somebody who absolutely knows and he's been

writing scientific papers about the technology I think Salvador Pas is somebody that does want it out uh other than that my guess is it's murky kind of like the UFO community and their [ ] Middle School drama you know some people are on some sides some people are [ ] on either side uh hard to say uh there's no we looked at the

(2:25:45) metadata in the videos but that's where the satellite video on YouTube does have metadata in indicating Malaysian Airlines flight 370 but we didn't we looked through all the metadata we can't find much more from it definitely seems to be a screen recording so yeah it's not the like original footage they did a screen recording of the satellite database um yeah the Y files are great the Y files even mentioned Salvador pz in the free energy uh episode they did uh I'm going to post another clip from that as

(2:26:18) well okay I think that's all for tonight guys great uh one more thing I guess here memory hole do your co-workers ever approach you a couple co-workers including an old coworker did approach me and they were like hey are you the same Ashen Forbes that's been talking about the MH370 stuff that I that I used to work with and I was like yeah that's me uh for the most part very few do but every person that I talk to uh in general about this is like very open to it in fact where I bought these shirts I

(2:26:46) talked to the guy and he was like wait what and he's like you got to give me your give me your Twitter account give me your your YouTube channel or whatever if he's watching right now it would be hilarious uh so yeah like usually everyone want to know more more about it and I love talking to people about it it's cool Justice for Amy esgd yeah I agree Amy esgd whatever happened to her whether or not it was suicide or not like I wish he was here to see this happen I wish Thomas Bearden was here to

(2:27:10) see this happen can you imagine if Thomas Bearden was alive right now guys to watch this going on God that would be awesome man that'd be real awesome what are you expecting getting this information out there I I want to force the government to issue a statement before ocean Infinity goes and does their search in November just in case they try to plant some debris or [ ] like that um so I'm going to put pressure on the AO now uh I might email them again although since they sent that weird response a month ago

(2:27:39) I've sent them three emails and they haven't replied to any of them definitely feels like they're being directed to not talk to me anymore by the Pentagon and the dod because somebody was probably like yeah stop looking into that uh we have no answer because they they can't even Gaslight that's the thing like they can't even they'd have to just objectively lie that's the only thing they could do at this point we've got too much evidence do I think the passengers are alive um I don't know I don't know maybe some

(2:28:10) of them could be alive it's it is possible if so though they're probably in witness protection which means it's like going to be impossible to find them pretty sure once you go into witness protection you never come out appreciate your time says Alex thank you very much uh yeah you can check out my interview with Eric Hecker that was a really good one talking to him

about Antarctica and the harp stuff and and he also didn't know about super fluids there's 450,000 gallons or something like that

(2:28:40) of helium 3 in Antarctica which is like that's extremely dangerous why do they have that and he says that they use it for some reason related to like the Elf or the one of the detectors that they have there and super fluids are Bose Einstein condensates so that's a really weird thing that they have hanging out there um definitely seems like there's a specific reason for that thanks Trev appreciate the kind words make sure you guys are following the YouTube channel make sure you're following me on X um I

(2:29:12) think that's where we'll stop for tonight guys so uh tomorrow we'll look at the science I've got a lot of science reading to do I'm going to do that tonight and it should be great no I'm not doing any stand-up comedy uh I would be like one of those like [ ] standup Comics like here's the thing guys like I'm not I'm not the nicest guy in the world I've never claimed to be ever I'm just a guy that fights for the truth that's it right if you don't like me you don't have to like

(2:29:38) me I don't not trying to get everybody to like me out there either not trying to be a dude that everybody loves you know I think that a lot of people you can't please all the people all the time you can just do what you do be yourself and the people that are interested will gravitate towards you we are MH 370x guys okay guys I think that's it appreciate you guys have a wonderful night uh I'm going to play us out with the m mm37 song peace everyone love [Music] you h37 until you do some research don't

(2:30:20) talk to me I'm going to find the truth while I sit this Mar your opinion it means to me it's m m m mm h37 not all heroes makees I wear glasses to see I'm going to find the truth while I this Mar the trolls hate seeing me [Music] succeed but guess what m m [Music] h37 gu what M

(2:31:24) M37 not all heroes glasses to see I'm going to find the truth while I sit this Martin you're opinion it to me your opinion and and h370 heroes spes my glasses to see I'm going to find the truth why I this party troll [Music]

(01:29) la [Music] they meant to fly PLS ain't supposed to fall from the sky but if they do they'll leave behind more than PE are too ples just be flying I know you think I'm lying the USA Baby hi the truth and night find ples they meant to fly PL PL supposed to fall from the sky but if they do they'll leave behind more than are to they'll leave behind more than who you think I'm lying the USA B be hien the truth and I ain't fine planes they're meant to fly planes they

(02:43) ain't supposed to fall from the sky but if they do they'll leave behind more than P are to I a just be flying I know you think I'm lying the USA they be hiding **truth** and i't [Music] they'll leave behind more than a piece of two they'll leave to hide more than a piece or [Music] two welcome everybody to the Stream I'm your host ashon Forbes good to have you guys here tonight thank you guys for being with me thank you for hanging out whoop whoop good to see you Noah good to see everybody in the chat today uh not

(03:40) going to do our our normal shout outs today to everybody just because I want to try to get through a lot of stuff today and I want to get through it as fast as possible because I'm tired it's been a long long uh week long weekend I appreciate you guys hanging out with me tonight uh appreciate you guys uh interest in the investigation interest in the science and everything that along with it uh one thing I want to get your guys feedback on before we get too far here is this graphic I'm I'm considering

(04:07) buying uh neon light because I got to get rid of what I've got going on back here it's too much glare it's too annoying although I love my poster back here it's pretty awesome uh I'm not getting rid of it I'm just gonna I'm gonna change my streaming setup around I'm GNA set my set I'm going to change my setup so there's more depths behind me I'm going to do it where there's a corner next to me I'm going to use that corner I'm probably going to use this

(04:31) sign here as well that I'm planning on buying I just have to find the right size so um I want to give I'm going to show it here in a second one in the chat if you like it two in the chat if you want to change something around if you don't like it you think it should be a different color different font or you have other suggestions let me know so here we go here it is four orbs so I'm planning on getting one that looks like this four orbs um I I looked through all the fonts and I think this is the one I like the

(05:06) most cuz it's kind of got like this orb shape to it you know it's kind of orbis font as well uh and then it also I like the the dark blue I think the dark blue will look really good when you're streaming uh and yeah I need more depth it just it's too it's not enough going on here so we're going to try yeah there is a red uh in fact you know what we can look at the other versions real quick you guys can let me know let me and show you the the website um here we go let just make sure there's nothing

(05:38) personal here yeah okay good okay so this is the website if I zoom in here it doesn't even let you zoom in so uh okay that didn't really work very well huh okay um the red one here I'll show you the red here's light red light red is okay also could I consider red and blue are like the only colors I pretty much would consider like the red I'm not doing purple or green or anything like that just it's it's I want something a little bit more straightforward and I don't like the light blue as much it's a

(06:13) little too I don't know I want something a little bit darker than that so I could also do one that's like changes colors but uh like static multicolor um where you can change it around so I could do that too that's uh possible it adds in like another \$100 to the price though it's pretty

expensive uh what do you guys think nah no dash it's just going to be four orbs no dash you guys like red let's look let me look at red again and this is the neon glow sign um red yeah Red's okay um light

(06:53) red I don't I can't even tell the difference between red and light red you guys like warmer colors okay um do it like this I want to just this is not going to be binding but uh one in the chat if you like blue uh two in the chat if you like red and I'm gonna look at some other fonts here just if you guys if there's any fonts you love just call out the name of the font here's the Batman font which is a little little too much there was another one this is the other one I was considering but I don't

(07:23) like this one as much because it's all capitals so one in the chat for blue two in the chat for red whichever you like better I just want to know what people's opinions are the rest of these like I don't like any of these cursive ones this one's a little too much as well this one's uh too plain yeah I'm this one's also okay but I don't like how skinny it is so I've looked at like all these many times this one's kind of cool but a little bit weird this one's also interesting but

(07:54) not quite I think the one I like the most is a neang glow I think this is the one I like two two two pretty even pretty even pretty divided a little bit more wow yeah okay so it's definitely going to be red or blue you guys are pretty pretty tied on the red and blue keep it keep voting one for uh blue two for red just curious yeah so that's the red again and I Pro if I did Red I'd probably do the light red the one I've got up there right now in fact you this is what I'll do I'll put them side by side so we can

(08:26) see I'm I'm pretty sure on the font the font I just there's I don't like the other ones um so that's red that's blue here's red put it side by side okay uh we'll look at both side by side here chat pull this over here let's look at a side by side and see there it is side by side let's Zoom this up there we go go okay zoom in a little bit yeah I like purple's a good color but I'm not doing the purple for the background for this a little too much Krypto says green three wants

(09:15) green uh yeah so I'm showing blue and uh red at the same time there both are good both are good okay any other last thoughts anybody I'd say it's pretty even there's slightly more red votes but pretty close you want to see all caps blue uh let me see there's a few that are all caps but I don't like the all caps ones I'm trying to find one for you real quick that that one's okay as well this is definitely the font the rest of these fonts are janky this one is actually I'm going to show

(10:02) all caps one here that's in red uh that actually is the closest to my name this one like actually just looks like my name it's weird here you go like that one that's like the all caps version pretty much right there yeah yeah you guys are pretty divided on the red versus blue I don't I'm I'm probably gonna go for blue but I don't know I mean I don't think it's make or break either way they're both pretty good looking so here's the blue yeah kind of like the blue but I

(10:38) don't like this this font is a little too much this is the one I like the most although there's

a few that I don't know I may just guys so hard to decide especially when you're making you're buy you're putting in such a big investment it's like \$200 for these things so I want to make sure it's worth it man the multicolor really changes it that's a \$100 wow okay uh pretty divided on it not looking like 40 I don't know what that means oh 40 no you think it looks like 40 or RBS nah it's four orbs for sure oh

(11:17) is that what you're thinking you think it looks like 40 40 four orbs H I don't know it looks like 40 people think it looks like 40 so if I let me if I add The Hyphen no I I don't like the hyphen at all no uh I get what you're saying with the 40 but the Caps makes it even more like 40 the the whole point of it is that it's like an artwork thing right where like people look at it and they don't quite get it right away there's nothing wrong with that honestly it's like it's just a design

(11:59) okay that's enough of that uh so you guys you guys let me let me take another look at the lowercase o that actually is H Forbes I just think it looks kind of weird you guys like the lowercase more H interesting I wonder what it looks like on some of these other ones with the lowercase well it does look like when you look at it it just looks like my last name which is funny definitely not the all uppercase ones though those just look bizarre you like that better if I do the lowercase o I probably wouldn't go with that one I'd

(12:40) probably go with which is the one like something like this or or this honestly this one's actually not bad cabone if I went lowercase I'd probably go cabone or maybe this one anyway give your opinions in the Discord if you want in general chat in the Discord uh here's the link is right here you can see it at the top uh if you want to pick which one you like the most I'll put the link in the chat you guys can go and you can set up what you like put it post your pictures in the Discord tonight I'll take a look at them and and

(13:20) review which one I like the most yeah this one's pretty cool too actually these two are also both pretty good I can't decide this one this one might be the best now huh okay hold on a sec hold on I don't want to waste all all night on this but uh it is an important it is an important G and I like that you guys are invested in it so hold on also Side Story while I while I do this real quick is um I got two more new shirts and very first thing I did was spill stuff on my new shirt very first thing so annoying and so now I've have been

(14:03) like trying to get the stain out of my brand new shirt that I just bought okay let me show you guys what we got here yeah if you guys if somebody wants to put some side by side as well and put it in the chat some different options let me know uh yeah you might be right let me just see what you guys got not going to do Roman numeral 4 I don't like Roman numeral 4 not going to spell out either it's definitely going to be number four I think I kind of like the four orbs here you might you guys might be right might be lowercase o might be

(14:40) lowercase o yeah okay people like the lowercase okay so it's probably going to be lower case okay guys I think that's enough time wasting on that welcome everybody for being here appreciate you guys um plasma is plasma even an option if you guys have other better options uh let me know uh put him in the Discord chat uh red does stand out red is honestly a good

color but I don't know I I may have to think about a little bit more but I'm leaning blue just because I like blue I'm gonna put a Discord invite out now right now

(15:16) though so you can come and give your feedback in the Discord I will be probably buying this tomorrow morning so that's how long you have to give your input here is TW if you have to be in the YouTube channel by the way to see the Discord invite so jump over to the YouTube if you want to see the Discord invite I just threw it in the chat um if one of my mods can pin it that's great um yeah red red means danger blue means trust red also is for winners so it's hard to say I just I like the blue a little bit more for streaming I want it

(15:48) to be kind I don't want it to stand out as much I don't want it to be like a thing that when you're watching me you're like I was looking at the background I just want it to be like this glow that's going on in the background so cool yeah probably going to be this one we got on the top right here okay cool guys thanks for your input let's get to the let's get to the fun stuff that was a good introduction while we got people going on here um I like how opinionated everybody is this

(16:10) is like the our most opinionated thing you guys are uh more more like triggered at which kind of sign I buy than whether or not jetpack men exists if you're new to this investigation then you know that people my followers are absolutely 100% convinced that there's people flying around on jetpacks which I love I respect I think it's hilarious I don't I don't think there's people flying on jetpacks but I love that we my followers love their jet Pacman um so you know just that's by the way that's the most

(16:42) controversial thing that you can bring up so don't bring that up to my people in my replies because people will get upset um that's just been a running ongoing joke is whether or not jet Pacman exists H it's too funny guys okay this is important though this is this is important what sign I get in the background is very important because I'm probably not going to have much going on guys as you can see I'm very I'm a very uh like practical guy I don't have a lot going on my walls are white there's

(17:13) there's not much special going on here uh oh uh oh Bobby Bobby Lee says no Jetpack Man oh guys Bobby you just stepped in it Bobby let him know guys send them links to the jetpack man okay guys uh I put the Discord invite out there next thing I'm going to do is it's we're going to have dream time chat does the oh no here we go good question does the show Lost have anything to do with this guys lost is a documentary and the events happen in real time no um no there's manifest lost all the other

(17:43) shows they don't really have anything to do with this we are going to talk in a little bit here about the difference between Wormhole and warp drive uh I've been talking to some science people some smart smarts in the background and it might be a little bit more complicated than I thought I've been kind of simplifying it thinking that that like oh warp dri is the same as wormholes it's not going to be that easy I don't think I think it's going be kind of complicated uh okay hold on that just reminded me of something

(18:10) else so we got a few things to get through uh the first one's I'm gonna it's G to be dream time guys o gonna tell you about another dream I had last night so and I don't really remember all of it but what I do remember was that it was a scary nightmare that was like a haunting dream and I was with some people I don't remember I only remember one of them one of them was John krinski which is Jim from the office I don't know why chat I don't know why and uh we were in some kind of weird like

(18:42) haunted either hotel or apartment or something that had a bunch of rooms and I remember one person like just disappeared like they went in one of the rooms and they were just gone and we were freaking out it was kind of like the show or the movie like it the book it if you guys know that where there was like some Demon or something like haunting us and it and it just made one person literally disappear and we were trying to find them and we went back in the house and we were trying to like save that person and then somebody else

(19:14) disappeared and I remember just like freaking out being like oh [REDACTED] I'm next and then we we were going to bounce out and then we ended up like finding the first person that disappeared and I think John krinski didn't end up disappearing I think he was the one that didn't because then I remember we escaped and we abandoned the one person who was gone and we just abandoned them in the in the like whatever haunted house SL hotel or whatever it was and the creepiest part was there was this music this like a

(19:44) music box was playing in the background and I kept hearing it and this really scary part was I woke up like so I you when you have Nightmare and you kind of wake up I woke up and I heard the music playing and I was like am I imagining this right now cuz I was like awake like I wasn't asleep I was like half awake and I woke up yes this is a dream Jake by the way at least I I hope it's a dream but the music kept playing and I was like okay am I going crazy right now or am I hearing this music I started

(20:13) wondering if like the freaking like they weren't shooting me with some psychotronic weapon that was making me hear music in my head like that's how creepy it got and then I'm like okay what's going on and I heard the birds chirping and I'm like wait a minute so I get up and I realize that what I thought was music was the birds like singing to one another at like 5 in the morning and I was like oh [REDACTED] because I had my window open so then I went and closed the window was like okay I'm not

(20:42) dealing with that anymore I was like I'm not like I was having nightmares because I was hearing the freaking birds chirping and I thought it was like a music box because they singing sounded like like like weird chirping it was it was a lot chat after that I was like okay okay we're going to go back to sleep let's not think about that anymore in my dream was Sinbad a genie guys Sinbad is always a genie I 100% I think he's dead right or is he still alive I have no idea anyway so oh yeah high frequency EMF disclosure

(21:19) in Congress the other day so I posted didn't I post a clip guys I think I posted a clip guys I'm sco in like I'm literally scooping the news we are scooping the news right now like I'm on

record on streams saying that Elon Musk probably knows about advanced technology and then like two days later Ross Kart's on news Nation saying that he's heard that Elon Musk has been read in I swear like you guys were here right you guys were here when I said that Elon Musk got read in to the dod stuff now I was mostly speculating

(21:59) but I have my own sources we're scooping Ross kohart and then uh the uh and then you saw my post as well about how like political figures no I literally wrote that uh people like um what's his name like Chuck Schumer knows right the gang of eight or whatever these guys know about this stuff and now that's like making the news as well we've been talking about the scaler weapons and Havana syndrome being I linked and like just yesterday two days ago they're doing hearings on that where the dude

(22:34) like I have the clip I'm going to post it tomorrow morning the clip of the guy literally saying that like they're using these weapons it's some kind of electromagnetic weapon and that our government is so messed up because we've been doing this as well that we're so evil that our adversaries are just openly using them now too because like what can we say like if we if we go after them and say that they have these weapons and we have to admit that we have them as well so that's why I was like okay when

(22:59) this started happening I was like guys like I'm actually thinking we are ahead of the reporting right now and so yeah and people are just learning about this stuff like the gang of eight includes people like Chuck Schumer and like Marco Rubio guys I'm telling you these guys know man and then I was like okay well since I seem to be ahead of the game here I'm gonna make another post so let me pull that up real quick because I'm thinking like if we're just going to start telling the future here like I

(23:23) want to make sure I've got it on record um so that when people start reporting on what I've already said that like you know they kind of have to give me credit at least I guess so I did the Special Report here and we'll start with that we'll look at a couple Twitter things we're going to talk about a couple Twitter things and we're gonna get into some science here guys and thanks everybody once again for being here so I'm just G to read this report if you didn't watch my my oh hold

(23:49) on somebody donated something how do I get up to that um how do I how do I link it my thing's all messed up chat like I can't can't find the donation why is my stream all messed up what is this okay whoever just donated oh there it is there it is I got you I got you Dobby Dobby with a throbby A you have a great name b birds aren't real government drones spying on you um not sure about that but you know whatever I I am going to post in a couple days the clip of the birds like falling out of the sky

(24:29) craziest clip ever does make you wonder if there's not some electromagnetic thing going on uh that's out there wait Ross talked to Bob Greener months ago and didn't talk about it since that's weird yeah like I I don't know I don't know what's up with Ross cart guys I can't figure out if like all journalism is just dead or if you know Ross Kart is just like 2 CNN brain I I really can't tell

man I really can't tell um the amount of stuff that I've been learning over the last few weeks is

(25:06) actually just getting the part where like I'm I'm actually wondering if I'm just like a literal journalist now which if so give me that guys give me that damn Pulitzer so I can rip it up on stream um okay Space Warfare Special Report World governments are developing weapons utilizing Quantum and scalar physics that is barely understood by mainstream Academia it is no coincidence the president president Trump formed space force in 2019 we are in the middle of an arms race utilizing Advanced relatively

(25:35) unknown weapons with unfathomable destructive capability a few months ago in February of 2014 representative Mike Turner warned of a serious national security threat the media reported that **Russia** was planning on putting nuclear weapons in Space the true nature of the threat may be next Generation scalar-based electromagnetic weapons I change this had this saying is to maybe because iel like people were going to scrutinize every word I say here but I would say I'm like 95% sure that's what is going on uh but I just didn't want to pretend

(26:12) like I was and I also want to make sure that there's a little disclaimer that this should be taken as a speculative post just in case there's threel agencies watching thinking that I have uh access to secret information we might be so on the nose that like they might actually should be wondering if I'm getting like real information that's how that's why I wanted to make sure that this is speculative although I do feel uh very confident in this assessment um these weapons have the ability to neutralize satellites over a

(26:40) wide area with electromagnetic pulses magnitudes more powerful than th thermonuclear detonations they have the ability to [ ] our space-based intelligence apparatus and Commercial Communications so this is the idea that we're not they didn't put any nukes up in outer space you got to be silly to think that we're sending nukes in in outer space why do we give a [ ] about that we have and first of all I think it's illegal to have nukes in outer space uh I think there's like some kind

(27:04) of space treaty or some crap about that uh but the thing about nukes is that they give off a EMP electromagnetic pulse uh but you don't need nukes to produce an electromagnetic pulse based on what we've learned from scalar physics we can just produce that like at a distance so you can imagine space-based weapons that are utilizing extremely powerful electromagnetic pulses ones that especially in outer space have a huge range that can knock out dozens or maybe even a hundred satellites at once like that's a real

(27:35) weapon that's a very serious threat I mean look at how much damage one uh boat crashing into a bridge can do you know like what boat goes crashes into a bridge takes down the whole Bridge like it's some Lincoln Logs so you know imagine and that's other thing too is there's people out there I don't know how many times people are going to be crying wolf about the coronal mass ejections guys we are not going to get wiped out by some coronal mass rejection from the Sun if that was going to happen

(28:00) it would have already happened the planet's been here for four billion years so like I don't know I I just think it's so absurd that people are going to all this fear porn about how the sun's going to shoot some Beam at us and wipe us out n man we're going to do our we're gonna wipe ourselves out way before that like way before that the sun should be the least of our worries like a lot of people that are doing that are just baiting for clicks um because it sounds really scary uh but there's like

(28:26) no actual like chance that it's going to happen in the real world um but this is like this this is what would take out the satellites this is what would you know make us go dark if somebody shoots off some super EMP so how are they gonna do that well I was Googling around on it and one of the ways that it could be done theoretically people have been asking about this weirdly it's not really known to the public but one possibility is using a type of proton decay like a proton decay explosion and you can imagine something

(28:58) similar like a nuclear Chain Reaction but with like a proton like splitting apart into its uh corresponding quirks uh and for some reason this question is getting asked like a lot on social media if you Google this right now about proton decay you're gonna find like a bunch of people talking about one guy talking about like he's writing some fictional book about some kind of weapon or something like that and whether or not he wants to know if like it's theoretically possible so I don't know for some reason this is what I'm going

(29:24) with so if I'm right then my intuition is really good uh but long story short we've got some crazy Advanced Weaponry that is being developed by the Soviets by ourselves probably by **China** as well and the the next Battlefield is outer space that's the battlefield because uh space-based direct directed energy weapons uh surveillance apparatus in fact there's a new uh they're trying to set up like a new system that's going to replace cbers that's going to be even better to basically provide full

(29:55) real-time coverage of the entire planet even better than we already have it I imagine that right now we have like video surveillance of almost everything on Earth and in the future my guess is we can like see through buildings and **[REDACTED]** like that like it's going to get totally nuts where like we're just bouncing like radio waves and electromagnetic waves off of everything building some kind of like Batman Dark Knight map of like everywhere everyone is all the time it's going to get real scary chat there already is no privacy

(30:22) so okay so that's that one um now the **debunk**er stuff I mean guys I'm just going to play this cuz I don't know what's wrong with these people um but like we're at the point now where they're just like completely making up fake quotes about me and I want to say before we go post this too that like I have nothing personal against these people but it's getting to the point now where like yesterday I had to get somebody banned because they're making like violent comments about wanting wanting me to

(30:55) like uh you know end my own life and um you know when it gets to that part like that's where you've like radicalized people and you you could argue that these people are like literally

domestic terrorists they're literally terrorizing me um some of them are like not some one of them admitted to literally using the promote paying hundreds of dollars to promote content attacking me and trying to **debunk** the case like this is this has reached a point where it's it's pretty goddamn weird chat like it's it's too far we we

(31:28) need to just dial it back a little bit here uh because I don't want to get hurt by some psychopath on the internet who's been radicalized into thinking I'm some evil person and that's what these **redditors** are doing now like it's not funny anymore uh like if you're not if you want to **debunk** the case or whatever focus on the case uh but don't come at me like this because you're you're actually putting me in danger when you do this so just to be clear and I'm not joking or anything anymore about this

(31:55) like if I see more stuff like that coming after me personally lying about me I'm going to get in touch with Twitter trust and safety and I'm going to get you permanently removed from the platform so um I I think my platform's my my account's big enough now that they'll take me seriously and this isn't cute it's not funny um some of these people have real mental problems and it's not like haha like actually real mental problems um and it does concern me that they would like go so far to uh

(32:22) that they might actually harm me at this point so please make sure if you're on the **debunker** side that you are focusing on the case and on the case self if you want to even **debunk** the videos focus on the videos do not be focusing on me um and and this is what I'm talking about right here you ready new story is that we killed the the the the United States killed everyone on that plane and he recently said that they that everyone on that plane deserved to die because they they were protecting Secrets or whatever

(32:50) that this warp drive technology and I honestly I was shocked to hear that and the people in his chat agreeing with him that all these people deserve to die because of made up scenario it's just wild to me so well guys I didn't have my clip ready to go here hold on I should had my clip ready to go oh crap it won't let me play the clip okay I was going to play my Chick-fil-A clip but but no it doesn't it didn't she didn't want to pop up so yeah what is that why are they claiming that I said

(33:25) all these people deserve to die first of all I I don't even know if these people are dead I don't even know if these people are dead so that's just not it's just so disingenuous that it's to the point where like this is like radicalization like this is literally how terrorists radicalize themselves like how people like convince themselves that they're justified in harming somebody else is through stuff like that like um that's like a literal malicious lie and I posted the whole clip here

(33:53) because the **truth** is like we talked about the implications the geopolitical implications of this and I said I could see as an American how it could be justified that you could try to say that you're trying to prevent these people from getting to **China** but in no way shape or form did I say it was justified in murdering 239 people absolutely not I think the vast majority of Americans

would say we did the right thing in fact I think I think maybe we did do the right thing um and that that is a dark thing to say everybody but I think it's

(34:24) the **truth** and I always like to say the **truth** so it's it's hard to say but not only do we potentially have to give amnesty to these people but we might have to admit that if preventing this plane from going to **China** was actually preventing them from getting access to this technology uh then from a geopolitical perspective you could argue that it was justified in doing that it's probably the darkest thing ever on the face of the Earth uh that I've ever had to say um but it's kind of like the same as

(34:56) saying like it was justified to drop on Hiroshima Nagasaki so once again I think this is extremely disingenuous um and the the United States killed everyone on that plane and he recently said that they that everyone on that plane deserved to die because they they were protecting Secrets or whatever this warp drive technology and I honestly I was shocked to hear that and the people in his chat agreeing with him that all these people deserve to die because of a madeup scenario it's just wild to me I think the vast so anyway there we go uh I

(35:32) played it twice yeah it's pretty scary especially because if you think the videos are fake then obviously none of that matters anyway like at all right like if the videos are fake then so what um totally Wild Man and that was me being as honest as I could be about what the implications were in terms of us having to potentially give amnesty to the people that pulled this off because they're never going to face Justice ever again um but absolutely not I mean the whole point of been doing this is to try to

(36:02) get the **truth** for the families of what happened to them and I keep saying too that I hope that they're alive I just think that the fire event makes it really difficult for that to be the case but I've also been pretty clear that I think that the uh warp drive event if we're going to call it that I don't think that they would have all died from that so it's not like I'm saying that the plan got annihilated by the United States government uh at the end of the day the government's the

(36:29) one's going on to have to speak to that so yeah it's a lot of disingenuous it's a it's really scary and this person Chrisley here as well I don't know why she's like I've I've had more sane ex-girlfriends than than Chrisley is the way that she's been coming out of nowhere like either I don't know if she's trying to clout Chase or if she's got some weird savior complex like a lot of these people do um but like if these videos end up being real like she's ruining her life here like you know this

(36:57) is this is just getting to the point where it's sad now you know it's a lot of copium happening here and as I said uh I was on this space here you're going to hear as well is that uh I have very strong reason to believe these videos are real very strong reason to believe that they're real uh there's no hoaxer as well I mean not just the evidence but uh just other stuff that I've seen and I've talked to people um and and I can't really talk about unfortunately as much as I want to uh and that's just you know

(37:26) I guess when you get bigger and bigger and you have more and more people talking to you that's where it gets so you know if these people really want to **debunk** the videos um then I'll pause that for a second the best way to do that is to find the hoaxter so if they're not finding the hoaxter it doesn't matter any amount of speculation about what somebody could have done with VFX doesn't get it done but the you know with respect to the VFX stuff too as well is that we have two videos from two

(37:52) completely different perspectives both military videos both with zero discrepancies no errors on a single frame of two different videos in perfect sync with one another this requires a full 3d render I don't know why this is so difficult the reason why it's so difficult I do know why is because if they had to admit that then that would be the end of the **debunking** nobody's creating a 3D fully fully 3D rendered environment uh between four days and 70 days with an original script with no reference copy and the

(38:23) **debunkers** know this and this is their biggest copium of all you know even Ken uh Ken stabin who thinks that the videos are partially fake even he is like yeah how that what do you mean we have two videos from two different perspectives the they're both perfectly in sync you can see the same clouds in both of them which guys I'm going to play that again because like I think the de bunkers need to really start coming to terms quickly with how wrong they are about this like they're making themselves look really

(38:49) really really bad and if these videos ever get come out to be real there's going to be people wondering who are all these people who were trying to cover them up like what were their motivations and then people are going to think that you're a disinfo agent I mean I think they might be disinfo agents uh so here's the Cloud sync guys like the clouds there's no doubt these videos are in perfect sync with one another look at the clouds you can see both clouds line up you can triangulate the location of the

(39:20) Drone here I'm going to pause it so you can see there's the first Cloud right here here's the first Cloud you can see so the Drone is somewhere up here like my mouse is and you can see that what you're looking at here is this cloud back here in the bottom right you can see it you can see that cloud right there keep in mind the angle here means that our perspective from the top is not we have kind of a weird perspective on this plane so this plane is probably closer to where my mouse is right here

(39:44) if we were to look at it from the side angle just due to the relative perspectives here and then you can see the second Cloud you can see the second Cloud right here look at the second Cloud right here we can see the second Cloud so we can basically triangulate the location of the Drone right here because of these two clouds this means that it's a 3D render environment I don't know anyone trying to tell you differently is in s denial severe denial not to mention the fact that we have moving clouds even in the

(40:11) satellite video we have 3D D Dynamic Parallax in the Drone video and we have accurate three-dimensional illumination from the zap which is consistent with a wormhole event and the

photons bouncing off of the worm mouth of the Wormhole so um **debunkers** please man just again leave me be um and if you want to cope just cope har you got to cope uh who just donated I don't have my buttons at the top says um Gen X thanks for the donation Aussie I think it's Aussie dollars I don't know thank you very much

(40:45) for the Aussie dollars uh Ashton these people are all waste of time all all Engineers slow us down in getting the **truth** out there getting free energy for the world now back to the topic at hand hey from Sydney yep that's that's fine um but My Stream I'm going to comment on whatever I want uh so I appreciate that now here I'm going to play this as well um and the reason why I'm doing this is because there are a lot of people out there that think like oh weren't these **debunked** by some V stock

(41:12) VFX or didn't I see something about some pictures of some clouds out there and **I want you** to realize that all of these **debunks** go back to these very people the very people here that you are hearing from right now are the ones that found those **debunks** that originate those **debunks** that promoted those buks uh the corridor crew never came up with any original thoughts themselves they literally just went on to **Reddit** and metabunk and took those ideas and pretend like they were their own and made tens of thousands of dollars off of

(41:38) it on their YouTube channel that's literally the definition of grifting the corridor crew are grifters they're **[redacted]** idiots on top of that they wouldn't last five seconds in a debate with me about this case um and the people that look up to them really need to find new Idols uh so I'm going to play this as well because this is important like this is somebody else there's there's multiple people out there that claimed that they uh know who the hoaxer is multiple people and they're all **redditors** and all **debunkers**

(42:04) like this is like the levels they're willing to lie at okay and um they are just they're lying about it so here we go comments the comment before that that I sent you was this stop trolling me in the comments or I will block you I'm tired of it that was your respons BL BL you've blocked everyone so can you just answer the question do you know who made the videos or not let him talk you **[redacted]** **[redacted]** he's trying to answer you um for the record I literally just asked him a basic question I had uh one

(42:37) of the nut jobs I don't know which nut job that was I I don't know if that was the area 503 guy um I think that was the area 503 now this guy is like completely unhinged um he posts videos where he like thinks he's some kind of armed mer mercenary or something like this and he said I doxed him because all I did was he was in my replies on my YouTube channel and I pulled up his YouTube channel and he had pictures and videos of himself on his YouTube channel well if you're in my replies on YouTube I'm gonna click on

(43:10) your name and see who you are so if you don't want to be associated with the things that you are saying to me and the weird crazy insane people comments that you're making don't make the comments uh this guy literally if he does have a security clearance this area 503 guy he needs a evaluation and it probably needs to get taken away from him he's very likely a

danger to other people also I looked up his uh Reddit thing and he posts non-stop on UFO and alien reds uh like trying to debunk people and put them down like it's it's

(43:43) sociopathic behaviors anyway let's keep so can you just answer the question do you know who made the videos or not let him talk Aston you [ ] [ ] he's trying to answer you and I just understand to finish so can I if I can just so my argument there was that these are the people who are objectively lying this is not even the only person who falsely claimed to know who the M videos were made Grider who's actually in the in the chat as well also falsely claimed this exact same thing so these are the people whose words you're

(44:14) taking when they claim that they know what the videos should look like these are also people who have literally no experience whatsoever with any of these assets but I'm saying let me finish well let meish I'll say one more thing and you can say whatever you want I know these videos are real let me repeat that one more time I know these videos are real all videos are real all videos are real all videos are real guys all videos are real these are the people that we're dealing with yeah the area 503 guys are

(44:40) complete lunatic complete lunatic shouldn't have access to guns shouldn't be guarding anybody I mean some of these people like really need psychological assistance like he's trying to answer I'm like dude I just I just asked a basic question like just do you know who the do you know who made the videos he's trying to answer the he literally wouldn't answer the question literally never answered it I think you know what I'm saying I'm saying I know these are real US military videos of what happened

(45:06) to MH370 I just want you to absorb that information for one second why are you withholding why are you withholding information from all of your followers then think about why why would I do that no here we go with a conspiracy it's no conspiracy just if you know then you need to you need to come out and I've literally said that I know I've said that I know I've said that I know publicly so okay that's all I'm gonna say all right thank you I don't believe you know I don't believe if you only I

(45:33) mean you could have made them yourself as then Tony says that I could have made the videos guys like if there's a conspiracy at play conspiracy theory me making the videos is probably the biggest conspiracy theory possible you're smart enough to to have made the videos yourself is that a strong is that a strong Theory uh on just I'm curious okay all right uh as a show host things start getting out of hand you have to hit the mute button just have to go I don't care if you have 200 and for the record I have unfollowed UFO Shane I

(46:07) will not be dealing or interacting with UFO Shane ever again uh and the reason for that is when I went back to clip the part where I never heard the part about them saying that like I said all that the people deserve to die or whatever like UFO Shane was not putting that down if anything he was supporting them against me so I will not be interacting with UFO Shane ever again if he even comes and tries to talk to me I will just block him uh UFO Shane needs more help than most of the rest of these guys but the biggest hypocrite is UFO Shane

(46:35) because UFO Shane rages nonstop about liars and people being liars and if they've ever lied he thinks they have no credibilities Jamie mouson thinks he's the worst human being on the planet he's lied 48 times Greers liar everybody who promotes real evidence is a liar but these people who I was able to catch in lies within just a few seconds he just gives them a pass doesn't doesn't ever say anything bad about them doesn't rage about them doesn't cut ties with them that's called being a hypocrite but the

(47:05) worst part is when you're calling people grifters and you've gotten your your your thing buy me a coffee I want to I'm I'm I'm I'm trying to get money from everybody in the chat like that's just I can't deal with that level of hypocrisy man period and Shane I want to help him out but the guy just constantly is just His Own Worst Enemy His Own Worst Enemy million followers or five or 3,000 like I do or whatever uh we're all equal regardless of your clout and your behavior or whatever I don't care what

(47:38) you do what you say almost done with this guys people don't want to focus on other stuff that if you are posting something you come up into this community basically and you are showing something you should be open to criticism you should allow it um and I think that Tony with the slick move Tony you savage [REDACTED] uh Tony was offered co-host and he knows exactly what he did so then right after like that thing I was there and all of a sudden I get booted from the space I'm like why did I get booted so it was because Tony had me

(48:15) blocked because he blocked me after this comment I'm the last thing I'm going to show is I'm going to show that comment because did I save it I need to make sure I have it saved as well I have a channel for losers um and every time I get some people freaking out on me or whatever I just I screenshot it and I I put it in my channel for losers for later on because at some point if these videos get proven real then you know we're just going to make fun of all the people that were like constantly raging

(48:43) about them or what have you um so here it is I like this guy became obsessed with me um and and so whatever I dropped out of space I didn't really care because I had had uh I was going shopping anyway so I was only in there for like five minutes or something like that uh and I had other stuff I had to do and I jumped back in later on at the end uh for a couple minutes as well they were still raging whatever no big deal um but here is the screenshots of me and Tony so I I just got sick of this guy he was if you

(49:18) guys have seen my reply like my replies so I I ended up muting this guy a couple weeks ago and uh he was trolling every single one of my posts and like you guys know what trolling is with just stupid ass crap so finally I was sick of him April 30th two weeks ago said stop trolling me in my comments I'm just going to block you I'm tired of it and then this is his crazy response right uh so the funniest part is he blocked me after he posted this comment he blocked me after that and I was like okay so you're just going to have a total

(49:51) meltdown I know who made the videos I've been sparing you this and wanting them and waiting on them to be ble to come out so I will have your I would have your plan B ready anyway

enough of the **debunkers** guys I just want you guys to see what we're dealing with here uh with respect to some of these people um at the end of the day I just want these people to leave me alone let's move on okay yeah I don't think these people are agents I just think that they're idiots for the most part now let me see what

(50:25) else we had to go to so a lot of people also asked me what like the ontological shock so I'm going to probably do try to do like one long form content thing per day if I can um and so I wrote this very long thing about I I try to do some update posts every once in a while so if you want to get caught up on like how this all played out uh here you go and for the people that think I'm a liar well here you go as well good luck trying to prove I'm a liar like I literally post my thoughts unfiltered non-stop so there

(51:00) it is we are going to be talking about warp drive in a minute as well and then here's also this video with Ian Carroll goes through the details uh let's go ahead and watch this as well oh you guys can't hear this okay sorry I forgot you guys can't hear this I didn't screen share it correctly let me switch it sucks if you on streamyard if you don't stream share correctly you can't hear anything I'll play it I'll play it again sorry guys okay um the satellite video says received March 12th

(51:56) 20 2014 that's four days after the plane disappeared it says Source protected and it was published May 19th 2014 which is nine days before that raw telem dat was available and we can see there's a mouse on this screen consistent with a citric session where somebody's actually logged into a spy satellite database and doing a screen recording this isn't a camera yeah we see these orbs com in one of these orbs came in at like 2,000 miles an hour we can tell based on the pixels and this plane descending we can see

(52:24) this smoke in the back of the plane which is not not Contra because that's cumulus clouds this is very low altitude that this plane is at here you can tell right away there's a purpose with this weird formation around the plane perfect triangle formation equilateral triangle it looks like it's mapping the plane and then it changes this ring formation here and this all happens within like 30 seconds and then you're going to see the main event poof it's just gone but then so right away there's so many details

(52:51) like there's never been a hoax video that looked even remotely like this before completely One of a Kind never seen anything like this the citric session the coordinates the Mouse um all of these things are basically that should already be enough proof for people nobody faked that nobody faked that nobody even come up with that uh why would somebody on their fake video have a mouse coming over the top of the screen and a different frame rate is the background like that should be enough for most people but a lot of people it's

(53:18) just the thing they can't believe is what we just saw right there that the clouds don't get sucked in it's not like a black hole it's not an explosion the clouds don't get blown away like a nuclear weapon we know  $E = MC^2$  so if this was some kind of annihilation event based on conventional physics we should see like part of the planet getting destroyed that's a

huge amount of mass that we see there yeah so this is where right away you look at this you go this is weird and a lot of

(53:43) people may go no this has just got to be Graphics it's got to be a video game or something like that but there's so many bizarre details going on here including we can't see it right now but pretty much right where my hand is there is coordinates right down here in the bottom bottom left it says nr22 that is National reconnaissance office launch 22 shot up in 2006 that's the first launch of the cber system the space based infrared system in 2006 that's a weird detail to add to your fake video and then it has the

(54:12) coordinates you can see the coordinates only move when the perspective changes which means somebody noticed at this screenshot here I I snapped this from somebody's reddit post as well has latitude and longitude incorrectly but whatever you get the you get the point this one right here the eight here is the North and then then this one on the right is east west um and I I'll answer the one question in the chat that people have asked a lot about the smoke we're not looking down through a satellite

(54:35) that's moving because otherwise those coordinates would be going changing constantly this is some kind of I got blocked for somebody claiming that I stole their idea for the thing about this the coordinates not moving it's pretty weird computer generated feed system like we were just talking about the cber system pulling data from satellites generating a realistic 3D imagery track in an object so we were able to deduce all this and the first question I asked is if these videos are fake how am I able to deduce the real

(55:04) spy satellite capabilities of the United States military from these videos just looking at it um and and you know if there was just one video like this it wouldn't be enough although it's pretty damn compelling because again those coordinates are the real location of the plane in the nicobar islands so for all the haters and the doubters here uh Ken actually did the calculations to figure out that the plane could get from the last radar location which is how far away like 300 plus miles away this the

(55:33) last radar location like 300 miles away um and it wasn't until the raw dat data came out because this is I think this one on the top is the only thing that we had before then and the experts couldn't even tell what this graph meant beforehand because like it didn't have pluses and minuses on it it seemed like it was like absolute values so it wasn't until the raw Telemetry data came out that people were actually able to correctly calculate that this plane actually went around Indonesia like this

(56:02) so that's I want to be as clear as possible on that um in terms of what I mean when I say that they there's no way you could know the real location plus as I mentioned right here these coordinates are not where the plane specifically is that's just the center probably the center of the screen of whatever the person's looking at when they're moving it around so the plane could be like further down here somewhere could even be these scans are huge so we just don't really know how far away exactly it is

(56:27) from this exact location but somewhere near this um and this is potentially a very large field of view so those coordinates aren't like tracking the plane those coordinates are somewhere else and they're just moving the screen to keep it cropped in to track the plane we also don't see the Drone which means that they're cropping potentially us assets out of this possibly to minimize damage to the United States there may be other assets too like the French father was told the United States knows what

(56:51) happened to this plane and that there was two awx these like Advanced radar planes that were in the area so guys the French father was literally told that the Americans know exactly what happened to this plane and that there was two awx in the area we are probably looking at video that was relayed via the cber system to one of the awx one of the spy planes and Edward cin was probably on it guys how can all of this line up if these videos are fake once again the the French father was literally told the Americans

(57:24) know exactly what happened to the plane and we're looking at two **leaked** to videos what if there's like another awx somewhere if they just cropped it out carefully so that people don't see that okay so I'm going to answer a couple of the questions in the chat so one of them somebody asked like said something about the VFX people completely stopped the thought of the satellite moving 7 it's so stupid to think that we have to look through satellites in 2024 if the satellite's moving at 17,000 miles an

(57:49) hour how are you even going to use it how do you think the satellites even work what do you think the purpose is do you think they're just they're just up there doing nothing this is like the difference between like idiot **debunk**ers that sit on a couch that are just **[ ]** morons like the the corridor crew the corridor crew are just some of the dumbest **[ ]** people alive they're definitely not VFX experts in any sense of the word they literally did no technical analysis on these videos whatsoever none none at all all they did

(58:16) was do what **debunk**ers do and just speculate they did no technical analysis whatsoever on the videos that's not a VFX expert okay somebody asked a good question about the heat signatures so this is one I get a lot uh I don't know where it is chat so the French father I can't say his name Guan Watros you guys can find it I literally posted a clip of it like here it's right here there it is this is him gan gan he's got a French name and I always butcher it because you can't I can't say it right you guys can find it

(58:48) yourself though um now here's the other thing I want to point out is people asked about oh sorry I'm not even presenting my screen this is the screenshot of the guy's name right here you guys can see it yourself you can find this article if you want uh now I'm G to share the video the thermal video because people ask why are there two Trails coming out if it's smoke good question really good question I'm going to have you see for yourself again I don't like to tell people what to think

(59:25) I want to show you the evidence so we are looking at the Drone video okay and if I zoom this video forward here a little bit till when it's zoomed in we can see the heat signature on the

belly of the plane okay here it is right here look at where the smoke is you can see the smoke line you can uh can I not click on this oh because I hold on let me share it the other way where you can see where my mouse is you can't see where my mouse is on this because of the way I shared it sorry chat streamlabs man streamlabs is good

(1:00:05) but it's also kind of annoying so I zoom this ahead till this point actually that was a great screenshot right there okay look at where the smoke is up here the smoke is not coming from the engines cons conclusively it is objectively not coming from the engine it's not lined up with the engine here's the engine here's the engine imagine if I draw a line in fact let me go ahead and do that real quick I'm going to draw a line we'll just make this super clear for people screenshot this here put it in

(1:00:36) paint present okay we've got this in paint here we draw a line if I draw a line from this notice it does not line up with where the smoke is the smoke is up above it so the black line let me change the color to red the red line is from the engine you can see very clearly now let's do another line let's line up where the smoke is we'll make it orange you see that chat this is 100% proof the smoke is not coming from the engine you can see that right any any any doubts any doubters out there so the

(1:01:21) question is if that smoke is not coming from the engine where is it coming from because we can see here this is 100% conclusive proof it's not coming from the engine it is definitely not coming from this engine it's not lined up with the engine you can see that again so what's happening is it's coming out of the belly of the plane on both sides it's coming out of the belly of the plane on both sides it's wrapping around the fuselage so it's coming out of here it's wrapping around the fuselage on both

(1:01:50) sides of the plane and it looks like it's coming from the engine when it's not so are we good with that this is the part I think people struggle with and again it literally cannot be contrails it's scientifically not possible for it to be contrails and the funny part is I have a quote from **Mick** West on a different thing where he talks about how contrails only form at a minimum 24,000 feet is the lowest they can form and this plane's at 1 to 5,000 or between let's say we think between five and

(1:02:20) 7,000 feet the fuselage is splitting the smoke Trails coming out of the back of it so there you go got it you can you can also just literally see there's no smoke coming out of the engine you can just literally see it you can see the smoke very clearly here you can even see it wrapping around the plane right here around the fuselage right here there is no smoke coming out of this engine we can tell if there was smoke coming out of the engine so the source of the smoke uh okay you guys want you guys really want to dig into

(1:02:49) this I did not expect to do this but we can uh I have the images there are AC exhaust ports right where we see this heat signature here the AC exhaust ports are right next to the landing gear and there's one on either side of the plane so if this fire is in the forward cargo bay we've speculated this fire because there's two pallets of lithium ion batteries in the forward

cargo bay that What's Happening Here let me pull this to the side is the for the fire is up here in the forward cargo bay somewhere and the smoke is

(1:03:19) permeating through the air conditioning system the air conditioning system circulates outout throughout the plane and then it goes out the AC exhaust ports the air conditioning exhaust ports so this was the big kicker back in like October when I had been staring at this image from my uh what is it my background or whatever my uh my banner in my Twitter profile so I'll pull this off for a second here you go there are the AC exhaust ports chat one on either side there's another screen shot as well seeing if I can find it problem is

(1:04:02) I when I'm not prepared to show something I have so many screenshots oh so here we go and the F the perfect overlay as well here's the overlay of the plane with the thermal Heat Signature so you can see where the Heat's coming from that heat is coming from the AC exhaust ports uh here's one that is overlaid with the cargo base so these are the the red is where the cargo bays are at underneath so at first we thought maybe it was the rear cargo bay but after looking at the AC system it would really

(1:04:34) be the forward cargo bay yeah it's being vented out exactly where who just said that Jonathan Gold Star Jonathan Gold Star for you sir um and yes we have a perfect oh yeah here's the best one okay this is the last one we need to show what the where did it just go oh here okay Jonathan gets the gold star today chat so there you go there's the vents right there we can see the vents right near the cargo bay as well so we've done our homework on this uh we can say pretty good certainty we've also found other oh

(1:05:17) this is actually the one I really wanted hold on this is the one I wanted there you go there's the cold intake and there's the exhaust supports this is the one I wanted to show so good question on that one hope you guys appreciate it uh apologies if this has been asked but have any foyer requests or Congressional uh inquiries been filed related to this your analysis of compelling wordss investigation I've fyed every single agency that's out there every single one that's relevant um they've all either been rejected uh

(1:05:46) either due to technical reasons like the national reconnaissance office they I I foed them back in September it's been like eight months um the Edward C Lynn I got rejected rejected in the interest of national security or foreign defense the NSA we found an O'Reilly Tates one where she was rejected in the interest of foreign policy or National Defense as well uh so yes basically every single foyet into this either been roadblocked uh technically rejected or we've been rejected on the interest of National

(1:06:14) Defense pretty crazy for a plane that supposedly the Americans wouldn't know anything about uh that's a whole lot of foyer rejections why are they rejecting all this stuff okay I don't really want to spend too much more time on this because I want to go to sleep tonight so let's let me see if there's any other major questions okay um whoever this guy is please stop lying I can tell you're a redditor without having any doubt whatsoever because there's a lot of people that just like I try to push

(1:06:42) misinformation like that we're not looking at a Malaysian Airlines jet or that we're not looking at Triple 7 yes we are that's why I've had it on my profile Banner bar for nine months it's a literal perfect overlay of not just set 7 it's a literal perfect overlay of MH370 the least controversial aspect about these videos is that that's MH370 there's no doubt whatsoever it's indisputable so when people when you the problem is when you lie like that and you claim that it's not the right plane

(1:07:11) you lose all credibility you have to at least be able to accept basic facts if you can't then just go somewhere else do something else just let the adults talk uh okay you guys ready to go let's see yeah there's a there's a lot of disinformation out there it's kind of it's pretty absurd okay you're getting banned you won't be coming back if I I'm only giving you guys one Warning by the way as well um you know so I don't really deal with [REDACTED] anymore like I don't if you if you're

(1:07:44) pushing disinformation if you're being disingenuous if I even think you're being disingenuous you're getting blocked you're never coming back that's it you're out of the case you can watch on the sidelines uh okay or you can do your own case if you want I 100% by the way I haven't said this in a long time but for the new people out there I have one I've made all my evidence publicly available so that anyone can run their own investigation that they want they can try to solve the case out there if they

(1:08:07) want and nobody has tried so far even though I've made everything publicly available to everybody else the only thing I ask is you don't steal my story that I've presented because that's the story that I've putting forth you can put up your own story for what you think happened in the plane I think the more people that put up stories for what happened to the plane the more likely it is we'll get the answer I've put nothing behind a pay wall so you access to everything yeah is the Air India plane

(1:08:30) in the chat with us right now yeah that's about it yeah it's one strike in you're out I we don't we're not going to be slowed down with all this [REDACTED] um because there are literally people that post disinformation because they're just trying to slow us down you guys are right and we probably shouldn't have spent an hour and eight minutes on this you guys are right on that as well so I do apologize on that let's get to some of our other stuff but I do want to answer questions for people that are out

(1:08:54) there the funniest though was the guy that was like adamant we were looking at a a 737 if you look at a 737 compared to a 777 it's like half the size it's like half the size and the engines are completely different too like hell man some people do I swear to God I literally think some people are just pushing [REDACTED] just to dis rail as much as possible um okay uh but yes like I and this is a good um actually somebody just asked about stock effect this is a good segue I'm not going to address every **debunk**

(1:09:29) every day I made a post about the stock effect and I made a post about the cloud effect you guys can go find those uh they're like two days ago or three days ago they're not that

long ago uh I'm not going to post about it every single time although I probably will have to address it again I do want to give the **debunkers** a chance to uh you know um realize the videos are real and at a bare minimum to try to solve the case so I don't want to polarize any more than I already have against them uh but people do bring up

(1:09:56) this idea of oh well somebody found some matching VFX okay well let me put that to bed for you as well right now so uh we took a random cloud and we were able to match the random Cloud to the stock VFX it is not a method of falsification to say that something looks like something else it's called prosaic just because two things look the similar does not mean that they are the same thing and just because you can modify one thing and make it similar to another another does not mean that they're the same thing we were able to find a random

(1:10:29) ass cloud and match it to the Pyromania VFX and I could argue that all we did here is that this cloud is fake and they actually use Pyromania VFX and they just changed the Shadows on the edges and and slightly adjusted the middle or something like that like that's not a method of falsification and this is why because it promotes many false positives when you do that just like you're seeing here on your screen right now if we use the method to **debunker** used everything in the world would be fake including a

(1:10:58) whole lot of real stuff as well so that's not a valid method of falsified and this is why it's objectively not in the MH370 videos is saying that you modified something that look like something else is stupid frankly that's actually just literally never been done for this asset before um the only person out of all the places where this Pyromania asset this VFX was used the only Eastbound and Down modified it at all and the only thing they did modify was they changed the angle like this slightly that was it the

(1:11:32) **debunkers** are saying that they changed all the shadows and the shading and they manually retouched up every aspect of it in the middle of it entirely like all disingenuous all lies and again you've heard these Liars as well um today so hopefully that puts the the nonsense to bed related to some of that uh no so I want to keep in mind as well that we're looking at nighttime footage as well in both those videos uh there's no shadows in the in the Drone in the satellite video and in the Drone video you can pretty you can almost tell

(1:12:04) it's nighttime just due to how how much noise there is in the background if it was daytime we wouldn't have that much noise going on uh also the flash probably wouldn't be as prominent if it was daytime compared to night time in the satellite video so I'd say we're like 99 the location of the plane indicates nighttime as well um and in addition to C Katherine T's sighting so it's definitely nighttime um and it can't be through the tunnel somewhere else because of this the coordinates

(1:12:29) although that's a reasonable question to bring up Jake reasonable question yeah and that was a good example too where the cloud like is pretty close but not a perfect match but that's the same argument that the bunkers bring up doesn't have to be a perfect match it's it's too close to be not it or whatever okay I will think about having Bob Green you're back on in the

future I've talked to I talked to him a lot I talked to him on the phone the other day as well he's a really smart guy I do think that the orbs Go

(1:12:56) Through the Wormhole yes I mean how I can't tell for sure but yes I do think they do click on me please okay Dave got you brother okay okay are we good with that let's go to the next thing there's not too much to go through tonight but there's a few more things we're going to do um okay okay next thing I want to show I've got some Bob Greener Clips here where are they now I don't know if I'm going to hit the right clip here so we're going to watch for a couple minutes and see

(1:13:37) but it's about coherent matter and coherent matter is definitely one of the special things that we need relating to this type of technology in these videos so this is a bob Greener I'm glad you guys brought him up a video from two years ago well before I knew Bob Greener almost three years ago uh make sure you guys subscribe to him he only has 10,000 he doesn't have 10,000 follow subscribers guys this dude is literally out here uh engineering cold fusion and my man doesn't have any followers so uh guys get get this guy

(1:14:15) on okay yeah also guys if you complain or cry about being muted or blocked that's also going to get you blocked just heads up so don't do that either uh that's definitely a good way to get blocked just whatever if you don't like me don't watch I don't care man um okay so he talks about device and method for generating coherent matter we uh waves now this is not the coherent matter wave beam patent from loed Martin but this is clearly why when when Bob Greener saw that patent he got really

(1:14:53) excited yeah can you guys hear it oh so he just talked about the locky Martin patent right there as well so we actually got in a good Tim stamp here um and so they're talking about Bose Einstein condensates here and or the idea of uh cooling it down like lithium 6 and helium 3 which form uh super fluids when they get to absolute zero this is where you start to get these coherent effects Quantum coherent effects so whenever you guys are seeing Quantum coherent oh there's no sound at all [REDACTED] sorry okay uh hold on guys I

(1:15:52) screwed up uh let me I'm going to Fat rewind it 20 seconds here and replay it for you guys thank you guys for letting me know I apologize here we go uh this is it surpassing the capability of these systems that were there up until the turn of the century which causes considerable cooling stabilization and switching problems and so um in in much of these discussions they're still discussing cooling down to cryogenic to near absolute zero Kelvin temperatures and that is where the big leap in understanding came in the locked Martin

(1:16:29) patent but anyway the generation of coherent matter waves so yeah that's the thing where oh so this is I get what he just said this was really important chat he just described that in this paper which is 1999 Max plank study uh actually should let me just confirm that that's when it was I have the patent up here patent published yeah 1999 was that when this patent published they we're still talking about getting to like absolute zeros for coherent matter wave beams but the locky Martin patent does

(1:17:02) not require absolute zero temperatures this actually now that I'm thinking about brings up the idea that salvator P mentioned which is achieving super conductivity which is in a sense uh coherence Quantum coherence at room temperature or at loud temperatures I I can't increase the sound for some reason this is going to be something I'm going to have to work on like uh um I think I'm stuck with this sound level let me let me see if there's a way to change the sound real quick output sound mic

(1:17:37) volume unfortunately that looks like this is the highest I can get the sound for the playback so I apologize it's just very quiet because of Bob's video is quiet Bas is based on the extraction of atoms from a Bose-Einstein condensate the atoms which are in a magnetically trapped state are transferred into an untrapped uh state uh the transition is induced by an external radio frequency RF field so H so the transition to from coherent non-coherent to coherent states I'm going to repeat what he says for you

(1:18:09) guys so just in case you can't hear it well says is induced by an external radio frequency RF field so here's another thing guys you ready for this connection the uh lot the Freescale semiconductor scientists uh there that company was linked to us Aerospace and defense through serving RF power needs I might even have to find that quote chat holy crap uh free scale semiconductor RF power needs nxp oh wait that's nxp semiconductors uh someone may have to find the link but we have a link somewhere about free scale signing a

(1:18:59) contract with the government to serve RF power needs um I think I have it right here yeah here it is free scales RF business makes long-term commitment to us-based Aerospace and defense Market oh boy free okay I have to switch over we have to go to the other uh here it is let me share this real quick guys this is this seems important uh here it is okay let's read this together people wonder about the Freescale semiconductor things hi Lando in the chat I think you spelled your name wrong but it's good enough um free

(1:19:44) SC free scale is a global leader in radio frequency RF power transistors sorry what free scale semiconductor was the global leader in RF frequency power transistors today announced a major initiative focused on demonstrating how its new and next new and existing commercial RF powered microwave RF devices can meet the requirements of us Aerospace and defense Market the company plans to support a broad range of Aerospace and defense applications with an entire new gallium nitride RF power transistor products guys just reading this makes me

(1:20:28) wonder like is there people outside listening right now uh as well as it's proven portfolio of 400 ldm oos RF power transistors wait a transistor is something that changes one power type to another right wait no that's a transducer okay um the free scale products will be supported by a dedicated team of professionals uh focused exclusively on Aerospace and defense markets and consumers and this was a year before the plane went missing wow guys there's no way that this is just coincidence these guys were literally

(1:21:15) working for the US Aerospace and defense and Bob Green is talking about the transition is induced by an external radio frequency field as well for coherent matter waves

these guys are definitely definitely the reason why the plane disappeared I I am absolutely certain okay let's keep listening and Dave there might be something here where we can stimulate the production of uh um the release of these things now uh John thank you very much for the donation you guys have been on fire just once again I like to say it

(1:21:51) every time uh if you need your money if you need your money for anything rent eating or any other purpose please keep your own money but thank you for the donations anyway uh you know you know I love you guys you know I appreciate you guys looking forward to that Lando book as well yeah this is a yatsi for sure you argue that one way to um uh trigger and what you can do maybe is to use your system let's call it some sound uh for instance or some electromagnetic waves which is using a p Electric material or

(1:22:27) otherwise what did he just say piso electric material he's literally talking about Salvador P's pel electric high temperature super induced superc conductivity okay yeah we're definitely going to get this is this is getting sus guys this is crazy are you serious holy crap yeah uh please like the stream as well if you're on YouTube I appreciate you if you're on X then you just get to appreciate it transductive material let me hear that again surpassing um the release of I need to hear that one more time now um You could

(1:23:01) argue that one way to um uh trigger and what you can do maybe is to use your system let's call it some sound uh for instance or some electromagnetic waves which is using a pzo electric material or otherwise transductive material to convert an electromagnetic wave into a a um a phone on Scala wave uh like like sound but in what he just gave us the sauce chat he just gave us the sauce they were the they were directly connected to the technology the freescale semiconductor scientist were what the [REDACTED] sound uh for instance or some

(1:23:58) electromagnetic waves which is using a pzo electric material or otherwise transductive material to convert an electromagnetic wave into a uh um a phone on scaler wave uh like like sound but in the material or to directly use uh uh Scala Waves by let's go chat oh my God he just Tau us how to manipulate gravity um sound waves can be used to manipulate gravity as well so when they equate something to like a sound wave uh and and the scalar potential is the stress in the medium the scaler potential is how we manipulate gravity

(1:24:39) like the equation that I just what like I always explain you guys with Maxwell's equations we literally lost how to manipulate gravity because we reduced Maxwell's equations how nuts is that people wonder well why can't we manipulate gravity because we're idiots and we were like we're going to all ofer Heavy side reduce the equations down to four so it's easier for people and that's how we fig that's how we messed up he just said this is the way that we do it the the freescale

(1:25:07) semiconductors were directly connected to converting electromagnetic uh wave into a longitudinal gravity wave that's what we're seeing using phase conjugation using phase conjugation you you could then build up a coherent matter State and then build it up and build it up and build it up and build it up and all the time it's building it's just locked into place and it

can't act and then you hit it with RF which could be let's say I don't know for argument sake are something between

(1:25:43) 21 and 24 cmers of Light which is in the microwave range and it goes and all of them collapse and they become these non-trapped but traveling coherent matter waves that can then go about their business [Music] um what the heck are you serious chat wow um wow wow the craziest part about this was two years ago before I ever met Bob Greener did Bob Greener ever even know salvator pz what so to speak okay so that was the craziest clip I think we've heard in a long time I'm definitely snipping that we're gonna

(1:26:39) snip that we're gon to combine it with Sal P's pis electric super conductivity we're going to combine it with the free scale C in RF power needs and that's our motive boom lock it up we guys how do people think these videos are fake man do you think that we can just [REDACTED] sorry for my swearing it's swearing time do you think that we can just [REDACTED] Sherlock Holmes this [REDACTED] and these videos be fake like we literally learning how to manipulate Gravity from these videos we found dudes and nobody knew that these dudes exist I

(1:27:23) didn't know these dudes existed we found Maxwell uh his equation is being reduced by heavy side explaining how we can manipulate Gravity from the scaler potential we found out that coherent matter wave beams can allow us to convert electromagnetic fields into scalar potentials which is exactly what we need to manipulate gravity we've got Salvador pz just uh let me just pull that up real quick Salvador pz uh p Electric induced high temperature super conductor and like I didn't even have I didn't understand all the pieces before

(1:27:59) this so what is it just we're just randomly getting this together like this this is random we randomly happen to cross all the requirements that we need we just happen to have a pis electric induced high temperature superconductor patent here from Salvador pz literally the thing that Bob Greener was just talking about we need and oh by the way we just also happen to have uh that's not it where's the where's the RF power needs where's my RF power needs what the hell where is it oh here it is right here and we just have that

(1:28:35) the free scale semiconductor had signed a deal with Aerospace us Aerospace and defense to literally serve RF power needs to them and they have microchips that are the size of a dimple in a golf ball and we have a oh and guys one more I'm going to add this in there as well uh NSA paper I some of you guys haven't even seen this guys just prepare to have your mind [REDACTED] blown super conducting technology assessment National Security Agency you guys seeing this [REDACTED] super conducting technology assessment

(1:29:12) National Security Agency I'm G to put it in the chat so you guys just don't think I'm making this up this this should just be the Smoking Gun National Security Agency office of corporate assessments August 2005 so they had their eyes look at this watch this chat watch free scale what nine times free scale is going to show up nine times free scale semiconductor some kind of weird ship commercial pre-production at free scale look here's a a design for their free for their semiconductor that they're producing they super Advanced

(1:29:54) one oh look here's some more they're just mentioned all throughout this report like all throughout this report where's the intro on this thing it's all about super conductive microchips um nsa's computer needs are outstripping conventional technology U let me see there's something as well in here where at the end like in the conclusions there okay oh yeah summary of findings okay um the panel concluded that private sector interest in superconducting rsfq which is uh I forget what that means would not be sufficient to spawn

(1:30:56) development so basically they have to invest themselves in this nsa's role is to turn these findings into specific actions and Partnerships with National Security community and other Federal FH f h HEC users having extreme high-end Computing needs and the vision to pursue performance goals that superconducting rsfq appear to offer what is rsfq again uh rapid single flux quantum technology superconducting rapid single flux Quantum technology does that sound pretty goddamn Advanced for 2005 chat absolutely ridiculous

(1:31:35) chat yeah the lk99 story went away real quick too which is real sus chat I didn't even know what super conductivity was before that honestly like this is more like just what we've done tonight probably deserves a piter just this just this alone is more than I think that any TV and news and media has done in like years like and this is just us [REDACTED] Googling [REDACTED] it's just holy crap uh also credit to JK Philly fan for finding that clip of Bob Greener holy crap man holy crap dude this was this is a wild

(1:32:12) clip we're saying we're posting that clip tomorrow chat make that clip go viral the problem is normies have no idea like unless you've been involved in this case they don't understand like how how huge these findings are because you have to first realize that you need Super conductive you need Super conductivity you need Quantum coherence you need these uh like coherent matter waves like this is what allows for anti-gravity we also need to understand the idea of what gravity even is you know a lot of people don't even

(1:32:42) understand what gravity is people think gravity is like some Force that's pulling stuff down it's not it's like the stress in the medium it's a big difference understanding that totally crazy holy Jesus man okay uh what's my next one I have I have another video also I got some good stuff here oh uh okay two more things we're going to do tonight and then we're going to call it quits bendal warp drive and then we're going to look at uh actually I kind of want to look at this first this post here oh and we have

(1:33:17) the Reddit thing as well we may save the Reddit thing for tomorrow uh we've uh I'll what I'll say is I'll give you guys a spoiler on the Reddit thing okay so and I'll show you right away and then we'll go to some of these other two things that I want to discuss hopefully this won't get deleted from this we found the video post on Reddit from uh a year ago this this was back so you can see if I hover over uh you can't see when I hover over this that's weird this is from January 13th

(1:33:52) 2023 Jan January 13th 2023 okay so this is eight months before I even saw these videos somebody posted the MH370 videos on the UFO subreddit we found out that the

Pyromania VFX was uploaded with fake pictures that include the MH370 videos 10 days after this post on January 23rd that's when it was uploaded by Wave Rider it is very very possible that the intelligence Community was monitoring **Reddit** and saw people posting the MH370 videos and they prepared the Pyromania VFX **debunk** to get found on the internet

(1:34:41) back in January of 2023 eight months before I ever even saw the videos again reemerge this is extremely suspicious and it gets weirder the France 24 **debunk** that like if you Google stuff you find these **debunks** one of them is France 24 they have the wrong satellite it says NR 33 in their **debunk** that's the only factual evidence they present and it's wrong the France 24 **debunk** supposedly came out right after this as well and the Newsweek **debunk** which is this just another version of it came out one to two days after these videos reemerged on

(1:35:21) **Reddit** in August like one to two days after new news week's newsweek's dropping a **debunk** about some random UFO video that shows up on **Reddit** like one day after it drops on **Reddit** why AR why is it Newsweek doing an article about my investigation we've been waiting nine months and yet one day after these videos reemerge on this same sub**reddit** Newsweek copies and pastes the France 24 **debunk** using some kind of AI it gets it gets the only thing which is the nr22 it gets it wrong again says it's n77 which

(1:35:53) wasn't even a real launch uh this just reeks of intelligence Community manipulation reeks of it super sus so we're going to write a post up about that also before we go to that I want to show you guys some of the comments by the way I believe this was downvoted to zero the only reason why it's not zero right now is because people found this link early on in August and they they pointed out how this video had been shown up before but I think it was set to zero and people found it and they started up

(1:36:23) voting it retrospect retroactively uh we're not we're not looking at ham operators or ham records that's what uh what's his face does uh Richard Godfrey uh you can't track plans with that but that's a good that's a good analysis we're not looking at ham radio stuff I'm not going to do that I've conclusively determined that the Richard Godfrey ham radio analysis stuff is complete garbage um free scale change their name around this no it's not that they changed their name they were sold they

(1:36:51) got sold off in 2015 to XP super semiconductors and by the way if you look up nxp's semiconductor stock price pretty solid for the record I am an investor in nxp uh semiconductors because I like to have my money where the rich [ ] have their money so I did go ahead and somewhere around November uh last year several months into the investigation decided I was going to invest in semiconductors after I learned that we're probably hid in super cond super conductive microchips in the world but that's not investment advice

(1:37:25) uh that's just information you can make your own choices in terms of what you want to invest in so um I do need to get a producer Pro if I if I do this full-time I do but for now and by the way this week I'm gonna have to focus on my job so I don't know how much I'm gonna be able to post here's nxpi chat here you go let's do year let's do one year how's that grab you last

year it was 160 now it's 260 in one year that is uh over a 50% increase in one year over 50% increase

(1:37:57) in one year how about five years five years ago it was \$100 the the PE the lowest was 220 at 2020 was \$80 it's now quadrupled since 2020 seems legit to me I don't know about you chat let's go back to when they were bought so actually they were stagnant for a while but now all of a sudden they've taken off since 2020 pretty interesting if you guys look up uh Nvidia theirs is even crazier they've gone up like 16 fold yeah if y y is in the thing just ban him just block y I'm not dealing with those people anymore i' I already

(1:38:35) got him blocked so I don't see his comments but if if my admins are there if anyone's calling me a grifter in the uh YouTube chats just block them we're not playing games with these people okay uh oh what I wanted to show you was the comments here as well so the the top comments used to be different but people started up voting them them so if you go down like three down here um this is fake as [REDACTED] and distasteful as hell if this was legit footage of MH370 every [REDACTED] news Outlet in the world would be talking about it they're

(1:39:10) not because it's fake as [REDACTED] this is your brain on CNN chat this is your brain on CNN this is what a complete idiot looks like right here dangerous daak on Reddit this is why redditors are the dumbest people on the face of the Earth can you believe this if this was legit footage every news Outlet in the world would be talking about it how dumb do you have to be to think that how dumb do you have to be to think that the government doesn't control the media and that if we took this plane filming it on

(1:39:39) two videos of course the media is not going to talk about it zero mainstream Outlets have reached out to me even though I've done more investigative journalism than all mainstream media combined and I'm literally disclosing the biggest cover up in history uh the Rolls-Royce data was never made publicly available that's extremely suspicious they probably have data that shows that contradicts the ersat pings would be my guess iMat data was made publicly available and there's a huge anomaly right at the location after the

(1:40:13) uh the the uh nicobar Islands as well at right after 1840 the data just goes dead then there's only 10 rows of data for five for five hours and before that there's hundreds of rows of data so this is why I don't know why people think that imrat data is some like completely undeniable data the iMat data is definitely garbage you should just throw it out I mean it looks good up until the nicobar islands the data looks legit but after that it's like it's extremely suspicious and that's honestly the

(1:40:41) reason why most a lot of these fake experts that are out there completely failed in their investigation is because they discounted like 19 real people and all this evidence they didn't like just because they thought there's no way that some random on an Excel data spreadsheet couldn't be manipulated like this is how stupid experts are um I the word expert means literally nothing whatsoever nothing whatsoever uh so and then there's some more comments in here uh that debris from the wreckage has been

(1:41:09) found like this is like almost certainly was a Fed post a Fed bot now you notice a lot of the people it's the same narratives debris was found debris was found they don't point out the fact that the debris contradicts the crash site the debris was found in Africa not Australia that means there's no chance this plane crashed off the coast of Australia but this is like the thing is that this is how brainwashing Works they had some debris that got found and then they convinced the media convinced the

(1:41:38) world uh using models that somehow this means that the plane crash like a couple pieces get found and they convince the world that like oh this means the plane crash this means we were right this means we were right had to have been crashing off austral Australia we found debris 3,000 miles away it's crazy uh and then this is just a completely made up quote here where this is like from like that you guys saw this guy uh Lance Vance or Vance whatever is Lance whatever his name is he's like the debris suggests the pilot lowered the

(1:42:16) plane's landing gear and crashed deliberately like that's not something you can figure out from looking at a piece of debris that's literally not something you can figure out by looking at a piece of debris and then a new report published by Richard Godfrey and American MH370 wreckage Hunter Blaine Gibson claims the piece of debris most likely uh penetrated From the Inside by the Jets disintegrating engines Richard Godfrey's analysis is completely fraudulent nothing that Richard Godfrey says should be taken

(1:42:46) with any sense of credibility whatsoever he his analysis The Whisper analysis I read the whisper report it's total nonsense sense it reads like fiction um and the guy who came up a whisper literally said that you can't use it to track planes that didn't stop Richard Godfrey from making up a bunch of [REDACTED] anyway Richard Godfrey is a fraud don't listen to anything he says he's not an expert in any sense of the word uh so this is this is what redditors do though they're so stupid this is total horeshit if you

(1:43:18) look at into MH370 at all it becomes quite clear The Disappearance of the crash was a deliberate Act on the part of the pilot there's literally no evidence that this was an act on part of the pilot Not only was there no evidence that the pilot did this everybody has ruled the pilot out it actually takes more of a conspiracy to think that the pilot did this than to think that it got warped Away by the United States government just I want you I'm gonna say that one more time it's more of a conspiracy to think that the pilot did

(1:43:46) this than for the plane to have gotten warped away using completely unknown technology by the United States government that's how stupid these people are roasty MCG giblets his account has been suspended by the way because it was probably a [REDACTED] bot look at this these are the people we're talking about you guys want to know how much disinformation there is on Reddit just look through this old thread and somebody even asked from what evidence there's literally no evidence at all the officials ruled out the pilot

(1:44:13) and this guy's response you should spend some time reading the MH370 sub uh motive there's no motive he didn't have a pissed-off cousin this is all fake everything he posts

right here is fake transponders being turned off they were tracked by the engines engine data was never made publicly available the this like what is he saying they were tracked by the manufacturer the manufacturer Never released any data uh shortly after transponders were disabled to plane climbed to 50,000 F feet literally not possible for the

(1:44:41) plane to do that and recently it was confirmed that actually didn't did not rise 50,000 fet it actually descended consistent with the emergency event uh let's see what else the the the thinking of the locking the pilot out again complete speculation not based on any evidence and that's it there's no other evidence the the simulator data also doesn't match either so uh this is so fake honestly that the fact that even one person is trying to figure out if it's real or not makes me think it's time to hop off this

(1:45:09) subreddit this is how stupid redditors are guys Reddit is full of the dumbest people on the face of the entire planet honestly they should just delete Reddit and we can just make the world a better place honestly it really is it's the biggest source of disinformation on the entire planet do never go to Reddit to to get your opinion ever dumbest place ever unbelievable honestly more I find this distasteful it's one thing to speculate about people seeing black triangles that's pretty ironic but this

(1:45:41) was a tragedy hundreds of people lost their lives yeah don't you think we owe it to them to find out what happened there's literally no conclusive evidence for what occurred to this plane how crazy is this bullshit video and post and then somebody finally says well there's two videos two angles filmed at the exact same time so yeah anyway I think that's good enough on that one pretty crazy right chat yeah also don't go to Wikipedia I mean you can go look at sources on Wikipedia but don't read

(1:46:15) any editorial on wikkipedia the editorial on Wikipedia is garbage uh now where's my warp drive engine thing I'm G have to probably pull it up oh here it is uh no that's not it Chad I have so many links up uh boy okay I'll pull it up over in this one here I've got five more papers I need to read to I'm trying to do at least two scientific papers per night uh just try to catch up to all this stuff because we got a lot more to go okay um uh here it is okay let me see what we got here okay

(1:47:09) um here's the thing I want to say next to this as well okay so with respect to wormholes versus warp drive what's the difference honestly I'm starting to get confused myself so we've seen the scientific papers that talk about wormholes scientific papers talk about warp d uh Stargates Dark Energy negative energy uh there is a slight difference between a wormhole and a warp drive I think that we can start to now reanalyze what we had posted before and say that a worm hole is going to be just literally

(1:47:41) connecting two points in space and time uh like if I were to take this napkin and do this to it warp drive is going to be the idea that you're bending space around yourself so Warp orp Drive might be what the orbs are doing if we really want to get very specific now I'm not 100% sure on this my understanding is still evolving let's say uh but when we look at the MH370

videos and I'll pull one up here the best clip of it the to be very technical what we see the the orbs doing with the trails might

(1:48:14) be considered warp drive because warp drive can be subluminal which means it does not have to go to the speed of light so what you see with these lines in front of the orbs here that could potentially be warp drive because it's it's making space in front of the orbs and then it's going through that space and pulling forward which is interesting to think about um and then what we see with the zap that might actually be the the Wormhole that's being produced so I've been asking some people behind the

(1:48:42) scenes on this to try to get a better understanding and that's pretty much what they told me and they've told me that warp drive doesn't have to be a super luminal event so warp drive and a lot of this has to do with mass reduction is once you get your mass down to zero now you can start to like achieve the wave function and if you achieve the wave function like the double slit experiment you can be over here or over here and so there's even this idea that even if you achieve super luminal speeds without a wormhole

(1:49:09) without a a uh like a a connection between two points that you're not going to get ripped to shreds because once you take your mass down to zero now there's no friction anymore so you're not going now what does that do to somebody I don't know no like I wouldn't want to be flying around in these little orbs I would not want to be inside of that I don't think you're going to be coming out in one piece so this right here so you can say that the lines we see in front of the orbs like right here uh actually you

(1:49:40) can't see my mouse uh the one on the south here there's a dark line in front of it you could argue that's warp drive and you could argue then that when they converge here this is where we're seeing the Wormhole pretty interesting Concepts but we'll see I'm going to keep looking into it I have a lot more scientific papers to read uh to really have a better idea of it I have no idea what material the orbs are made of and just for the record guys a lot of people ask me questions that I can't possibly

(1:50:05) know like I I can't know what happened to the passengers I can't know what the exactly what material the orbs are made of uh but there are questions like that where I could potentially make speculative guesses based on interviews with salvator pz and based on this whole thing about the piso electric induc superc conductivity stuff like that uh I'm just not smart enough yet on a lot that stuff guys when I do get smart enough for some of that I will let you know but please keep in mind that the science is like

(1:50:30) the thing I'm I'm the most Noob at I'm a newbie at the science I'm trying to catch up to the science as fast as possible um and that's because I'm not like formally educated on it uh but I'm smart enough to be able to like catch up pretty quickly uh now let's go back to the warp drive here it is okay so uh let me preface Malcolm Bendle has come out with a patent for a direct matter to energy warp drive now I looked at this video that we're about to watch and I this is why I started to ask have to ask

(1:51:04) people about warp drive because I was like wait this isn't a warp drive this isn't like B this is not creating a wormhole and people were like oh no that because that's not necessarily what warp drive is so we might have three things going on you might have Star Trek impulse Drive which is like the EM drive and then you might have warp drive which is like bending space around you like we see the orbs doing and then you might also then have a wormhole which is just like creating like a literal nonlinear

(1:51:33) location in SpaceTime uh where you know space breaks reality breaks down as we perceive it uh and that punctures through to The Ether that allows for this shortcut to happen so there actually might be three things going on not just two I was conflating Wormhole with warp drive uh so just goes to show you how you know you can this science for my understanding of science keeps evolving I have not yet talked to Eric Weinstein or really any scientists this is probably why they don't take me very seriously but they will one day they

(1:52:03) will okay now let's go to this one I wish there's a way to default it so it doesn't default to that other one can I just remove that other one just can you remove this I'll have to look at that later okay okay but what we are showing you with B drin hang's cavitator is exactly the same forces are produced by cavitation here we go um that would be appreciated so thank you for your oh and let me shout out here to um Jordan so this is Jordan I think Jordan's going to be at the cosmic Summit so I'm probably going

(1:52:50) to meet all these guys in person pretty soon um and he's alchem science so please follow him maybe this way I won't get uh and yeah for the record I guess I'm hopefully don't copyright strike me I'm doing this for educational purposes or whatever Contin need support I appreciate it all right uh here we go let's get back to the house of the meta Malcolm bendle's Direct Energy to meta wolp tribe for Land Air okay wait did I skip oh yeah no no we got to come back to this okay so where

(1:53:22) are we right here we're at 14 minutes let's start at the beginning waste with the thunderstorm generator we are able to atomically reconstruct the exhaust waste stream primarily existing of carbon dioxide carbon monoxide and hydrocarbons into oxygen and other more useful elements in this context this is of course Grail breaking and the thunderstorm generator will continue to be our primary focus this coming year as it's in the commercial pre-production phase and there is still a lot more testing and Analysis actively going on

(1:53:53) there to C up this is the transition technology that we going to see mass produced first yeah and so I was talking to Bob Greener about this as well and he was throwing a little cold water on it that it might actually not be um it might be that it's not a cold fusion generator but it only produces uh clean uh exhaust which is still pretty damn big if you ask me but it's actually only one of melol vel's plans for plasmoid technology to today we're going to skip right to the end and talk about the Final Phase of Mal's technology

(1:54:27) instead the direct matter to energy drive or vadra implosive turbine the drive can be utilized as an anti-gravity uh propulsion device for use on land in air uh on or underwater or in

space but it's not simply a turbine it also has many other uses just as an engine has far more uses than just transport that's pretty amazing the V implosive turbine is designed based on the same underwriting principles as the thunderstorm generator sacred geometry and frequency so why haven't we talked about the direct matter to energy drive

(1:54:59) on the channel so far and why are we now suddenly skipping forward to talk about it now so a couple of reasons for this one uh Malcolm has just submitted the protection Pence The Invention he had significant and valid concerns about this one being locked up or blocked in some way and he's much more willing to talk about it now that the patents are submitted two uh I've had more time to study these subjects myself now so I feel ready to start start discussing them in more detail I'm still a St okay

(1:55:27) so apparently Malcolm Bendle has been holding out on us and he's got some kind he's calling it a warp drive I don't know if it's technically a warp drive or if it's just a propulsion mechanism that uses this Vortex plasmoid technology but either way he's calling it a warp drive pretty cool so let's go ahead and Skip ahead because I don't want to be up all night let's go to the part where we talk about it and how it works I I don't really like that they throw sacred geometry and all this stuff it makes it

(1:55:55) sound esoteric it doesn't matter what the geometry is that does it like that's doesn't matter all that matters is that it works what does it do and then you show us the design if the ratios are 3 six and N or two three and four whatever great great just show us how it works that's it right uh that's my that's just my humble advice to the people that are promoting uh this stuff power generation and atomic reconstruction and a number of other things called the vandra implosive turbine or msart F engine for

(1:56:27) short msart being mold C Arc Atomic reconstruction technology uh it also has some other important uses uh including being an integral part of the bendal Tesla world power plan design for unlimited free Power which just said the secret word unlimited free power as well and yes once again even if this is even if it is like sacred geometry you guys got to realize iiz like you are the moment you start dropping the term sacred geometry on people and saying that this is the answer to everything in the universe you lose like a huge number

(1:57:02) of people a huge number of people are literally just going to turn it off and not and not think listen to anything more that you're saying so I would implore people that want to be taken seriously to not focus on the sacred geometry the underlying Frameworks and consciousness of the universe just show how it works that's it then after that gets figured out and agreed upon then you can start talking about what it means for Consciousness and reality and Eternity and the universe and stuff like that we will talk about a little bit

(1:57:35) later just in short we will watch this short introductory clip from a video that Malcolm M strike has produced some time ago um you may have already seen this floating around on YouTube or on strike foundation's website be up for a while uh this Vis zero matter time light and matter The implosive Vortex waveguide is inspired by the Molton SE vandra based on

Malcolm Bendle's scientific observations drawn from his Bendel Taurus this led to his unified field Theory which is clearly illustrated by his model of the and this

(1:58:06) too like guys this this could be absolutely right but and I am not one that's going to turn it off because of this but like guys if you go to your standard CNN brain person and you start showing this graphic to them they're immediately going to think you're cuckoo for Coco Puffs uh like you just you don't need to go this far with it like we don't need to know about the guy's unified theory or whatever like all we need to know is like okay let's get to the nuts and bolts of what's going on

(1:58:31) right the elements and his octave dimensional model the bendal turbine has direct applications to all current Technologies but especially to the jet turbine and space propulsion Industries the bendal turbine manipulates the movement of air using a structured wave guide to create an implosive Vortex this Vortex once established by the wave guide becomes self-structuring self-organizing and self-perpetuating around a pole emanating from the zero point of the model this effect induces a vacuum which is the defining operating

(1:59:02) parameter of the turbine the air flow which creates a clockwise imploding spiral Vortex centralizes and compresses the oxygen and fuel which is then combusted to create a fire tornado producing internal heat and an external vacuum so he's already talking about fuel so it really just makes me wonder right away exactly what the nature of this engine is um seems like the secret here is that we have this zero point system which is always big and then it is able to contain the heat into a specific point so that the engine

(1:59:32) doesn't get damaged from the Heat and then you can see these counter rotating vortices that are going on as well which is pretty awesome and people ask why does it matter why why can't we talk about all the sacred geometry and all that stuff well because the answer is this is an information War people say well it doesn't matter if it's true no it does that's the problem if you don't realize that this is an information War then you're never going to get anything pushed what did we just

(1:59:56) see from these CNN brain people on [Reddit](#) they're all sitting there just saying No this is true this is stupid blah blah blah you have to realize this isn't about discovering new technology this is about getting information out there that has been out there that people have just been ignoring and once you look at through that lens you realize what you say and how you say it is extremely important it's actually the only thing that matters a conventional jet turbine directs the heat generated onto the

(2:00:24) blades which in turn creates differential expansion in contrast the bendal turbine directs the heat away from the blades whilst the incoming air cools the system creating a boundary layer that insulates the blades against the radiant high temperature emitted from the compressed fire tornado Vortex core this is equal to the effects demonstrated by the plasmoid thunderstorm generator a conventional jet turbine blade has a high press boundary layer that generates friction and therefore heat whereas the bendal turbine fire tornado creates a central

(2:00:53) vacuum which expands out beyond the turbine blades and has the effect of causing the air in front of the bendal turbine to be sucked into the central vacuum the vacuum creates a minimal boundary layer effect reducing friction and cools the turbine the differential expansion doesn't matter on our blades because there is no inertial stress the bendal turbine having no axle turbine blades fixed to a shaft bearings or moving parts does not generate inertia and therefore does not subject the turbine blades to the destructive forces

(2:01:20) of heat so this this this is what you start with right if I am promoting this this is this is the CLI this is I start with I don't start with any like unified theories or sacred geometry stuff the first thing I'm showing the Normie people is this what are the advantages of the engine well it's got a central vacuum minimal boundary layer effect reduces friction cools the turbine no inal inertial stress and no conventional moving parts that's the money that's what people going oh okay so you just

(2:01:47) invented a a super engine that like has all the all the positives of the current one of the current jet engine and like none of the negatives sweet okay great how how many uh ratios there is and what have you no one cares right like this is what people want to know a metal fatigue in a conventional jet turbine when subjected to both heat and pressure the differential expansion inevitably leads to a deformation of the blades this is due to the non-homogeneous casting and forming of jet turbine blades combined with the

(2:02:18) weight differential between the Boron magnesium and aluminium Allo components or composite materials were used this differential deoration will result in an unavoidable imbalance manifesting as a vibration of the turbine especially when Amplified a peak load in contrast the bendal turbine blades are stationary and operate as static mixes of fuel and air structured and directed by a wave guide of intelligent design this means that the weight of the bendal turbine is an order of magnitude less than that of a conventional turbine design another

(2:02:50) major feature is that the engine moves mes into a vacuum instead of pushing into a body of air when we apply Plasma in quadrature to the zero those were some pretty damn good advantages guys like those that's what you want that's the money right there it's like okay you know it doesn't push against the air so this actually this this might be the secret to the plasma stuff in general in terms of reducing c as well let me I want to go back to that blades are stationary and operate as static mixes of fuel and air

(2:03:18) structured and directed by a wave guide of intelligent design this means means that the weight of the bendal turbine is an order of magnitude less than that of a conventional turbine design another major feature is that the engine moves into a vacuum instead of pushing into a body of air moving into a vacuum instead of pushing into a body of air that seems extremely significant moves into a vacuum instead of pushing into a body of air because pushing into a body of air is what would caused a friction but moving into a vacuum would be no

(2:03:50) friction is that the secret to reducing C hm that is really interesting that that is very important chat that might be the most important thing about this so far when we apply Plasma

in quadrature to the zero point of our fire tornado it combusts any remaining material and adds effective electron thrust creating an After Burner effect all right let's break this down this is okay I think I'm going to stop there with this particular you can watch the whole thing I don't want to show his whole video here uh but if you if you're

(2:04:23) interested more about it and the vortex and what have you check out alch scientist or science he's he's got 10,000 views on this so people are definitely taking this seriously um this is Malcolm Bendle right here actually well done congratulations from Malcolm Bendle uh pretty sweet uh okay so that's that's pretty awesome that that might be legit I'm not really sure I I do know they very serious people are looking at Malcolm's engine and looking at his stuff so I urge you guys to take a look urge you guys to

(2:04:54) follow those guys um I'm actually getting pretty tired and I have to reply to a lot of people uh tonight so I probably am not going to post the [Reddit](#) thing later tonight uh I think I'm gonna we're gonna probably wind it down right there um just as a uh what's coming up next week uh this upcoming week I do have all these other papers here let me go ahead and show you as a little sneak peek what we're going to be looking at we got more scientific papers we're probably going to start with these

(2:05:21) tomorrow concepts for extracting energy from the quantum vacuum yeah so concepts are extracting energy from the quantum vacuum Quantum [Computing](#) and utilization or utilizing organic molecules in auton automation technology okay the space communication implications of quantum entanglement and non-locality this is literally might as well just say faster than light communication that's what this should just say right here faster than light communication and then last one state-of-the-art Evolution State of-the-art and evolution of high energy

(2:06:02) laser weapons okay the high energy laser weapons could be the secret to unlocking some of these gravitational effects based on the other scientific papers that we were reading uh these documents are not in the Discord you can literally just Google these names that you are seeing on your screen right now and you can find the links of these documents they're not hidden somewhere I just Googled these names and you can find them on on Google right away so these are not hidden or anything like that um yeah take it easy Alonso appreciate

(2:06:34) you brother uh so once again guys if you want join the Discord I'm going to put the invite in the chat again uh give your feedback on which of the signs I should buy I'm leaning towards the lowercase orbs yeah I think I do like the lower case orbs better right now uh I am leaning towards this one actually I think I like this one better um so and I'm probably gonna end up doing blue I'm just not sure if I want red uh and then let me see oh yeah and the other thing I'm going to do too is we're going to rewatch The Thomas

(2:07:11) Bearden videos at some point probably later this like the end of this week or or uh weekend uh next weekend because the Thomas Bearden videos are probably some of the most important videos ever that are out there explaining scaler physics and the more science that we learn the more those videos make sense I might even invite somebody to watch them with us

like someone like uh Tom Monto or maybe crypto Alchemist if he wants to watch uh so that we can go over them together um just because it's nice to have somebody else who kind of

(2:07:43) understands some of it so that's what's coming up guys let me see what else I've got so the dur papers Thomas Bearden the **Reddit** findings that uh from that old video that we posted the links up with the **debunks** and all that stuff that's pretty sus uh going to be posting about that and then I'm going to take that clip tomorrow of uh Bob Greener and I'm GNA snap that I'm GNA put in some graphics with like all how it connects to freescale semiconductors and the locked Martin coherent matter wave being

(2:08:11) patent in fact let me write that down real quick because honestly Bob greener's given us like some of the absolute best clips that are out there Bob Greener is a **[REDACTED]** genius uh he really is uh what a smart guy man I'm so lucky to meet these guys anyway guys hopefully no nightmares tonight for me I hope you guys had a good uh enjoyed the stream thank you everybody who's watching we have a lot of people watching so I appreciate you guys uh have a great night we will be streaming tomorrow night uh probably

(2:08:46) gonna be looking at these papers um give me your feedback in the Discord on which uh which thing you like the most oh **[REDACTED]** I just holy **[REDACTED]** uh I just invited people the wrong Discord **[REDACTED]** um **[REDACTED]** how do I let me take care of this okay guys well have a good night I'll talk to you later uh I'll post the right Discord invite in a second I just posted the wrong one peace guys [Music] they meant to fly PLS they ain't supposed to fall from the sky but if they do they'll leave behind more than he s to ples just be flying I know you

(2:09:52) think I'm lying the USA Baby hiding the **truth** and I ain't ples they meant to fly ples they ain't supposed to fall from the sky but if they do they'll leave behind more than are to they'll leave behind more the who you think I'm lying the USA Baby hiding the **truth** and I ain't [Music] fine ples they meant to fly ples they supposed to fall from the sky but if they do they'll leave behind more than a pce or two R just be flying I know you think I'm lying the USA they be hiding

(2:10:59) **truth** and I ain't fine they leave behind more than a piece of two they'll leave behind more than a pce or two it's I m m h37 until you do some research don't talk to me I'm going to find the **truth** while I sit this Mar your opinion it means s to me it's m m m m m h37 not all heroes my capes I wear glasses to see I'm going to find the **truth** while I this

(2:12:05) Mar the trolls ha See Me [Music] succeed but guess what m m H3 [Music] mx37 not all heroes gles to see I'm going to find the **truth** while I sit this Martin your opinion it me to me your opinion M h37 now hero our glasses to see I'm going to find the **truth** why I

(2:13:16) party g

Transcript:

(00:05) [Music] meant to fly PLS ain't supposed to fall from the sky but if they do they'll leave behind more than be S too ples just be flying I know you think I'm ly the USA Baby hi the **truth** and night ples they meant to fly PL L supposed to fall from the sky but if they do they'll leave behind more than to they'll leave behind more than you FL I'm ly the USA Baby hi the **truth** and I ain't

(01:07) [Music] fine planes they're meant to fly planes they ain't supposed to fall from the sky but if they do they'll leave behind more than are to just be fly and I know you fake I'm lying the USA they be hiding **truth** and I ain't buy they leave behind more than a piece of two they'll leave to hi More Than A P or two everybody Welcome to the stream okay welcome to Friday night fun

(02:12) we are going to be doing an xace here in just a couple minutes with Jake Chanley we're going to be going over the DIA papers uh we're going to be talking about some science should be a good time so thanks for being here everybody uh while I'm getting ready here uh welcome everybody who right away this is kind of an impromptu stream William Sigman Noble uh Mr Hawaii glass Todd Turner jet stream Surfer Nicole good to see you hey West hey John B here for as long as I can stay awake says the blow welcome uh

(02:47) hey hasatu I think I already said hi to Jess if not Hello uh yeah lots of solar flares says Sigman uh I don't think that we're going to get wiped out today so we'll see uh JT Donnie Darko airplane engine it is pretty damn weird uh flimsy Greenberg how's it going uh Christa Marco I see you uh thanks again for that that's a nice comment to make great day for fishing fancy Flint good to see you or Flint fancy John Johnson awesome ditch the music nah we're not ditching the music how's it going

(03:20) Jack uh let's see what else we got Richard everybody else how's it going guys okay so um waiting for the space to start up here in a second oh it looks like it just started so here we go hold on how do I can I open this in another one sec guys I gotta get this set up just right there we go there we go I think it's looking pretty good here we go um I'm sure that is busy but um what I'm going to do is I'm going to play a little bit of music here while we wait oh there he is hey Ash they have 40

(04:10) people in the space right now so my thinking is if all 40 people end up R tweeting the space we could get even more people in here and then that can help us to create the demand for this technology to be released and thus we will have a supplier um Orlando Salazar I see you there uh I don't know if Ashton asked you to come in or not um Ashton if and when you want people to come up and you and get a mic I will allow you to by all means do that if you want somebody to come in if you've told somebody to come in that's cool what I

(04:47) would like to do though first is kind of Bounce things back and forth between yourself and myself let's let's condense this jargon and this esoteric knowledge down into language that most people can comprehend and uh then kind of field the questions and stuff like that does that sound good to you yeah Hey Jake how you doing tonight man we today this afternoon I'm doing well man I'm really excited to do this yeah me too yeah no sorry it took me a second I was just getting my stuff set up uh we're live

(05:21) streaming as well over on YouTube and on X if you guys want to watch as in addition to participate um I I hadn't asked anybody else to come up so I thought we would do it the same way we normally have so for people who are new uh Jake and I have done a number of spaces and streams about advanced technology stuff about the MH370 uh and then just some other streams as well they've all been really good usually our our format is we go for a couple hours for the first hour or so usually Jake and I kind of opine about

(05:47) you know the technology what it means Etc and then usually the second half or you the last 45 minutes or so we have people come up ask questions what have you so uh Jake is that cool with you if we do it that way again absolutely I'm looking forward to to it um I'm going to play a little bit of music here while we wait uh for people to retweet the space um and sweet uh share this info with others see if we can get this room full um I certainly hope you like the my choice of Music I've chosen a I think

(06:18) very appropriate song uh written by Han Zimmer so let's uh let's put that on quick while we wait and here we go okay this is going to be good okay we got a little background music chat when I go solo layout can you still hear the background can you guys still hear the music while I have solo layout like this people who are watching on the stream okay let me see little epic music ooh uh how am I going to do this God ha it always tries to clip it think we're going to start with the warp drives paper can't read it like

(07:12) this though if I put this up here okay you guys can still hear it yeah yeah it's very quiet it is really quiet I think that's just because he the way he's doing it so okay everybody who's in here we're going to be doing this space today for the next couple hours uh I'm going to go through some of the same stuff on these Dia papers I will I may uh switch the view over so you guys can see the paper while I'm talking through them maybe not I haven't really decided uh so if you guys have

(07:41) seen the some of the recent streams we have it's going to be somewhat repetitious but repetition is good for uh understanding the concepts so Jake and I kind of have an agenda it's going to be uh we're going to talk about The Ether scaler physics quantum entanglement uh faster than light travel wormholes vortices magnetic fields electromagnetic fields um and then Quantum travel entanglement and then we've also potentially talking about some radar plasma physic semiconductors so we've got a lot of stuff to talk

(08:11) about here it's going to be good everybody's a Critic this is from Interstellar oh interesting I know that good to know this a little bigger Twitter like supposedly has copyright

strikes but um I don't think it's as harsh like they don't really people don't really enforce it on Twitter yeah I can never repeat the science enough I'm probably going to do restreams of the Thomas beard and stuff now that we know more as well like maybe next week also those it's better to do those streams for me because I don't

(08:50) have to have so much preparation takes a lot of preparation for some of this stuff yeah Interstellar was pretty crazy uh that's where I first learned about time dilation pretty big we've already got 100 people in the Stream or in the space which is pretty [Music] big close that okay then I'll move these papers over here can't get this thing on the left to go away huh yeah there's no way to get that to go away oh there it goes okay now we're much better situation to read these papers there we

(09:40) [Music] go I might have to get a beer [Music] chat maybe a beer and a root beer I don't know so John B asked a really good question do you think that the ether is too much of a catchall no that's the beauty of it the thing about physics in science that's wonderful is that it's it's elegant it's elegant solutions that are elegant are what you want to find you know the fact that the ether solves the problem of dark energy is that's honestly mind-blowing it really is for that don't

(10:25) recognize the song it's the interstellar main theme by Hans Zimmer which uh God I love that song Hans Zimmer is so good and yeah that movie is really relevant here too that's the first time I learned about time dilation and I remember I watched that movie and I was like wait a minute you can travel to the Future like time dilation is a real thing like what happens to them on the planet when they're by that black hole and I so I spent like all night just like Googling it looking it up finding out that yeah

(10:55) like we actually tested this like decades ago and like we sent up airplanes into like near as near orbit and we sent them in opposite directions at like different altitudes or different orbit and said that we found out there was like a slight difference in the clocks that they put on them afterwards enough to like prove that time dilation is 100% real which means that you experience time flow based on your frame of reference as Einstein would put it which is that like you yourself are experiencing time at a different rate

(11:22) than potentially somebody else is experiencing time which becomes very important for what we're going to talk about today when we talk about uh quantum entangle uh and teleportation and uh super luminal speeds uh because that's going to come into play yes it is this is why I chose that music I was really kind of rocking my brain like what am I gonna put thanks that's the perfect one and you're right time dilation is a real thing time is relative Einstein told us that a long time ago and we're I think just now kind

(11:53) of catching up so let's for I mean do you want to start with the DIA documents yeah I was thinking okay so have yeah go for it well I saw in the comments that somebody looked up the address that was placed on that document and it took them to some random Suburban home in in Vegas or in Nevada rather and I'm just sitting here scratching my head and I'm

wondering because I know that how the intelligence agency like to do things is they will release a bunch of stuff that may very well be factual but then they

(12:33) will alter the documents ever so slightly in ways that most people wouldn't realize or recognize like the seal that they use for the agency or the address or what have you or the signature of of the bureaucrat that signed off on it all of these things or one of these things might be off slightly or not official and then the intelligence agency will point to these inconsistencies and say ah see this is this is **debunked** this is bogus even though the info in there may very well be real or there it might be partially

(13:09) true or whatever so I'm curious about the authenticity of these things have you investigated thoroughly enough to identify the markers that this thing is in fact real yeah that's a good question because a lot of people have this idea I think it's called limited hang out or something this idea that we would throw stuff out there to just throw adversaries off which of course we do stuff like that in general but when you look at these scientific papers the thing about them is that they're consistent and they have real equations

(13:37) from Einstein and what have you it's not like it's somebody just made up some mumbo jumbo on there so they're they're written from a perspective of not an experimental perspective but from a theoretical physics perspective and in this sense there's no like throwing somebody off with respect to that because that's the stuff they describe in there is like einsteinian uh and Rosenberg you know um uh physics that that we see here um what I'll say too is that I think the person that wrote them

(14:03) is uh Eric or um Eric Davis Eric W Davis who and the other part too is that they want you to think that it's stuff can't be real that they wrote you know because that's also a tactical Advantage so you can almost think of it in the reverse as well is that some of these people like Eric Davis I have it on pretty good authority that he will come out and even just say that like oh no we can't you know we can't warp an object teleport an object but he just knows like firsthand that we can and

(14:28) potentially even has walked through a real Stargate himself which is just Stargate like you know a portal similar to warping two areas in SpaceTime so um you know you can take it or leave it in terms of believing it but what I would say is that what like how we analyze fake news in general should be that we trust and verify so we shouldn't just take the headline of what we read we should look through the facts in it and that's what I want to review with you guys today is like what's the meat and

(14:52) potatoes of these papers so the ones I'll list off what we're going to look at here today and then you can uh and I think what you realize right away is as well is that there's a lot of common themes between all three papers that would say okay if we're spending all this effort to write all these papers that's a lot of work for dis information that all lines up between three disparate papers the first one is warp drive dark energy and the manipulation of extra dimensions and this is really

(15:16) important because Einstein Rosen ER is an Einstein Rosen Bridge which is a wormhole and uh dark energy is these stuff where we know that from based on uh let's say classically accepted physics there was a big bang but we know that the Universe expanded faster than the speed of light but we also think the speed of light's the speed limit so how is that possible this is where physicists came up with dark energy which they think encompasses like 70% of the Universe um and then the last one here is manipulation of extra Dimensions

(15:47) which is going to come up with this idea of The Ether and the ether is this idea that you have potentially unlimited negative energy it could be like the canvas on which our reality is painted on which we'll talk about here in a minute as well the second paper traversible wormholes Stargates and negative energy so we were just talking about this idea of warp drive and now you can take this idea of having a traversible wormhole which is can you actually survive a wormhole if you were to go through it and that's what this

(16:12) paper deals with Stargates which would be like taking that concept to the next level and saying like Okay we can actually create a portal that's always there not when we just induce like a wormhole and then it can just be like a living thing like the TV show Stargate um and then the last one negative energy is essentially like like we talked about The Ether the extra Dimension if there's unlimited negative energy this can account for Dark Energy so you could postulate that dark energy literally is equal to negative energy and that can be

(16:40) the reason for why we had that expansion in the big bank and then those are going to be the main ones but there's also this third paper uh and there's actually more than this as well I'm going to review but these are the ones that are all kind of like linked together which is anti-gravity for Aerospace applications and this one talks about something that uh that there's more than one type of manipulating like gravity for propulsion a warp drive is like creating a hole within SpaceTime itself

(17:05) and going from one location to somewhere else but you can also have this idea that you could create like an Impulse engine that just pushes off that uh negative energy essentially or pushes off that extra Dimension and that's what this paper digs into but it has topics for Dark Energy anti-gravitational application for dark and vacuum energy and it also talks about something like zero point fluctuations which I think is just another term for you know the ether extra Dimension so that's what we're

(17:32) going to dig into today uh Jake you have any initial comments well I it wouldn't surprise me at all if the DIA gave a bogus address for their paper because they don't want to identify where their locations are where they're doing this kind of research of course if they're going to make something public they would either redact it or put something that's not necess that's going to be like a false Trail there so the concepts behind what you're talking about are very real and if we understand the laws of physics as

(18:04) they are practically able to be applied then we can and will be able to do things like go through wormholes or Einstein Rosen Bridges whatever you want to call them um the fabric of

reality from what I understand is held together by Quantum and Cosmic black holes and white holes or vortexes and so if we learn how to Traverse these vortexes and these bridges that they create in time and space then something like what we're talking about really isn't all that far-fetched let alone using harmonics energy frequency and vibration to

(18:43) manifest wormholes or Stargates vortexes that allow us to Traverse massive amounts of space in a very short amount of time yep and here's the thing I want to let people know ahead of time and this is this I rarely like to do the trust me bro stuff but if youve looked through my work if you look through what Jake's talked about um I think that you'll find that we have very significant amount of evidence that the military-industrial complex potentially other governments other than United States but definitely

(19:11) United States is secretly way more advanced than what the public perception is I think the public perception is that like oh military is just real stupid they can't get anything done but that's the thing like if you look at strategy like when you're weak you want to appear strong and when you're strong you want to appear weak uh and we Dropped a Bomb the nuclear bomb uh 79 years ago so you know it's not like we've been doing nothing for 79 years what I think Jake and are proposing is that you know the

(19:39) government and potentially other governments through private Labs have acquired uh technology that's essentially the level of breakaway civilization F via you know a unification theory of quantum mechanics and general relativity and especially the Quantum Mechanics Parts brings up a lot of uh more spiritual aspects like Consciousness and the nature of reality and you know uh energies and things like that which I which I I like to listen to Jake talk about then the other thing that I think we when we open it up to

(20:06) the crowd we can ask uh everyone as well is like how do we think we got here you know like this idea of advancing that far secretly even in an 80e time span B brags the question of like did we find this technology somewhere did we dig it up did some be visit us is uh Did we tell ourselves from the future because when you start to get to faster light travel you start to wonder about stuff like time travel um or maybe other answers that are out there um so I think it's going to be a fun conversation here I totally agree and all of those

(20:36) things are plausible and on the table um so let's let's kind of dive into the nuts and bolts of this stuff if you don't mind where would you like to start yeah I got it ready to go so I'm going to start with just some overviews of some of the concepts from the uh warp drives dark energy and manipulation of extra Dimensions so um as I already mentioned uh uh warp drive kind of functions like an Einstein Rosen Bridge a wormhole which is a connection between one point and another uh it means that

(21:06) we can achieve super luminal relativistic speeds and when I say that it means that if you were the person who was Going Through the Wormhole or object going through it it would look like going through a doorway but if you are the person who is looking at that Wormhole it's going to look like that person just went from one location to another location within the blink of

an eye um and this is the kind of travel that we would need in order to be able to go Interstellar distances because even the closest star to us is four

(21:32) light years away it means it's so far away it takes light to take four years to get from there to here um if we were to use conventional Rockets it would take hundreds and hundreds of years to get to the nearest star that's out there so we really need something like this in order to be able to achieve those types of speeds um and then in addition to that we wonder okay what is a warp drive what is that actually mean what what's the physics that we're talking about so if you've seen Star Trek we're talking

(21:57) about Star Trek warp drive Drive literally the same thing alberry Drive Al alberry was a Mexican physicist who came up with this paper of how we could achieve warp drive in like 1994 I want to think so we're talking about 30 years ago it's not that long ago um and the idea here is that you're bending space in front and behind your object to create essentially a warp bubble around your object when you put your object in a warp bubble now it's displaced entirely from SpaceTime as we perceive it but this is not a situation where you

(22:27) are like going to some other Bizarro Dimension it's more of like a shortcut between two points the idea that all points in space and time as we perceive them are connected by the extra Dimension and how can that make sense the answer there is that if you were to strip away our reality to the extra Dimension the ether as I like to call it we're bringing The Ether back the speed of light is no longer constant anymore the speed of light is now potentially infinitely fast Tesla measured it supposedly at 50 times what we

(22:54) considered to be the speed of light so now that speed limit that we were talking about in terms of how long it takes to get to another star system for light years now it becomes instantaneous potentially if all points in the universe are connected um so this is a huge jump up from the idea of what we have from propulsion and this is why it's there's so much resistance and why this concept is so Paradigm shifting is because we are still using chemical rocket propulsion The Next Step Up from that would be some type of

(23:20) electrogravitic propulsion that just like like Star Trek impulse Drive where you're just like pushing off of the vacuum this is what we're talking about here with Drive is like you're just literally like teleporting to another location um so it's huge now I'll bring up a couple more things and then I'll let uh Jake jump in on this one is uh so we need something called uh negative energy in order to produce a wormhole bubble now there was a recent paper that just came out a week ago that says we

(23:48) think we can do it with normal matter energy and that we don't need negative energy um but if we do need negative energy then we would expect it to look similar to a black hole which is an absorption of of all it's that where the matter is mass is so strong there absorption of even light cannot escape from it and the main difference between a black hole and a wormhole is that a wormhole doesn't have an event horizon so in the movie Interstellar Matthew mccon falls into a black hole in the real world he would have been ripped to

(24:19) shreds because of the gravitational forces and the moment you go through the Event Horizon there the the uh gravity is so strong that not even light can escape so there's no way to ever get out of it um now in a wormhole there's no Event Horizon so that means you can have this absorption of energy event but you're not going to get crushed in it which is really big it means that wormholes are humanly traversable um yeah and then the way that we know that there is dark energy or negative energy is something called

(24:49) the Casmir effect and if you were just to take two plates and stick them next to each other I think uh copper plates or they may be different uh materials that we can use I'm still learning a little bit but you take two plates and stick them close to together to one another a force or repul or a attractive force will occur and those plates will stick together so this is uh like a negative pressure that we can see exists and they say that it's because of quantum fluctuations in the vacuum and I would uh suggest that

(25:18) perhaps it's because there is an extra Dimension and when that happens what they say is there's certain wavelengths can't fit between the space between the um the plates and that's why it occurs now if you can scale scale this up um and find a way to utilize that energy on a much larger scale then you might be able to achieve the negative energy densities that you need for say a wormhole so the Casmir effect is something you want to remember for sure if you're trying to understand the physics behind how this is possible um

(25:45) and then extra spatial Dimensions so it right now we're trying to explain everything in terms of quantum fluctuations and um these virtual particles which my new phrase is that this is just the ether with extra steps because the ether potentially has unlimited negative energy in it if there is like a canvas that our reality is painted on and with unlimited negative energy now it's just a matter of how do we tap into it and it begs the idea of free energy which we can talk about later um but Kusa back in

(26:15) 1919 came up with a unification theory of gravity and electromagnetism which involved adding an additional spatial Dimension to general relativity and populating this extra Dimension with two mathematical Concepts called a Vector potential and a scaler potential and this is the part where he the theory got added to clu a clim but this is important because somebody's already come up with this idea of adding an extra Dimension and Tesla had come up with the idea of the ether as well and this is how they were able to figure out

(26:43) how we can take stuff that's very small these Quantum fluctuations and how we can have it make sense with respect to stuff that we see that's very large general relativity that's out there um I would say that we had figured out the answer 105 years ago in 1919 and ever since then we've just been trying to build on physics that made no sense and this is the reason why public physics can't explain stuff like dark matter and dark energy it's because we just threw out this idea of creating this extra

(27:09) Dimension um the last thing I want to say on this one oh no okay so then the other thing is the energy requirements so I think there's three ways to solve the problem these massive

energy requirements now we need negative energy which if we have an ether we have the answer to negative energy but how do you get the enough negative energy to be able to create a warp bubble around your object three ways one way is that one of the equations uh Dr Jack sarfati proposed that we can reduce  $C$  the speed of light which is one of the

(27:36) requirements we need for energy and you know the speed of light is a huge number so if we can reduce that number in the equation then we can reduce the amount of energy that we need for a warp bubble significantly uh and I I posted a clip like last week where it was proposed by somebody else on the panel with the alien scientist um I think his name is Santiago but if I'm saying that wrong I apologize that we could potentially use a plasmoid for that so plas research in physics is another aspect of this that I

(28:01) think the public doesn't really realize how advanced it is but if you can use a plasmoid which is like an exotic vacuum think of like ball lightning we call them exotic vacuum objects some object like that that's a self-sustaining ball of plasma that that can actually reduce the requirement we need for the energy um the other option that we can do is we can create the shell the bubble very thin so imagine the difference between a very thick shell around your object and a very thin one and the answer is when

(28:25) we're warping SpaceTime creating a bubble to displace an object our shell can be extremely thin can just be a tiny thin shell so this significantly reduces the negative energy requirement and then what Dr salvator Pi said to me directly in my heart TRS podcast is that we can amplify energy as well if you read his high frequency gravitational wave generator patent it says you can amplify energy to such a degree that you can destroy a planet or PL or asteroid or a planetoid or asteroid now how does that possible if you look at kum's law which

(28:55) is um how much force you can generate from Electric charges if you were to take like forces or like charges and jam them together the electric force increases exponentially based on the distance as it gets reduced because the bottom the denominator is distance squared so the more that number goes down the more your Force exponentially increases so we might have three ways we might be able to reduce the energy requirement we might be able to make our shell really thin and we might be able to produce basically unlimited energy

(29:24) through uh exponentially increasing it so I think that wormholes personally based on this paper and you can do your own uh analysis seem like they could be practical we just need the idea of an ether to be real and then we need to have our very Advanced Plasma Research and the next thing you know we've got the the makings for a warp bubble what are your thoughts Jake well um first of all very well explained um that the fact that there's multiple ways of doing this I think is indicative that the understanding of physics is one that

(29:59) becomes all-encompassing and allows for multiple ways to shall we say hack the system or use this understanding in mathematics and harmonics to Traverse massive amounts of space and therefore time and if time is its own like little Dimension now then that would make sense um one of the things that I like an analogy that I like to draw for people is that when we talk

about these wart Bubbles and the traversing of The Ether or the traversing of the this other dimension the reason why we see for example this object pop up in one spot and then a

(30:47) couple of minutes later pop up in another is because what's happening is that this field that is around this object allows it to act access this other dimension and essentially skip across the dimension of time the way that a rock can skip across the surface of water and you'll see the ripples where the if you're like a fish in the in the water you will see the Ripple of where the stone hits but you're never going to really see the stone as it's flying through the air because that is this other dimension that's outside of

(31:25) the water right so you're just seeing these crafts skip across the dimension of time and space like a a rock skips across water now when it comes to things like The Ether or even things like dark energy or dark matter um I am proposing that this negative energy that you're talking about that is not necessarily visible or detectable with the limited amounts of tools that we have at our disposal in the public is in one way or another the vibratory nature to Creation itself in that so if we factor in something like simatics

(32:08) right simatics is the use of sound to create certain patterns in especially in certain mediums like water or grains of rice on a speaker grains of salt on a metal plate what have you and when the vibration is put through these mediums then the Vib of this field this simatic field ends up moving the the matter the physical objects through vibration into a very specific pattern based on this much larger field and so it is my contention that what we are witnessing when we look at things like dark matter or dark

(32:48) energy or what you're calling negative energy is actually the vibration of creation and the movement of of physical objects or energy into a pattern and the dark energy that we're seeing the the negative energy is actually the vibration of this simatic frequency that is moving physical objects around in time and space in this extra dimensional element to the universe now if everything is quantum entangled which it is then that means that everything around the universe and within this negative energy space is

(33:32) interconnected therefore if we understand the vibration of this larger simatic field then we can Traverse across space and time using this vibratory frequency to Journey from one galaxy to another or one Galactic supercluster to another because now we're using this extra dimension of this negative energy to do the journeying as opposed to trying to journey in between the grains of rice or the grains of salt what we would think of as stars planets and galaxies um I do see the requests that are there we will get to the

(34:12) requests please keep your requests active we're not trying to ignore you we're just going back and forth me and Ashton on this for a little bit and then we're going to open things up now when it comes to things like vortexes and wormholes and stuff like that one of the the ways that I like to kind of help people to understand in layman's terms how this stuff works is similar to a guitar you have a guitar for example with six strings and you can hit one of the strings without putting your finger

(34:42) on any of the Frets and you will get a certain sound but if you go to the string above it or below it and you place your finger on a certain fret and then you pluck that string you will get the exact same sound you will get the exact same harmonic frequency that you would get by plucking the string above or below it if it was just without being touched on any of the Frets so in this way if we look at the universe like these layers of dimensions then and or strings right based on certain frequencies of vibration or densities of matter or

(35:21) energy then we can then liken this metaphor of the guitar and wormholes to the idea of placing our finger on the Fret of a certain string to produce the exact same harmonic resonance that you would get based on where it is that our world or our string would be and then if you can do that you can then Traverse from one dimension to another simply based on harmonics and the holding your finger down on a fret or technology in our case using technology to create a certain frequency that can then allow us to journey into this extra Dimension

(36:06) that is quantum entangled to the rest of the universe does that make sense to you Ashton am I on point here no I think you are for me the big question about like frequency and what have you um you know that's the part where I'm not really sure but I do know that resonance is extremely important and that that to me speaks to the idea of frequency um I think you hit on a couple of really good points and I want to also uh you know basically say that the analogy for skipping a stone on water is a really

(36:33) good one especially when it comes to this idea of what are UFOs that we see out there um and I'm pretty much open to anything on that front but if these if this technology that we're talking about being able to create wormholes warp drive Etc is real um it does open the door to there being a lot of answers for the new the non-human intelligence question and if uh other beings other than us than humans have this type of Technology people wonder what would it look like you know what does it look like if I'm looking to seeing something

(37:00) out there maybe why don't we see more UFOs out there if there is life out there well maybe they've discovered this technology and they're just skipping across the the Galaxy the universe you know and this is why we don't see them floating around because they're not using conventional propulsion the way that we would think and the question there is okay well what do you use as your uh direction of travel how do you determine where you go and that part is something that I think I I've I believe

(37:24) I have a pretty good concept in grasp of now because uh of the investigation I've been looking into it's something called phase conjugation and this is again the idea that you can have your waves uh kind of cancel each other out perfectly or be in harmony with one another and amplify one another um the idea that if you have two waves you just line them up exactly over one another or an exact opposite orientation of one another um and if you do this and you have a zero point system which would be a system

(37:52) where you have your vectors going against one another perfectly your zero point system could be like two lines uh intersecting or going at one another like imagine two cars that are

driving right at each other or the other way that it can work is you could have like a triangle where you have a triangle where like let's say three cars are all driving towards one common midpoint this is would be your zero point system and the way that the physics would say that would work is that you would have that zero point system uh basically what we

(38:17) mentioned with kums law You' have that system collapse on itself the distance Clos now you have this electrical exponential increase of energy uh now three points in SpaceTime is the minimum number you need to make a two dimensional object like a triangle so if you were to imagine that you were going to warp an object then three would be the minimum number you need if you had two you just drew a line you can't get something there's no your Wormhole have no depth or have no uh face to it that you could go through um and then the

(38:44) question is okay well how do you determine the vector of travel based on that okay you went through a wormhole where are you going well the answer there is twofold if you have let's say three objects that are spinning around you have something in electrical engineer called the right hand rule which goes this idea of vortexes which Jake was just talking about and if you take your right hand then and you curl your fingers and you point your thumb and then you point your finger you can determine the electric field direction

(39:08) as well as the magnetic field as the curl and then you have this Vector based on where I think it's your thumb hopefully I'm not saying this wrong it's either your pointing finger or your thumb where the vector would determine your direction of travel and so if you were to look at your object and say okay well they're spinning clockwise then the vector of travel would be backwards from wherever the object is if you're looking straight on on and this could determine which way you go now entanglement could also determine

(39:32) exactly where you go so if you imagine that you have those three objects spinning around and they're creating a wormhole now you send another object a fourth object an orb let's say somewhere else and now when those objects converge you have that fourth orb shoot a beam at the three other objects at the center point of those three other objects and it creates a phase conjugate which is an exact reflection back the other way so you can imagine rubber band snapping and then you in that way you've entangled

(39:59) your object to your to your pump waves as they would call them using phase conjugation and next thing you know your objects goes from one location to the other not even just the object but all the energy around where the object was at in SpaceTime as well is now just moved from one location to another in your warp bubble um the other thing I want to point out real quick is an analogy of the stress in the medium which I really like a lot because I think it's true uh which is if we uh take uh classical physics and we say if

(40:26) we pull on like a rubber band or a rope in two different directions like tug of war and we pull equally on both sides then that rope's not going to move left or right it's going to stay right in the middle there it's not going to move we could pull twice as hard and it would still the sum total of the forces would still be zero in the middle and then if we pull four times as hard same

deal but if we pull that rope super super hard this rubber band that I have in my hand really really hard the rubber band's

(40:48) gonna snap it's gonna snap in half so what that means is that even though we've canceled our forces on both sides it doesn't mean that there's nothing left it means that there is a stress in the medium so if your medium is a rope or this rubber band and I'm playing it and this goes to Jake's idea of the guitar and the sound with the guitar is that if I'm pulling on this this is how you create uh this stress in the medium so now instead of a rubber band or a rope or you what have you let's imagine

(41:13) that it's SpaceTime itself that we're pulling on SpaceTime itself in both directions we're making our force equal to zero What's Left what's left is the stress in the medium of SpaceTime what is the stress in the medium of SpaceTime the answer is gravity Gra the stress on the medium of SpaceTime so this is this idea of how we can use something called scalar potentials which is the stress in the medium to produce gravity now why haven't we able to figure that out why I mean it's you know 2024 how we not

(41:42) figure out how gravity and propulsion works if it's that simple uh the answer is because we've uh forgotten how uh the equations were initially written by James Clerk Maxwell James Clerk Maxwell wrote 20 electrical engineering equations that had the scalar potential in them in addition to the fact that we just just WR read about that paper where Kusa Klein came up with a scalar potential in your extra Dimension um and then what happened is Oliver heavys side came in and said no that's too complicated I'm going to um make I'm

(42:09) going to reduce this down to four equations and in doing so we lost how to manipulate the scalar potential the stress of medium and the saddest part about this is that even with all of our heavy sides equations we can still do everything that we're doing right now from electro electrical engineering or electromagnetic perspective so we can have streams we can be talking through a microphone you guys can be hearing it all this stuff TV everything that's cool we just forgot how to manipulate gravity so I would uh then suggest the idea that

(42:39) the military government especially has figured this out a long time ago and they have just had no reason to tell the world all the textbooks in the world are potentially written incorrectly and the people in power probably know that and they keep it that way for whatever reason for greed for geopolitical purposes for defense purposes whatever it is so um let's see the last thing actually that's it that's all my things so Jake good job on that part uh any other comments on that before we go to the next one well yeah because you

(43:07) brought up the the three points like the Triangular element to this and this brings me to the MH370 and the video the the live that I was watching that you did where you were talking about how it is that these three objects rotating around the the airplane in a perfect wave form and each of them emitting a very specific electromagnetic frequency and when they when they all came together it like created this pressure that allowed for the creation of a of a wormhole or created a double tourus field within a double tourist

(43:44) field that was like this Wormhole that allowed the plane from both the back and the front to be basically transported to another location so is that kind of how like like is that how this is working that you have these three objects that you're like you're talking about because you create another dimension right you you can't just have two objects because then it's just a straight line but if you have these three objects and they are rotating creating and they're all kind of like feeding into this

(44:14) electromagnetic potential and then they end up coming together and then creating a almost like a pressure wave or stress in the medium of SpaceTime itself then that ends up creating like almost like a a double tus field or a collapse of this energetic potential which allows for this Vortex or this Wormhole to open up and for this object to then Traverse through it right yeah so that's I mean you honestly nailed it so I will just give a little bit more context on some of it as well is so that when we want that to achieve

(44:50) then that scaler potential which is the stress in the medium the gravity what we need to do is we need to zero out our our magnetic and or electric potentials so instead of this there being electromagnetism we have this idea of electrogravitics so if we can manipulate our uh magnetic potential to be zero so we can take our magnetic normally a magnet like if you imagine the Earth is going to have like bend around from the top to the bottom if we can zero that out somehow uh and or zero out the electric potential then what we're left

(45:19) with is the gravity manipulation the stress in the medium the same way where if I'm pulling on the rubber band on both sides cancel it out it's not that there's nothing left there's a stress though so how do we do that the answer seems to be something called a Taurus a donut a donut shape so make a circle with your hands the doughnut shape is what allows for that to have a zero at least at a certain point a zero magnetic potential which can create that stress in the medium that we need so that would

(45:44) be the toroid whenever you hear the word Taurus toroid what have you so when you look at plasma physics as well um you'll see that shape come up all the time when you now that you guys have heard about it you're going to see it everywhere so when in MH370 videos we see these orbs spinning around the plane and early on I was able to just tell by looking at it that we're looking at some kind of field like a plasma field uh there and then we can tell from the heat signature in those videos that's what we're looking

(46:09) at so you can imagine the idea that there is a toid inside of there that is producing that Electro that that plasma field and that's why we actually see the heat signature in those orbs a really weird Heat Signature looks like a Tesla symbol and that's exactly what would be predicted based on a toid with a plasma field so they themselves are Taurus they themselves are a donut and what they're doing is they're producing a higher level Taurus a fractal Taurus so people wonder what is a fractal moment what is

(46:37) a fractal Taurus it means just something inside of something so like a toid inside of a toroid a donut inside of a donut so you've got your dut your sphere your orb and they're

spinning around the plane in a zero point field and they're producing a higher level toroid between them you could draw a circle between them and now that is the electromagnetic feel that they are creating around them and why are they doing that because they're going to create a gravity wave they're going to manipulate Gravity the stress in the

(47:03) medium around the center point of their formation which is in the case of MH370 videos a 777 and just like Jake said they're going to create a gravity wave which then the question is okay where does it go and how far does it go and how are you limited and to something else that you mentioned earlier Jake is this idea of entanglement I love the idea that everything in space and time is connected and we just don't perceive it because think it answers a lot of questions about Consciousness even some stuff about like people having like

(47:32) psychic uh powers or experiences like remote viewing and stuff like that um and I think that even with this technology for a lot of people when they first heard this they went no no not possible and I did too and then now I'm like oh my God not only is it possible uh I think we've already had it and to me the question is how far can you take this how far can you advance this like a lot of people kind of think of Technology like a step Stone but it's kind of like a thing where you can get much a lot better at it like a lot lot

(48:02) lot better so even if we have this technology right now you can imagine a thousand years of advancing this technology we might go from a situation where we can produce these kind of effects with radar on the ground people talk about like Antarctica harp stuff like that those could be used for these types of scalar waves to then putting them on satellites where then we can shoot beams down from the sky and at their intersection point we can you know either create energy or move energy at a distance and then The Next Step Beyond

(48:30) that would be that you make some orbs that can float around themselves that are self-sustaining and that they have beams on them so now anywhere you want on the planet you just deploy the orbs and you can create those effects anywhere on the planet without the Restriction of uh line of sight like with the The Radars on the ground or with the satellite um and then what's after that that's the real kicker is that you can imagine well if every Point like Jay just said is quantum entangled and it's just a matter of tapping into

(48:56) that entanglement then maybe you could just create you know literally beam me up Scotty put you from any point in the universe to any other point of the universe the snap of a fingers and this opens the door to the next paper as well which we'll also talk about well why couldn't you create a Stargate then like why can't I just go down to my basement create a giant Stargate and connect that to anywhere else I want in the universe create a Stargate on the other side and now I don't need to induce the Wormhole the

(49:23) Wormhole is just permanently open however long I want maybe I drop an electric charge through it and now it just opens up just like in the TV show you know Stargate sg1 or what have you um so I would challenge people to think that like not only is this technology really possible but if it is then let your imagination like push how far you could take the technology I

think it truly is essentially the equivalent of magic go ahead Jake well I'm wanted to address something you you said something earlier about the vector I think you said Vector

(49:56) potential right yeah so like the direction of travel simply right right okay so if you look into sacred geometry and the notion that the vector equilibrium is the fundamental building blocks of all of reality because it is mathematically stable because this and I have it up in the nest here it's the the image that is in the top right hand corner of the assets that I have in the nest the vector equilibrium is basically two equally powerful forces colliding together and because they're equally powerful they create a stable structure

(50:44) in the dimensions of space and time and at the center of the vector equilibrium is the energy that creates all things so everything is made up of energy everything is made up of the exact same fundamental Parts whether they be Quantum particles or celestial bodies they are all made up of energy and in this way this kind of explains quantum entanglement because if everything is coming from the same Source then it would kind of make sense why it is that just for the sake of balance of the universe itself we would have quantum

(51:19) entanglement now because the vector equilibrium is a stable geometric structure in space and time it can be built on infinitely endlessly from Quantum to Cosmic and that's why I have in the bottom leftand corner of that post up in the nest I have an image where the vector equilibrium is built on top of itself over and over and over again this is where we get the whole uh star tetrahedron or Mera and the double Taurus field because when these two equally powerful forces Collide they don't just stop they don't just stay

(51:55) there they actually begin to rotate around one another and we get a clockwise spiral going upward and a counterclockwise spiral going downward and this creates the double tourist field now when we talk about things like the creation of like an anti-gravity field or um some sort of a Quantum wave affecting field around a craft it is in fact a double tourus field that has accessed this Zero Point Energy this energy at the core of fundamental core of all things it has accessed that and it is basically through that accessing

(52:31) that other dimension and then enveloping itself with that frequency or with that extra extra dimensional waveform and then this allows the craft to go from a physical object a macrophysical object to then using the quantum entangled nature of reality and this extra Dimension to begin to Traverse the universe or space and time now that being said when we're talking about like the uh these Vector points or these uh double Taurus Fields if everything in the universe whether it be Stars galaxies the universe itself atoms

(53:17) Quantum particles if they're all based on the same sacred geometric design then if we can learn to match certain energetic frequencies then we can vibrate reality or SpaceTime itself we can manipulate that to the point where we can Journey from A to B and back again instantaneously because we're essentially tapping into the quantum entangled sacred geometric structure of reality itself and then using that understanding to circumnavigate to these higher Dimensions so if you look at the asset I have in the nest and you look at

(53:56) how it is is that the vector equilibrium can be built on top of itself then what you're seeing with these different layers of the vector equilibrium is different frequencies of energy different amounts of energy being pulled to and through space and time to create certain physical objects so the sun has a lot more energy than the earth the galaxy has a lot more energy than the sun Quantum particles have a lot less energy than atoms and atoms have less energy than molecules etc etc so the idea here is is that we have all of

(54:32) these different infinitely nested Quantum or Cosmic vibrations of energy that are cycling this infinite amount of energy within the universe to and through themselves and all the way down to on a Quantum level all the way down to the same omnipresent source which is at the core of the vector equilibrium at the core of all existence so if human beings are kind of like right in the middle of the infinitely large and the infinitely small and if we have this double Taurus field that surrounds our body it the electromagnetic field if we

(55:06) have a vector equilibrium within our heart and that's what creates this double tus field this electromagnetic field around us then we have the ability to create a technology that allows that electromagnetic field to Traverse to these higher Dimensions or these lower dimensions and circumvent the ud usion of Separation circumvent the illusion of space and time am I does is any is all this making sense to you in context of what it is that you're saying there Ash yeah so there was this letter that was addressed to me on a YouTube channel

(55:41) that just randomly got created had a couple other weird uh pretty well produced AI stories in it but then there was a letter to me it was about the case I was digging into it was about a lot of the science that we've been talking about too which is weird um it mentioned the idea of a magic fed which was very similar to this idea of like warp drive or what have you and near the end of it it said it was like telling me to find a guy that was on Joe Rogan but got his episode pulled and I just thought that was weird and said you

(56:10) know find this guy that's this gray bearded man and I had no idea what the hell it was talking about but I was like I'm interested this is crazy and uh it mentioned this idea of sacred geometry and I had never heard of sacred geometry before that um and I looked into a little bit and it looks just like what Jake has up in the nest up here at the top with these uh really simplistic geometric structures and shapes which one thing you can imagine there is this idea of zero point structures so you know like we have two lines going

(56:40) intersecting or a perfectly equilateral triangle you can build that up into different shapes and there's many different ways you can create a zero point system um and then also the idea of a Taurus which potentially could be itself a sacred geometry type shape because it has you just natural properties that are consistent with how maybe even the universe was created um from something that was relatively simple itself but the letter said so to find this guy the great beard man so we find out right away that it's Randall

(57:06) Carlson that there was an episode he was on with Malcolm Bendle and that he's huge in the sacred geometry um and my my followers found it out within like hours or less and so I look

into them I find out my buddy Bob Greener who does low energy nuclear reactions cold fusion he's hanging out with Malcolm Bendle in the Maldives like the same day this video drops and I mean to me at that point it was just like now you're living in like a a mystery movie you know pretty bizarre um and he'd been working on plasmoids exotic vacuum

(57:40) objects same exact thing that we were seeing in these videos same exact thing that we think we need to reduce the energy requirement for a wormhole I to me that's a pretty damn weird coincidence um and so I haven't talked to Randall but have talked to Malcolm um but if you guys watch a lot of Randle's work he's been on Joe Rogan a number of times he talks a lot about how important sacred geometry is one of the weird things about the letter was it said you know the gray bearded man might not even

(58:09) know how important the stuff he's talking about really is and when you look at Randle stuff he's a lot into like some of the old uh ancient archaeology type stuff and the pyramids and things like that but he doesn't talk too much about like the high science aspects of it like can you create like a PL you know exotic vacuum object of ball lightning with this and what else can you do the other thing that the letter mentions is the idea that what it requires to do these magical types of things like teleporting aircraft are

(58:33) simple structures and low energy phase Transitions and this opens this kind of brings up the same thing that we just mentioned with respect to that first paper which is this idea that you could potentially lower the amount of energy that you need maybe you don't need this huge infinite amount of energy to be able to achieve some of these magical type effects maybe it's a matter of efficiency and using very simple structures to create very efficient ways of forming a phase transition which is what we see in those videos happen to

(58:59) the plane we're not looking at a black hole because we don't see everything get sucked in there's no Event Horizon it's a phase transition that's happening that's really what you could argue a warp drive or Wormhole is which I think they're just synonymous with one another at this point um and then for me the reason why I haven't harped too much on this a lot of people might go whoa this is like you have like the answer for how you could achieve this stuff is that for me I like to try to build up from a

(59:23) foundation a basis for a lot of people even what we're talking about now is too much so for me it's like I don't really care how it's possible that we can warp an aircraft what I want to know is just show me like literally what it takes to make it happen and if that's a Taurus or if that's some other sacred geometry shape great you know I don't care to Jake's Point that's why I think he's like the yin to my yang is that Jake will then go okay well you know these shapes also from the esoteric aspect are

(59:48) like the nature and shape of the universe this is like explains Consciousness and potentially like our internal energy like why we even are alive why we even exist why Consciousness even exists it can even just be like you know if people are searching for the meaning of life you can look at it from a couple perspectives one of the ways that I look at it

personally is just my belief is this idea that our bodies are like avatars and like our soul comes from this you know Cosmic ether if you want to think of it or higher Dimension and

(1:00:17) it manifests itself in in our physical bodies as we see it I mean that's what it feels like to me when I'm living uh and the other way you could look at is this idea that The Ether itself if there is this extra Dimension that our reality is painted on that we're constantly interacting with all SpaceTime is that that is almost like the underlying computer code of the program that we're in the holographic Principle as people would say and some people go no we don't live in a simulation I would say don't

(1:00:41) look at it like that at all I mean we know we're alive we know we're interacting right now and and that's what life is is enjoying these moments that we're having right now with one another uh so there's no the the world Universe being a holographic principle doesn't doesn't diminish any value of life in fact I argue and this is one of the more surprising things I'm GNA make a post about it later is that the more I dug into the science the more spiritual I be I became because I came to the

(1:01:07) conclusion that like our reality is a construct which means that somebody would have had to design it um which means that there would have to be a Creator so anyway go ahead Jake well no I'm I'm right there with you and the funny thing is you mentioned about the yin-yang is that yeah I totally get that we what you're saying about the into your yang for sure bro um and I would like to take that a step further because it it made me think about how the double tus field technically is a 3D yin yang it is a

(1:01:42) positive and negative electromagnetic field and the yinyang symbol is a two-dimensional image of this three-dimensional electromagnetic field now if the entirety of the universe is based off of electromagnetic fields being infinitely nested with one another which Holo Cipher is uh down there requesting I I want to bring him up uh when we open things up for questions because Ashton I think you're really going to like this guy um he he blew my mind when it came to the science behind the things that I'm talking about conceptually he

(1:02:21) understands the science and has done a lot of investigating much like yourself um I think that the three of us together would be like the three points of the triangle here and if we came together we could create a wormhole man I'm telling you um but the yin-yang field the electromagnetic field because everything is infinitely nested with these electromagnetic fields of higher or lower frequencies an atom has a yin-yang field right the galaxy has a yin-yang field our planet the sun Etc all of these yin-yang Fields our physical body

(1:02:54) has a yin-yang field then this is how the universe remains in Balance this is the how positive and negative charges and quantum entanglement all correlate with one another and coming back to what you're were saying about like negative energy or dark energy or dark matter then we could basically use this understanding of the yin yang positive and negative to say travel from one part of the galaxy to the other if the universe is in fact encapsulated by a what we could say maybe un AI or multiversal yin-yang field and if for

(1:03:31) example matter is the positive to this electromagnetic field or the yin then the negative energy could be the the Yang to this Yin and then if we learn how to Traverse through the yin we can move anywhere in the Yang or I'm sorry if we learn how to Traverse in the Yang we can move anywhere in the yin if we learn how to Traverse through the negative energy we can move anywhere in the positive energy because this electromagnetic yin-yang double Taurus field is intimately connected it it's Quantum entangled and if we understand

(1:04:07) the vector equilibrium and how it's able to be built on top of itself then we and we look at that asset that I've placed in the in the nest there then each of these different levels to this vector equilibrium are different harmonic wave vibrations that if we match them then we could very well be able to Traverse in that Dimension and then pop up elsewhere within physical SpaceTime and that's that's pretty much all I have to say I uh I just I I like that Yin yangang thing you said no we've been nailing it

(1:04:42) uh so yeah let's go to the next paper um so the second paper and this one will go a little bit quicker because a lot of it what you realize when you read these papers and I definitely recommend everybody out there read them for yourselves is that there's so many common elements they talk about so this one is traversible wormholes Stargates and negative energy and we've already talked about a lot of this is that negative energy is potentially just the exact equivalent to Dark Energy um and negative energy is essentially what The

(1:05:09) Ether the extra Dimension is filled with which is why we can have dark energy exist why the universe can expand faster than the speed of light um and then the idea of traversible wormholes is this idea that we can survive that we can walk through the Wormhole and this paper has a equations in there that show that you won't be ripped to shreds the gravitational forces of the Wormhole won't rip you to shreds but it also does mention the idea of not touching the basically like the edge of the Wormhole so you don't want to be like half in

(1:05:39) half out of the Wormhole you want to be fully inside that shell and you don't want to touch it now in your perspective it would appear as though you're just like walking right through it so it' be very tough but imagine like not touching the doorway you know you don't want to touch the door when you when you go through and why this is kind of interesting to read from the paper is that you can imagine the idea of the Philadelphia Experiment and in the Philadelphia Experiment supposedly it didn't go very well and what they were

(1:06:03) trying to do with the Philadelphia Experiment is they were trying to cloak the ship from electromagnetic signals using extremely powerful de gusers and you imagine that if they created a field and they didn't realize the field didn't encapsulate the entire ship and maybe it went through parts of the ship any of those people that were part touching that shell like that's why you have these pictures where people are stuck in the wall with half their arm going out or why you like messed up their brains

(1:06:28) because this kind of stuff can like mess up your internal you know thinking your internal organs all kinds of stuff out there which is the idea of like Havana syndrome and some

of that stuff just imagine it like extremely powerful so I think that this technology could go all the way back to 1943 which was the Philadelphia Experiment and that that is potentially when we accidentally figured out oh whoops we actually can manipulate gravity we didn't realize that we screwed up when we rewrote those equations and ever since then government

(1:06:56) just been improving it for decades and decades and decades and potentially when quantum computers came out or super Advanced supercomputers that's when it just took off where like now you can like literally just have a supercomputer having these orbs create these perfect triangle formations that you know no one could actually fly like that um to produce some of these effects that otherwise we wouldn't be perfect enough to be able to recreate because like Jake said a lot of this has to do with harmonic resonance and things like that

(1:07:24) um but a computer can pull that off no problem problem um so the other thing this paper mentions is the idea of Stargates and so a Stargate is the same application of the technology of a wormhole but now you're making a permanent gate that is permanently entangled between two locations in fact some might argue that's even easier than creating a wormhole is that if you can entangle two points you set down where those two things are they're entangled then the only other issue is you don't want decoherence to occur and

(1:07:49) decoherence is what happens with supercomputers so supercomputers use entanglement themselves and the problem with it is you have to keep them very cold and even like disturbances like observing them like the double slid experiment just looking and a measuring can break down the coherent states of the cubits and if you get decoherent now your thing doesn't doesn't work anymore because now imagine you're looking at your Stargate and somebody got too close to it with a magnet or whatever and now your Stargate

(1:08:15) collapses um that's the kind that's the idea is that you need to be very stable but there's actually was a recent paper that said that they might have figured out a way to keep up these types of systems cerent long enough where you could create like real potentially macroscopic Quantum effects teleportation and quantum teleportation has been proven uh it's been proven for actually many years at this point there's even records for how far people have teleported uh energy or potentially in the future uh information with faster

(1:08:45) than light communication using that um so Stargates are something that I would have thought would have been completely science fiction and now I look at it I think wow that's not even that's probably one of the more trivial aspects of this type of phys physics and Technology that's out there and it would be funny if there's people that actually have been through them and there's some pretty fun animations in there where people stick their arm through one side and then the Wormhole comes out the

(1:09:05) other and it looks all bizarre and funky um we already talked about the no Event Horizon with respect to a wormhole but that's another one of the big requirements that everybody should know because a lot of people think you're going to get ripped to shreds and you absolutely will not be ripped to shreds if you go through a wormhole or a Stargate um the

energy requirement again is the big limitation if you go and watch if you like Google wormholes warp drive this type of stuff you'll find that physicists will say that it is

(1:09:30) possible uh what they say though is that the energy requirements not realistic that it would take this huge amount of energy but this is where we're already proposing Solutions right now on an X space we're saying that you can potentially reduce the energy requirement through two ways potentially by being able to slow the speed of light down which if you guys Google looking uh checking out stuff like where that slows the speed of light down there's actually experiments literally working on this right now and if plasma physics is the

(1:09:53) answer then there's one of our ways we can reduce we can make our shell very thin and then the other thing as well is that we can potentially amplify energy and if we have access to unlimited energy through the ether then we have all the negative energy we could possibly need then it's just a matter of engineering it to get the properties that we want um now with respect that some people may say okay well what about conservation of momentum like let's just talk the real physics with with respect

(1:10:18) to a warp bubble we don't really have an issue of conservation of momentum because if you put something inside a bubble and it from a perspective of the person inside the bubble they're going to appear on the other side instantly again like going through a doorway so if you were to walk through the doorway the moment you're going to come out on the other side the same speed you were going in this is true for any other object we have out there and because of that we have no issue of conservation and momentum but there are some physicists

(1:10:41) and Engineers that I spoke to that said no actually we can uh we can achieve inertial Mass reduction and if you're going to reduce the mass of your object this is the idea that you can actually defy Law of Conservation momentum and potentially just set something down so the idea that someone could go through a wormhole at 100 miles an hour and they come out on the other side and they come out at a rest or at like five miles an hour super slow and that's a big difference so this is another one of those things where it's like it may be

(1:11:07) that the initial uh um engineering of this technology doesn't allow for Mass reduction but potentially in the future it can be Advanced to a point where we can do stuff like that where all of it kind of seems like magic but it just gets even more more and more magical um and then the other one's conservation of energy so with respect to conservation of energy uh we have to think as to get around this idea of well you can't energy is neither created nor destroyed we have to think about opening our system up so I take Pac-Man's mouth

(1:11:37) close Pac-Man's mouth he gets hungry you open Pac-Man's mouth up now you have an open system and now this system you can put in a certain amount of energy to it it can actually use energy from the environment or from The Ether as we would call it and then you can get more local energy out of the system so in essence we haven't really violated the law of conservation of energy we've just reimagined it now I would still argue that you probably have to rewrite it so that you include the The Ether and the

(1:12:02) unlimited negative energy into your equation because it's kind of like cheating the system but if our ether has unlimited negative energy or practically unlimited essentially an infinite amount um then that is like that's how we can achieve some of these energy requirements and stuff like free energy that would seem otherwise impossible um so I think that's pretty much all the points in this second paper um it also goes through a lot of the images in terms of what the geometry of SpaceTime would look like in terms of

(1:12:30) SpaceTime being flat and this is where you just take like a in this case I'm taking a napkin or a piece of paper and you just bend it and you bend it and then you puncture a hole through it and that's the equivalent idea of a wormhole or a Stargate and that's just if you want to be able to visualize it um any thoughts on that Jake um well I guess I will just I guess I'll just say that the military-industrial complex as Eisenhower called it is comprised of not just governments but also intelligence

(1:13:08) agencies and corporations that are contracted with the government that are able to do things that the government uh is not able to do and um in the in the getting of these contracts their employees sign ndas they have security clearances they get massive checks that would incline them not to go public with this kind of information because they don't want to disrupt their Cash Cow and because the ramifications of opening their mouth or violating their NDA or their security clearance are just enormous we're talking being locked in a

(1:13:50) prison cell for 20 years or or more possibly being executed on charges of treason um their families being ostracized and harassed no way of ever getting a job or living a normal life um and if we look at for example the um the Manhattan Project and how that whole thing was so compartmentalized that nobody even knew we had the atomic bomb until we had it dropped it and then it went public uh and how it is that there was like I think something like 10,000 employees in a city that the military built out in the middle of the New

(1:14:30) Mexico desert and they worked on it for years without anybody knowing a thing that was going on so the type of technology that we're talking about is easily compartmentalized through non-disclosure agreements security clearances and large checks also it's important to note here that the types of technology that we are talking about would and it's this is just a matter of fact disrupt the current economy that is being used to generate all of the funds the taxpayer money necessary to fund these government contracts Etc so if

(1:15:10) this technology were to go public then all of the people that are working in this economy and generating all of this money now all that money goes out the window because there's no there's no eon the way that it existed before and all of these slaves doing slave labor with minimal understanding of physics or of technology and the advancements are now privy to the secret also with respect to what it is that we're talking about about compartmentalization and ndas Etc a lot of these scientists they don't

(1:15:48) necessarily know the totality of the big picture they are just given a little compartmentalized piece of the puzzle they then work on and then people above them are the

ones that put the puzzle pieces together and have this larger compartmentalized understanding of the projects or the special access programs the black budget projects that are being worked on by these individuals that are compartmentalized that being said um the military-industrial complex has from what I understand Advanced something like seven to 10 10

(1:16:26) years for every year that they have been around since like World War II so if that is true let's just say it's the low number of seven years and World War II was over oh what you know 80 years ago something like that then what's I'm not a math Guy what's seven times 80 right yeah so that means we are literally hundreds of years ahead of what is on the surface and this Breakaway civilization that is literally under our feet is very very real and it's all compartmentalized and the final

(1:17:04) point that I will make regarding what you were saying earlier about Stargates and people just being able to walk through them is I don't know if you've done a lot of research into secret space program whistleblowers or what have you but there are stories many different stories of how it is that these individuals say go into what normally seems like on the surface a normal looking building they get into an elevator they slide their little key card in they get their ey scanned they press a button and then the elevator

(1:17:37) takes them through a wormhole and then lo and behold they're on the other side of the planet or in some cases some of these people have said they're like on the moon or on Mars so this type of technology has been spoken about on several different occasions and the final point I'd like to make is is that now some people may roll their eyes when I mention this but Looking Glass Technology is also something that can be factored in here because if you understand how it is that everything is quantum entangled and if

(1:18:09) you understand the laws of physics then you can essentially use the types of physics that we're talking about to both peer in the past and to peer into the future through one of these Bubbles and access the quantum entangled information that exists in this probability wave that is in the quantum realm so there's a lot of testimony that corroborates what it is that you're talking about Ashton the thing is is that a lot of people have been written off they have been uh maligned they have been uh just

(1:18:47) completely ignored um and people like Bob Lazar and this is the final point that I'll make people like Bob Lazar were one of the few courageous people that came out and started talking about this stuff and he talked about Element 115 long long before we ever even knew it existed and was placed on the elemental chart yeah the sad part about Bob laar if you guys watch his Joe Rogan appearances you know gets asked like if you could do it all over would you do it again and his response is no no I got to play with magical technology got his

(1:19:20) life ruined had nobody believed anything he was saying and he goes no I wouldn't do it all again and for the people that would say how do you keep this stuff secret well that's how cuz nobody's going to believe you if you come out anyway the people that do come out they send all their disinformation apparatus to destroy their lives you've probably seen that from any half a

dozen or maybe even a dozen people that are out there anyone goes against the the Deep State or the elite cover Elite whatever you

(1:19:43) want to call them you know they use all the media to go after them they find something in their past use it against them it's a big information War that's out there that's just the reality of it uh for it to be kept this secret this long that's what it would have to be now I agree with Jake that the military is a breakaway civilization I think that they've achieved that level if you've achieved the ability to warp an object uh just like a plane or some other car with some crazy super conductive

(1:20:08) harmonic orbs um but what I would say is that the technology is not an invention so it's not that there's like a Time requirement to figure it out doesn't take you 500 years to figure it out you can actually catch up because it's a discovery it's equivalent to the discovery of fire for cavemen it's something that was always out there you were always able to make fire you just had to figure it out once you figure it out it became trivial after that that's the same thing with the unification

(1:20:32) theory of uh Quantum field Theory and general relativity quantum mechanics and and stuff that's macro siiz very large um so how do you do this people would ask well and going back to what Jake said about SSP or what have you or special access programs I know the special access programs are real out there and so we're talking about these defense contractor Labs like north of Grumman uh locked uh Batel Institute Boeing Phantom Works uh saic a lot of these people have got private labs and they do contracts with these Engineers

(1:21:02) people like Bob bzar uh people that are either work independently through llc's or they work directly for the government so salvator pasz Works directly for the Navy I think Eric Davis Works directly for the government as well like I don't know if he's independent people like Shanker Patrick who is the head of AO has his own LLC now I'm sure he's working on these kinds of labs uh I've intr I've interviewed other people that work on them as well and and they will pretty much just be open and say that

(1:21:27) yeah they're dealing with technology as magic the government goes through them so they're protected from foyer requests this is how they keep it secret and none of these people have any uh reason to talk about it they don't want to risk their lives their family's lives they don't want to risk their money they're getting paid a lot a lot of money to do the stuff they do and they get to work with magic like Bob Lazar said so now you understand how it's kept secret in order to produce uh the effects that we

(1:21:49) need one of the things that one of these papers actually just tells us it says you need Patt lasers that are essentially only available in these private Labs so it's not the type of situation that in order to make a gravity like a you know some type of effects that we see like in the MH370 videos we need something more than just like a household offthe shelf you know \$20 like laser thing pointer that you're going to buy at Walmart you know we need something that in I'll just read it off to you guys so you can hear it directly

(1:22:16) in a handful of labs scattered across the country power lasers are being built and tested these are lasers with profound capability able to generate short laser pulses of uh of intensity of 10 uh oh crap oh 10 to the hold on I the thing messed up um here it is 10 to the 15 watts per meter squared with Peak Focus power densities greater than  $10^{27}$  watts per meter cubed and energy densities of 10 to the 16 joules per meter cube now why is this important is that the swing limit where uh SpaceTime becomes nonlinear

(1:22:58) which you could argue is like ripping through the hole in the fabric of reality is potentially I think 10 to the 32 uh I think it's Joules per meter cubed I don't think it's Watts I'd have to double check but the idea here is that we're looking at lasers that are essentially half of the requirement that we need or more in order to achieve what we think is going to break down through the fabric of reality um so these are extremely powerful lasers and then it says if it were possible to construct an

(1:23:25) exotic device whose energy output had  $W$  less than less than one then the calculations identical to those uh generate Table Three which is how much energy you need to produce a wormhole it would seem straightforward to show that the energy density produced by an analogous Dark Energy laser would translate into a local expansion of space corresponding to  $V$  warp equals  $10^{13}$  or  $10^{15}$  m per second I believe for every meter that the space that the laser travels so basically it's saying there that we are going to create

(1:23:58) a dark energy laser it's going to create space in front of us by shooting a laser beam and then it says at the end it may be possible to construct an experiment that could measure the modified expansion of space along the length of such a laser to test the predictions of this paper so it's basically saying we can potentially create dark energy or tap into The Ether here by creating a pulse laser effect of extremely high energy densities uh maybe we shoot two lasers at each other and then we have the loop and then maybe that's how we

(1:24:26) can produce it I'm just speculating um now the one of these papers also mentions the idea that you can actually produce negative energy in a lab and it's actually already been proven so essentially what we just described right there has been proven on small scales and Labs out there already so we know we can produce essentially small amounts of negative energy the question is how do we produce very large amounts and we talked about that before now one of the other things one of these papers mentions this idea of this lensing so if

(1:24:51) we know gravitational lensing gravitational lensing if I look at a black hole has a huge gravitational force if there's a star behind it what you see when you look in the night sky is you see like four points of light like bending around like in a in a circle formation around the black hole we can actually see behind the black hole and that's because it's bending SpaceTime around it and to such a high degree that it creates this uh almost like you take a wine glass with water on it and put it on your on a table and

(1:25:16) then pick it up and you're going to see this ring there that's essentially what we see with lensing and the reason why this is interesting is when we look at the MH370 video we see

in the last frame right before the Wormhole the mouth of the Wormhole opens we see the orbs flatten entirely there spheres and all of a sudden they flatten we can even see the plane bending and actually gets a little bit smaller and blurry which is the idea of a similar lensing effect happening in the very frame right before the Wormhole

(1:25:43) opens up which is a pretty goddamn weird detail pardon my French to add into your hoax video if it was fake now this is also what I'll say in those videos when we see this uh phase transition occur in the satellite video we see a flash a lot of people wondered why are we seeing a flash especially when we look at the Drone video we see this cold endothermic event which is an absorption of energy you would think if you see this absorption of energy that's kind of like a black hole you wouldn't see a flash

(1:26:14) well this second paper says this when black when background light rays strike a negative energy lensing region they are swept out of the central region thus creating an umbra region of zero intensity the lensing of negative energy region is not analogous to the diverging lens because in a certain circumstances it can produce more light enhancement than does the lensing of equivalent positive energy region which to me if I'm interpreting that correctly says that all the light that would hit your Wormhole is going to sh bounce off of it

(1:26:46) like a mirror and potentially even be Amplified to some point like a diverging lens it says and it can potentially produce more light enhancement than does the lensing of an equivalent positive energy region which is basically saying that you're going to have a flash happen from that which to me is wild when I read that because then it brings up the idea of like okay especially for what I've been digging into if that m270 videos are fake why are there so many details that nobody on Earth would have ever predicted in a paper from 2010

(1:27:13) which I don't even know how many people had read it in 2014 probably not very many and how many people less than that took it seriously um so I'm just going to say these last few things as well related to this because we're we're going a little bit over here but so Quantum coherence is another thing that you hear a lot in a lot of these papers so you know I kind of look for some of the patterns and some of these papers and some of the terms they bring up Quantum coherence is one that comes up a

(1:27:35) lot and this is analogous to what we're talking about with having your waves cancel each other out uh it's also analogous in superconductivity when superconductivity electrons they say form electron pairs Cooper Pairs and then they begin they get this coherence and you can imagine a coherent wave of matter coherent wave of electrons is essentially what super conductivity is and Quantum coherence seems to give rise to second order effects which is uh like creating a new type of effect that the original would not be able to create um

(1:28:06) and one thing that we see this in is like holography which is Optical phase conjugation there's the idea of turning a 2d picture into a 3D hologram and you use Optics and lasers in order to do that actually it's very similar to the idea of macroscopic phase conjugation but that's just an example of something that would be a second order effect so what is a second order of

effect of two lasers shooting each other two phot beams of photons concentrated photons maybe it's anti-gravity maybe it's

(1:28:30) bending SpaceTime you know I'm just I'm speculating there but I'm trying to give you an analogy to think about um so plasma physics and semiconductors seem to be the secrets to this advanced technology now I'm not telling you what to think here but I'm just throwing some ideas out there based on what I've seen uh based on what I've heard the idea of superconductivity is extremely important superconductive microchips are used in like all advanced technology including quantum computers

(1:28:54) um a as well as potentially what we see in those MH370 videos you can potentially create a wafer which is like a microchip right and then um you know have something that could produce some of these Advanced effects and I say that because there's a Lockheed Martin patent for a coherent matter wave beam which goes back to this idea again of quantum coherence I think that's the secret personally uh of how you produce these types of effects and how the government has produced them and this would explain

(1:29:20) why semiconductor Industries their stocks have just been going crazy and why it's like such a highly protected industry with respect to intellectual property is that whoever has the best semiconductors the smallest semiconductors that can produce these types of effects you're going to have the best output you're going to be able to do the craziest most magical stuff uh and then the last idea here is radar so radar we would think it's like ranging and detection whatever that's what radar stands for we think of it as a passive

(1:29:47) device but if you Radars used from uh they use electromagnetic signals and you bounce it off your object and phase conjugation this idea if you bounce your electromagnetic signal off an object like a mirror it's going to bounce directly back in in the exact opposite of what it came which is going to potentially cancel out your your wave function which is the same thing we were trying to do when we're trying to get things in harmonic uh resonance and it turns out that if you do this as we pointed out with the max

(1:30:14) will equations is if we cancel that out well what do we get we get the stress in the medium so then opens up all of a sudden this idea that radar when used with phase conjugation can produce scalar potentials so you could imagine this idea of creating a scalar beam that you can shoot and Thomas Bearden in the 80s promoted this idea that well it looks like there's nothing there because you've canceled out your wave functions perfectly from electromagnetic perspective but the stress is still there and if we then take two of those

(1:30:44) beams and we cross them we can create an interference Zone where you have constructive and destructive interference and this is how you can either produce energy at a distance uh or you can potentially remove energy at a distance a cold explosion um and so this is I think opens the door to scalar physics the unification of uh quantum mechanics as well as macroscopic effects and tapping in to that ether because the only way that we can produce these types of scalar beams uh is the idea that our wave is propagating through a medium

(1:31:17) that we don't perceive which is potentially The Ether and what that means is going from a transverse wave imagine like a sign wave or an ocean wave to a situation where it becomes like a sound wave a longitudinal wave Through The Ether um and so this is kind of how we unify a lot of these Concepts and potentially the exact types of technology to create this stuff so the last thing I would have you remember and think is like what Eric Heckler said on the Sha Ryan show is that people need to learn the idea of directed energy

(1:31:44) weapons because radar is not simply a passive device electromagnetic uh um anything that can transmit electromagnetic signals can potentially be used as a weapon which I think is kind of a mind-blowing thing at least for me there you go Jake well grab another I want to start by saying that the human body the electromagnetic field of the body actually emits scalar waves and they affect the longitudinal lines of the earth so this is intimately connected into what you're talking about about like scalar waves and scalar energy affecting

(1:32:19) longitudinal lines of the universe and if the longitudinal lines of the universe and the Earth are intimately connected also with our bodies then this may be how it is that from a physics standpoint we are able to Traverse wormholes and move throughout space and time in that regard because we are intimately connected to the very fabric of the universe itself now that being said I think it's also important to mention based on what you were saying earlier about the there being no Event Horizon and the Flash of

(1:32:52) light that came out of or off of the the Wormhole that was created in that video of of the MH370 is are are you familiar with tensor networks uh not really but stress tensor is definitely one of the physics Concepts I want to get a better idea on because I do think it's related to this idea of stress in the medium well tensor networks from from what I understand are basically how it is that the universe is quantum entangled and how it is that we can have multiple different realities that are kind of based Bas off of a similar

(1:33:25) frequency but if and when the quantum entangled frequency of certain particles changes enough then you can end up getting like a bifurcation or like a splitting of the bubble of the tensor Network and you can get dualistic realities that kind of overlap one another or at least are tangentially connected to one another and basically like the creation of a universe that is like a Quantum entangled version uh like the positive and negative charges for like what would be normally Quantum particles and how they are quantum

(1:34:01) entangled but also like that on a macro scale so this is how it could involve like the creation of different universes within the Multiverse and in order for something like a wormhole to be traversed or even created you would have to intimately understand things like tensor networks and how it relates to quantum entanglement so so that you could move something from one place to another within that tensor Network without moving to another version of reality itself or another version of the Universe I want to add something real

(1:34:37) quick in there too which is that the brain you have your left and right hemisphere as well is that I've seen some arguments that that's you know inter scalar interferometry Network

itself you know both if you imagine like Consciousness like interacting with reality which I think is pretty cool um just because we are running a little short in time do you want to pull some people up and then we can have them ask questions and you can kind of opine a little bit more or whatever absolutely um I'm going to bring Holo Cipher up

(1:35:01) real quick because uh this dude blew my mind and I I would love to hear him and you Converse a little bit and then we'll get to some other people okay yeah I'm on my desktop so like my thing's all kind of buggy I don't know or not so I'll let'er go ahead brother if you have something you'd like to say or questions you'd like to ask maybe I surprised him he's not uh unmute his mic um Holo Cipher are you there sir okay well then we will go to somebody else until he is able to get to

(1:35:39) his mic um I think I saw D dcoin has been there waiting patiently um I don't know where Source just went but I was going to bring him up um a part of one and uh um let's see love of humanity has been waiting a while um Prometheus has been waiting uh AJ I got you um oh where where did H suppos to ask questions or just you know talk about let's try to keep it to questions okay yeah yeah good call yeah because then you know we'll go way too long um Holo Cipher can you hear now yeah I don't know that was weird you

(1:36:19) brought me up and it just cashed out my network connection so hopefully you can hear he me yes sir feel free to speak ask questions um Holo Cipher this is Ashton Ashton Holo Cipher um ashton I'll just tell you Holo Cipher blew my mind in space and ever since then I've been I I really like hearing what he has to say I like how it's at is fractal universe so uh or fractal verse that's pretty cool well there's a good reason for that isn't there I mean the further you dig into this um the further you start to

(1:36:54) see that there is a uh whether it's from a cosmological sort of standpoint that you see fractal displacement through the clustering configuration of the say the local star cluster um we see that there's uh batner and Kalisto came up with the egg carton Network Theory which isn't much of an egg carton it's more of an octahedral ice structure which I guess is a good way to enter into all this right but uh there's also fractal uh just to finish that off fractal verse fractality fractal nested networks

(1:37:27) within the brain uh itself within the microtubulin and within our you know our blood brain barrier and everything is essentially uh we have crystals on the inside of our skull for example tuned very specifically to the Resonance of the planet uh and so we have a fractal identity on the micro and the macro scale and obviously our job right now is to pull those two uh ends of the pool together so they can talk and so I've made some notes of everything you guys have said you kind of where I chimed in and started listening to you guys you

(1:37:57) were talking about the uh the vector equilibrium which had to do with uh I don't know how much I missed before that but uh of course like having read through all Buck Mr Fuller's material I could definitely say a few things on that uh because my starting point other than you know perhaps a lot of people had read you know Graham Hancock and got their their feathers

wet a bit there and got kind of more curious as to how this technology was uh clearly utilized and ancient Past Times and when you you kind

(1:38:27) of start pulling on that you see there's a sacred geometry principle behind that and now we're sort of getting back to that with respect to kind of how to implement that on different levels of technology so I think what's interesting too is that the uh the vector equilibrium um it's uh for me kind of special because uh I have my job is to kind of bring out the temporal topology or temporal mechanics and just explain this last sort of vage of of uh physics where uh say for example uh lee smallen uh he had discussed in several

(1:39:03) of his books really that the critical component that we seem at least from his point to be missing out on is time so what does time have to do with the vector equilibrium well isn't this interesting when you take into Buck Mr Fuller's system accounting which was always done with the tetrahedron tetrahedron was essentially like his bottom like his Penny if you will and in terms of volume metrics it takes 20 of these tetrahedral pennies to account for a vector equilibrium well isn't that interesting because we have several

(1:39:35) ancient calendrical systems um not just calendrical systems but what integrated into some of the actual uh social political integration such as uh in ancient Norway they used the vernal system but also in Sumeria and in the Maya uh all three of the Maya calendars all used vjo its base counting um obviously they had individual days but the 20-day was quintessential for time count for whatever reason and so when we're looking at Quantum topology as say vector equilibrium or as Buck Mr Fuller he thought it was so

(1:40:09) important okay um first of all I should briefly outline quickly that the vector equilibrium is something that Bucky thought was capable of being at the heart of all the topology so if you started with the tetrahedron you can kind of truncate that down in half what he called wavelength or Edge elements so you can truncate a star tetrahedron becomes an O octahedron an octahedron then becomes a Cubo octahedron and through this self uh well this is having to do with station and truncation of topologies and through that process we

(1:40:47) can actually discover more inner nested features so while you guys are looking at uh Jake's description of self- nested um Cub octahedron or vector equilibrium so Bucky gave it that special name he actually kind of put it up on the the pedestal of saying it needs a new name because of how you replace the the meeting points of those edges with sphere centers and you start to see the spherical representation of this which gets us into a lot of how biology nests itself and so forth so there's an interesting

(1:41:24) interaction that I want to get to though I don't want to stay hung up on uh sacred geometry too too long but for those of you interested certainly there's lots of material with uh there's a book written about Bucky's work it's much easier and much more approachable than synergistics it's called Everything I Know by AMC Edmonson it's a great book to get your beak wet on that um moving forward though trying to connect more so than just Quantum topology with time but actually getting to some of like for

(1:41:50) example I'm going to jump a bit around here but we I'm sure a lot of you are familiar with and we got to get to of course wormholes and natural wormholes that are going to be taking place in this next few days which is what they readily admit are called electron diffusion regions or edrs this work is being done mostly by University of Iowa um and he discusses this is where the uh entanglement of the solar wind uh meets with the geomagnetic uh filaments if you will so we got filaments from the Sun and we got filaments on around the earth

(1:42:28) and it's when those connect that we have moments to observe and we have a satellite cluster configurations that can do real volumetric analysis so they can give us a breakdown of how these events happen they're very brief but they give us a glimpse as to Natural worm holes and how they work of course as uh Ashton was saying to open up a sizable Wormhole that as the standard physics will tell you takes the energy m equivalent of Jupiter which only denotes how disparagingly uh remote current physics is to approaching this but it still

(1:43:03) gives you an idea of the sort of Leverage that you need to have but you know if you get over to what Hal POF was saying uh with Eric Weinstein on American Alchemy he discusses for example there being enough energy within a glass of water um to essentially boil off the entire oceans we've heard this probably from several others as well but this gives us an idea of how a potential amount of energy is available in a given amount of volume and that if it just takes a little bit of rejigging with our physics to get there things that we're

(1:43:37) seeing that seem magical they seem beyond our approach other than maybe through a Sci-Fi lens become a lot more approachable as does traveling super luminal etc etc so we have very good examples that did appear in the public for a very brief period of time such as ugv pnov in the late n well mid 90s he came out with several papers addressing uh gravity impulse uh capabilities and that in that case was a superconductor of like kind of like a ring at ring if you will that was made out of a basically a type two

(1:44:12) superconductor and they had noticed that it was shielding about 3% of gravity at that time because they were smoking in the lab and I know they weren't supposed to but the smoke was being attracted above their a superconductor and they got to measuring weights above it and of course they found yes indeed not just in that floor in that room they noticed every floor above them impeded not by matter that there was a 3% Mass reduction and that's literally the only real example we have of mass uh reduction in the sort of public prview

(1:44:42) and as per there's several Papers written on it uh we found out through later studies that early 2000s he he published some papers that showed that gravity potentially was traveling at 60 four times the speed of light uh which may denote the frequency of gravity has an ability to travel at different velocities or you know factors of of the speed of light um and so this gets us into sort of T towns and brown um which we found out from another American Alchemy interview that t towns and brown in later stages of his life was very

(1:45:16) interested in this thing called siderial radiation which gets to how planetary frequencies are affecting potentially gravity which is also dovetailing into Rupert sheldrick's

work where he discusses the Big G changing as if it was like the stock market and how Metrology people in the UK had standardized and fixed it to the speed of light so uh or to the sorry to the second uh as a you know SI interval of Imperial standard of measurement so that they would fix that and not take note of the fact of what was changing that

(1:45:54) that's where the critical uh intersection lies now I just want to touch on Quantum coherence real quick because obviously the uh Declassified work of dro hobo Greenberg silver bomb from the 90s we found his papers released in the early 2000s from the CIA reading room which showed uh coherent states which are obviously Quantum in the brain which we know from the work of uh whether it's sarfatti and bom with the buium theory or Penrose and Hammer off with the orc orc Theory so there's you know plenty of

(1:46:25) theories to go around but the fact is it's the quantum coherence state that actually has this which he called cgic Theory which has the ability to essentially take neuronal fields or neurological fields that are around the head and around your body and through coherent States interact with the SpaceTime metric which gets back to what Koff was saying with Weinstein that they could engineer and alter me and new these so factors of altering the SpaceTime metric the permittivity and permeability they said was

(1:46:58) engineerable like holy [REDACTED] people like that's crazy that we're actually broaching these topics that were always fairly classified so it's like slowly but surely if we keep pulling on the string I swear to God if we could get help bu off in his space and we could actually like ask him like a like I'm sure between the three of us man we could really go to town with this guy but I don't is he ever going to get cleared for a conversation with the public I don't know but I question I've asked and apparently

(1:47:27) doesn't have any doesn't have any um will to want to do it uh oh come on speaks to the idea though of like a lot of these Engineers that are in the know that are part of these Labs like they they don't have any there's no cost benefit for them to go do that like what they don't want to be famous you know they're not trying to be a celebrity uh they're getting paid maybe even millions of dollars you know they're well-endowed they don't want um you know their families whoa okay hold on whoa whoever unmuted

(1:48:00) themselves do not do that again um so by all means go ahead Ashton thank you um so then the other things I want to say Hollow ciper you had some really good points there I think especially near the end where you were talking about the put off winstein um Jesse Michaels uh interview I've I've spoken to Jesse Michaels a few times myself actually and he's of course he's pretty skeptical about like the stuff that I put forth related to some of this but he's open-minded about it I think he's an

(1:48:30) incredibly smart guy and I think that it's because one of the aspects if you want to learn this uh a good skill to have is to be a student of history and that's one of the things I think Jake is really good at because he knows history really well and Jesse Michaels was a history major I believe as well because it turns out that all this stuff we don't have to discover new

science the science is all out there that's the saddest part you just have to do a history lesson and look into it so like

(1:48:52) all you were mentioning I think pot kov as well uh who did worked with uh superconductors superc conductors again it's just a perfectly conductive semiconductor you know this is why I talk about the idea of semiconductors are one of the main aspects to make this technology work and uh a lot of these anti-gravity scientists were working with semi superconductors so po kof was doing it uh ning Lee uh which I posted about and people talk about a lot you know she quotequote disappeared but really the rumor is she just like went

(1:49:20) into DOD Contracting for private labs including like locky Martin um and that's what they do they just suck you in um I know that because people have just told me directly um and then Amy ESD is one of the more recent ones where she passed away a couple years ago um the official story is that she committed suicide just in case people want to know um and even if she did you could imagine like if you know this technology is real they have to have staff psychologists on hand because imagine you go and you're

(1:49:46) working on like straight up anti-gravity and then you got to jump in your gas powered car when you know we could be living in a world of zero ution free energy for everybody and you got to go fill up and pay \$5 a gallon for gas in your completely obsolete car like imagine what that does to your psyche and then if you come out and tell anybody they're just going to think you're nuts like how that's just got to mess people up so Amy is with us in spirit right now uh I just I know that I just feel that um she's somebody that

(1:50:15) wanted Tucker Carlson to know about this uh the clip I may post again later where she says like Tucker Carlson will be the guy to to bring this forward and I think he is because he talked to Jake Jake talked about the Salvador P patents I think Tucker's interested in this ufology and what it means um so I hope that one day we can bring this information to him and uh get it to a huge audience uh think that's all I wanted to say thanks a lot holl for great comments man yes thank you y thank you all right um since we're kind of

(1:50:46) running low on time here we're gonna try to hop around as fast as we can um I think that somebody that's been waiting a long time was God's Source or I need a little break I was happy let and we'll go to love Humanity after that you want me to post a clip of what we just said right there Source that's you man I can probably do that later okay check there we go okay go ahead I was waiting for you to open your mic we couldn't hear you he dropped down um I'll try to bring it back up next we will go I'll to talk

(1:51:34) later I think it was uh actually no we're gonna go to a part of one and then we'll go over to love Humanity uh how y'all doing how y'all doing oh I wanted to um not clarify but give some some importance on what y was talking about about um the Earth having like this electrical magnetic field that uh is influencing the body and basically this uh crystals in our brain is called magnetite crystals and every Animal Planet that's know uses the magnite crystals to navigate you know the weather and where to go when it gets

(1:52:15) cold when the season changes and we we uh as humans we not trained or you know live or studied this type of information on a reg basis so I feel like if we try to understand this more often and understand how inter interly connected that our body is with the universe these technologies that y discussing will be more um accessible to the world Roger that I agree um let's try to go over to love Humanity if we can if we can try to keep this to questions you guys really running low on time and I while we have Ashton here and his

(1:52:58) knowledge available I think it would be really good for us to use this uh Prime opportunity to to get some clarification on the things that we've discussed in the space so go ahead love Humanity okay we're not going there sorry about that your mic's all funky so removing you from speaker sorry all right so let's go to God Source uh again hey how's it going wonderful space nice to meet you Ashton um trusting this this new era of um big S institutionalized science when um basically knowing what we do about

(1:53:47) Quantum uh collapse Quantum function collapse just just the basic stuff would tell you that you really need to trust your own eyes and not instrumentation that has to be converted into binary and given back to you because it's going to show you what if this if this is a simulation or or whatever uh it's going to show you what that would would be but not maybe what it is or maybe not what it potentially could be if you didn't even look and um so yeah the idea of like us sending out satellites that are looking you know

(1:54:26) potentially billions of Miles off into the Yonder and collapsing those probabilistic places that you know maybe there's nice nice cultures of who knows what existing in those probabilities and we're collapsing them all um I don't know it can we even trust that that's legitimate or is it just something that might be pulling the over our eyes how we this if this was a simulation could could we trust our instrumentation or is it basically you know is that not within our reach thank you very much yeah I think that's a tough one to

(1:55:07) answer in terms of if our reality's holographic principle where does the magic end and where does the the foundation basis for science begin that's certainly one thing that I uh you know I'm careful about I want to say is that I try even though we may have stuff that seems like magic okay well what is that that mean there's still got to be limitations out there doesn't mean that every possible thing is Magic you know there's still got to be some foundation for it so this is where like I'd like to

(1:55:31) talk about trying to build up from a scientific uh standard to these ideas that are uh bigger and bigger bigger questions um now I think the other thing you said uh what was it um related to what what what can we trust uh that's out there um again I think that that we have to use the scientific method and old scientific method is uh science is the study of observable reality so this is the thing too that I think a lot of science wrong where it's specific go ahead I'm sorry go ahead Ashton and then

(1:56:05) we'll go back to you Source I just want Ashton to finish this thought please yep so I was just going to say science is the study of observable reality and a lot of science would say that

okay your science is built up based on scientific papers or what have you but people forget that like no science is actually what we see and observe and then the paper are us trying to explain what we see and observe go ahead yeah yeah um I completely agree with the the methodological aspect I was kind of wondering why certain Nikon

(1:56:35) cameras that are now discontinued and only being used by NASA seem to show a perfectly magnified version of what the eye sees versus a digitally reconstructed um is is that really what we're looking at it's almost like your you know DSLR camera or whatever kind of digital um binary you know telescope is is reconstructing this image in a way that is completely different than how the eye sees it in this place and um you know we it's like I was trying to look for these cameras and they're all discontinued now

(1:57:16) I have to find a used one and I just started thinking like what is the difference physically like what are they doing that that doesn't collapse the wave function are are you asking that based on the notion that digital cameras or telescopes in general are actually absorbing far more information than the human eye and that because of that what we're getting back must be in some way shape or form kind of doctored so that we could see it as we would like to see it versus as it actually is is that what you're getting at

(1:57:52) I have a very good visual Acuity and I've watched the stars for so long and when someone shows me the the weird Nikon image of the dancing simatic sphere it's like yes that's what I'm seeing that's what I'm seeing up there and it boggles my mind and then when someone else is like no here's what you're looking at this is from NASA it's like  and they're discontinuing them for for you know commercial use but they're keeping them for themselves and it's like something's happening here and

(1:58:30) I think it's it's like I don't think they have to doctor every image I think it's built into the simulation yeah well I think Ashton and likely Holo Cipher would agree with me when I say we know NASA is not telling us everything that there is to know they are and have been a Nazi front for a long time you know Vernon was a Nazi a paperclip Nazi so um there's a lot that were not being told I think NASA's also kind of like a money-laundering machine for special access programs and the secret space program so um Ashton did

(1:59:05) you have anything you want to say on that before I move on to somebody else no it's not really my area of expertise but I will say NASA is definitely not a straight answer so yeah don't trust a single damn thing NASA says totally all right um let's go to um I think we had AJ media has been been waiting a while we'll also go to AJ um Holo Cipher I'm gonna come back to you we will I'll let you have the last question just because I'm sure there's going to be a lot of things that you can go into or

(1:59:40) here and uh we'll have comment on um then after that we will go to Prometheus so it's going to go AJ media AJ Drome metheus then we're going to go over to Soul and then 33 um a part of one is if you can make it brief then cool we'll come back to you and then holos Cipher and then Ashton I'll wrap it up oh and don't take it personally if and when you're done with your

question I'm going to drop you guys down hi Ashen so in in terms of the uh the radar system so you you talk about

(2:00:16) how uh you know the radar systems are what produce the scalar potential via phase conjugation and and that they're not just you know you know basically detection systems is there some uh references of things you could look at to look at the specs of how these radar systems work if you kind of want to learn uh more about the the technology of that um and then also a couple other things um you you mentioned that you had submitted to the AO uh the names of a couple folks including Joseph Dunford with lockie Martin uh can you talk about

(2:00:47) that because it seem like there there were direct connections with these agencies that uh that did uh testify to their knowledge that these videos are real the technology is real uh and then just lastly you know if you're kind of doing in you know kind of your own independent research trying to assist with the case what what do you think is the next thing that should be done in terms of looking looking at just Solutions what what can be done um like say you're trying to do your own independent research trying to assist

(2:01:13) with the case to you know try to get this information uh more known or try to get responses from some of these you know government agencies and such yeah great questions let's start with the last one so I can keep them all in my head here um if you want to do help out I think just bringing awareness is the best thing and I know that doesn't seem very proactive but it's really the problem we face is one of conscious awareness and waking people up and when we reach a certain level of Consciousness I think that the truth

(2:01:42) will become self-evident out there um harassing people isn't really going to get us there trying to force people to believe the stuff's not going to get us there um I have it now on really good authority that the videos are real and that people that are very prominent have seen it and are talking about them in ways that uh that they're that they're taking it seriously and they're saying a lot of the same stuff that we're saying here from a physics perspective as well um as well as the stuff that Thomas

(2:02:08) Bearden had mentioned as well and even other stuff as well which is honestly just blows my mind um but you know Joseph Dunford is one where I've told a story many times where supposedly his nephew was shown the videos and somebody who's friends with the nephew told about it and if the whole thing seemed very credible there was no gotcha at the end they never came out like I lied to this guy you know he like literally begged me to delete the post about it because I showed the screenshots of the communications and that person had to

(2:02:36) delete all their social media after that so it was pretty damn bizarre um and They begged me to delete the post which I ended up doing and then I ended up reposting it later on with uh removing all the social media tags of the person um so I I and Joseph Dunford would have been the guy who potentially would have been in charge of the mission and he got promoted to the highest ranked military officer afterwards in the entire United States like literally the adviser of the president Joy Chiefs of Staff Secretary

(2:03:03) of Defense uh for four years under both Obama and Trump and then he retired in 2019 became board of directors on Lockheed Martin and this is a good plug for what just began which we'll go to after this is the um my interview with uh Ian Carroll uh just started um we recorded it a little while ago and in there he pulls up the board of directors Lockheed Martin he's like I heard you talking about this guy and he goes to Joseph **Dunford** and it turns out that he's on like some special committee within the board of directors at Lockheed Martin as

(2:03:31) well and there's a bunch of like ex-military generals and stuff that are on their board of directors so extremely sketchy in terms of the fact that this guy gets this huge promotion he's also the one that started space force for president Trump um so like if there's somebody hiding secrets guys like Joseph **Dunford** is a guy he's a guy who I didn't even know who he was before before this person drops his name to me um so yeah I think that's I think that answers your questions um yeah so I think that they

(2:04:00) know about it and the question is like holy **[REDACTED]** like how long are they hiding this and how many people know so anyway hopefully that answers your questions man good questions all right we're going to AJ let's try to make it fast so because I know Ashton probably wants to get in the chat that he was a of the video that he was in with the Ian you got it Jake I just wanted to ask the hosts um uh what's your opinion on De ja Vu cuz like in the movie The Matrix uh the guy sees the cat cross his path

(2:04:26) twice and they say it's just a glitch in The Matrix I wonder if that's more than just an allegory like it does it have to do with alternate realities or um you know or is it just our BL brain playing a trick on us I just I know it's a different topic but I've been waiting to ask since you were talking about alternate universes about 20 minutes ago yeah and I'll go real quick on mine and then Jay can take it because I think that I don't think that the ether represents an alternate universe but

(2:04:50) that doesn't rule it out uh if you listen to my interview I did with Tom Monok guy's a genius and one of the things he brought is this idea of like time loops and you can imagine a Closed time Loop like the show TV show Dark or like the movie Tenet where whatever happened always happened but you could also imagine what if there's multiple loops and every person has different loops and those loops are constantly interacting that could create this idea of alternate timelines and it definitely comes up with a respect of superluminal

(2:05:16) travel uh faster than light speed because it does beg the question like okay we know time real we can travel to the future but can we travel to the Past like can we teleport from Mars to Earth and then look up and see ourselves waving at ourselves uh pretty weird concepts to think about for me personally De ja Vu has been instrumental in my life I have had numerous De ja Vus where I have had visions of the future that later came into fruition and came to be a reality and in many cases there was very specific specific messages and information

(2:05:54) that were almost encoded into the De ja Vu that if like I had this De ja Vu at this time then that meant X Y and Z and if I do an act on X Y and Z then I can do an act on a b and c and

affect the timeline so in Shamanism visions of the future where Deja Vu what have you Dreamscape and in the dream world they all kind of interlace and inter weave together to create a larger view of SpaceTime so with that said let us not forget that everything is made up of energy and that includes our Consciousness our Consciousness is

(2:06:37) essentially this what Quantum physicists call non-local Consciousness it is the signal of self-awareness that permeates all creation and impregnates all of matter with some form of life this also plays into Shamanism and the notion of animism so if Consciousness is essentially or mind is creating reality then we if we have the ability to create vehicles that can Traverse SpaceTime then we can also use Consciousness to do the same thing and when it comes to Deja Vu or visions of the future I would have you look into

(2:07:18) tachon and the fact that tachon travel so fast through what we consider space and time they basically travel backward through space and time from the future to the past as opposed to you know things moving from the past to the Future so if there are other Quantum particles not just tons which there are I just can't remember the name of them that travel backward through space and time then they are encoded with information this is how and why it is that you are able to if you're thirsty get up from your chair walk across the

(2:07:51) room and grab yourself some water because in your mind you saw that future of you getting up moving your three-dimensional body through the fourth dimension of time to this fifth dimensional probability that exists within the larger probability wave of SpaceTime so that means that if you expand your Consciousness to these higher harmonic vibrations to these higher octaves of self-awareness beyond the physical then you can essentially tap into this extra Dimension that talking about being tapped in through into through technology and you can

(2:08:26) essentially travel through SpaceTime you can skip across the dimension of time the way that we talked about earlier these vehicles are doing you can skip across these dimensions of time the way that a rock skips across water and you can end up perceiving information from the future and then act on it so I think that Deja Vu is similar to that I also personally think that it is evidence that we're on the right track mentally emot emotionally spiritually physically um and that being said uh I think that when we understand that

(2:09:00) the stuff that we're talking about achieving technologically through craft or the understanding the laws of physics are also able to be done with our Consciousness field because as I said earlier the human body emits scalar waves and they affect the longitudinal lines of the earth and if everything is quantum entangled then that means the scalar waves emitting off of our body and affecting the longitudinal lines of the earth also affect the longitudinal lines of the universe itself and if you look into things like the doorway of the

(2:09:29) Gods in Peru and the way that shamans have been using that to literally Traverse the cosmos for Millennia and I actually know a story this I talked to this guy that knew the shaman in Peru that taught him basically the key to journeying through this Wormhole or the Stargate the the song or the the words that he had to say and his wife he got the guy walked up to the the

doorway of the Gods he said the magic words and sang the magic song and lo and behold his wife saw him dematerialized in front of her eyes and

(2:10:03) then he said he was like going down this light tunnel and all around him were all these other light tunnels and then he wound up in this room this white room filled with light with these massive light beings that basically said what are you doing here why what are you doing how you're you're like a child wandering around you're really really lucky that we found you because you might not be able to get back so we're going to send you back we going to send your ass back to where you came from and

(2:10:31) don't do this again and so then his wife saw him within a minute or two rematerialized and for him it lasted way longer than a minute or two rematerialized in front of her and he was messed up just totally [REDACTED] up for like three to six months because of this experience so understanding this notion of natural Stargates natural vortexes natural wormholes how it is that they intricately weave within SpaceTime understanding the human body and how it is a part of this interwoven pattern this tapestry of the cosmos and then

(2:11:10) fathoming the totality of that big picture and then taking that understanding and then creating a craft that's able to do it you have two ways then you can do it through technology or can do it through using the physical body as a technology and the electromagnetic field around it to gain access to future or past events and that comes into like Looking Glass Technology and stuff so you have the ability to do so with technology you can look in the future of the past or you can do so with your Consciousness and look into the

(2:11:39) future of the past um let's go over to Prometheus wow my brain is just expanded to light years across right now uh thanks so much Jake Ashton amazing conversation um Ashton I wanted to ask you about um Quantum Computing uh and I tagged you guys on a um uh post uh so I I work in the field of technology and um recently there are um there has been some breakthroughs in terms of creating uh worm holes supposedly uh using Quantum Computing um technology so um I wanted to know Ashton if if not something that you'd explored yourself

(2:12:32) and uh yeah like if um what do you see in terms of like uh Wormhole uh creation um and information exchange uh when it comes to uh Quantum Computing and Technology uh there we go um yeah so from the spe to the quantum the quantum Computing there's something where it always feels like there's something there where they're not really telling us I mean we've had these quantum computers for like 30 years in the late 90s and like conventional uh media would say well we don't really know what to do with it

(2:13:13) which is just really weird to me like well why do we develop it must have developed for some reason I would speculate that we have the military de developed it for some purpose that we don't uh really utilize it for the public perspective yet maybe something really powerful one of the things that it's been proposed to do is like uh develop new meta materials which I think is another way where we can increase our material our Material Science and thus technologically evolve significantly um the letter Dash and

(2:13:40) Forbes also mentioned this idea of that we've had this technology for a long time in terms of like you know teleporting an object warping an object but that quantum computers in the early 2000s were when it really started to take off we really started to be able to do magic with it because we were no longer limited by human limitations like reaction time and things like that and I think that's a really interesting concept because if you look at the papers we talked about they came out in 2010 if you imagine that that was people

(2:14:05) writing up science they already knew was real from the black projects in the black world then that could line up with the idea of us first having like really took had this technology become Star Trek level in like the early 2000s um so that's my thoughts on that just to let you know Prometheus I just did a live on Quantum Computing and how that works and how it is that the brain is a quantum computer I placed it up in the nest um so check that out if and when you uh have the time it's only like an hour and 13 minutes if you're so

(2:14:34) inclined would love to bro that's awesome alrighty let's go to I believe I said Soul s so Soul if that's how you pronounce it it's got the Emoji have the sun in there giving you an opportunity to speak here Amigo okay moving on 33 hello hello good Great Space tonight guys um 33 from the naughty conspiracy chat Ashton I believe the um question might have been proposed at the start is where did the microchips like come from and there's a little Theory um ahead and I'd like to back it off you um we we

(2:15:20) went back to the uh the Roswell engine in the technology way back then but um for the microchips um sorry sorry sorry um the ships do you think that a hydron collider could speed up a particle fast enough to to be able to shoot it down like the the the conspiracy is is that alien space crafts and Technology crashed in the Roswell desert and um that's where we gained the technology from my question proposes do you think the technology existed for us to shoot them down because as we know with rockets and technology that we currently

(2:15:56) use in the military we we would not be able to hit a anti-gravity machine that is moving at proportional speed so yeah what do you think about that do you think the US has a US yeah good question yes because the question is like really if you could create A Spacetime bubble you can create like a force field essentially I mean that's kind of what it is so what you know could anything even get through if you can create some type of gravitational manipul potion like a white hole the opposite of a black hole

(2:16:24) and I would agree Conventional Weapons would be of no effect against that type of Technology uh but actually I think it's a little bit simpler than that is that just because something seems very Advanced does not mean it's Invincible uh even Superman has a we a weakness which is Kryptonite so in this case what's the weakness to anti-gravity if anti-gravity is based on electromagnetism well how do we produce a scaler potential we use scaler beams and we interfere them so what if we shoot our radar at a UFO what is that

(2:16:54) going to do to it imagine like it's the equivalent of essentially taking a surfer and pushing them off balance or taking somebody who's riding a bike and hitting their handlebars

now all of a sudden your craft is going to lose its uh stability that it had before I personally believe that we used radar to knock down UFOs that we've taken down they we're not using rockets and and missiles to knock them down uh that would generally be ineffective we might have accidentally caused craft to fall because we didn't even realize the

(2:17:20) capabilities of r at the time this is why I harp on radar so much uh radar is potentially directed energy weapon as well as capability to take down something that's using Electro gravitic effects so that becomes the next uh Battlefield in terms of uh the Cold War you know um the technological advancement happening behind the scenes good answer all right let's go over to Soul if you're this is your last chance before before I drop you Amigo alrighty um part of one uh try to make it fast okay uh what is your thoughts on

(2:18:04) brain heart coherence in the 40 specialized 40,000 specialized cells called sory neurites and within the brain what uh are the correlations with that and the electricom Magnetic um frequencies of the universe Jake I'll probably let you take that one I don't really have any uh I don't really know in general I mean when it comes to a lot of the esoteric stuff or like the uh neurological stuff like to me it's not really necessarily my wheelhouse I do think that uh there potentially is this idea of like using

(2:18:36) scaler weapons to damage people's brains I think Gary Nolan has looked into a lot of that people who are like too too close or too exposed to either some of these craft that use these effects all I know is that if there is some kind of hovering object I'm not standing underneath it staying away from because it could be giving off some kind of crazy radiation I'll just say that the heart brain coherence um is how it is that we create reality there the human body is a standing wave of energy the electromagnetic field around the body is

(2:19:12) a standing wave of energy and it is based on harmonics and therefore mathematics what you want to do is harmonize all of the chakras you want to harmonize the waveforms coming out of the brain and the heart and the heart is actually more powerful than the brain as far as electromagnetics is concerned and there are actually neurons inside the heart believe it or not that kind of tell the brain what to do for the longest time we thought it was the brain telling the heart but no actually it's the heart telling the brain so if you

(2:19:45) look into Greg Braden's the Lost mode of prayer he talks about how it is to create a coherent pattern that ends up affecting the quantum Realm by combining an emotion and a thought of the same frequency and then creating a feeling in the heart space that ends up informing the quantum realm as to the reality that you wish to Branch to in space and time that being said we are intimately connected to the universe and the universe is comprised of numerous different harmonic standing waves of energy part of the role of these

(2:20:26) directed uh energy weapons or things like psychotronic Weaponry or whatever is to and all as well as all the propaganda that's out there is to create decoherence within the human electromagnetic field field in the human brain in the body so that your heart and your mind are not creating a similar waveform so that you don't create the reality that you desire but instead

instead You observe reality the way that you're told and if you are not buying the propaganda that is being shoved down your throat then that's where things

(2:21:02) like psychotronic Weaponry comes into play and how they can manipulate the neuroconnectivity in your brain and even do things like muscle twitches affect your dreams all sorts of stuff because the human electromagnetic field is intimately connected to the physical body um I think that pretty much answers the question I'm I'm not trying to go too long here so um Holo Cipher uh if you can let's try to wrap it up make it fast we're gonna give Ashton the last word here yeah I think there's just a couple

(2:21:37) of things to tie in here uh including perhaps uh a note that we should probably make on incoming solar weather having to do with uh you know another driver towards uh our Quantum cortical uh coherent interface often what they call a cortical uh coherent interface um this has to do with the brain heart connection and how basically through modulating of the same we can alter not only a perception but our interaction with our local and surrounding SpaceTime but this also modulates not just local SpaceTime but the potential for these uh

(2:22:13) non-local uh entangled uh which I refer to as the entanglement coefficient is changing as the so activity changes so just like Hal POF was saying that we could potentially engineer the SpaceTime metric what's happening to give you a more down to earth kind of example of this is what's happening right now with the ionosphere otherwise called the Schuman resonant uh cavity this is changing with the solar plasma coming into the ionosphere it changes both uh the Q value which is essentially a fancy word for denoting

(2:22:47) the quality of the resonator this changes the conductivity and permittivity of uh essentially ionosphere which changes the way that the even if the frequencies didn't change it would change its intensity but the in actual fact the osphere shifts and because of that it shifts the base frequency and the and the way they calculate is pretty simple you just take the circumference uh at least in terms of the mathematical uh backbone of this it's just the circumference of Earth which I'm sorry we have to use metric uh yeah I'm gonna

(2:23:21) quiet that because I want to close up as fast as I can do it here which is I've got the Ian uh interview is live right now on X it's also live on Rumble for some reason it's not up on YouTube you can watch on Rumble uh please follow Ian uh Carol on rumble on YouTube and I just retweeted right now the link to the X version of it where I'm live in the chat with them on X um hopefully it's work correctly so watch that right now there's 177,000 people watch at the it's about 20 minutes in you start

(2:23:55) over watch you can watch live on yeah I am live right now with it's a prerecorded interview but I'm in chat and I'm G drop after this after this space and then I'm G jump into the chat there and I'm gonna watch I'll interact with people um so I posted link I'll post another link for you guys here's the link this guy long winded chat not working chat gets stuck sucks give me a sec I'm G basically there's

(2:25:16) one little interesting thing that ties this together with our DNA which is the work of Luke go to Luke moner he was a Nobel Prize winner for his work on one virology but more so having to do with AIDS but later on his work became very controversial because he started using Schuman frequencies to essentially teleport DNA expression to me diens essentially the internet using the seven Herz as the modulated or incubation about sort of frequency so we have the idea that DNA is integrated into human at a fundamental resonant level and if

(2:25:52) that's the case then any small changes as Dr Persinger has already pointed out and many others including Decades of Russian research uh have shown that small changes in the Schuman could create very small changes within genomic expression which then unfolds into a whole different type of expression it doesn't take aate a big that's where the analogy of the Butterflies Wings flapping over there creates a big tsunami effect over here it's just to give you the impression that small effects can have big changes in the

(2:26:27) world and it's a maybe a cascading effect but that's where I wanted to finish just tying up a few little things with how the Schuman resonant might be the key to all of this and it's something worth keeping our eye on because we are neurologically and hormonally connect get to the link go to my TT means our performance capabilities as a species is connected to it and of course there's a t towns and brown connection with all this which we need to start taking all these separate strings and start weaving

(2:26:55) together a pattern that's for the public because clearly as Ashton has pointed out there's very good indication that there's a pretty good picture of how this works through the billions of dollars that have been spent in private uh labs and it's time they they have no way okay I can't listen anymore um guys so check out my uh check out my Twitter profile guys you can do a little bit of work you can go to my Twitter profile you can find that stream right now Ian Carol's live with me right now I want to

(2:27:24) go listen to that um we've been in here for half an hour longer than I was going to be thank you guys for joining this stream I appreciate it again go over to Ian Carol go to the twt either his Twitter or my Twitter you can see the the stream it's live right now uh we're talking about the Kona Blue we're talking about uh some of these papers as well very much for the space and thank you for everybody for uh chipping in I really enjoy thanks holer appreciate you man and I don't know much about the Schuman

(2:27:54) residence but it does seem interesting Bazar talks about if it's a secret then that's great um I just want to thank everybody for being here thank Jake Chanley for uh you know putting this together for talking about this stuff thanks Hollow Cipher for bringing up your insights everybody else who answered questions as well uh I do have to drop but this has been an awesome conversation and I look forward to doing more uh make sure you're following all the speakers on here uh following Jake following Hollow Cipher uh the rest of

(2:28:20) us make sure you're sharing the information with as many people as possible and if you are interested after this come check out the live stream that's going on it's pre-recording

with Ian Carol who I think is in my opinion probably the best investigative journalist on the planet uh we actually do talk about uh one of these papers in there as well so thank you guys very much have a good one thank you Ashton God bless okay we're dropping as um at some point in the future I have an orb story for you oops well oops too late

(2:28:49) dropped okay guys thank you very much today for this stream jump over to the Ian Carol one listen to us there I'll be in the chat you can chat with me guys if you want have a great night m370x thank you Jake thank you everybody in the chat appreciate you guys peace

Catastrophic Disclosure Stream - MH370 & Science - YouTube

Transcript:

(01:28) [Music] a [Music] they meant to fly PLS they ain't supposed to fall from the sky but if they do they'll leave behind more than PE are to ples just be flying I know you think I'm Ling the USA Baby hiding TR the night ples they meant to fly PL L supposed to fall from the sky but if they do they'll leave behind more than these are to they'll leave behind more know you think I'm lying the USA Baby hien the **truth** I ain't

(02:32) [Music] fine ples they meant to fly planes they a supposed to fall from the sky but if they do they'll leave behind more than a p are two I just be flying I know you think I'm lying the USA they be F **truth** and I ain't B they'll leave behind more than a piece or two they'll leave behind more than a piece or two welcome everybody to the stream tonight technology tonight with Ashton Forbes

(03:35) we're going to come up with a new name probably but you know what for now technology tonight yeeha brother welcome to the show uh guys I'm really happy to be here with you guys tonight uh happy to be AI on this planet with everybody still lfg hey what's up guys um hey arcade a CW a **truth** Seeker hey Alex hey Finny hey Brandon yeah we need that merch I spent \$550 **debunk**ing MH370 videos and all I got was this stupid t-shirt memory hole man good to see you man thank you very much memory hole for uh I think you provided some of

(04:14) the um some of the videos that we helped use to **debunk** the rebunk the **debunk**s uh leay tried to Google the song yeah you're not gonna find it Googling uh Chris frog yeah we are so back my man uh Flint fancy good to see you William Bill hit the like button appreciate you uh Joe mama ashon looks like he would play the washboard with the spoon yeah probably Remos good to see you man uh uh an Heiser Kaiser however that you say that how you doing uh Steve good to see you Kathy D nice to see you as well Alex um weona I see you Mary C Professor

(04:53) Jay's here arcade Outpost good to see you Jen Jen X asks hey Ashton and thank very much for this I don't know if that's Australian dollars or whatever but whatever I appreciate all donations thank you very much has there been any discussions around any surveillance of MH370 exiting the Wormhole event this needs to be investigated also uh there's nothing we can do we don't have we don't have two videos on the other side it's not like they're just handing out classified videos to the public say here

(05:21) you go guys here's our most secret weapon here here it is um but yeah I mean sure there probably are out there if they filmed it going in it would not surprise me if they filmed it going out on the other side and we'll get to some of that here in a minute as well uh Will William schwant thank you man for being here appreciate you uh who else was in there uh William Bill's here as well happy belated birthday again to him he turned 68 yesterday yeah Josh says the beginning the end with the the AI music

(05:49) for sure uh Jake hero of the of the chat guy who's donated a lot appreciate you man um neurotypical people yeah uh Christopher George hail I don't know about all that um oops there was somebody's comment up here sorry guys it's hard because you guys there's so many of you people in the chat I appreciate you all for getting on here early um I'm probably not GNA be able to shout out all the rest of the people there's so many people oh um yoga with Denise says have you been in contact have you been talking to Mr

(06:22) Mr mbb333 does anyone know who that is if anyone in the chat knows who Mr mbb333 is let me know that's not uh specific enough Denise I have no idea what that means um Sam Chris I see the rest of you guys in the chat as well Brian Tass Carla Joe uh fancy Flint AK crazy fool uh good to see you guys okay um okay where are we gonna start here tonight uh we're probably not gonna have a super long stream tonight so first thing is on a personal note things have been challenging let's say uh I may have to try to step back especially during

(07:07) the day while at my work so that I can focus on work more it's hard because it's like I get so many messages I getting random calls all the time from people as well related to this stuff people that want to talk about stuff people that want to Network all this stuff that's out there um so I don't know what the next step is in terms of this like I'm at a crossroads right now where it's like I'm I've been giving so much time to this investigation and to everybody in these streams and

(07:32) everything like that that it's very difficult to balance that with my normal work and I really don't want to lose my normal job because I really love it um so if you do see me posting less during the day that's probably why uh it doesn't mean that I've been disappeared or anything like that and this case will never go away um until the government issues a statement and that kind of goes into my next thing that I want to say uh man I'm not even sure exactly what to say but that's why I like doing live streams

(08:01) where we can kind of just chat um so now I'm I'm 100% sure these videos are real so uh I'm going to pull them up here while I do this SEC sorry guys I didn't actually plan on playing the

videos but here we go I want to play this while I talk about it I want to share the videos as much as possible because these videos are what really happened MH370 and and uh people deserve to know the **truth** and there's some people out there a lot of you guys have seen these videos a lot and for you guys you know there's

(08:37) nothing new when you watch these but there may be new people that are out there that are watching um these videos are the most important videos in the history of the world at least so far that we know of in the public perspective the reason these videos are the most important videos in the history of the world is because that's MH370 a plane that disappeared where we found no plane where we were told to go look in the South Indian Ocean and we found absolutely nothing there and we know the United States

(09:06) government knows exactly what happened to this plane without any shadow of a doubt and yet they've been completely silent about it and we know the United States government's implicated because what we see here on this video is the United States Secret Spy surveillance apparatus filming This Plane um the second video shows the United States drone filming the plane from a different perspective as well uh so we know they know what's going on here um and I would also say that I'm almost 100% certain as well

(09:38) that what we're looking at here is the most advanced super weapon secret super weapon on the face of the Earth right now uh there's probably other applications of this super weapon that we see here but this application that we see right here of this warp drive event is something that is completely unknown to the public that the public has no idea we even capable of and this is the type of thing too where we are probably revealing this to our adversaries uh most of them per already probably figured it out because they'

(10:09) these videos have been out there on the internet um but the ones that don't know the ones that are a little further behind they're they're getting redpilled right now to realize what the United States is capable of um somebody in my reply said well this would mean the United States government is like the predominant superpower in the in the world and the answer is yes yes they are they are there nobody can stand even one second you know in face of this kind of Technology this kind of Technology uh

(10:38) renders even nukes completely obsolete so this is extremely powerful yeah and somebody just posted in the chat this is why you never see us testing Hypersonic missiles because Hypersonic missiles are even nothing compared to this this is like a Hypersonic plasma orb that we have the capability of putting them into a synchronized formation and literally bending SpaceTime so that the object just gets warped to another location um so what I want to say here is I'm going to make some statements here that are of course going to be trust me bro

(11:12) type situations but of course you just can listen to me and if you're somebody that you know knows that I'm telling the **truth** or not you know you can make you can judge for yourself so uh we've been dunking on the United States government this investigation has just been it's like the pton Manning Saturday Night Live commercial where pton Manning's just picking on the

kids and throwing footballs at them hitting them in the face and they're just fumbling the ball and falling over that's us what

(11:38) we're doing in the United States government the most powerful government in the entire world that has orbs that can teleport objects and us some random people online are just straight up boom dunking all over them all day long exposing all their secrets nonstop and the best part is there's nothing they can do about it whatsoever because we have PL plausible deniability and we can always just say well we have no because they didn't tell us that the videos were classified we have no reason to think

(12:05) that they aren't you know so like these were **leaked** on the internet too bad so sad you got screwed over um I know for a fact that the United States government is taking these videos very seriously people in the United States government they're taking this seriously that's as far as I'm willing to say um but we know from Arrow's response as well that they found something related to these videos based on the email they sent me back arrow is definitely ghosting me because they probably the

(12:37) people that looked into it realized that this guy figured it out like this they figured out our super secret weapons we can't deny anything to him they've probably looked at my stuff and my content and realize like there's no way to lie about this uh we've got way way way too much evidence uh there's no denying this they're going to look and seen that they took these videos they're going to look at Edward cin and figure out he'd **leaked** them like we found everything we found the guy that **leaked**

(13:00) them if Edward C Lyn didn't leak these videos Arrow would have responded right away and they would have said nah he's not the guy that **leaked** them like there's nothing they can say at this point they need to like convince Edward C Linn to come out and say that these videos are are he didn't leak them like they need him to like lie to National Television at this point or they need to send like the CIA to start going planting debris in the South Indian Ocean because like they're **[redacted]** they're just **[redacted]** there's nothing they

(13:26) can say to Gaslight their way out of this um now in addition to that I'm gonna say even more stuff guys uh the white hats are afraid of this it's not just the black hats the white hats are afraid of this as well the reason why that Ross kohart and Jeremy Corbell and these guys that have contacts are ignoring these videos is because their sources are either telling them to ignore them or their their sources are lying to them about these videos even the good guys are lying about these videos and the reason is

(14:04) because this is literally an issue of National Security imagine just to put it in some perspective for you that we had found nuclear weapon codes and I'm just blasting nuclear weapon codes all over social media everyone would lie about it even the good guys would lie about it that's the equivalent of what's going on right now this is the reason why none of the UFO people are are talking you with think if somebody's showing you these videos and you're into UFOs you would be jumping all over it Jeremy Corbell has

(14:35) no credibility he throws the shittiest videos on the internet of floaty jellyfish and stuff like that you think he's not a thousand per interested in these videos of course he is he's controlled he's been controlled to not talk about this because they know it's a national security issue and they don't want to get in trouble for exposing it and the and the thing what I would say is I don't even really blame him if I was in their shoes I would probably do the same thing as well I would probably

(15:02) lie about it as well if I had an NDA that said I can't reveal government US government weapons and Tech and capabilities I would probably be lying as well but the good news is I don't have one no NDA for Ashton so I'm just going to keep exposing to you guys because I feel like everybody deserves the **truth** and especially the people that have been following this investigation for so long you guys deserve to know the **truth** about these videos MH370 and everything out there so I'm just going to keep doing what I've

(15:30) always been doing which is telling you guys everything that I know uh and everything that we've revealed and investigated and yeah everybody out there gets to know the **truth** for themselves and until the government comes and talks to me or knocks on my door and tells me to stop so if they don't do that then this is just going to keep getting worse and worse like the reality is that the government underestimated me and they underestimated us as a community and they thought that they would be able to get their lazy **debunk** YouTuber pieces of

(15:59) **[redacted]** to make these videos go away and their like little **Reddit** trolls and everybody else they got out there that they would be able to convince the world that Ashton's like crazy or whatever **[redacted]** and they failed they failed miserably because they underestimated me they underestimated this entire community and now they're in a situation where I don't even know what they can do at this point you know um and if they were to try to do something to get rid of me then that's going to also just

(16:26) make it look even more suspicious yeah these videos I mean you look at this and it's obviously real when you look at these the only reason why people don't think they're real is because what they see is too incredible and for a lot of people uh it's kind of like how you still walk around you see people wearing masks outside even though Co was like four years ago because once somebody's been told something and indoctrinated into a belief system that the government tells them then it never

(16:54) goes away that's the thing about when people are told stuff from the position of authority and so for a lot of people for these videos to be real it means their whole lives are a lie it means everything they've ever been told is a lie and they would have to re-evaluate all their preconceived notions about what they thought was real and what they thought wasn't um and that's just so the reality is even if like the government were to come out tomorrow and say these videos are real there the **debunkers**

(17:20) would never change their opinion like the people like **Mick** West or whatever the ultimate irony of the **debunkers** is that sometimes if you look at my replies you'll see them say

like oh what would it take you to convince you that the videos are fake and I say well it would take you to find the hoaxer or to find the plane and then they go quiet because like they don't expect me to have like a legitimate here's what it would take if you ask the **debunkers** what it would take they can't answer the question because

(17:45) there's literally nothing that would convince the **debunkers** these videos are real nothing at all there's nothing at all that would convince them even if Edward C Lyn came out and said these are the videos they wouldn't be convinced they would still continue to lie and say the videos are fake even if the government came out they would say well the government government doesn't know what they're talking about I'm goofy I don't think the government knows what they're talking about because they've literally done

(18:06) that already like **Mick** West literally did that when the dod Navy videos uh were **leaked** to the public or were Declassified he immediately started Tred to **debunk** them again after already being proven wrong so uh that's what like so there's not really a lot of point engag in the **debunkers** and the people like that because they're not really honest with themselves um if somebody can't look at these videos and just tell right away that we're not looking at video game Graphics here then they're they're just

(18:34) like a little bit they're not ready to be woken up yet um so that's what I wanted to say off the bat because I think the question there is so now that we understand the framework of what's going on um we can figure out what our next step is what our strategy is because the reality here too is that um they know exactly everything we're doing if they if they don't the government doesn't have agents listening to me even if these videos are fake they should have people listening to me because of what I'm saying about the

(19:06) government and and exposing about them not just from the videos but their surveillance capabilities too uh so I hope our government is smart enough to have people surveilling me and listening to all the stuff that I do because if not man feels like kind of embarrassing for us I I expected more um so then we're just going to propose we're going to post our strategies out to the public as well live stream into the world so everyone knows what our strategies are because they're probably listening so now that we looked at this video

(19:33) let's go back okay so we looked at the MH370 videos we're going to watch a few videos tonight um so how do we proceed with this so let's just think about it together these videos that we are looking at here expose President Obama President Obama 100% knows these videos are real and he would have he's he was the highest you know he was commander-in-chief when we did that he had to go to Malaysia and start covering it up he had to probably call the Malaysian Minister uh the Malaysian prime minister and uh tell niib to cover

(20:08) it up um so it's not like a situation where we're gonna get we're not going to get like justice for this you know that's that's not gonna happen the people that did this are never gonna face Justice that's just the **truth** of the situation for everybody out there so I don't I want to just level it for everyone um you know that we're never going to get people to come out and admit

that they did this and even if we did no one's going to go to jail over this um the best we could hope for is that there

(20:39) would be settlements for the families where this the US government would pay the families for what we did to them and to their loved ones but we don't even know what happened to the loved ones like we have presumed that many of them died but some of them may have lived for all we know maybe some of the loved ones were returned and that's why the families haven't talked almost impossible to say thanks Obama yeah no this is this is a true this is a true thanks Obama situation this like a honestly can

(21:07) someone make a meme and put the MH370 videos on there and do a thanks Obama for me because that that is an epic meme that we might have to drop um so with that given that uh that with that being said I think that our approach has to be that we have to go for amnesty for the people that did this and the people that are hiding this technology if we want anti-gravitational technology SpaceTime technology warp drive technology if we want free energy then we have to come out in support of the amnesty for the people that covered this up because

(21:41) otherwise we're never going to get it otherwise they can never admit to it because otherwise the situation becomes that the people that did this have to go to prison and those people never never going to prison um so I think that's the hardest thing to say especially as somebody who has been investigating this case and has been doing it to get Justice for the families um United States government took MH370 we we took the plane and we lied to the whole world we convinced every media out there to lie to the world

(22:13) about it we may even have set up fake experts to go on CNN and tell people that phones can ring when they're underwater which like the whole world's like no okay yeah phones can ring when they're under water that makes a lot of sense wait where are the cell towers um so you know it's a pretty messed up situation uh but the reality is that this kind of Technology will help fix the whole world that's out there um so we have to propose amnesty for the people that covered this up so that they

(22:45) can come out and and they can give it to us safely otherwise you know we're never going to get what we need out of this the other part of it too we're going to look look uh some clips up here as well is that the reason why they're hiding the free energy is like all the movies and TV shows say uh because it would sh it's too much of an impact it's too impactful to the economy you know some companies will immediately go bankrupt and other ones will immediately have their stock prices raise rise up like a thousand

(23:19) perc instantly the next day um but not just that uh it could potentially be the destruction of the whole world you know more Wars would instantly begin we might even have wars over what we did to the plane for all I know uh so it's pretty wild um I'll look through some of the questions here in just a second so make sure I didn't miss anything uh what was the other thing I was going to say about amnesty oh yeah so here's the other thing that's crazy God and the more

I this is something I've been thinking

(23:55) about recently uh that we talked about in some of the spaces which is we might even have to come out and say we did the right thing by stealing the plane I can't believe I'm saying that now nine months after but I think that most Americans if you tell them that the United States government took this plane so that **China** would not have access to Super Advanced weapons the same weapons that we used on the plane I think the vast majority of Americans would say we did the right thing in fact I think I think maybe we did do the right thing um

(24:33) and that that is a dark thing to say everybody but I think it's the **truth** and I always like to say the **truth** so it's it's hard to say but not only do we potentially have to give amnesty to these people but we might have to admit that if preventing this plane from going to **China** was actually preventing them from getting access to this technology uh then from a geopolitical perspective You could argue that it was justified in doing that it's probably the darkest thing ever on the face of the Earth uh

(25:04) that I've ever had to say um but it's kind of like the same as saying like it was justified to drop nukes on Hiroshima and Nagasaki to completely destroy them uh and a lot of people say well killing is never the right thing but we don't even know that we killed these people um so but but you're right and I think that the world's not that simple is what a lot of people would say is that the people that dropped a nuke would say that well we we Dr dropped a nuke because we saved millions of lives

(25:30) from having to go to a land War you know and that's probably true it's probably true I wish everything was as black and white as everybody wants it to be but it's just not um so that's what I wanted to say here right away let's go to some questions real quick and then we'll look at some clips that are out there and I know it's controversial guys and **I want you** guys to think about the controversial things that I just stated uh because I I also want people to think about the reality of what I just stated

(25:56) as well if we can never get disclosure uh catastrophic disclosure without amnesty and without at least passively supporting the actions that were done then should we do that or should we just continue to live in the Stone Age and not get any of the goals that we want it's a tough pill to swallow that in order to get disclosure of the technology that we want we might have to a give amnesty to the people people and the monsters that have been doing these actions and we might even have to support it it's a tough one

(26:39) guys okay um somebody asked what are the people ask here in the chat couldn't we have stopped the engineers at the gate um I think this was also a message message to our adversaries personally CU yeah there's probably other ways but if you're trying to stop 20 Engineers that's a lot of people to stop man what are you going to do disappear them all at the same time I mean we literally did that that's because they were all on the same plane and it made it easier uh the Smith month modernization

(27:19) act on Wild Goose chases unless just tell us exactly what you think the ACT says and why it's important so like you got to realize I get like 50 DMS per day everybody wants me to hear their stories what have you reality is I don't have time for any of it so if you want to send information to me you need to be as explicit as possible if you send me a clip you need to tell me the the segment you want me to watch if you have something you want me to see don't send me a 70 page paper like literally give

(27:45) me the snippet and the quote that you want me to read um I don't mean to say that to be rude that's just a reality of when you have 120,000 followers and you've got people messaging you all day long every day calling you all day uh just it is what it is okay let's see yeah for anybody who's still unaware the clouds absolutely do move naturally people always struggle with this because they don't know what they're looking at a lot of people don't realize we're looking down in the

(28:12) satellite video the clouds move the clouds evolve naturally uh you can find my post about it if you want to I'm not going to rehash it every single time every day that's probably like one of the number one questions I get is about the clouds and where the people are stuff like that um and and I'm probably going to stop answering a lot of those questions cuz a lot of people too like literally want me to in the replies with them in Twitter tell them every single answer to all their questions like literally just look through my

(28:40) highlights and you only have to go down like five posts and you'll find every answer to every question that you want uh I just don't I can't change everyone's mind individually anymore so I apologize if anybody's out there and they see that you can either help me out and you can post replies for people that are out there to get them up to speed or direct them to that as well but if people aren't even willing to go look and do a minimal amount of research to like just look through my replies or not

(29:04) my replies but my my post history uh then I can't I can't do much for them that means they're not really interested in knowing the **truth** uh the origins of the letter to Ashton Forbes yeah I don't think we're going to listen to it again tonight but we probably will listen to it um pretty frequently uh because that was the weirdest letter ever and I'm not sure that all of the letter is 100% true but it it definitely makes you think about certain aspects um the letter to Ashen Forbes is showed on a YouTube

(29:29) account that created some AI stories for like current events that were going on and then all of a sudden there was this one for letter to Ashton Forbes in there like directed right at me and then it did a couple more uh with couple more like stories one about Chan Thomas one about the glitter conspiracy and there was like a couple messages in the beginning of those to like clarify the letter Dash and Forbes which tells you that the whole channel was pretty much just dedicated to send me that letter and then a few days later the Channel

(29:58) goes dark never post another message ever again super weird um definitely feels like it was a some something that was being specifically sent to me um and I think it served his

purpose because now you see like I was looking at my engagements this last week we've had 17 million engagements the week before was something like 16 million um this is like my Twitter profile is getting higher raans and CNN gets um so and this also shows you as well that uh the government's telling the media not to talk to me so without any Shadow

(30:34) of Doubt the United States government is telling the mainstream media not to talk to me this story is huge uh there's no excuse for them not to be contacting me and trying to talk to me about it Fox news is talking to the kid that saw aliens last year like in his backyard and there's people posting about it posting blurry black Shadows going oh this proves there's aliens so if Fox News is willing to do reports on that the only reason why the mainstream media is not talking to me about this case is

(31:01) because the videos are real and because it is literally the most secret classified weapons the United States government has that's the only reason that's the reason why they're not talking to me if the **debunk**ers were right and we were looking at CGI or some crap like that the media would be all over me talking to me non-stop because they it's not a threat and they would love to talk about stuff that's not a threat when it's a threat like it is that's when they don't talk to you

(31:25) that's when they're directed not to talk to you as well um and I have reason to believe that even Australian media was told not to talk to me they literally cancelled one of the appearances I did so here's a quick story for you guys um Captain Dan Hanley who is the um you know he what is it 911.

(31:45) org or whatever it is um he and like I think uh McConnell um is it oh crap I'm already forgetting his first name I either get Fleet or James McConnell incorrect but they Captain Dan Hanley was asked to do a thing on MH370 for one of the Australian news stations I don't remember which one I'd have to go look through my emails but then he emailed me and it was like hey Ashton you should come on with me and so we sent the things like okay Ashton will come on with me and then the guy replies back he's like okay great

(32:15) we'll do that and then like the next day they reply back say sorry we have to cancel we had uh technical difficulties [ ] total [ ] the Medias of the world the five eyes media of the world are are literally being told not to look at the MH370 videos they're being told not to talk to me because they are directly implicated in the cover up and uh you know at this point it's just a matter of time before it gets out to the world and when it does get out to the world everyone will know the **truth** that this plane didn't

(32:43) crash in the South Indian Ocean and that we covered it up in the various countries of the world Malaysia United States UK Australia um they directly covered it up and then some of the other countries like Thailand India uh Indonesia like they were just strong armed into saying nothing about it uh and that's the **truth** that's the **truth** of what happened um yeah and uh I'm not really going to be addressing too many more like **debunk** stuff either for the most part like if you want to think the videos are fake go

(33:19) on with it they're not fake I know for a fact they're not fake so if you if you want to think that they're fake you want to think you're looking at CGI go nuts man I really really don't care anymore at this point I've already addressed all the **debunks** that are out there if you're the kind of person that thinks we're looking at video game effects in these videos then you're probably a lost cause anyway you can just go back to sleep go back to living your fake life no one will bother you about it ever again um

(33:40) I'm just trying to reach the people that want to live in a better world and we're trying to figure out how we're going to go ahead and and accomplish that which is not going to be easy because the cover up and cover up of this technology is something that's extremely dark and it goes back not much longer even than 10 years this is just the first time where these videos have shown up in the in the real world something like this where we have like undeniable proof where not just a video but two videos in

(34:06) perfect s from multiple perspectives with a real world event that we were able to prove was a literal cover up oh what just happened Jake Jake again wow man thanks a lot dude that's huge um Jake says thanks ashon for raising the amnesty issue the only acceptable term would be if the **debunker** stop harassing you and us and the media talks to you right after the government approves introduction to free energy that's I think that's a little bit wishful thinking but I think that's a a good thought and thank you very much for

(34:33) for this donation you've been donating a lot man so I hope you're really rich because that's really nice of you otherwise you don't need to donate that much to get my attention um I'm not I'm not a actually I was gonna make a bad joke there but I'm not gonna say that uh so I appreciate it man um definitely that's really nice of you I don't care about the **debunkers** for asking us what I would say too is that it's not I don't think it's an accident that all the **debunkers** in the world right now are all

(34:58) like just completely losing it right like we've got the United States backed into a corner we're getting way more attention the more they don't talk about the videos the more and more awkward and obvious it is that there's a coverup going on like this is the biggest story in the history of the world I'm getting 17 million impressions just on my you my Twitter Channel alone just this week like this month overall we're probably pushing a hundred million impressions and the media won't talk about it the

(35:25) government won't issue a statement on it because the videos are and they've got every **debunker** that is under their thumb out there attacking us trying to attack my personality trying to attack my credibility non-stop uh trying to attack the videos making these stupid videos that are posting on social media like they're literally out there paying to promote fake falsifications to CLA to convince people that were looking at CGI and crap like that and their best play was the cloud image which almost

(35:54) certainly they planted on the internet like during the Edward C Linn case or right after for Edward cin case so that they would have a backup in case things went horribly wrong but

they underestimated us again because they didn't think they forgot to look on they forgot that the Torrance would be out there that was their biggest mistake if the government had remembered oh [redacted] people torrent these websites and they had dropped the cloud image on one of the torrent this whole thing probably would have gone away but they didn't

(36:21) they [redacted] up and they forgot that people will torrent the website and we looked at the Torrance and there was no cloud images on there and then that was the real impetuous for us to proceed forward because then we also realized yeah there can't be a 2d Cloud picture we've got two different angles any VFX artist that doesn't sound start their argument with that you would need a 3D rendered environment to create these videos is lying right off the bat right off the bat if somebody says they don't

(36:49) need a 3D render environment to create these videos right away they're a liar and you can just ignore everything they say after that guys um because because you have two perspectives because they're perfectly in sync and there's no discrepancies on a single frame you must like any any person who's going to go about that challenge is going to need to build a 3D rendered environment to make sure that both are Instinct and the point of that is you make your 3D rendered environment you make your plane

(37:13) you have your orb circling and then you take two video perspectives and the reason why the debunkers can't admit that obvious truth is because it destroys every single one of their debunk attempts today all the debunk attempts today claim that they've got 2D visual effects and 2D Cloud picture and uh and it's much much more difficult to make a full 3d rendered environment so this is the reason why they've been lying about the 3D render environment situation and it's just sad because a lot of these people are just fake VFX

(37:41) artists that um you know are just pretending for the most part and most of them aren't really like they don't work for any major Studios or anything like that they're just people that like fool around with VFX or Freelancers and they pretend like they're VFX artists like I've got Jeffrey Ford um lead VFX artist from Marvel Studio on the record saying it would take uh four to six months to to do these videos um so like anybody else who wants to put their credibility up with the guy who made Avengers

(38:08) endgame Captain America Civil War and Spider-Man no way home yeah good luck uh so let's see here oh Devas man wait what just happened DeVos go on fire as well wow guys you guys are on fire you guys are going to make these dunkers super triggered man you guys are donating more money to me and they've spent trying to promote their their like falsified uh falsified comparisons to debug the videos yeah the letter to Ashen forb said keep talking about it keep talking about it that might be the most authentic thing I've ever heard anyone

(38:44) ever say so you know what just because of that just because you donated here I'm going to play the last bit of the letter to Ash and Forbes um it's actually like saved in my like history here when I just start typing letter Dash and for ORS so let's pull this up because you donated I think it starts like 10 okay here we go can you guys see that sweet okay so this last part is

probably the most authentic part about the letter to Ashton Forbes because it talks about the implications of what this technology

(39:31) really means like not just like what this technology means the world but like how you even get this information out to the public so here we go finally I want to say this how do you defeat someone who can turn skyscrapers to dust completely erase whole neighborhoods in an afternoon and steal a burning Boeing Triple 7 midair someone who when needed has the complete control of all media and crafts the perception of events and has most of humanity eating from its hands after almost a full life in their service I think I know the answer you

(40:09) talk about them and you don't stop talking so wow that still gives me like anything where you like you have your hair standing up on your arms like that's when someone's telling you the **truth** you know and that's the thing is how do you defeat somebody with unlimited power unlimited power which is what the m370 rep videos represent unlimited power the ability to craft the perspective what does it say perspective of events or whatever uh from the media has the the media doing their entire bidding

(40:42) that the media will yeah craft the perception of events I think it says and has the whole world eaten out of the palm of their hands so the media part that's where like you have people on CNN lying about the what happened to the plane the having people eating out of the palm of their hands that's like the **debunkers** like a lot of these **debunkers** are not being paid directly by the government they're just literally brainwashed it's like the movie The Matrix where you have like people fighting to help out the the agents

(41:11) because they're just literally brainwashed and and if they were to go against their programming would be to admit everything they thought was true is a lie if you guys were in the space that I was in uh with I think it was the Nick Fuentes space like people like Destiny and the cren like they literally think the government doesn't lie to them they think the media tells them the **truth** and then Ian Carroll's like dude do you guys know the CIA like literally controls the media it's like been known like they

(41:43) craft perception of events and they're like no you you they would not lie to us I was just sitting there like holy [ ] these people are brainwashed as hell like you have to be just completely brainwashed to think that you turn on CNN that they're telling you the **truth** and they're not like telling you what to think uh it's just literal brainwashing uh Pier thank you for that donation \$20 donation yeah you guys are on fire today um I first saw the video because Glenn Beck my hubby told me that

(42:11) because he knows this kind of stuff fascinates me I felt like this shows the product of years of dark R&D keep it up good stuff yeah thank you I think the Glenn Beck uh interview opened this up to a lot of people and here's the thing a lot of people go on big shows and don't get a lot of followers afterwards because people are like that's full of crap blah blah blah I went on glenbeck and told people we have warp drive technology and I got like 30,000 followers from that because people listen to it and they woke up and

(42:43) they were like whoa this guy's not lying like he's at least telling what he thinks is true and then people come and they come to my post and they read my content and they read the scientific papers that I show and they go holy [REDACTED] this guy's actually legit he's not lying you know and that's the difference is that when I go on big platforms I get huge amounts of people following afterwards other people people that are [REDACTED] artists whatever they go on huge platforms nobody follows nobody

(43:10) cares even these ufology people a lot of them I have more followers now than most of the like bigname people in ufology because they go and you know I didn't want to crap on James Fox anymore but he went and he put this clip out there with Tim Brett and he's like oh we have a big announcement coming up soon and it's going to be great and I'm just sitting there going damn James this is just it's a bad look man it's like this is like NASA when they make an announcement for an announcement just

(43:39) say what the [REDACTED] you know man stop with this posty footing around about oh and tomorrow I'm gonna have a big announcement of announcement I'm gonna Premiere my next guy that had telepathic Communications with the blue alien or whatever like dude nobody gives a [REDACTED] about that nobody wants any more stories we want hard evidence like the videos that I'm promoting and we want somebody digging into them looking into the science doing the investigative journalism that's what people are gravitated towards so this is the thing

(44:06) where it's like it's too bad that people like James Fox and some of these other people as well didn't reach out to me because I could have helped them out a lot it would have helped their careers out as well but the truth is people like James Fox are also Beyond any Shadow of Doubt controlled by the government I don't know if he's being misled or if he's a willful participant uh but absolutely no doubt in my mind they are telling James Fox and they told James Fox that you know either to say the

(44:31) videos are fake or tell told him to you know people that he trusted told him the videos were fake some of his sources this so this is the truth about all these UFO people like I'm just going to lay it down for you right now 45 minutes into this stream tonight um let me have my drink real quick it's going to be a good one guys you ready okay okay so David grush uh luou alzando these kind of guys they have ndas their ndas prevent them from speaking about anything related to us surveillance capabilities or weapon

(45:10) capabilities that's the reason why these guys can't say crap about the MH370 videos or a lot of the stuff in ufology because it's not an issue of talking about aliens or whatever this is why David grush can say oh we've got alien bodies because that's not a threat that's not a national security issue they can't talk about the technology because the technology is a national security issue I think they absolutely know about the technology and they cannot talk about it now you take the

(45:38) next tier of people these uh UFO influencers Ross kohart Jeremy corbel James Fox Etc everyone wondered why are these guys not reaching out to Ashton super weird like Ashton's

out here saying I've got these UFO videos it's because either they know the videos are real and they're being directed to lie about them because they are white hats black hats doesn't even matter and they know it's a national security issue and they don't believe that we should be telling the world about it or they're

(46:09) being lied to by the governments and saying you know manipulated in a way where the people are telling them people their trusted sources that they won't name are telling them that the videos are fake and then they're like oh well that's my trusted Source Who told me that the videos are fake I have screenshots of Ross kohart talking to Think Tank 528 Vibes and Ross kohart saying oh I think the VFX is a perfect match that goes to show you Ross kohart is 100% full of [REDACTED] 100% he's got eyes he can tell

(46:41) doesn't match he is spreading literal misinformation and disinformation Ross kohart is and I think they know that we have advanced technology that's out there and this is why they never Broach these topics of well what is the basis of tech this technology can it be used make a super weapon and things like that so now you guys understand the framework and Landscape of the ufology world as well as just disclosure in general and what we're up against here there's basically nobody like me and like us

(47:14) that are doing what we're doing out there which is just putting the information out there to like straight up bear information here it is here's the hard truth here's the opinions you know um and you know not being afraid about what that means to everybody else and what it means to the world the true reality is that this technology probably will be the end of the world I think that it's not just a geopolitical thing with respect to the implications of what this technology can do to our planet uh

(47:43) but it's also a situation where um you know we might actually just destroy ourselves from this technology that's just how powerful it really is it answers all the big questions like the firmy Paradox uh answers why they would hide it uh answers why you know everybody's so talking about aliens and ufology as opposed to this stuff it answers everything um Hector greywater thoroughly enjoyed your channels your tenacity courage and Analysis I appreciate it because my life expectancy is definitely just plummeting for sure

(48:15) I'm trying not to get Boeing whistleblower out here um by the way like more Boeing airplanes crashed cheers to that oh sorry my my headset thing is falling out okay let's get to some of the videos that we're going to review tonight I think so I've done enough of my explanation of all the stuff I wanted to say today you guys are all up to date on everything so you guys know and to be honest guys I don't want you guys to harass all these people that are out there I just want you guys to know the

(48:55) truth so uh especially with respect to like the people out there lying they're lying to us for what they think are good reasons you know David grush is not saying that uh you know talking about the technology because he thinks that it's in the interest of National Defense same reason why Lando's doing it in their own minds they're lying to us is for our own good I think

that the people in the government also think they're lying to us for our own good uh with respect to you know Jeremy Corbell

(49:28) and those guys like Jeremy Corbell literally lied to Joe Rogan about the videos straight up lied to Joe Rogan about the videos to not have me go on Joe Rogan Jeremy Corbell did which honestly is a piece of [ ] move uh but at the same time it goes to show that like Jeremy Corbell the stuff that he's posting out there is completely full of [ ] and he's being fed information almost certainly that's non-threatening to the United States government to just string people along forever um this is the reason why he's not showing any

(49:56) videos of jellyfish flying out of the water or whatever but then he'll talk about them and then he gets and where's he even getting his videos from where's he getting these classified videos from the government's giving him these videos so these people are probably working on a slow disclosure like a literal spreadsheet of what what they're supposed to disclose at what time and this comes down to the idea of just like getting people slowly acclimated to what this is all about um because as you guys

(50:23) have seen when we talk about stuff like warp drive this [ ] broke people's minds people out there going this guy's crazy talking about warp drive no the problem is a lot of people have to be built up to this and I just don't care I'm just ripping the bandaid off telling you guys straight up no we got warp drive yep we got warp drive so let's start with this clip hopefully this doesn't get me copyright strikes I'm gonna go through like halfway through okay here we go this is a clip from a movie that I've

(50:51) never seen before uh called chain reaction in 1996 I might have to watch watch this movie later tonight yeah I'm a realist I'm kind of an idealist but I'm also a realist which I think is a very dangerous combination wait wait can you guys not hear that let me try again okay sorry I think I did the wrong screen share guys hold on okay so the first thing he just said right there was that um people just want to live in their homes and eat their their TV dinners is the first thing he just told Kiana Reeves is basically he

(51:35) told them people want to live in the dark and the reason why this is important is the idea that like a lot of people out there are too inundated into the Matrix itself they they don't want to be woken up it's too hard to believe that they would be lied to and then we have all this information okay here we go can absorb it now so right there it kind of explains the whole situation right is that it would change everything from a geopolitical perspective the world can't handle free energy free energy will

(52:10) change everything so what is the government's goal to release it in a Avenue that they an amount that they can absorb that's literally what the government is doing that is exactly it completely explains exactly what the situation is right now in the real world world today is that they leak the technology out slowly over a long period of time and slowly over a long period of time we can absorb more and more and more technology and maybe we never get the free energy it's literally controlled disclosure exactly as it was

(52:44) said um how come I can't uh I wish I could block people from um the chat on you on X I'll take care of those people later anyway okay yeah um free energy would disrupt the existing world powers it would defeat the need for hierarchies as they are founded on resources of resource ownership yeah it's definitely going to manipulate that as well um and that's and that's a big problem is it's too disruptive but I think it's not just that it's disruptive in this case it's also the situation

(53:23) where it would lead to the end of the world like we' actually just destroy our EI that's pretty much the main thing that I figured out what what is up with all these people talking about blocking each other no idea what these people are talking about no idea okay anyway let's keep going okay um let's go to the next one here where's my next clip oh this is a clip from Oppenheimer that we're going to PO okay how do I whatever not revealing anything I don't think here okay here we go these are all my bookmarks you guys

(54:15) can see here we go where did you come yeah so here's a situation as well that it talks about um what is the what does nuclear power even mean um and the answer is we gave them something that they never expected something that is almost unlimited power this is Oppenheimer and the situation of the ability to destroy themselves when I think about this too now in retrospect I go man nuclear weapons are powerful and everybody talks about how we can destroy ourselves with nuclear weapons but the weapons that we're talking about in the

(54:50) MH370 videos that's infinitely more powerful than nuclear weapons that's what we can really destroy ourselves it even makes me wonder if we didn't figure this technology out in the 40s the same time we figured out nuclear weapons and we've just been keeping it secret the whole time slowly advancing it slowly making it more and more and more powerful behind the scenes um give me one second chat figure out what's going on here um what am I going to do here hold on anyway stop spamming in the in the

(55:47) chat if you don't mind otherwise I'm going to start blocking people I do have uh I do have the ability to block you now pulled it up I'm going to leave this person's name up here just in case I have to do it okay next thing next clip here uh the biggest story is who controls the directed energy electromagnetic weapons in ARA no I would disagree I mean those are powerful but the first it of this type of technology is scaler technology and scaler weapons uh is uh somebody else wants me to unblock them

(56:41) [REDACTED] I don't know can people even reply in my streams if I haven't blocked sorry I can't it's I got too many things going on to figure out I guess people can reply um the first iteration is weapons on the ground shooting upwards like the harp and what have you and an Arctica but then you put it in satellites satellites facing down in fact there's a somebody made a post as well about using some kind of EMP type weapon I think this is what people are afraid of in space is using one of these

(57:10) scaler weapons as a as an EMP that can just wipe out satellites in outer space that's that's what everybody's afraid of up there and then the the iteration after that is you make it

into orbs that are floating around and then you can use those weapons anywhere you want now you're not limited to any range or anything like that um I saw Lou reviews post a message you're I'm I'm not going to debate I already talked to you I I reviews L reviews for the record didn't even know that quantum computers existed

(57:38) quantum computers have existed for almost 30 years I'm not sure what kind of debate we're going to have like you jumped into a space with me the other day yesterday or whatever and like the first thing you asked you want to know where I got my news from I thought maybe you were thinking it was be some kind of Goa that I was going to say like I get my news from Fox News or something like that I haven't had cable TV in eight years and I don't get my news from anywhere uh certainly not from [Reddit](#) uh certainly not from

(58:09) any uh news stations not from the AP or Reuters or anything like that because I use something called critical thinking which is that when I read an article that I find usually from Twitter scrolling through my feed I go to the article and I go what does the headline say the headline is usually something called narrative or editorial and I go what are the facts in this article and I dig through the facts so now it's to the point where it's like if there's something important that's G to happen there's gonna be like

(58:36) 50 people posting about it on Twitter I'm not really worried about it I prefer to do stuff like read scientific papers like for example this one right here constant velocity physical warp drive solution because these are what is interesting to me warp drives are Exotic Solutions of general relativity that offer a novel means of transportation and this study we present a solution for a constant velocity subluminal warp drive that satisfies all the energy conditions the solution involves combining stable matter shell with a

(59:06) shift Vector uh distribution that closely matches well-known warp drive capability Solutions such as the aluer metric which is alabar warp drive is what I've been promoting we generate the SpaceTime metric numerically evaluate the energy conditions and confirm that the shift Vector shift Vector distribution cannot be reduced to a coordinate transform uh transformation this study demonstrates that classical warp drive space times can be satisfy the energy conditions by adding a regular matter shell with positive ADM

(59:36) Mass that's the stuff that I enjoy Lou I don't think we really have a lot in common to be honest with you um and this paper was posted uh April 29th 2024 so less than two weeks ago on the internet that's the stuff that I like to look into man let me see what else we got back going on here so when it comes to like debating people I'm certainly not going to bother with someone like Lou reviews I don't think there's anything to gain by debating Steve Cambrian the irony is these people want to call me grifters

(1:00:11) and they obviously are just like trying to clout Chase because I've got so many people listening and following and they've got YouTube channels that have been failing for years and years and years and years and they just want to get more viewers you know so why would I feed them that when they been trying to tell people to not platform me for months and months and

months and months like now it's time for you to get a little bit of karma back on yourself um so no I'm not going to baate you plus I the three people types of

(1:00:38) people I'd be looking to debate people that know about the videos uh and there's really nobody that knows as much as I do about them there's nobody even on the debunker team that I even respect anymore I've already debated all the the um you know the Riff Raff people in the debunker thing Mick West is the one that everybody would want to see Mick West wouldn't even last Mick West would probably last five minutes he probably won't last 10 minutes in a debate with me which is why he would never do it

(1:01:02) because he would just get absolutely destroyed even if I gave him the questions ahead of time he just has no chance whatsoever the guy literally fabricated three fake debunks about MH370 like he would have to address all of those the fact that he fabricated a fake jittery contrails debunk that he fabricated a fake VFX debunk that he got the corridor crew to use uh and the fact that he also tried to falsely debunk the Philip wood exif data picture and he was wrong about that as well from every single technical perspective this guy is

(1:01:30) like the most criminally liable debunker related to MH370 not even just the videos but just in general Mick West has been lying about MH370 going back till like 2014 um and then the second thing would be uh just MH370 in general I think the only person that I would even consider probably debate I mean I would consider a lot of people debating a lot of people MH370 I think talking to Florence D Changi would be very uh enlightening even though we don't really have the same opinion uh but Jeff wise like credit to Jeff wise he's like a total

(1:02:02) [ ] when it comes to like thinking the Russia is the problem of everything but he did figure out the debris situation um the problem with a lot of the MH370 investigators is that they have falsely tied their opinions to the satellite pings which you would think that like if this was 2014 saying that these satellite pings are accurate would be fine but the problem is it's 2024 now and in 2024 we have searched down in the South Indian Ocean where the satellite pings claim to know exactly where the plane crashed and we found nothing

(1:02:35) searched for three years and found nothing at all above water below water no black boxes so if you're still hung up on the satellite pings like you obviously delusional you have to just use basic reasoning to say that that and the best part is the debris that washed up in Africa proves that the plane couldn't have crashed in the South Indian Ocean this is one for uh I'll post post this here real quick for um My Buddy L reviews because I think he was struggling with this yesterday is that a lot of these people that like they only

(1:03:03) base their opinions on what they were told by CNN they don't have any ability to think for themselves that's the big problem so people like L reviews like no ability to think for themselves at all like this is where like and I I'm not trying to be mean about this but like you literally just need to learn how to think for yourself bro like this is how easy it is to show you how it how you think for yourself as well here we go um let me share my screen here's a literal overlay of all the relevant information related to the

(1:03:31) debris okay I made it as simple as possible for you you can find out where all the confirmed or potential debris is in Africa here you can see the currents the ocean currents here where they flow you can see the search area down here with the seventh Arc which is where the satellite ping say the plane crashed where we found literally nothing along all along this Arc we found absolutely nothing anywhere and you can see where Diego Garcia is right here now if you have debris showing up in these locations how the [redacted] does it get there

(1:04:02) from down here look at where the ocean currents are the ocean currents go east down here so if debris if the plane crashed down here the debris would have washed up here in Africa on the West Coast or Australia on the West Coast of Australia it's not going to float past Australia and then up and around and then back right past Diego Garcia and then down to these locations here it's too far it's 2,000 to 3,000 miles if I do a straight line so if it has to go all the way around this Arc and get over

(1:04:31) here it's like I don't know 4,000 3, 4,000 miles it has to drift there's no it's not possible you know where it's much more possible look at where Diego Garcia is look where the ocean currents are relative to Diego Garcia the debris fits a perfect match to where you would expected to float if the debris was put in the ocean near Diego Garcia just guys this is just basic logic and reason it doesn't take uh phds or you know fake experts to figure out you can just use common rational logic

(1:05:01) and figure it out so there's no point in um you know debating people that have no idea what they're talking about so then the third type of person I would debate is a scientist and that's who I think we have to go to at this point so I know these videos are real I think a lot of people in here know the videos are real uh and then the question is like okay well how do we prove the science to people this is where like I want to debate somebody like Eric Weinstein or if that's too much then

(1:05:31) I'll even take somebody who's the next Echelon down you know I want to I want to debate somebody who's got a like a somewhat CNN brain from the science perspective and they don't know anything about scalar physics and I want to explain to them how Maxwell's equations were reduced and I want them to tell me why the scalar potential is not the stress in the medium and why that's not gravity I'm gonna literally use this exact analogy right here uh and I'm going to explain that to them

(1:05:58) and I you guys have seen me do it on pretty much all the interviews I've done but you know what I'll do it one more time so when we uh reduced heavy sides equ or Max's equations when heavy side reduced Max equations we lost the ability to manipulate gravity and this is why because if you look at heavy sides equations you would say that because I'm pulling on both sides equally then the net result must be zero and if I pull even further if I double how far I'm pulling on both sides the net result is still zero because both

(1:06:27) sides cancel each other out if I pull even further they still cancel each other out but we can already tell now things are starting to get tight here if I pull this too far this rubber band's

going to rip it's going to break that's the stress in the medium the stress in the medium of SpaceTime is Gravity the scalar potential manipulates gravity that's what we're missing that's what we forgot that's how we hamstrung ourselves and forgot how to manipulate gravity there has to be a way to

(1:06:55) manipulate gravity we can see ligo can see neutron stars colliding and creating gravitational waves so there must be a way to create them it's not as complicated as we think uh that's the beauty of the manipulation of gravity and even warp drive it's just alberry drive it's literally creating a warp bubble it's literally Star Trek warp drive uh and that's what I was surprised about I thought it was going to be some complicated thing of uh you know madeup words I don't understand and virtual

(1:07:25) particles I didn't understand and and it's actually not it's actually a lot simpler than that just creating a little warp bubble around your object displacing yourself from SpaceTime so uh hopefully that guys helps you guys out so yes one of those three types of people would be great to interview uh MH370 videos MH370 investigation or uh the science I'm definitely not GNA be Bill NY the Science Guy I don't know if you guys have seen the clip of Bill Nye on Larry King live or where he just gets

(1:07:53) destroyed by the one guy one of the the greatest Clips ever out there man one of the greatest Clips ever but I will say uh to L reviews man good luck with your interview with Chrisley uh I think it's gonna be an epic epic stream uh really awesome I hope you ask her what the source of the Pyromania VFX is where she downloaded it I hope she didn't download it from the 2023 version that has falsified images directly in the samples where it shows the MH370 videos you can literally see it I'll show you guys so

(1:08:22) this is what this is one for you I reviews make sure you ask Chrisley this question uh make sure she provides a source of where she can download the assets that she used online not just a way back machine but somewhere where she can actually download the actual Source she used um because I want to go ahead and pull where is my my debug here we go yeah don't worry I got it ready to go chat got it ready to go so ask the **debunkers** because you the **debunkers** love the first question I usually get is what is the source

(1:08:56) so I want to know is this the source that the **debunkers** are using because it says right up here at top uploaded by Wave Rider 3000 on January 25th 2023 so this is eight months before the videoos reemerged on **Reddit** so this is well before the videoos got any traction and it has this image in the background on that website but you know what's weird about the image in the background this is the Pyromania this is the um MH370 somebody literally copy and pasted the MH370 zap and other than the middle here and they superimposed it over this image

(1:09:29) and falsified this image and down here they did it again this is literally you can see this tail sticking out of the pl out of this part right here this is actually not in the Pyromania at all this one on the right is the Pyromania VFX the one on the left is the actual MH370 zap why would somebody upload this in 2023 in January 2023 and literally take the MH370 zap and pretend like

it was part of the Pyromania Pyromania stock assets why would they do that eight months before the videos reemerged and got popular Somebody went out of

(1:10:01) their way eight months ahead of time and added the real MH370 app I'll just show you just so you guys can do a quick comparison so you can see that I'm not making something up here okay one sec here it is switch over this is exactly the image that they copy and pasted they took this they copy and pasted this into uh a picture of what is they're presenting to be the Pyromania stock assets they took what you see right here this is from the MH370 video and they literally added it so that people would be fooled when they

(1:10:42) come to this website to think that this effect this what we see right here is part of the Pyromania stock assets when it's not why would somebody lie like that and this happens to be the exact same place where the **debunkers** are downloading their effects from to try to claim that they match this shows uh pre uh preemptive um motivations here uh that they were essentially trying to use this that they had this ready to go before the videos ever even reemerged somebody had planted this on the internet back in January of

(1:11:12) 2023 so that somebody would know to use this to try to **debunk** the videos how weird is that chat just so you know I'm not making anything up here I'm going to go back to what I just showed you before and I have a link to this as well what you see here in the bottom this is 100% from the MH370 video this isn't been manipulated or anything this is literally what we just looked at somebody copy and past it put it into this asset here put it into this stock picture to try to confuse people to think that the MH370 app comes from the

(1:11:42) Pyromania VFX and uploaded that on January 25th 2023 whoever Wave Rider 3000 is that is a very very suspicious account crazy huh so if uh the **debunkers** are getting their asset from that location that proves Beyond any shadow of a doubt that um that the **debunk** has been falsified because that is a literally bad faith source to pull that from pretty crazy right guys how crazy is that yeah so guys like we I'm just going to tell you guys straight up like the intelligence community and the **debunkers** like I don't know if they're working one

(1:12:25) and the same with one another but they have planted fake **debunks** on the internet just so that if this ever happened that they would try to use them to **debunk** people it would not surprise me at all if the corridor crew are literally assets of the intelligence community in the US government wouldn't surprise me at all whether or not they know it and they're just useful idiots or if they are actually in knowing situation to do it uh wouldn't also surprise me like Julian Dory for example Almost 100% he is uh under the thumb of

(1:12:53) the US government James Fox he friends with James Fox James Fox lied about the videos uh James Fox is out there talking to congressman and stuff James Fox is either being spread bad information or he's willfully lying about it and maybe he thinks he's doing the right thing by lying uh but he definitely had Julian Dory come after me those guys also communicated with the corridor crew the Spooks were definitely behind that to try to make the videos go away and they all failed they all failed that would

(1:13:21) have probably worked on lesser people that they would have been able to bully them and try to ruin my life or whatever like they tried to do um but they all failed and so now we're at a point where we've never had more attention on it we've exposed Julian Dory we've exposed Danny Jones as frauds we've exposed the corridor crew as frauds we exposed James Fox and Ross kohart and Jeremy Corbell is people that are either useful idiots or frauds themselves um and these videos are 100% real and anybody else who tries

(1:13:52) to expose them and tries to you know lie about they're going to get exposed as well there's no going back from this so the best thing that they could do is if I was the CIA right now I would be taking pieces of the plane and I would be putting them into the South Indian Ocean right now I would be throwing them in the South Indian Ocean right now dropping them off down there and uh getting ready to have ocean Infinity go find them and be and coming up with some excuse for why the planes in a million pieces even though everybody said that

(1:14:21) it had to have crashed in one piece and then trying to lie to people and be like oh the the debris all just sank somehow that's why we never found it 10 years ago and and the black box is just mysteriously missing because they can't ever find the Black Box because the Black Box will tell the **truth** um I don't know that's what they honestly need to work on because if they don't uh then they're screwed so and for people like this like the source is confirmed like this is like your this is like your typical CNN brain

(1:14:50) person right like a lot of people are just too stupid to have opinions of their own like people like what's your dumb name zapus 2024 like if this is how you're going through life where like you need people to tell you what to think like your life is going to be miserable the best advice I could give you zik Aus is when you look at something come to your own opinion on it based on the facts and the evidence a lot of people out there they just want to be told like what's real what should I believe what

(1:15:18) what do my YouTuber telling me to think like that's not how the world Works look at what the evidence and the facts are if you read my post it has three million views right now on Twitter the reason why it has three million views is because people look at the evidence presented I'm not just telling them what to think I'm presenting the evidence and it's extremely compelling the only way that that story could even exist as if the videos are real just use straight up logic regular logic man I've identified who the

(1:15:48) leakers it's Edward C Lyn go look up his case he's the guy that **leaked** these videos it's extremely obvious once you look at the evidence around it he's the guy so if you need to have Joe Biden tell you that the videos are real you are living a lie your whole life is a lie okay like the people the government the Spooks the three agencies are not your friends they're lying to you every single day and they're having the media lie to you every single day I know that's hard to believe but it's the

(1:16:15) **truth** so just want to tell you guys that yeah NPCs are real man NPCs are real and and you guys can free yourself from being an NPC by doing what I just told you which is use critical

thinking when you read an article do what I just said don't just take the headline and say this much be true look through it for the facts what are the facts not the opinions not what people tell you but the facts like oh somebody was stabbed or you know look at the actual numbers of what it says in there and then come to your opinion and your interpretation

(1:16:48) of what that means based in the facts you source source source source it's like that's all there is for **Reddit** right it's like I don't like that Source I need a different Source I need a source that I trust it's got to be the AP or Reuters otherwise I don't believe it like this is the problem with people like Lou reviews is like he thinks that he's objective because he goes to Reuters and AP and they they wouldn't lie to me dude they all if you watch the show The Newsroom they just have a feed

(1:17:14) where there's some douchebag sitting on a computer like I'm sitting on a computer right now and little stories come up on the thing and they go oh okay we we'll run with this one and this one and they all run with the same **[redacted]** that's how the news really works and who who runs those news feeds and what what shows up there well at the end of the day the government's the ones picking which things show up on that list and which ones don't what's this comment been with you since day one but you know it's the

(1:17:46) other way around we have to **debunk** again and again not the others is very misleading yeah um I'm not going to be **debunking** stuff anymore I don't care anymore what people think doesn't matter to me uh I've already gone ahead and I've if you guys want I'm just going to from now on I'm just going to link what I've already provided for the VFX link the source of the the new **debunker** saying that of course they don't look anything alike because they don't that's all we really need to hear uh you know

(1:18:11) link all the other stuff that's out there so I'm not going to bother that much anymore now let's go to some of the other videos that are out there damn you guys chat's blowing up today huh L reviews I'm G to put you in a **Timeout** man don't make me block you again okay let's see what we got uh what's the next video I wanted to go to where's my thing oh okay so we're going to do the Malaysian Minister of Defense guys so if you don't think that uh there is a coverup going on watch this video that

(1:18:48) we're gonna watch if after this you still don't think that there's a cover up I don't know what to tell you man we're about to watch is something that you could put directly on to CNN or what you could put on directly on to Saturday Night Live and it would get more laughs than anything on Saturday Night Live has ever gotten in the last 10 years uh so what is it called Four Corners uh what's it called missing mh3 oh here we go Jesus that's not the one hold on um what is it called oh lost h27 okay hold on although

(1:19:25) I do kind of want to watch this too I do kind of want to watch that because **I want you** guys to see the Larry Vance guy who's like one of these official experts where uh actually you know we are going to watch that hold on um I might have to find the clip of that before we go to that though we're gonna watch this though probably gonna get copyright strike for this but I

don't even care here we go chat Minister when did you become aware that MH370 was mhm  
sometime that morning what time sometime that morning

(1:20:02) what time did you become aware that the plane was missing well sometime that  
morning what kind of answer is that dude she asked you a direct question right away off the bat  
we're not even 10 seconds into this interview and the dude's already obfuscating morning what  
time does it matter what time does it matter dude are we doing an interview here here or what  
we're 15 seconds into the interview and the guy won't even answer what time he was told the  
plane was missing which is like the most basic question out there plane

(1:20:38) disappears 1721 UTC he should be like well I was told at 1730 UTC that there was a  
plane that went dark he can't do that because he can't get himself caught in a lie anything he  
says will expose the cover up how crazy is this in a story telling sense yes yeah look at his look at  
his body language you can tell how defensive he is right away like he's sitting there thinking like  
what am I gonna say what am I gonna say like look at how I act on streams compared to this guy  
I would get a confession out of this

(1:21:10) guy in under 15 minutes that like I would be able to break this guy down destroy this  
guy 100 per. you guys have seeing me on Spaces on streams this guy have put me in the room  
with them chat put me in the room with them it's like yeah I'm not going to answer that  
question but again the timeline uh will will will show and I I think when the um inquiries uh uh  
actually um take place do you really think that Malaysia can hide the the the way uh things have  
unfolded okay so he's now this is seven weeks later this plane has been lost for

(1:21:50) seven weeks he won't answer any questions and then he says oh well the inquiries will  
come out guys it's 10 years later the question of when this guy was told has still never been  
made public it's 10 years later right now it's never been made public on when this guy was told  
that the airplane went missing he says the inquiries will release it well it's 10 years later and it  
didn't and then he says do you think Malaysia could cover up what happened to the plane why  
is he saying that he's got

(1:22:20) a guilty conscience the only reason why you say something like that guys I can tell a liar  
this guy is lying his ass off you think Malaysia can cover up what happened well apparently  
because that's literally what you're doing right now course not but this that is no no you don't  
think Malaysia can cover it up no no why are you asking me these question what is up with this  
guy [REDACTED] liar um thank you for this donation I can't read hold on uh I have no idea how to say  
your name the tammed me whatever thank you

(1:22:55) very much keep going I've been visual visualizing how this Tech can eventually become  
available to the world a new giant lead for mankind towards peace will be necessary quite the  
task for us all but attainable yeah I think that we have to become a more peaceful civilization  
before they'll give us this kind of Technology uh because if not then the world will end that's a  
sad that's a sad State the oh Theta Moon me okay thank you very much Theta Moon me  
appreciate you yeah this guy's a huge

(1:23:21) douchebag clown this is not a controversial question hey by the way guys if you guys didn't watch I used to play this back in like October and November I'm literally in love with this woman I am I am in love with her I would marry her tomorrow I love I wish we had journalism like this why do we not have journalism like this in the United States she does not let him off the hook she just straight up is coming at him I I love this woman I think she's married but if she wants to get divorced and marry me then I'll make it happen uh

(1:23:53) things have unfolded of course not but this that is why don't this is not a controversial question boom She lays down the hammer on them this is not a controversial question it's like the most basic question ever uh when did you hear the plane went missing how why won't you answer this basic question dude it's not and and basically uh we're trying to coordinate 26 countries for search now I'm looking now he's just listing off [REDACTED] that's completely in we're we're trying to coordinate

(1:24:23) countries uh dude she has asked you what time the plane were missing working into a deep sea search as we talk today what does deep sea search have to do with what time you heard the plane was missing nothing the last thing on my mind is trying to figure out what time that I got it what do you mean the last thing on your mind bro you're in a literal interview with a woman asking you basic questions that you presumably agreed to you're you're thinking about the deep sea search while you're in the

(1:24:48) middle of an interview with their woman obviously she's he's completely full of [REDACTED] permission well I'll put it to you like this in a story sense for a documentary right take us back to the take us back to that day March the 8th how were you informed that the plane had disappeared the there were phone calls this reminds me of the the beauty pageant the South Carolina beauty pageant the US maps and such as it's like how are you informed this is a basic question should be like well the general of the Malaysian military called

(1:25:23) me up at 1730 and told me that there was a rogue trip 7 flying through our country like that's what a normal person how they would respond is that he's like there were phone calls like dude you're literally OB fisca the answer she wants a direct answer not how you were called she doesn't mean like did they come on a horse and deliver you a letter that's not what she's asking she's asking exactly who communicated with you and when uh Lobster I wanted to donated a bit nothing to say that thanks for your

(1:25:50) work appreciate you Lobster big thank you appreciate you guys guys you guys are the best uh m370x is the best period uh nobody can nobody can hang with this with this group um the DCA and I'm in a way quite fortunate that I'm also the Minister of Defense in a way I'm quite fortunate that I'm also the Minister of Defense what she asked you how you were communicated about the plane disappearing well it's fortunate that I'm the Minister of Defense as well what is up with this guy I think no one there is holding two

(1:26:27) portfolios um he's praising himself he's praising himself this is divine this is divine this is divine dude I'm I'm trying to remember the question was how were you notified of the plane

disappearing and your answer is well there were phone calls and I'm also the minary defense and this is divine what the and I had calls from the uh effort um so many uh lines of there was so many just I can't pick which one there's so many ways where I was communicated communication and it happened you have

(1:27:09) to understand you know what time it happened you have to also you have to understand what time it happened yes he she just asked you that she just asked you what time and you wouldn't answer and where it happened it was at what do you mean where yes we want to know when and where you were told the plane appeared is that I feel like that should just be like we're already like 2 minutes into this and we could have got the answer within 15 seconds like you can just tell this guy's full of [REDACTED] time in which they moved into Vietnamese

(1:27:36) airspace now we know when they moved into Vietnamese airspace the plane went dark at 1721 UTC everybody knows that what we want to know is when did you find out about the plane disappearing so we can figure out what the deal with your response time was and the reason why he won't answer that is because if you were to say like oh I was notified at 1730 DC people are going to be like well why did you not do anything and the answer is he can't say anything because then they're going to find out that

(1:28:01) there was a fire event and that the fire event is completely contradicts the idea the plane was in the South Indian Ocean that's why he's lying right here because they know that it was an emergency event related to a fire and they know they can't talk about it because if they say there was a fire event the whole coverup gets blown up that's the truth that's what's going on right here Chad was a period of time that uh we were really trying to figure out really between Mas the DCA the military getting information to the

(1:28:32) Prime Minister um me as putting my hat on as the Min acting minister of transport and then dealing with the military um in in that respect so there were many uh first of all too this plane is only one hour from when it goes dark to where we see it in the nicobar islands and this guy's talking about like I had to talk to like 15 different people okay man give us a timeline when did you talk to what dude when we just want to know we're trying to figure out a solution here there might be people somewhere stranded on an island because

(1:29:03) of a plane crash and you're sitting here obfuscating every single basic question and answer makes no damn sense we information was coming in but for personally on my part like anybody else this information has got to be digested we have to look at it calmly so were you it's like she asked you what time and who and now you're going well the information has to be digested said calmly and dude this was s weeks ago this was not like the next day like this is all information that you should be ready to talk about look at this dude's

(1:29:32) face he's just sitting here just lying his ass off right now that it was missing before it was due to land at 6:30 sorry were you aware that M was missing before it was due to land there was an so then she's like okay okay let me help you out here did you know that the plane was missing before it was supposed to land 8 hours later he's like oh oh yeah yeah yeah it was

before that it was before that so you can't narrow it down more than before the plane was supposed to land so because obviously

(1:30:01) you must have been told at some point indication that uh they were not in the radar you know um there was no more communication there was no communication okay so let's we're going to catch him in a lie right here he just said there was no communication hm are we sure about that um we had to confirm with the Vietnamese authorities then we have to get the militaries uh activated then we have to get uh uh so what does he mean like confirm with the Vietnamese like they know they had it on Military radar this

(1:30:36) is seven weeks later they knew they had it on Military radar the whole time why is he talking about confirming it the Vietnamese you're the one tracking it on Military radar flying over your country you don't need to C the Vietnamese and be like hey is the plane over there you know where the plane is you're looking at it on radar the military is looking at on radar me uh to verify and corroborate and then we have to get all those countries uh involved on board did Air Traffic Control try and contact MH370 that

(1:31:10) morning I'm sure they did but basic question did Air Traffic Control call MH370 you can actually call the aircraft you can just call it well I'm sure they did what do you mean dude you're the guy that's supposed to know yes or no this is the the highest ranking person that knows the answer to this question the answer is yes we know because the iMat logs released years later have two failed phone calls one right before the zap at 1840 UTC right before the videos and then one like six hours later five hours later why did

(1:31:45) they only call twice why did they wait so long to call the aircraft the answer is simple they had Communications with the craft he can't answer a basic question because he's lying but I think I cannot today uh confirm one way or the other Because unless I have it in front of me today that sort of questions are so detailed that the question of whether or not you called whether or not they called the aircraft is too detailed he can't answer a yes or no question yes or no did they call the aircraft I can't

(1:32:20) answer that question today it's only seven weeks later what you not you don't know you haven't been made a form informed whether or not they called the plane seven weeks after it disappeared it's a too detailed of a question yes or no question is too detailed I do not want to be cornered I do not want to be cornered finally he tells the **truth** accidentally he doesn't want to be cornered in a lie if he were to say that they called the plane and then the imrat logs which he doesn't know that they're

(1:32:48) going to falsify uh if if they dis if they uh if those logs contradict what he says here they're going to get caught in a lie this is the reason why he's being very careful because he knows iMat is falsifying information on the logs to release to the public so that they can make it look like the plane went in the South Indian Ocean he knows that and he knows that if he says something that's going to get caught in a lie he's going to get in big trouble so we can't give any information away here that's what

(1:33:13) he's doing I'm calling him out 100% that's what's going on and be misquoted air traffic control don't want to say any information and get misquoted what do you mean dude you're being recorded on an agreed upon interview we understand it knew that MH370 wasn't responding right to Radio Calls Etc from around 1:32 a.m.

(1:33:37) yes 4 and 1/2 hours pass what happened in those 4 and 1/2 hours from the Malaysian perspective to try and locate the plane well I think that I want to know too she asked him four and a half hours went by what did you do to figure out what was H how to communicate with the plane where the plane was I want to know too what you're the guy dude you're the number one official in responsible you're the minister of defense and minister of transportation and it's seven weeks later seven weeks later this isn't like a few hours later or the next

(1:34:10) day seven weeks later and he doesn't know anything about when he was communicated he won't answer when air traffic control if they tried to reach out to the plane or during four hours of like the the critical moments he has no nothing about what happened and uh you don't know of course and she she can't believe it you don't know you don't know if they tried to get in contact with a plane at all during a four and a half hour window I don't want to get caught heard stories from uh and reports

(1:34:43) from all sources heard reports from sources well what are they brother this is the interview this is the time what's the sources what are the stories what did they say but based on other speculation and based on doubt um based on other spec so okay i' I've heard stories and I'm literally the guy that would be informed of the facts but I'm going to speculate and have doubts I'm sorry what what doubts what speculation what is he talking about I want to be sure being the minister responsible what comes out

(1:35:15) there is credible so now he's just said he says the **truth** right there he gives up the game right there he says I'm afraid that I'm going to get caught in a lie so I have to be very careful about what I say right here so I'm going to say nothing somebody who's honest and open just says exactly the information they have they're getting that information out there to the public they're not afraid of being caught in a lie because even if they had information that was false that you know that that

(1:35:40) wasn't credible they would be able to we would be able to figure that out this guy wouldn't be at fault for it the problem here is that if something were to come out if the fake story were to contradict this guy then this guy is going to prison so this guy has to be extremely careful about what he puts out there and is corroborated and it is verified now if the area we're again chat we're talking about the only questions he's been asked so far that he says needs to be corroborated verified

(1:36:04) is when he was made aware of the plane going missing if air traffic control called the plane and if they did anything to try to get in touch with the plane over a 4-Hour window that's the only thing he's been asked so far and he won't answer any of those questions that we can learn from this I'll be the first to admit it well you are the one who could if there's anything we

can learn from this I'll be the first to admit it like this this is why people thought that the Malaysian government was

(1:36:27) ignorant and incompetent because this guy's a [REDACTED] [REDACTED] and he's a liar and it's not that they were incompetent is they were literally maliciously covering up what happened to the plane that's what's going on here verify and corroborate and that is why and I will and I will answer with a panel of exp I will answer with answer with a panel he's being asked of his direct information he's the highest ranked official he won't even answer a basic question he wants to answer with a panel

(1:36:53) of people as opposed to just straight up why did he even do this interview because they will be asking not speculative questions they will be asking whether standard operating proceed nothing that she's asked is a speculative question she asked him when he was directly communicated the plane with missing if air traffic control contacted the plane these are not speculative questions these are yes and no questions these are questions that are easily verified that these would be the very first questions that any

(1:37:19) official in response to the investigation would be doing if I'm the investigator and I am in this guy's position the very first thing I'm doing is hey I'm going to air traffic control very first thing talking to air traffic control did we get communication with the plane when was the last time we talked to them when was last we tried calling them again those would be the very very first things I would ask I would be able to answer those questions the next day this is seven weeks later and the guy won't answer those questions

(1:37:44) have been followed International standards of civil aviation Cotes have been followed and now he's giving excuses for why he doesn't have any answers we followed International codes for civil aviation like why are you giving excuses for why you can't answer basic yes or no questions and that will come out will you confirm whether that will come out it spoiler guys is 10 years later none of it came out nothing ever came out that will you confirm how many times DCA and air traffic control tried to contact

(1:38:21) MH370 well you have to actually uh get the DCA to do it not today I mean if you not today how many times did they try to call contact airra contact m370 I can't tell you that what why can't you tell me that again this is the very first question as an investigator that you would be going to air traffic control to ask them how many times you try to contact the plane I mean I would have called the plane if if we have a rogue seven Triple 7 I'd have called it like 20 times turns out based on the iMat

(1:38:48) logs they only called twice they only called twice why would they only called the plane twice you've got a rogue 7 you would have called it way more times what give you time to find out because I'm not these questions were not given to me in advance you there he says it again these questions were not given to me in advance so he's afraid of lying now and he doesn't want to get caught in the LIE he gives it away there are a million and one questions out there they've been so detailed I these are again not detailed

(1:39:22) questions when did they call the plane were they aware of it disappearing how many times do they call it these are things where I mean I know the answer I'm a dude 10 years later on Twitter and I know the answer these things just from getting them through the internet this guy couldn't answer the question he's the official who would be in charge of the investigation and would be the one that all the information would flow up to he won't answer any of them I don't think we can answer it all in this uh

(1:39:46) interview that we have today I'm not being defensive and then and then he literally does the thing where he admits the thing that he's doing I'm not being defensive yes you literally are by the very definition of the word being defensive that's actually exactly what he was being he was literally being defensive um which is weird because when people like victimize themselves like this or this is like the sure sign of a liar like this guy is literally I'm not a body language person but 1,000% this guy is lying 1,000% no doubt

(1:40:19) whatsoever when people lie about being defensive when that's literally what they're doing now you know you can't trust anything else that they say nothing really to um to um avoid because uh what we have done since the beginning uh everybody actually um that I've spoken to including leaders from Nations that have got a longer history of um aviation history and said that this is something that is baffling to all baffling yes you as Minister for defense then and this should not be controversial and this is really a key

(1:40:56) Point here and it was in my list of questions MH370 flew through multiple military radar zones right did the Malaysian military detect MH370 in real time so what do we think his answer is going to be guys did MH the Malaysian military detect MH370 in real time so the question is were you tracking MH370 we already know they were because they've already admitted at this point this is seven weeks later they admitted at this point that they were tracking MH370 and that we were searching in the South China Sea

(1:41:28) for 5 days for no reason whatsoever that they knew the plane wasn't in the South Tennessee we detected an uh an airline but uh we I think we've got on record to say that it was not identified at that time as MH370 so he won't even answer it's like you've yes we detected an airline he's very careful about his words I think we've gone on record to say that we didn't detect it as MH 370 the only plane that's gone off course the only one that's out there you don't know if

(1:42:01) it's MH370 or not what the [REDACTED] how can you not know how many planes going rogue AR out out there are there but an aircraft unidentified was detected that morning that came out i' I've said that in the beginning and now you can tell he's trying to corroborate based on stuff that he said before so this is like when people try to say that like I'm a liar it's impossible because I've done so many interviews that you would get caught in Li what's happening right now is he's getting caught in a Web of

(1:42:28) Lies that's why he's saying stuff like I think we said that in the beginning right because he's going back trying to make sure he keeps his lies in order he wants all his lies to stay straight

and this is like when you look at a liar this is it this guy would not last five minutes even with Lou reviews guys um because he's just too many lies right this is why like I would get this guy full full uh um uh Whatchamacallit confession full confession of this guy 15 minutes in easy and I think that's

(1:42:58) confirmed by the Prime Minister too what did the military do when it was detected well I mean is an airline that came from our airspace is a commercial airline and the military actually said he just said that it wasn't detected as MH370 and now he's saying that it's a commercial airline and remember earlier he claimed that they didn't have any communication with the plane wait for it they didn't consider it a hostile didn't consider it as hostile How Could You youve detecting a off a plane that's going off track that

(1:43:34) is uh somehow you know that it's not MH370 but you know it's a commercial airliner somehow and you don't know that you know it's not hostile how would you judge that it's not hostile what if hijackers took this plane going to fly into the Patronis Towers what if it's a rogue pilot who's going to crash the plan and kill everybody fly into a city and kill a bunch of people the only way that you could know that the plane is not hostile the only way there's no other possibility is if they have

(1:44:04) communication with the aircraft the Malaysian government had communication with MH370 um aircraft why what were they relying on to come to the conclusion she she and she's smart she asks him he says we didn't consider to be hostile why what is the reason and you can look at him freeze up look at him freeze up right here oh [REDACTED] oh [REDACTED] I said too much I shouldn't have said that because the moment he said it wasn't hostile and they didn't consider it hostile she picked up on it right away the only way

(1:44:33) that could be possible is communication that it wasn't well that's a call uh by the uh um officer that was in charge of doesn't answer the question like I said earlier there was an inquiry under the um dodes military Air Force that will come out too that so completely won't answer the question because she knew the only way they could have known it's not hostile communication and he had couldn't answer because the only thing he could say is that we had communication with the plane that would have been a lie or that he

(1:45:03) would have shown that he was uh lying before when he said there was no communication so they must have had it so the reason why he wouldn't answer the question about Air Traffic Control trying to call the plane is because again it would have shown the lie so this is why he was dodging the question earlier about Air Traffic Control calling MH370 because they know they had communication with it that's how they knew it wasn't hostile that's the only only possible explanation this doesn't require IMAF pings or any other [REDACTED]

(1:45:27) like that again guys basic Common Sense here uh this is the only conclusion that can be reached so who was on Jui how many people whoa you see that what was that that was so and you can tell this is right after he almost got caught in the lie about saying the communications so he almost got caught lying the communications look at this facial expression

come too look at this whoa got him who is he looking at right here look at who he is looking at right here there's somebody in the room with him here and he is

(1:46:01) afraid like somebody's staring at him like going dude don't say anything shut the hell up don't say anything shut up so who was on Jui how many people well I mean these sort of uh question so then she's like how many people were on duty how many people were active tracking This Plane can't answer those questions either because that again if there's a lot of people on duty then you know you would have had to have communication with the plane people have been trying to call the plane so he

(1:46:26) can't answer any questions because he's like we had like 150 people on duty then there's no way they weren't tracking This Plane calling the plane so we can't answer even questions like that like I said it's not going to get us very far well what we're trying to understand I don't understand level of knowledge I understand and now he's getting defensive again super defensive this is guys if you don't know what defensiveness is this guy is the stereotypical hostile witness who's

(1:46:50) getting super defensive he's saying he doesn't understand he's lying he does understand uh he understands what the questions are here but he's just obfuscating intentionally and surveillance right but you need the experts you know like I said there are we are talking about going through multiple countries military airspace you need to talk to every single country out there no you don't if there's a country if there's a rogue plane flying through United States we don't call up Canada and Mexico to

(1:47:22) figure it out we take action ourselves it's our country the only country that needed to be talked to is Malaysia they're the ones it's their Airline it's their aircraft it's flying through their country they don't need to call up Thailand or call up Indonesia or Vietnam none of that's true he's literally lying about everything this guy says about their military capability if that's the line of questioning that you want to ask about Malaysia what is more important is for

(1:47:49) us to actually understand how we looked at moving from the south China Sea to the streets of Mala what happened and can we just agree that she's looking cuz no that's not important at all I mean we do want to know why you lied about the plane not why we were searching in the South China Sea for like five to nine days when they knew the plane turned around and went back over the country yeah we want to know the answer to that too uh obviously the answer is they were trying to build a cover story for coming

(1:48:18) up with this idea of the plane going to the South Indian Ocean they needed people not looking in the right spot what sort of details um are going to come out anyway we I don't think it's so controversial that it's going to um be something that uh will impact so much on what we are investigating in Hans is that unfortunate that the decision was made it wasn't hostile well it's not for me to judge it's not for me to judge hey we didn't send up a jet to track the plane and there we have no idea where it went

(1:48:54) but it's not for me to judge that we didn't do that guys if there's a rogue trip 7 a plane the size of a city block with 239 people on it you're sending up a jet after it every single time and yes it's literally this guy's literal job to judge he's literally the minister of defense and transportation two hats both of them it's actually his real job to judge and take responsibility for those actions it's actually like one of his only jobs you know I mean uh do you want we we didn't go through a situation like

(1:49:26) the September 11th why is he bringing up September 11th right now I mean this is 10 years after September 11th and if there's a rogue Triple 7 we one of the biggest fears would be hijacking that they're going to crash it into planes that's on everybody's mind in 2014 when the plane goes missing is did somebody take the plane are they going to crash it into a building that's exactly what the military would be afraid of and again he's giving away the game like he brings up 911 because that's what people would

(1:49:53) be afraid of and that's what they would be thinking of that's why they would be communicating it Americans would not prepare then and it took uh two planes to crash into two Twin Towers Pentagon and guys is it any other Americans in the chat I'm just straight up offended that he's even bringing up 911 why is he even bringing up 911 in this it's completely inappropriate and it's just a complete distraction from what really went on I'm going to play it back for another like 10 second Ser like the September 11th

(1:50:26) Americans were not prepared then and it took uh uh two planes to crash into two Twin Towers Pentagon and on the way to uh uh Washington for them to have the Pres sop we are not at war with anybody right now so do you really think that I want to um put our uh suco uh on high alert uh with special Sops in that kind of situation um but why not send the Jets up if you you you have conceded earlier that you knew very early in the morning the plane was missing there were there was 4 and a half hours time in which to respond and find out hostile it

(1:51:05) was commercial it was from our we not okay he just gave up the game again right there it was not hostile that he said that not speculatively he said that definitively it was not hostile they knew it wasn't hostile because they had Communications that's why they didn't send up the Jets they knew it was not hostile didn't send up Jets to track it because they knew exactly where it was going war with anybody if they did go up in hindsight would you agree that we wouldn't be in the situation we are now which is I

(1:51:43) don't think that's specul even if we send are you going to say that we're going to shoot it down it's speculative that we wouldn't be in this situation if you sent up Jets no it's definitive if you sent up Jets to track the plane we would know exactly where the plane was and there would be no mystery that's not speculative that's a statement of fact this is like trying to argue with the bunkers about vfxs that don't match well that's not speculative that's a definite match and

(1:52:12) I go no as a statement of fact it doesn't match and they go but you can move it all around that's like trying to argue with this guy it's like trying to argue with a wall who's just lying

Non-Stop and then he said says what are you going to argue that we would shoot it down no she's talking about tracking the plane dude I can't believe she's asking about sending up Jess to track the plane and he asks her in response are we gonna shoot it down well you said that not me no I'm asking

(1:52:40) you she goes you're you said she said well you said that not me and he goes well no I'm asking you she's an interviewer why is he asking her if we're going to shoot the plane down and then listen to her response I could not possibly not going to shoot it down what's the point of sending it up to see where it's going boom guys put a ring on it if she is not married guys I don't I don't know what her name is if she's not married give me your contact info uh I'm going to send her a wedding proposal um just

(1:53:16) the best answer ever what's the point of sending the jet up if you're not going to shoot it down to track the plane and see where it's going how is that not obvious to this guy how is that not obvious to the minister of defense and the minister of transportation that you send up a jet to figure out you know why it's not obvious because they had communication with the plane there was no reason for them to send a jet up they knew exactly where this plane was going it was flying to panang it had a fire event going on it

(1:53:46) was going to land there and then doesn't and then diverts over to the Straits of Mala the Andaman Sea and the nicobar island they knew the whole time exactly where this was playing was going they know the Americans were going to they probably knew the Americans were doing an operation to help it out uh and that's the reason why they didn't send up any Jets it's the only logical conclusion well to see it going you need a fighter for it to see where it's going do you need a fighter jet for that well

(1:54:12) yeah I mean that's the point right you're telling us that you don't know anything about the plane you're claiming that you don't have communications with the plane so yes what else are you going to send up you going to send up another commercial airliner no you're going to send up a jet and now listen to his deflection they were talking about military proced military procedure you're talking about military procedures the procedures and if I did shoot it down You' be the first to say how why is he

(1:54:43) talking about shooting it down again he's the only one talking about shooting the plane down she's never even brought the idea of shooting the plane down and he keeps bringing up and if I did shoot a she's like dude she just told you that you're going to track the plane yeah we're going to send up a Cessna to go track the plane of course we're going to send a military jet up can you shoot down a commercial airline with yeah we gotta get where's Chick-fil-A girl Jesus I got to get Chick-fil-A girl out here

(1:55:08) this is Chick-fil-A girl where are you at Chick-fil-A girl um Chick-fil-A girl where are you at this is the only appropriate re action this guy talking about shooting down the plane we're going to keep this up in the background 14 Nationals half of them Chinese I'll be in a worst position probably why shoot it down though if it's not hostile okay look at just look at this guy

sweating right here you can tell he's he's retreating into his shell like a turtle right now he's retreating to a

(1:55:48) shell you can see the sweat dripping down his head he's panicking right now full on Panic uh he's realized that he's getting caught in a lie she's like just nailing him to the wall right now he's talking about shooting down Jets when she's talking about just tracking the plane 14 Nationals half of them Chinese i' be in a worst position probably why shoot it down though if it's not hostile well the Americans would the Americans would why shoot it down if it's not hostile well the Americans would

(1:56:26) what the hell is that was that just like a reflex was that just some kind of Freudian reflex there was he just giving away what happened to the plane do we need to go to the MH370 videos right now because that's a pretty weird ass response you just gave us there sir especially when we have two videos in the public sphere of showing the Americans zapping the plane basically either out of existence or somewhere else on Earth it looks over again you see that look you see that look again Chad look at that and this guy's got a Handler he

(1:56:58) there's a Handler in the room Americans would did DCA contact the military that morning yes you did what time you have to ask the DCA and it will come out the details I think this are the dates because I do not want to be trapped by from my experience in the last four weeks by dates by numbers by names by rank I don't want to be trapped by dates by numbers by rank I don't want to be trapped by any of these pesky facts I don't want to be trapped by any of these guys if I say something and it gets

(1:57:32) contradicted then I'm GNA look like a fool guys only people that are afraid of facts and numbers are people that are liars those are the only people afraid listen to this again this is like he's melting down in real time and it will come out the details I think this are the dates because I do not want to be trapped by from my experience in the last four weeks by dates by numbers by names by ranks I don't want to get trapped by dates by numbers by names or I don't want to be trapped by any these

(1:58:03) facts this is like scary stuff if I get trapped by facts he's telling the **truth** right there he doesn't want to get caught in a lie he's telling the **truth** well we'll give you the details Carol if you want I can get confirmation um we'll give you the car is her name I guess for your documentary it has been reported obv once it is confirmed by DCA once it been verified I don't think this is something that we uh I can confirm it today because I don't have it in front of me but we'll give it to you before

(1:58:31) your documentary adds I'm not asking for an exact time I'm asking now during this interview at around what time did the DCA contact the military and and alert the military that there was a plane missing I'll confirm that I don't have what time did DCA confirm the plane was missing all confirm that dude what was even the point of this interview man the only point of this interview was to show how guilty this guy was this interview is like honestly this might be better than finding the videos if I just

(1:59:05) see this video this interview I know there's a cover up this dude's lying through his teeth non-stop uh won't give any facts won't give any basic information has to send it later on because it's got to get vetted and confirmed that that it fits with the story that they're trying to tell this is what a liar looks like this is what a criminal does when they lie you're looking at it right here this is exhibit a in terms of a guilty conscience and somebody that can't keep their story

(1:59:30) straight dets with me today was it before 6:30 a.m. I'll confirm that too because I do not say something and then on record and then guys find out if she's married would be not the case do you agree that the military detected mh317 real time they detected Anup do you agree that they detected MH370 like this is the least controversial question because we know at this point 7 weeks later they detected MH370 this is where they've already admitted that the plane went back across the country and went to the Malacca Straits he still

(2:00:08) won't even answer that even after they've already admitted that because he's he's so afraid of getting caught in a lie we detected an aircraft we're not even really really ready to prepare that we detected MH 370 because we might need to change the story a little bit later wild a commercial what did the radar show it showed uh uh an aircraft that was um commercial that's it it's a BL what did the radar data show though let's discuss altitude what altitude I I don't like I

(2:00:43) said having the details of the altitude and wonder what was more important did it reach 45,000 it showed an aircraft that was commercial the guy is just the worst man worst liar in the history of the world here I'm even spitting my beer out it's too funny more important right is to make sure as I said from the beginning to find aircraft right we need to stick with the the facts at hand that this is a very simple factual question yeah exactly wait radar showed a commercial aircraft yeah and she's just trying to stick to

(2:01:15) the facts and the guy just won't she lost her job guys let's get her signed up on MH 370x car car whatever her name is Caro soon to be Caro Forbes let's get her signed up she I love this woman we need more investigative research like her she should be the number one investigative researcher on the planet um I want to see her interviewing just everybody I mean like this is just greatest interview ever we need to stick with the the facts at hand there this is a very simple factual question did it reach

(2:01:45) 45,000 fate where what the military radar was coming I said the military have done uh an inquiry on this we having the panel of why why won't you answer that question there you go why won't you answer the question Minister why will you not answer a basic question about the altitude why not probably because it was a fire event and the plane attempted an emergency descent to keep the passengers alive if they answered questions about the altitude then it would show that it was a fire emergency event very clearly and the

(2:02:20) whole thing would unravel all all the lives would unravel they can't even answer they can't answer basic questions about the time they can't answer questions about if they called them and tried to communicate with the plane the lies about not having Communications and

then saying that they know it wasn't hostile and now we won't even talk about questions related to when the military track the plane if they track the a370 or the altitude of the plane which would be known because I don't have it I don't

(2:02:46) have how does he not have basic information like this it's literally his job doesn't have basic information about the altitude of the plane doesn't have information about when he was first contacted this is not guys this isn't like a day later this is seven weeks after the plane disappeared yes he has the information he absolutely has the information he's lying about it he has the information about the plane uh an inquiry on this we're having the panel of why why won't you answer that

(2:03:14) question why because I don't have it I don't have you don't know what else I know there are many um information has come out but what I need to say today it will be depend very much on um the structure and how we're going to move forward I have a plan you know and this plan we cannot move forward without facts I know but the fact the facts will come out and we will not get the facts today because at the end of day but you have stressed you have nothing to hide so why not answer a simple question

(2:03:44) around it's not as simple as that why well because we have put structures in place where the NTSB the aib have all agreed to come on she's married and I come on to your docu uh your interview to to reveal things which are going to come out anyway I think it just have to be fair to me you know um if by this afternoon I find out from the relevant authorities that these two questions um can be answered these questions have been asked day in and day out so then what did the radar dat oh there he goes again we got him again

(2:04:19) there chat yeah he's looking at his Handler again got got him right there got him three times we caught him looking at the Handler on this um you can find this interview on YouTube it's called Uh I think it's called lost lost MH370 it's called Lost MH370 Four Corners part one published May 21st 2014 this video was published two days after the MH370 video was published so then what did the radar data show H what did the radar data show did it show location you're still going on about the details what did the radar data show did

(2:04:58) it show the location oh you're still going on about the details dude yes you're in something called an interview where the point of the interview is to determine details so oh you're still going on about the details I gotta listen to that part again Ask day in and day out so then what did the radar data show what did the radar data show did it show location you're still going on about the details looks over his Handler says what are the radar sh where am I am I in an interview oh wait you're still going on about the

(2:05:30) details interesting which radar the military radar data you know you got military radar you got civil radar you got satellite she asked about the military radar next thing you know he's talking about civil radar the maps US maps and such as uh Iraq the Chinese satellite there are 21 chines chines satellite why why is he talking about Chinese satellites well I mean it's kind of funny because this is like there was actual Chinese satellite picture that dropped as well which

we think might show what's going on in the videos so

(2:06:04) pretty weird one of them actually gave me uh uh satellite images in the South China Sea you really want me to confirm something he mentioned the satellite images that were supposedly of the South China Sea those satellite images were not of the South China Sea uh they checked and there was no debris found there so that's interesting he brought the satellite images up that he just mentioned this Chinese satellite images when even uh satellite that's coming from a third party has shown to be negative so basically you're looking at

(2:06:40) a man who's followed every lead from the first day and a lot of these leads that was speculated by the media and wanted people wanted answers for which people conely forgot he just mentioned that the satellite images were speculative by the media he just gave away that the Chinese satellite images the story about the Chinese satellite images were speculative by the media wow they really weren't of the South China SE the media is what claimed that the Chinese satellite images were the South China Sea we're right those

(2:07:14) are actually spycraft holy [ ] this is awesome guys but the Tre oil slicks the fact that there was a fireball on top of an oil R the fact that he just brought up Mike McKay he just brought up Mike McKay the fireball on the oil rig he just brought up Mike McKay seeing the fire on fire they had to discredit Mike McKay and lie and say that Mike McKay couldn't have seen the plane on fire he just brought it up guys the truth is starting to seep out she's like this is why I'm telling you you give me 15

(2:07:45) minutes with this guy he's going to be singing like a canary he's going to say all everything out there I would have this guy admitt into the fire scenario I'd have him admitt into the cover up I'd have him admitt into the United States government taking control of the plane everything there was a live boat and live and the satellite you won't tell me what altitude no I won't tell you I'm saying you won confirm how long it was on Military radar you won't confirm how many people were on duty you

(2:08:13) won't confirm whether the DCA contacted the military is in what time but are those questions going to be so critical to what happened Minister because they are about the process that the government followed at the time this plane went missing she just hammers them hammers him put a ring on it she is the best my God everybody uh if you want me to fall in love with you just do what this woman does she is just absolutely brutal listen to this I mean where there journalism like this doesn't exist anymore man doesn't exist military radar

(2:08:47) you won't confirm how many people were on duty you won't confirm whether the DCA contacted the military is in what time but do are those questions going to be so critical to what happen Yes Minister because they are about the process that the government followed at the time this plane went missing and that is what the world wants to know if that's what you want to know there are other people who want to know many other things much more rational much more convincing more rational he's gaslighting her right now he's

(2:09:18) gaslighting the interviewer right now he's going people want to know other stuff that's more rational more rational than knowing when you were notified the plane were missing how many times people called it how many people were involved in it when the military figured out if it was hostile or not like that's no that's what everybody wants to know he's gaslighting the interviewer right here my uh present uh Focus there are people who are not looking at that angle only those are people who really want to know

(2:09:46) where is the plane there are two things the world wants to know agreed where is the plane that's your op abely and she's like people want to know where the plane is she's like yes people want to know where this [REDACTED] plane is where the hell is MH370 man fess up fess up Mr of Defense where the hell's the plane we know it was on fire we know you let the United States government zap it tell the truth you tell the truth number two how was it lost so what we need to do so anyway that's the end of that part

(2:10:19) guys um absolutely the most incredible interview I've ever watched in my life I've never seen a woman or sorry not even a woman just a straight up any interviewer ever roast somebody as hard as she roasted the Malaysian Minister of Defense he's clearly full of [REDACTED] he's clearly lying he's clearly covering up what he knows no doubt whatsoever so if you think that whether or not you think the mh37 Z videos are real I don't really care they are real uh I have reason to believe the government knows they're real as well um

(2:10:51) and that is potentially the most secret super weapon that is out there period people say why haven't they disappeared you yet Ashton well because I have 120,000 followers and if I were to disappear off the face of the Earth it's gonna be pretty goddamn suspicious right now uh but I'm sure there's people out there who are thinking about that and if that's an option that's on the table at this point would not surprise me at all uh but even if you don't believe the videos are real you must know from

(2:11:16) watching that interview that there is absolutely a cover up at play no question no doubt whatsoever there's a cover up going on with related to what happened to MH370 you don't have people that talk like that when they're when you're not hiding something um okay good question a lot of people ask about this Ashton have you seen the Lost Century documentary from last year it covers many times free energy that was suppressed throughout history aligning a lot with your findings write down check it out when

(2:11:45) you can that's Dr Steven Greer's uh thing uh guys the reason why I don't need to watch it is because I know it's true I know it's true yeah we've been hiding free energy I figured that out I've deduced that myself I hear that movie is really good though so if you guys want to watch it and check it out and you want to get some background of free energy and how they've been hiding free energy um I agree with what Dr Greer says related to technology I don't necessarily agree when it comes to you

(2:12:12) know the alien stuff with Dr Greer but that's fine we don't have to agree on everything um and I think that the reason why Dr GRE is so credible on the technology is because he

actually interviews real people he actually interviewed Thomas Bearden that's how he knew about free energy is that he interviewed Thomas Bearden and that he saw documents when he was uh advisor uh during the Clinton era uh he saw documents and so he became convinced uh but I think that maybe some of his interpretations might be maybe they're

(2:12:39) not fully accurate and then he opened himself up to criticism because he went and started doing you know uh like C5 stuff in the desert for celebrities and that makes you easily open to disinformation now I don't think he cares about his perception in by you know standard people but I care because I want to prove that these videos are real to the world um now I know I'm not GNA convince everybody I don't care so I'm just going to convince as many people as possible and try to stay as credible as possible for as long as

(2:13:06) possible now if I lose my job and I have to start trying to do social media crap for money then I will be opening myself up to that level of attack myself and then it's going to be a lot harder to get this information out um but we'll see so I'm going to try to keep this investigation as clean as possible but like I said before this is probably going to be a situation where I'm probably going to have to step back a little bit and focus on my job again because people are starting to notice because I have like I mean I'm getting

(2:13:33) like three million views on some of my posts out there like people in my job are noticing now and they're like oh you know Ashton's poting on Twitter during work so I've got to be like a lot more uh separating my two things you know okay uh let's watch the videos one time and if you weren't here in the beginning because we've got a lot more people that followed up I'm going to say a couple things I'm I'm going to repeat what I said so if you want to take off because we've uh you've already heard

(2:14:05) this you can so once again here's the MH370 videos uh let me just rewind this so the reason why everybody's lying about these videos is because even the white hats are scared of these videos like if you would have a nuke get out there to the public before people knew about nukes even the good guys would want to hide it even the good guys want to hide these videos this is why the people that are probably even on the side of disclosure you know the James foxes the Jeremy Corbell the Ross karts even they are lying about these videos

(2:14:40) and they're lying about these why oh this is the short no wonder I was like what is this not the right one Okay the reason why they're lying about these videos is because they don't want to hurt National Security like these videos getting out hurts National Security **China** and **Russia** figuring this out hurts National Security Iran figuring this out North Korea this hurts National Security uh too bad they shouldn't have let it leak out to the world they shouldn't have let some random guy on Twitter on X figure it out

(2:15:08) figure out the science that's their bad uh until they come and talk to me I'm GNA keep exposing it but we know the people are lying about it we know all the UFO celebrities are lying about this all their contacts are lying to them about these videos everybody is trying to make these videos go away the AO is panicking and losing their **[REDACTED]** that's why they're ghosting me

because there's nothing they can say about these videos that won't expose the lie like the Malaysia Minister of Defense the Aro is

(2:15:33) at least smart enough not to do an interview uh because if they do an interview I'm going to do what that woman did to the minister of defense and I'm going to show that the Aro is full of [REDACTED] um so instead what they're doing is they're ghosting me uh and I gave them verifiable evidence and I've mentioned this many times on many podcasts on many streams I've gave them the verifi evidence of Edward C Linn Edward C Lin's the guy that **leaked** these videos they will be able to conf prove

(2:15:57) that and confirm that and uh that's the reason why they can't talk to me that's the reason why they probably can't mention this so the question is we're going to figure out how are they going to lie how is the Aro going to Gaslight I would imagine that the Pentagon and the dod will tell the AO to lie to me if they lie to me though somebody has to be brought in in order to be told to lie so it's going to be interesting I the way I would expect them to say that no they didn't find anything or something like

(2:16:23) that right but we caught them because we have USA 229 staring down at the location where the plane supposedly turned into the South Indian Ocean so the United States government we know they know um they're kind of caught over the barrel on this one um so we'll see what they say and how they try to lie and once again if you weren't here in the beginning uh the best thing the government could do right now I'm going to give the government some advice right now if you're the CIA you better go find

(2:16:48) those pieces of MH370 that you tore apart in dieg Garcia and go out to the South Indian Ocean and send somebody to start dumping those pieces of the into the ocean and and make them sink to the bottom somehow I don't know how you're going to do it but go somewhere along that seventh Arc sink them down there and then have ocean Infinity go down there and try to find them and tell people like oh we just missed one spot somehow and somehow none of this debris was floating and you know and then fake somehow fake a black box or something

(2:17:15) like that I mean I don't know what you're going to do good luck honestly good luck I I don't know how you're going to lie to people on this but that's what would do uh backup plan for the government would be take the original videos and use AI to like disappear the orbs and the zap out of them and then tell the world like come out and be like yeah we were filming MH370 somebody got the footage and they added some orbs to it and we were tracking it and yeah um yeah and you know make up some [REDACTED] about it like

(2:17:45) that's the that's the other backup plan because there's really just no we we have them like there's nothing they can do we have them over a barrel there's no way to lie about this anymore you guys are looking at our most powerful super weapon on the planet right now and this was 10 years ago there it is right there a real Wormhole that's a real Wormhole right there chat we're looking at we get to look at a real [REDACTED] Wormhole warp drive there it is there it is

right there incredible

(2:18:15) huh what a time to be alive guys what a time to be alive energy is real we have warped technology that the government has been hiding from us peasants and we caught them in 4k we just straight up caught them in 4k and we were able to put together just some random civilians were able to put together the probably the strongest criminal investigation in the history of the world international investigation find more evidence about this plane than every expert that's out there all these phony experts like Jeff wise and Mike

(2:18:53) exner Larry Vance and Victor ananello they're all clowns they're all frauds we did more work than any of them we found the real story of what happened to the plane and we also exposed the government at the same time guys cheers to m370x you guys are [REDACTED] Heroes cheers to you we have the ability to change the entire world based on these videos that's how crazy these videos are so thank you guys for being part of this community thank you for hanging out tonight we are probably going to be focusing more oh by the way tomorrow I'm

(2:19:30) going to be doing a space with uh America Shaman it's at I think six o'clock Eastern time tomorrow we're going to talk about the DIA papers and other stuff related to that usually we go for like two hours um so that's probably what we're going to do we'll have people can come up and take questions during the second half uh we'll talk about the the technology how the government's hiding the stuff from us and all that it's going to be fun and then I may do a follow-up stream tomorrow night I want to dig into

(2:19:58) some more of the science there's a bob Greener uh a couple year couple years ago he did a thing about coherent matter waves and then I also want to look into John archal Wheeler as well and some of these other scientists and some of their other theories uh Aronoff bom effect because I think I want to be able to understand the technology even better than we understand it now so come along with for that and that'll be awesome yeah sorry nastro for that brother for that accidental ban yesterday that was my bad the chat was

(2:20:30) moving so quickly that when I right clicked on somebody else's name to ban them it banned no instead so it was pretty funny oh yeah is that the bear guy yeah you know what and at least you didn't call him the qinon shaman because he's America Shaman guys he's not q and on anything like the media just literally made up a fake thing about him where's the lan piece yeah where is that I'm gonna have to ask him I hope he didn't get cold feet on it because we had an amazing conversation it may just

(2:20:57) be taking a little while I may ping them and see where that's at um but that conversation was awesome so there's actually some still some pretty good stuff coming out but that was like long form two hour long uh thing so it should be good any other last questions guys yeah so once again 6 PM eastern time tomorrow should be the America Shaman space this is going to be like the fourth or fifth space I've done with it with Jake uh I really like Jake a lot like Jake and I are like yin and yang like I'm like the hard science and he's

(2:21:28) like the uh the more esoteric science but he still he knows like so much so should be sweet man should be sweet okay guys gonna go to sleep you guys have a good one I'll play you out peace everybody have a good night [Music] play they meant to fly bra they ain't supposed to fall from the sky but if they do they'll leave behind more than are to ples just be flying I know you think I'm lying the USA B be hiding **truth** night BL for men to fly PR things supposed to fall from the sky but if they do they'll

(2:22:35) leave behind more than P are to they'll leave behind more than who you think I'm ly the USA Baby Harden the **truth** and I ain't fine planes they're meant to fly planes they ain't supposed to fall from the sky but if they do they'll leave behind More Than A P or two I just be flying I know you think I'm lying the USA they be **truth** and I ain't fine [Music] they leave behind more than a piece of two they'll leave behind more than a piece or two

MH370 & DIA Papers w/ Dave Rossi - YouTube

(01:27) it's m m m m m h37 until you do some research don't talk to me I'm going to find the **truth** while I sit this Mar your opinion it means to me it's m m m mm h37 not all heroes make capes I wear glasses to see I'm going to find the **truth** while I it this Mar the trolls hate seeing me [Music] succeed but guess what m m h37 [Music]

(02:34) s y m M3 7 not all heroes gles to see I'm going to find the **truth** your opinion to me your opinion m m h37 now Heroes glasses to see I'm going to find the welcome everybody to this special episode of hard TRS podcast this is Sunday I'm your host Ashton Forbes today I have a special guest Dave Rossy my good friend I'm bringing him on right

(03:38) now hello sir how are you doing this this afternoon I'm doing good brother thank you so much how are you doing great man so I'm so happy to have you on here if people are not familiar with uh brother Dave here he is a DOD contractor an engineer uh that means he uh works on uh private contract that are out there uh he has a lot of extensive knowledge about physics and electrical engineering and if you've been following the streams that I've been doing over the last uh week or two you've seen that we've gone

(04:13) into a lot of these defense intelligence agency papers so what I wanted to do was bring Dave on here today to go through those papers and to go through the MH370 videos today in this very special episode so Dave um first thing I wanted to ask you is are you familiar with these defense intelligence agency papers that are out there and how long have you known about them and what do you think about why they exist in general sure thank you well first off thank you so much for having me on I love the the vibe that not just you bring brother but

(04:45) also that your audience brings I love uh reading the chat too here and just want to say hello to everybody uh for those that have come from uh my neck of the woods thank you so much for hopping on to Ashton stream um and as it pertains to the DIA papers I am extremely familiar with them um very well versed in them and I've known about them I I had read the papers probably within three or four days of it being released on the Dia's website I think this was two to three years back maybe two two and a half years ago I

(05:13) think it was and um I think they're they're what these papers suggest I mean keep in mind that the papers were contracted by the DIA to essentially look I think anywhere from 20 to 50 years into the future with regards to various forms of uh propulsion communication and things like that with that said I would say that these papers are describing things that secretly have been developed and matured uh quite some time ago now without getting into a whole you know backstory and whatnot I I know that much of your audience knows

(05:47) this but I would say that a lot of what these Dia papers cover um both conceptually and to a large extent practically uh plus or minus a couple of areas in the engineering side were probably matured I'd say by the 50s or 60s and I know that's a bold statement to make I know that's a large claim to make but uh if we look for example at a lot of the work at sper Rand Corporation in conjunction with the Navy and General Electric going all the way back to the 1930s we know for example that the usage of Tesla's technology was in fact

(06:21) utilized in various forms of uh Network analyzers for the Navy um and electrical engineers were even at the time seemed to be far more prominent in being able to make some certain aspects of this work in conjunction with people like um Bondi uh DT uh Einstein um Neil's bore and so on and so forth so uh these papers are fantastic um and I think that they really represent something that is uh that connects to both your work as well as uh Mr pz's work and many others yeah so why do you think that they like

(06:53) the dates on the publish year are like I think they're all 2010 and I think that's when they were published I can't I don't know when they were L Declassified or unclassified do you why do you think that they were only published in 2010 if the science goes back to the 50s and 60s well I think what we're dealing with here is we have to realize that the effort from the DIA papers was part of a larger effort now what I'm about to say here can get controversial so I'm not claiming to

(07:18) support nor go against or attack what I'm about to the individuals involved here but if we look at this bigger apparatus of what was going on we know that those papers were contracted by the D from the DIA two Bigalow Advanced Aerospace space studies and so when we look at that scenario we see that bass at the time bass is short for Bigalow Aerospace uh was at least seeming to attempt whether for personal proprietary gain or for the betterment of humanity is not for me to say I really don't know but it seemed like there was an attempt

(07:47) to bring a lot of these conceptual understandings and theoretical uh uh foundations forward in ways that other groups were not and I think what we saw there essentially was that

this this what these papers were uh written about discussed Concepts and topics that would have been considered highly highly sensitive and classified probably post World War II Nazi Germany and I know this because without getting into any specific names um uh for my own safety there are individuals that have since passed away but individuals that worked

(08:18) with the Germans both during and post World War II in an engineering sense to make these a lot of the phenomenon discussed in the DIA papers come to fruition um after in the 1950s 60s and so on and so I think what we saw with the 200920 publication of the papers um even in a classified sense was a grander picture of essentially saying this stuff is there in the classified setting and how can we bring some of it into a commercialized setting or you know some type of uh uh some type of setting in which for example you would have the

(08:53) Saudi Arabian Energy System underwrite a lot of what those energy principles entail and then try and bring it out in that regard now now that is my understanding and so we have to look at it as more of a 70 80 year type of big picture thing um but does that answer your question 2009 yeah I guess what I'm kind of getting at is do you think there's some element of plausible deniability where they can like if this technology were to come out they could go hey no we had these papers we told you that they were out there I mean we

(09:17) had all these Dia papers that say that we were working on it like do you think there's element that absolutely this is how one can play both sides against the middle again rules for the not for me so what you do is you publish a paper like what we see with the DIA then you have a handful of scientists that may or may not have contributed to the um the uh the publication and writing of those papers or authoring some of those papers we have those science certain scientists would come out and now say no well the

(09:42) theory is there but there's no way to practically engineer it it's impossible da d d d da but then if there is a sudden breakthrough that just so happens to favor the ones that are trying to keep control of this type of understanding of energy and technology and physics they can still then say well the theory was there so you know it it was only matter of time till we engineered it and so it can go you can play it both ways and swing it either way yeah so I think let's get to it first of all I'm wearing my shirt today

(10:10) MH370 didn't disappear itself now we're going to look at the MH370 videos here um and I want to uh kind of put this disclaimer out there that we're going to look at them from the perspective that they are authentic um you know we also have plausible deniability no one has told us whether or not these videos are real if they are they're probably classified vide videos um but we are going to look at them through the lens of these papers and the science that is out there that may be uh non-conventional uh so you know we are

(10:40) looking at them through the agreed upon laws of physics but we are potentially looking at those laws of physics through a different lens uh the lens of you know um potentially uh concepts of Tesla brought forward and then we're going to look at all those papers after and figure out how it kind of line those papers line up with what we're seeing in these videos so are

you ready to take a look absolutely okay here we go let me pull up we're going to start with the satellite video and this is the highest

(11:06) quality version of the satellite video uh this was published later on in the summer I did a post earlier today that this version since it's higher quality Regis side and non's version's lower quality and you can't see the coordinates as well in the Regis side and non version which would indicate that Regis side and non was not the original source of these videos that they both of these sources got them from a third party that's out there which I think is really strong evidence they're real because Regis side non says they

(11:34) received this video March 12th 2014 only four days after the plane went missing which is practically impossible for somebody to hoax something like this now let's go ahead and play it take a look you can see the coordinates in the bottom left we can see this plane scale down accurate capabilities of a 7 s7200 we can see smoke we can see what looks like a citric session or remote terminal login and then Here Comes our first orb right out of the top side of this screen now one thing I've started to notice

(12:02) about this is this speed of this orb when it comes in we calculated to be somewhere around like 2,000 miles an hour yeah and what I've been calling these is a Hypersonic weapon because when I Googled Hypersonic weapons I found out that these Hypersonic weapons have a plasma sheath in front of them and supposedly that's how they get through the issue of having friction in in air um would you agree or have any comment on the idea that like PL as physics has a major component to this type of technology or the idea of this

(12:34) technology that we have without a shadow of a doubt absolutely I would actually say that I can say his name now because I he I know he has passed away but there was an individual I think based out of Germany that did specialized in this type of notion of uh basically plasma sheath in combination with various forms of Crystal experiments and his name was uh thorsten Von Ludwig and he he was contracted quite often by various DOD agencies and contractors to develop things like plasma sheath and and other other aspects of of this type of

(13:07) technology so I I would fully agree with you I mean one other thing that I I would like to mention as well is that what we're dealing with when we talk about things like you know negative energy or vacuum polarization or creating a gradients in the SpaceTime metric to develop one's own axial geodesic and so on and so forth or even using you know the strong nuclear force and resonance to to amplify these effects or direct energy weapons and so on this is all the same underlying Zer Point Energy science that tends to

(13:33) conflate over and overlaps into various areas so one aspect of negative energy with enough energy density applied to it could in fact enable things for example like low energy nuclear reaction called fusion and so we start crossing over into these various areas in which there have been stories in the past where individuals developing free energy devices or overunity devices meaning you know you get more out than what you put in in fact also begin to lose their weight if that you know if you know the voltage induced and the current and

(14:00) voltage was scaled up significantly and so we start to realize that it's almost as if nature is geometric and we know this because quite often there's a there's something that is recommended behind the scenes to individuals looking into this which is a book by John Wheeler called geometrodynamics essentially unifying geometry and Quantum electrodynamics as Sal payz is also mentioned and even what those discuss in those books is that there is this in electrical engineering we know we have the right-hand rule but we also

(14:31) have what has not been taught in schools a left-hand rule or what we could also call an anti-right hand rule this is what gives rise to right angle vectors and this is also what gives rise to the notion of inducing uh orthogonality and perpendicularity within the vacuum and so in other words the least I could say is yes I agree with you fully um and the most I could say is that it conflates and in a vend diagram sense it overlaps into various areas of basically every field of science um chemistry all of it yeah it's funny because um you know I'm

(15:05) trying to bring it down to earth for everybody who's out there and watching but I remember the first time we spoke I had no idea what you and S were talking about you can probably tell when you look at my facial expression but now you know now you know and now it's six months later like actually the stuff you're saying actually makes sense to me now and when we're talking about like the geometries we're talking about the geometries potentially of SpaceTime itself and this doesn't mean like

(15:25) everything in the universe is connected but there are aspects where like this technology is a pend box where once you open it up now you realize there's all these different applications low energy nuclear reactions is one of them uh and that can be how we produce these exotic vacuum objects uh gravity manipulation um so let's go back to the videos here for a minute uh because there's an interesting thing happening in these videos which is this first orb doesn't quite lock in right away you see

(15:51) it spin around the plane to the left and then it locks in you see the second orb come in and the second orb locks in almost instantly and I did some timings on this and there's like about a 5sec difference between the first orb getting there and the second orb but after the second orb gets there the third orb comes in within two seconds and and connects and finishes the triangle and you can tell right here they're not creating a zero point system that's like a line they're creating like two edges

(16:16) of the triangle of the equilateral triangle zero point system and then the third orb comes in right away and right here when we first spoke I wasn't sure what was going on here with this orientation spin on the plan plane but now I'm pretty much certain that what they're doing here is they're trying to figure out exactly how big the singularity they're going to induce here has to be in order to Encompass the plane do you have any thoughts I do actually if I hope you don't mind I brought a pen and paper here some

(16:44) sketches I like to show so one of the things now that you have more of a a very fantastic understanding of this so one of the things I will say is that the orbs in Rel and some of the stuff

I'm going to say here to some may seem quite far-fetched to others it may not you may find me jumping between ES postulations and known uh condensed matter physics laws and things like that but with that said the notion of the three orbs being there we talk we talked in the past I think uh late last year early this year

(17:11) about a fourth orb being at the place in which if there was a teleportation event the fourth orb would have to be at the place in which they would want the plane to go assuming it's a teleportation event and not an endothermic or exothermic event um with that said what really gets interesting is that we talk about this notion of completing a quadruple right which is again two dipoles overlapping each other but what's interesting is that when we notice the three orbs surround the plane we notice that the number three like

(17:38) Tesla always mentioned 369 is very significant but this also directly correlates to a different type of dare I say understanding of mathematics with regards to Pythagoras's Theorem the notion of two: one and the reason I bring that up is because it's almost as if the orbs themselves were trying to develop a sort of ank like uh scenario or a bifurcation uh apparatus geometrical bifurcation which is would be a fancy way of essentially saying inducing a fractal moment as even Bob Greener mentions now what's interesting

(18:07) is that when we look at this geometrically it's almost as if for example let's just say we had one orb on each one here say this was a positive and a positive and it's almost as if this orb the third orb was a negative orb to then bring the plane in which it's surrounded to where the fourth orb was and the fourth orb would be negative as well so now it's not a perfect X because geodesics can be perturbed and so on but essentially what we're seeing is the crossover of two different dipoles and we know that gra from an

(18:42) astrophysical scale it's been proposed that gravitons could be emitted even from planetary bodies even at small or large density levels U by oscillating the mass of a quadripole and so I would say very firmly that is what these orbs are doing in conjunction with much of what has been talked about in in recent from others for example I do very strongly agree excuse me with Dr Jack sarfati when he says for example uh that plasma can slow down C or the speed of light um this is something that I have not really uh I don't think elaborated

(19:15) as much or as clearly as he has in the past but this notion that plasma or a Bose Einstein condensate can essentially act as a so imagine The Ether right now or the quantum vacuum or empty space let's call it the ether imagine all around us we have all of these particle fluctuations moving super quickly but they're all moving at light speed so how can you snatch it it's like when you're trying to grab the handle of a door but the door keeps moving and you can't get it what plasma does and what a Bose

(19:43) Einstein condensate does is it essentially slows down that doorway that's always been around you but it's just been moving too fast for you to grab it and so plasma essentially slows down that doorway so you can basically grab that that door handle and open it now Translating that to practicality would be basically breaking down the symmetry of the vacuum of the local or

of The Ether essentially so the idea being that you would be inducing a form of uh of negative energy so yeah and we're going to talk a lot more about

(20:12) that when we look at the papers here so yeah um and then just again from a high level perspective we see this that the orbs are clearly doing this mapping and then to your point about the right hand rule you can see them reorient right there which this is not an accident this is not somebody just guessing what they should look like if you were to look at the plane straight forward right here they would be spinning clockwise and if you use the right hand rule you can create your vector and your vector is going to be pointing backwards from the

(20:39) T from the uh where the plane's uh trajectory was and we were able to map out the direction of travel based on those coordinates we see in the bottom left Y and it shows that this plane is currently going somewhat East when we see this plane flying so if it's going backwards it's going to go over to the west and we went ahead and we pulled up uh we did like a proposed route to figure out where where that would potentially go right and what we found out here is that it goes somewhere over near the

(21:06) malds and more so than that here you can see that if I zoom this in let me see I'll zoom in a little bit so this plane is seen by a witness right here where we have the coordinates and then if it goes over to the West turns out there was a B7 fire suppression device that was empty that washes up in one of these islands like a week or two later and we have on this small island called cuda huaduo who I butcher in that Cuda huadu I think it's Huda huadu there was like 20 Islanders that see this plane in

(21:41) the early morning hours and it was discounted because the direction of travel had the plane coming from the West they thought well if it came from the East it should have come from the East so they just ignored it even though the Islanders saw steam coming out of the back of the plane right and they also saw the red and white rpe of Malaysian Airlines and they said that they saw the plane flying south and if you just scroll down what do you get if you go to the South oh there's a secret military base there that's a great spot

(22:09) in the middle of the Indian Ocean to uh hide an aircraft right so yeah well the one thing I wanted to mention as well too is that it's I saw some comments even earlier probably 15 20 minutes ago about people asking if the fire on the plane if I thought it was premeditated I would say certainly because again when you this is metaphorically and literally when you bring someone or something down yourself you control the way it happens whether that is someone's Public Image when you're trying to do a damage control or

(22:39) whether that is literally when you're trying to bring a plane down or have a control a plane's momentum velocity and speed so that you can do what was done here um allegedly in this footage and so I would say certainly that the orbs without a shadow of a doubt induce the form of a direct energy weapon and people might say well okay where would be the where would the heat signal mates be of that event right and to that I would say well we have to understand that when we're dealing with what we call negative energy we're dealing with

(23:08) both a negentropic and a the an anti- thermodynamic state which essentially means that all of our Radars and detectors which are normally made to pick up heat for heat signatures will not be able to to detect the complete reverse aspect of that because what we're essentially dealing with in this case are cold currents or basically very cold uh EI waves to the point in which they could actually uh freeze your finger if you touched it in the laboratory or something like that but that would be another aspect so again we

(23:38) are only as good as the detectors in which we make um and so I think that's also another reason why for those that may say well Dave if you think it's premeditated where's the laser beam hitting the oh there we go perfect there we go so even what that's perfectly shown okay that would be a perfect example of the direct energy weapon result where the beam itself say from you know deployed from the orb let's just say hypothetically it's shooting the orb one of the orbs is shooting a beam at the plane the beam itself would

(24:05) be cold but then the result of that of whatever it's uh burning up or what have you will start to show the signatures we see there so I I would say that there's certainly something there we we've seen for example even Ken shoulders uh do some work in the laboratory pertaining to a different type of electricity that was you know phenomenological that was able to cut through Stone um and and I can get the paper for you on that afterwards but yeah and so and here's I have a slightly different take on it

(24:32) which is that there's these batteries on board the plane and people ask were they accidental was it intentional I think if this is an operation and we see see this drone very close to the plane in the very beginning of this video uh this is set up from the beginning this is an operation right I would speculate that they if they use directed energy weapon they used it on the plane when the plane went dark initially and they ignited the batteries and then what we're seeing here is the smoke from the fire within

(24:57) the cargo Bays uh going through the air conditioning system and out through the air conditioning Ducks here and this is where you see this smoke Trail come right out of that location potentially just wrapping around the hall of the plane here right to produce that smoke and then we do see the cold lines in front of the orbs we actually can see it pretty clearly especially right beforehand now in this version of the video it's harder to see but these dark lines here are actually pulling these orbs forward that's that geodesic as

(25:22) well that we're seeing and then to your point about low energy nuclear reactions this is where Bob greener's got his video that says like I didn't make these videos and I didn't go back in time that's what he says because what we're looking at here is that Thor's hammer here uh which he says you know this is where they're changing the primitivity of free space so this video to me is the one where it's like who the hell made this and how would they have the knowledge that nobody at the time in

(25:46) 2014 outside of the the black world would have any idea about and this is where I would even go as far as to say that if we had detectors that were able to pick up the negative aspect of

this uh of this low energy nuclear reaction angle we'd act would actually be able to see far more of a protrusion surrounding the uh the orbs around them and so on and so forth but I'm fully with you on all of that yes 100% this this all lines up with with the different aspects of what this entails Y and then the part two here is that a lot

(26:17) of this goes back to Tom Bearden and I want to ask you about him in a second but when we see this event happen I mean the way it zooms out here tells me this person is expecting this to happen they zoom in we're getting the best intelligence I would speculate based on seeing this this isn't our first rodeo at this kind of thing but my guess is as well is that we're filming this to get better Intelligence on how it operates so that we can improve it in the future if I had to guess um yeah go ahead so if

(26:45) I could say quickly a lot of this goes right back to what Tom Bearden had discussed including of course the work by Nicola Tesla now one of the things I'll say that may be controversial or maybe not is that there was allegedly testing of Tesla's interferometry experiments going all the way back uh to World War I allegedly now there's some documentation providing this there are some newspaper articles and so on uh that match up with the dates of the time in relation to World War I uh but it mo more and most importantly we see that

(27:14) after World War II uh the likes of people such as Lieutenant Colonel Tom Bearden uh were doing their best particularly I think in their in their later years of their lives to try and develop help people develop an understanding of how this works so that people can then demand more transparency from uh their leaders and so on and so forth uh so as to be able to understand that we these things are possible um without a shadow of a doubt uh Tom Bearden was someone who I have immense admiration for and someone who really uh

(27:45) was decades decades ahead of his time and uh really I have much respect for him because he really went out on a limb and he he went through a lot of personal sacrifices uh just to try and essentially get the message out and this was before the era of the internet um uh I know he had done some things on the web a little bit but yeah yeah and um the Thomas beard and stuff I mean I watched like all of the videos I could find on him and when he's talking about the cold explosions I I can't think of any other time where

(28:17) we've seen a cold explosion an endothermic event other than this video like these videos this one particularly might be the only human record of a endothermic event that we have in the public purview that's at least of this high quality I mean we see it right there this that right there endothermic event if I could say as well for example this notion of an endothermic event uh there have been in private Laboratories experiments for example where and I think I may have brought this up before if you take

(28:48) because what this physics does is it dramatically increases um uh it opens up a vast amount of new types of physics in chemistry amongst many all the other Fields but say you take an acid and you take a hydroxide and you neutralize the two in a Petri dish and from that neutralization you're normally expected to get some type of um uh exothermic reaction

normally you're supposed to get some type of heat but in this particular instance there is no heat after you neutralize the two substances in the petri dish right and so what that tells

(29:22) you is that there are some peculiar properties in that particular acid and that particular hydroxide in which it's possible the internal structures of those those um of the acidin hydroxide are enabled in such a way that they've actually implemented the open system uh or The Ether with in in conjunction with its um boundary conditions so in other words what that basically means is instead of actually observing the heat dissipate from the neutralization in the laboratory the heat itself is actually transferred in the form of other types

(29:52) of energy such as mass or resonance that then just sort of simmers off into the ether um in a way that normally again we would be cold and not hot yeah and Thomas Bearden talks about the scalar interferometry as well so taking your scalar transmitters and at one point I remember specifically he brings up the Ideo zero point system for your pump waves and then he goes like this in the video and then he goes like this and when he did the triangle formation that's when I went oh my goodness that's what we're

(30:25) looking at here kind of what you just showed in your diagram a second ago as well right it's it's the very basic visual of the notion that our models currently publicly are based on a flat space time and I would say that a lot of the diaa papers are basing it on basing those physics discussed in the papers on a semi-classical so a flat but also curve space time but they kind of they they watch the way in which they write the equation so you have to kind of go in knowing when you go into these papers what they're kind of grasping they won't

(30:54) explicitly state it but um basically yes it's a flat space time in which one then makes a peak in that SpaceTime now that Peak could be you know triangular it could be curved I know you know quite often we speak more about curving space time of course um but yeah that's that's that's what that is absolutely yeah these videos are very exciting and I want to give Dave credit for two concepts that he's helped out with in the past that I did not previously understand one was uh the fourth orb so the idea of like how do we

(31:23) determine the direction of travel and I think that I like both both you and Bob Greener have very similar approaches to it Bob Greener would say well we just turn it on and then we turn it off and that the right hand rule can still dictate the direction of travel now on yours I like your theory a little bit more because I like the idea of having a steering wheel and this is one where the orb can theoretically be anywhere but I do think that it's probably somewhere back near the malds and when I look at this technology too A lot of people look

(31:51) at this and they go we can't understand this and I would say yes we can understand it but it even goes a step further than that that this is not like the absolute Pinnacle of this technology like this is us just figuring it out yes we're trying to figure out how to improve it but we can potentially improve it like a ton I can imagine in the future you could have warp gates or you could have a situation where you can just send this plane anywhere you want but for now maybe we're limited to sending it somewhere else on Earth or

(32:16) somewhere else where we have another orb as the direction of travel and that's the part where I want people to think like this is just the beginning like this could get way crazier right right I can tell you yeah yeah very much so they it's interesting to see what's happening right now because you know I'm having conversations with many individuals and groups and committees behind the scenes that you know again they're they're kind of pulling what I call a Sean Kirk Kirkpatrick you know they're they're

(32:43) saying one thing in these private calls but then another thing publicly and it's uh it's it's very unfortunate because uh I do really believe that there's a way that a lot of this stuff can be developed and commercialized in a way that there's enough money for everyone to go around whether it's on the big level or the small level and um I understand the need to keep various aspects of this secret but I mean we're at a point now in which you and I discussed privately as well that it's

(33:08) getting very difficult to progress physics and science overall without having to reveal a lot of this and so that's why I must say that although I don't agree with him on everything I agree very strongly with Eric Weinstein when he says uh quantum physics is like a startup company that never ships a product um that was I I say arguably that's that was kind of the point people keep running in circles yeah and I want to go ahead and say people will say well why are why are they doing this why would you do this and of course only

(33:36) United States government could give us the official answer but yeah as somebody who probably knows more about these videos than anyone on the planet what I would say is that this is related to the 20 freescale semiconductor scientists on board This Plane it's way too many people semiconductors super conductivity see are all over this kind of Technology when you imagine these microchips and making them smaller they had just a microchip that was the size of a smaller than a dimple in a golf ball they had also had a patent for maximizing the

(34:05) number of dieses on a wafer or something like that which I don't even fully understand but when you look at Super conductivity especially the Ikk99 stuff recently you see rocks just floating freely the magnets like moving all around them and you look at this and you go that's got to be related to it do you have any comment or thoughts on that I do and uh as we talked about privately there's quite a few things that unfortunately I can't say but and I and I really apologize to the audience for that because I'm not trying to lead

(34:32) anybody on or anything but the semiconductor aspect is very crucial uh whether it's a superconductors or the notion of room temperature superc conductivity occurring um as you know I I firmly believe that uh I I would go as far as to say that I know and I wouldn't expect anyone to just blindly believe me but I know that for example basic uh material like aluminum or gold can actually become superconductive if uh you know certain things are done to that material now yes the procedures that would need to be done to those materials

(35:05) are not something that could be done at home but certainly something that with the right resources could uh enable room temperature super conductivity now the reason I bring

that up is because if we think about the way in which semiconductors work which is that again they're very basic devices that both conduct electricity but also don't so they have a dielectric uh element to them but they also have insulators and barriers that stop electrical flow and charge we we have to ask ourselves well if we talk about this notion about

(35:30) quantum physics occurring within at the quantum scale basically at the plank level in which the smallest forms of matter exist we have to ask ourselves could it be possible that these semiconductors uh find a way to couple to this plank scale and the reason I bring that up is because if we can couple to the plank scale it may be possible then to use resonance to amplify the effects in which the coupling picks up at that plank scale and so if and We Know by the way publicly that there's very very a very very weak coupling between

(36:00) electromagnetism and gravity on the plank scale and so the coupling is there but the amplification is the problem and so I it's possible that a lot of these semiconductor scientists knew ways in which to amplify some of these effects whether these effects were propulsion related or healing related or what have you that I I really I can't say um not because I know I genuinely don't know uh but because there's so many areas you can into to explore in this field I mean it it never ends biophysics the brain it

(36:32) keeps going so I think certainly um without a shadow of a doubt uh I am of the humble view that if there was an attempt to send a message to other countries via the an intelligence apparatus or un official channels basically saying look at us this is what we have don't mess with us I really see no no better way than to do something like this yeah to me that's what this is this is a message this is a warning to people uh and when I dug into intellectual property theft the number one target are foreign Nationals that

(37:04) work for American companies and **China** steals like \$600 billion dollars worth of intellectual property and if I remember John mcaffee before he passed away sorry on a **Reddit** AMA he had a very good description of uh terrible for us but great for the Chinese in terms of the methods and strategies used in in the ways in which Chinese University students are sent here uh to North America as you know foreign students and the way that they get into these programs or these databases is very sophisticated uh but again it's an

(37:35) attempt to constantly bring uh bring information back to **China** if there's one thing I could say from a historical perspective and I know that this is not in any official history record but it's as I understand it to be uh which is that after World War II um and after the uh the nuclear bomb was dropped Stalin had told uh basic and I think had told this story in the past Stalin had basically told and I'm paraphrasing here he gathered all of his best scientists from all the institutes across the Soviet Union so at the time you're

(38:07) talking about you know bellarus latva you're not just talking about **Russia** you're talking about all of these countries Eastern European countries and he basically said uh ladies and gentlemen to the scientists uh the first great uh re scientific uh Revolution was American but I can assure you that the next one is going to be Soviet and so what he then did was he then had

all of his intelligence agencies and he also had all of his um best scientists essentially go to America and Europe load up all the literature on everything

(38:38) chemistry you name it uh loaded up on literally on boats like loaded up books on boats and shipped it back to to **Russia** and they set up very sophisticated translation institutes and they went over the literature with a fine uh tooth uh a fine comb and they looked for anything and everything they could and that is why quite often the Soviets are attributed to having a much more better understanding maybe more back then than now of this notion of bioenergetics psycho energetics psychotronics direct energy weapons and

(39:12) so on and so forth um I I certainly think there's something there and I think to this day uh the **Russians** are some of the best nonlinear uh non-commutative non-abelian mathematicians I've ever seen personally I mean they're even far more open about their discussion on gra if you just type in you know uh **Russian** Publications University of Moscow or what have you on graviton uh uh generation and so on and so forth the papers are out there yeah and I actually I remember listening to Thomas be talk about that and I it would

(39:42) not surprise me if they were ahead of us in like the 70s and 80s maybe in the 60s and that when the fall of Soviet Union happened you know economics was the the biggest downfall for that and and so I think that's possibly where we caught up and right um like the weird letter to me mentions it feels like in the 2000s when quantum computers started getting figured out super computers that's how to me you move from like radar dishes or even satellites using interferometry to now you've got floaty orbs that can do

(40:09) it you know like we see in this video and I'm I'm showing these videos again this is one where it's some color changeed versions that I slowed down and put in here just to show people how much detail are in these videos you know these videos in my mind no doubt whatsoever are real far too intricate far too much science that goes into them brother if I could jump in I saw someone in the comments here say uh didn't Lazar say gravitons are nonsense and that gravity is mainly two types of waves grav a and grav B I would actually agree

(40:41) with all of that in the sense that uh I believe there's two types of gravity we have AC gravity alternating current gravity and then we have DC gravity so DC gravity is static and then AC gravity is essentially a fluctuation effect that we see like for example in the way that the sinusoidal wave was mapped out with by these orbs here gravitons themselves are both particles and waves simultaneously it's a nonlinear effect and they cannot be when you emit a graviton in the laboratory they do have a how can I put this they they do go

(41:12) faster than light and they also cannot be seen by the human eye they essentially exist in a form of hyperspace because they act as a spin to boson particle um and so you see the effects of the graviton uh but you don't actually see the the you can't at least with the naked eye you can't see the traveling wave or the traveling particle if you will um but yes great question to purposeful uh poro I think that's your username there um yeah and I wanted to show as well the uh oops that those graphs that you're

(41:47) showing just to show people and also this this video right here this is actually a gif right here um oh cool that actually shows the similar tracking to what we see in the Drone video as well here I'll just show actually the full video that I've got cuz to me like we we think we found the camera exactly here this is this MX uh 25 camera here and it's got the exact capabilities that we need it's got EO and IR it's got color it's got nighttime vision capabilities we found this on a YouTube

(42:17) channel where it was uploaded 2015 and we can actually see in the top left here this was taken July 15 2014 so these potentially would have been the exact type of cameras this is the exact kind of tracking that we see in the MH370 drone video where it's manual and we don't see the huge Heat Signature underneath This Plane consistent with what we see with the engines here now this is a much lower altitude than what what our plane is potentially at but we can then this kind of helps us to compare to that drone video to see it's

(42:44) got very similar capabilities um and then the pattern of the orbs uh is really inter I'm so sorry to cut you off brother if you want to keep going and then if I could just when you're done if I could reply to a couple of great question questions from your audience here yeah sure so this was from a very old [Reddit](#) post before the whole thing got banned off of [Reddit](#) in August and it was the the graphical mapping of the orbs and to me this here is like who is coming up with this you can tell this is very realistic in terms of these lines

(43:15) in the beginning are when they're kind of linking up to the plane and then they get into the orientation and then they have this perfect waveform pattern that you see here which is far too exact in my mind for anyone to be flying in these this is why it's not aliens or humans inside these little orbs like this is some kind of computer program or automatic homing or tracking system that they're us using and it's consistent with a three-phase 120 degree zero point electrical system which again so now you

(43:41) think of all the listed requirements to fake these some VFX expert that knew about where the plane was before the world knew that also knew about like Thomas Bearden and Tesla science that still consistent with electrical engineering if I could say very quickly that that other gentleman the former Marine who claimed in I think where was it uh oh jeez um what was that that country he was in in which he claimed that Indonesia in which he he saw that craft and then those private contractors got made them get on their knees was it

(44:09) Michael Herrera Herrera thank you uh Mr Herrera had even stated that he heard sort of like an electrical Transformer hum coming from the craft when it was close to the ground and so we noticed this reoccurrence whether it's a sine wave in in Ashton's anal analysis of the videos or whether it's this notion of an electrical hum so to speak we know there's something there with electricity that clearly has not been taught in the in schools without a shadow of a doubt yeah and I find it very unlikely and I

(44:36) found this old [Reddit](#) comment and the reason why this [Reddit](#) comment was interesting to me is that this [Reddit](#) comment was from early August and in early August even up till about

September I was sure we were looking at an Annihilation event I I thought that wormholes weren't possible or anything like that and this was me because I knew nothing about it you know I just and then I find all these scientific papers about humanly Travers worm holes I'm like huh they are possible and I talk to you and I'm like okay now actually I do

(44:59) think it's a it's a teleportation warp drive type event that we're going to look into and this person some of the people in the comments were like this is exactly what you would expect it to look like here's how it would rotate here's how the right hand rule works that this might be a a literal Wormhole generator and I actually have when we look at these scientific papers in a few minutes a couple links where I think that I want to get your opinion because it seems like they're kind of explaining this

(45:21) type of catapult type effect that we see here which is this rubber band effect of uh you know the fourth orb and and slingshotting it over so um I just thought this was very interesting to see that because people were on it people had it figured out even way back then in terms of what we were potentially looking at um in these videos and I don't think there's ever been um any kind of hoax videos or even UFO videos that are this detailed that are this accurate to the science where real Engineers like you Salvador P shout out

(45:52) to him look at them and are like hey we need to talk we need to talk about some of these Concepts that are out there right well I I I couldn't agree more and I thank you for that I I don't put myself next to s s is that incredible but um yeah 100% I I would say that when you look at all of the aspects of this there's the more time goes on the more it's there's provability behind everything we're seeing in the videos with regards to the different basically data points that come out in other areas

(46:24) of your investigation that you can then correlate back to very very seamlessly um if I could address a couple questions here from the the chat I'll just go through two or three there's a few that I really really appreciate um Nature's wisdom says well if chemicals can be altered to create uh exothermic reactions I think you're looking for my friend instead of endothermic is it possible to create clothing that could absorb heat perfectly in theory and in principle yes technically yes when you

(46:49) talk about Atomic layer deposition and you talk about you know uh you know Optical lithography and you know nanofabrication and all of that the sky the limit ultimately uh the only limitation at the end of the day comes down to you know um finances and resources in order to practically manufacture these things have a you know team of Engineers to design and so on but yes yeah um Captain James West that says planks conin is why we have wave particle duality and measurements yep um let's see uh Joe vachi says we work off

(47:20) the same Tech and it even unifies Consciousness with physics I would fully agree um Ray Tracer this was the question that I wanted to get to says why does gravity somehow uniquely possess attractive repulsive properties and no other wave does well this is where it gets interesting because gravity itself we could say is an emerging force uh topologically it is the birth

child of when electricity and magnetism are brought together to meet very particular conditions now we know in uh electricity that there are diff we

(47:52) have a positive and negative polarity electrically whether that's running a current or a voltage and so on and so forth and so the question becomes is it possible to measure gravity electrically and we know for example that um it might be possible to measure gravitational phase shifts for example uh even at the astrophysical scale uh using electrical devices and we know this because uh I can one thing I will say is that Mr lupoff from the Soviet era uh wrote a paper in the Soviet Journal of physics uh which I'd happily provide Ashton with

(48:26) afterwards talking about how electromagnetic capacitors could act as Detectors of gravitational waves and so if we consider the possibility the same way that I know this may sound silly but in from a philosophical sense it may not the way in which if we have Divine masculine representing electric permittivity and the divine feminine representing magnetic permeability if those conditions are brought together in the same way that male and female birth a child but in the same in the laboratory if we were to have a scenario

(48:54) where E and M the E and B fields are vectored to zero and various conditions are met in a way that it is not vectoring to the zero that we normally think of in the standard school system it's possible that that zero that different zero becomes something else that can be measured electrically but behaves gravitationally and because it is an extension or fractal bifurcation of the initial electromagnetic induction it's going to have a polarity to it as above so below plus minus the same way that an electrical capacitor has a plus

(49:27) and a minus to it and the reason we we have electricity coupled with gravity in particular is because people might say Dave why electromagnetism in gravity compared to you know other aspects of of Science and physics well electromagnetism has that weak gravitational coupling to it and that's been confirmed the problem is just scaling it up or well the problem but yeah yeah that's what I've noticed on the papers that I was I was re-reviewing them again today before our um interview here and I did notice that one of the

(49:57) things that comes up is yes we can find a lot of these effects like we can get negative energy in the lab we can find this coupling uh that we know there's a relationship between gravity and electromagnetism we just can't make it very powerful at least in the publicly available papers but you know that's that becomes then the engineering issue is how do you find the ways to cheat the system to get your exponential growth or whatever you might need you know like when we look at the orbs when they

(50:21) converge Bob Greener talks about the amplification of energy and I looked up kum's law and found out yeah when the radius can you know reduces you get an exponential growth so these are the kinds of things we're looking for even when I one more thing real quick and then when I talked to Jack sarfati I asked him about superc conductivity and it seemed like there was kind of a similar relationship with superc conductivity in the equations where it allows for this like I don't know if it's necessarily

(50:45) exponential but this extremely powerful effect that will manipulate the equations in such a way where we can get some powerful uh you know real macroscopic effects to occur go ahead 100 I couldn't agree with you more um let me see very quickly but I shoot oh there we go that's what I wanted to mention the other aspect of this is  $\alpha$ 's constant if you look at the eccentricity of  $\alpha$ 's constant which is the fine structure constant you'll notice that there's no number in which repeats itself in that constant and the

(51:15) question then becomes if you can electrically couple to that constant in which the gravitational coupling seems to permit then you would be able to at with the right Threshold at the right RPM assuming we're doing an electromechanical apparatus here you would be able to essentially excuse me permit and amplify as well as absorb and detect gravitational waves so the notion being that if you had a and this is also why it becomes equally as threatening on the next level of things because the notion is that if you have a

(51:47) system in which there's a self- sustaining feedback from The Ether that would mean that anytime you have a situation where you can have an electromagnetic setup in the laboratory that can detect gravitational waves it's also very possible that that electromagnetic setup can emit gravitational waves therefore acting as a transducer and that also becomes equally as threatening because then it you again if you can emit gravity waves then you start messing with time and you start messing with the you could say the

(52:14) graviton lattice of the actual vacuum itself and the vacuum has multiple layers to it like an onion um but I just wanted to address something here uh that someone had said regarding uh gravity because because it gets it gets interesting uh let me see very quickly someone had asked about go ahead I'll be right back to you so you take the next two three minutes to let them sure sure um Edwin says uh I'll just answer some of the the comments here which I appreciate guys uh let's assume all data points to it is

(52:44) all real us made Tech and so on now was the plane transported into another parallel univers or world or just into another location in our current reality I without data I can't say uh Edwin my friend but I would venture to say that it was just another spatial location within this reality assuming it wasn't um an exothermic event uh assuming it was a teleportation scenario uh can being on shrooms make me see orbs that I don't everyone's different to be honest one thing I can tell you is that the

(53:15) patterns in Geometry seen in when someone takes mushrooms are starking similar if not identical to the patterns that are seen in superconductor crystalline structures if you were to look at it um in a very very micro scale when superconductors are in their critical State uh it it gets really interesting the correlations there um let's see here uh oh Ray says why gravity waves are special compared to other waves um oh sorry CH says do we need gravitons for this isn't gravity just time dilation uh correct yes so in

(53:50) other words when we talk about these longitudinal waves quite often they're we could say that they're gravitational and gravit based and this is where again this is why it's both a

particle and a wave because it has to be both but neither simultaneously it with respects to the way in which the vacuum works with in a Vortex like way so if you have a vortex in which you want to you know increase to a certain extent you still need to have the potential surrounding that Vortex always be there in case you

(54:18) ever wanted to increase that Vortex even more and so that potential is always surrounding that vortex in and of itself and the reason I bring up the potential is because the magnetic Vector potential is what allows for the gravitons to continue to ride that Ortho um that orthogonal metric or orthonormal orthonormal tetrad metric which is tetrad means pairs of fours which is this quadripole dipole nature that is constantly stretching and expanding through the space-time uh momentum so to speak so in simple terms isn't gravity just

(54:52) time dilation that's one effect of it yes you could say that sorry yes because space time are space and time are interrelated right so if we have this idea of this you know gravity is the stress on the medium of SpaceTime then obviously there's going to be some stretching of of time itself as well right 100% ABS yes uh so this is where it gets interesting because it's a completely different way of looking at a lot of the stuff we already know which is that if we think of the notion of acceleration being directly related to

(55:22) gravity we think of this notion of rotating magnetic fields for example there comes a point in which it's it may be possible to have a rotating magnetic field with some pH photonic components to it the same way for example that laser gyroscopes were looked into but if again they were kind of scuttled away into silence because certain effects were being noticed there as well which is that it may be possible in a rotating frame of reference to have an absolute frame of reference that could slow down the speed of light and therefore affect

(55:53) gravity in and of itself and so when people talk about um you know gravity uh is gravity time is Gravity the you know the bending the metric itself I don't want to say what it is so much as what it isn't because at the end of the day gravity in and of itself has so many various physical and philosophical meanings to it that I'm it's not for me to say to tell everyone no everyone you have to listen to what I'm saying about what it is you know end all BL not necessarily does it affect time is it time we can have those

(56:26) debates all day long it gets philosophical yeah I think uh for another time if we talk I'd like to discuss time and time dilation and retro causality with you for today I want to talk about the papers and the science around it we're not going to really dig too much into the time travel aspect um and to switch gears real quick I first I want to thank the people in the super chats that put in there Chadwell thank you very much Anan big donation thank you very much appreciate you man uh Team maned yeah Team maned all the way love

(56:54) you I love the picture of me with them things if you could see that in that one and then Daniel thank you very much man appreciate you guys with those donations so the concepts that are going to be in my opinion interl that we're going to talk about here right in a second uh and if you want to briefly comment on them before we jump into the papers you can is uh faster

than light communication um em Drive which is if you want to think of like Star Trek impulse drive because when we talk about anti-gravity we're

(57:22) really just talking about a repulsive force that you know cancels out gravitational force something to hover uh freely uh then warp drive which is uh really the thing that I think we're seeing in these videos is some extra manipulation that goes beyond just levitating into a situation where you can actually just instantaneous transmission so to speak uh maybe not necessarily instantaneous but um you know fast as the speed of light are faster and then the ideas of low energy nuclear reactions cold fusion uh and

(57:53) then straight up free energy uh my mind says that the only way all of these things can be possible and they all become possible simultaneously is the idea of an extra dimension of unlimited negative energy uh known as The Ether which is something that Tesla was a proponent of and Kusa as well which we'll dig into one of these papers yeah now the implications of this are in my mind are at least three-fold possibly more uh one people asked about the conservational momentum does what happens to the plane in this situation

(58:23) uh I think that the scientists like you and Bob Greener would argue that we can violate the conservation of momentum and we can potentially Set This Plane down somewhere else in a remote location um and that you know we it doesn't have to come out there my opinion just in intuition looking at it is that I think this plane is coming out of the same speed that it went in on the other side um in which case we won't have a violation of conservational momentum because we're we're warping in a space bubble in a in a wormhole and

(58:53) from the perspective of the uh person on the inside frame of reference of the plane it's just going to look like they're walking through a doorway there's all of a sudden on the other side plane goes through plane continues out at the same speed um thermodynamics law second law of Thermodynamics which pretty much says if I'm understanding this correctly that we can't produce overunity due to the way that heat flow hot flows the cold you can never get something to be 100% perfectly efficient

(59:19) uh that's where I think you would come in and say well you open up your system open up Pac-Man's mouth to The Ether to the vacuum if I could say very very quickly the conservation of momentum would be preserved in this case through what's called gauge and variance and then um the second law of thermody Dynamics would in fact be violated and we know that the second law of Thermodynamics by the way uh is literally violated constantly because when super as long as superconductors are uh staying in their

(59:50) critical State they are violating the second law of Thermodynamics as long as perfectly efficient yes as long as you have say for example liquid nitrogen or what what have you uh liquid helium or or whatnot the inside of a bowl in which a superconductor is then uh levitating a top say a magnet within the levitation will never stop so long as it stays in its critical state so in principle we we have already violated that second law of Thermodynamics it's just never been really addressed don't heat pumps do it

(1:00:19) as well with is that common home common home heat pumps do they have a COP or coefficient of performance of like seven or eight for example the problem is is that they've been dare I say diabolically designed in the sense that the second it gets cold out there you're back on Resistance heating because the those common home heat pumps don't have an open system within them that in other words Pacman Pac-Man's mouth is not opened and so you're 100% correct in other words the people might say what

(1:00:44) you're telling me for example that that I I don't have to plug into the wall or you know the the heat pump in my home can can yes ultimately yes now this is what brings the situation back to is called and this is something I will say first time I've said it uh no I brought it up before but I brought it up lightly on uh the show with pz uh the source charge problem that's what it's called it's been suppressed for many decades you try and Google it I don't think you can find anything on it maybe I'm wrong

(1:01:13) about that but the source charge problem essentially had was a problem that electrodynamicists had many many years ago pre World War II World War I and even after the fact which was that they did not understand where energy was coming from ultimately and what they ended up realizing essentially was that either one of two things occurred and we know this because Leon Yang won the Nobel Prize in 1957 for the broken symmetry of opposite charges they were able to prove that you can break the gauge symmetry of Opposite charges and still stabilize

(1:01:43) it longitudinally now what's interesting is that I believe it was Lee that said we have discovered at the time in 1957 after they won the prize and they were they were given the prize super quickly in a very abnormal manner almost as if they discovered something super super underneath the radar that even the official announcement did not disclose but woo had stated and I I'm paraphrasing and I quote we have missed the opportunity to interact with a local vacuum with regards to what can occur there now the source charge problem

(1:02:12) essentially deals with the notion that we don't know ultimately where energy comes from and we know that even Richard Feynman and John Wheeler touched upon this but what we're noticing now is that either conservation of energy needs to be completely violated which it is in my opinion it doesn't because the ether itself is an open system which implies directly that the virtual particle fluctuations from the magnetic Vector Potentials in The Ether or the vacuum directly from the plank scale give rise to the electrical charges that that we

(1:02:45) know to be all around us essentially and so this is where it becomes a little bit uh uh abnormal in terms of a linear way of thinking but it's this notion that for example there are fluctuations in the vacuum that that don't exist but can exist if certain conditions are met and will always be possible to be able to exist uh in what we call empty space essentially yeah I just say because I I think that most conventional academic physicists would disagree with you there and say that it's definitely being

(1:03:20) violated that the conservation of energy because that was the last one I was going to

bring up is that yeah I think we absolutely have to rewrite the law conservation of energy and and that's to incorporate and I'm not disagreeing with anything you said I absolutely agree with this idea that it's the interaction between The Ether and our reality and that you know these virtual particles that are coming gives rise to the charge and energy that we experience within our reality all around us um but because it

(1:03:45) does offer an opportunity where you can use that as an open system to extract energy and produce energy locally that seems like it's coming from nowhere then that in my mind in most physicist minds I think would say no that you're violating the law of conservation of energy that energy cannot be created nor destroyed because we are in theory we're not creating it on nothing we're just borrowing it from The Ether itself so it depends on how you look at it right 100% this goes right back to the uh John

(1:04:10) Wheeler and Richard Feynman one electron universe theory which was that uh we live in one big fractal electron so to speak and so that the electrons we see orbiting say within a device for example are bifurcations or fractal ripples basically or branches of a larger tree or trunk of a larger electron and and that that's that is that would permit this notion of an open system to also work too because it would be self- sustaining in the sense that you have for example if you think of one slice of an onion taking energy from the next

(1:04:43) Slice Above it and then that Slice Above It taking from the next one and so on which then gives direct Credence to this notion of what Doctor James Jordano and his colleagues out of DARPA and the European human brain project authored which was uh with another colleague I think Diana Dullus out of Loed Martin which was an oscillatory Theory Of Consciousness so not to get into that but basically we're we're seeing these connections with this notion of uh oscillations and resonance constantly okay well so that was good to

(1:05:12) kind of set the framework for what we're going to talk through here because I think we're going to I'm going to try to go through some key points on these various three papers we're not going to read through all of them but a lot of the same Concepts we just talked about are repeatedly discussed in the these three DIA defense intelligence agency papers before we get to that I just want to show people this document that was found last week I mean people have probably found it for a while it's out

(1:05:36) there since 2001 uh but it's about subject scalar waves this was from the CIA reading room here this this document essentially talks about Maxwell's equations and how scalar potentials are possible because of Maxwell's original equations before they were reduced by Oliver Heaviside um some parts I thought were really interesting is down here it talks about this Symposium their conference that happened about Nicola Tesla and Tom Bearden's name gets mentioned but there's all this stuff blacked out here I would kill to figure

(1:06:07) out what is being blacked out down here because seems like it's probably pretty important I don't know if it's people's names or what have you it's not names okay yeah because then it be really interesting because this talks about like how this could be useful for the R&D

Community here and and I imagine that this is where like we're trying to get ahead of where the Soviets were with some of this yeah I'm guessing this document goes back to the 90s maybe even to the 80s and then it got Declassified

(1:06:32) in 2001 um but this is where it talks about exactly how what you said you can cancel out the magnetic potential or the electric potential and now you're not necessarily left with nothing and there is a very I think it's a beautiful uh analogy that Tom mon talk told me that I'm going to go ahead and share right now with this rubber band that I've got which is that classical physics would say if I pull on this rubber band on both sides equally that there's a net zero because the forces cancel each

(1:07:02) other out if I pull a little bit harder still net zero even though I'm pulling harder still Net Zero and I keep pulling still they would say it's Net Zero but if I pull this thing too hard all of a sudden it's just going to snap and why is it snapping because there's stress stress in the medium which is the rubber band itself same way if we're like when we play musical instruments can I just say very quickly after the band snaps it becomes something else okay that's you might have to expand

(1:07:27) upon that because here's my final point is that if we look at SpaceTime the same way and we take these equations and we say okay if we cancel it out there's not nothing left what are we left with we're left with the stress in the medium and what is the stress in the medium of SpaceTime gravity gravity manipulation to me this is how it makes perfect sense how Maxwell's equations shouldn't have been Rewritten the way that they were shouldn't have been reduced because this is how we're able to do all the stuff

(1:07:53) we're doing right now we're streaming we're talking to each other right now over all the stuff but we the only thing we can't figure out is how to manipulate gravity um so yeah to me this is the missing link sure if I could say very quickly I love the elastic band exper uh example by the way so if we take that same example and we stretch it to the point in which we eventually break its symmetry so now it's become asymmetric What If instead of actually the band breaking what if it when it when we

(1:08:20) expect it to break it actually ends up becoming something else entirely in which it becomes a self- sustaining rotating band basically now this is what I mean by topology this is what I meant about half an hour ago when I talked about under the right conditions electromagnetism at when the vectors are sum to zero give rise to a whole other phenomena that can be uh measured electromagnetically but is an entirely new type of energy in this case gravitational so to speak now if I could quickly address here um two uh two

(1:08:54) comments that I really appreciate which which are uh JK Philly fan says if I could get one question in on the Magneto Optical trap idea or is it just an artificial sheath with the orbs when you go back to the MH370 topic thanks uh Ashton and Dave well I'll let Ashton touch on that but very quickly uh I've said this to Ashton privately as well too I I can only put together a a generalized hypothesis of the functionality in terms of the engineering of the orbs itself I did not

engineer those orbs myself so I'm not

(1:09:25) going to sit here and prot like I know the intricacies of how they work um this notion of magnetooptical trap idea I don't rule it out but I I can't say for certain in the case of that particular footage I I don't know Ashton if there's anything you wanted to jump in on that goes over my head JK Philly fan knows more about the science I do even okay got you got you um me I'm just like a theoretical physicist if if an amateur one at that so I try to understand the concepts but even the hard math like

(1:09:50) it's going to take me another year or so to really wrap my brain around it got you got you so the last another one I wanted to say here was Dave by Connor uh McKibben 73 Dave in the same way the double slit experiment Simplicity is its Fascination is there a comparable experiment for electromagnetism that alludes to the magic you speak of yes yes um give me a couple minutes to think on how I can word that electromagnetic experiment um I brought it up on a on an xace uh back in November or December with you um

(1:10:26) I'm considering bringing it up again although it it's a practical example that is it was logged it was put in the literature but it's hushed away but yeah so yeah keep that one on the back of your mind um yeah because here's the other thing too I I forgot to mention this before when I was showing the videos but when I look at this event Happening Here the way I imagine it with talking about like breaking the swinger limit uh when you look up the swinger limit talks about uh you know SpaceTime

(1:10:52) getting nonlinear is the way I look at this is like a literal rip through the fabric of reality and we're going to look at it on these papers in a second that this Wormhole the big difference between the Wormhole and a black hole is that there's no Event Horizon right that's extremely important to understand because it means that there are there is some type of relationship that's very similar of this black hole is that you are ripping through the fabric of reality here but you're not creating a

(1:11:19) gravitational force where if you were to fall into it you're going to get ripped to shreds um and I think that's going to be very important uh when we talk about this so what's happening is why is it so fast if you look at this in real time it happens in like a fraction of a second like a tenth or 20th of a second is that there's like this self-correcting mechanism that occurs where you know SpaceTime fills in the Gap right away like that's why we don't see The Ether all around us is that in order to

(1:11:45) sustain this you have to achieve these really high energy levels and that we see with these orbs pulling off right here there very specific stuff we have to do and so we see it and then immediately kind of think of like reality rushes in and closes the Gap and now all of a sudden it's it's not there anymore at least that's how I imagine it one 100% I I'm I'm totally with you there's so many different areas in which one can go down with respect to the effects of these field forces and the

(1:12:09) the the different induct the the different types of forces that they can produce for example so we're not just talking about gravitational forces we we can also talk about for example the diff the notion of uh let's see um uh an Electro gravitic Force which is we can argue a little bit different than a purely gravitational force and so on and so forth but yes I'm I'm totally with you um the the one thing I did want to bring up in in addition to that to add to what you said and to what uh Connor McKibben asked

(1:12:40) which is so Connor there are I mean I could probably there are four or five off the top of my head that are that I know of in terms of electromagnetism that uh speaks to uh similarity in terms of its amazement regarding the double slit experiment but one of them is and this is something I can mention because it is in the published literature albeit it's very uh seldom even known to my knowledge at least but there was uh a time when sax two gentlemen saxel and Woodward they found when they took a an aluminum cylinder and they put it on a

(1:13:13) scale and uh they they ensured that there was no uh noise or any significant artifacts that could that this could be attributed to but they took an aluminum cylinder put it on a scale they attached that aluminum cylinder to a certain type of electric capacitor when they charged the cylinder and then started rotating the cylinder the cylinder started to lose its own weight yeah so that speaks to this idea that there's a relationship between overunity and anti-gravity and this was talked about if you guys watch the

(1:13:48) yfiles episode about this it was great I mean our buddies were mentioned in the wi Files episode Thomas Bearden gets a shout out Salvador pz gets a shout out I that was one of the most surreal episodes I've ever watched where he's showing overunity device where the voiceover narration is is Thomas Bearden I'm going whoa this is this is just bizarre I feel like one day there will be a wi Files episode about the MH370 videos maybe they'll even clip this in there um so what I want to get uh get

(1:14:20) into here uh I'm going to pull this back up for just one second is at the end of this document it so it talks about the idea of the maxal equations but then it also says if such scalar waves exist and they will be transformed by a collective phenomenon from microscopic waves to macroscopic waves um and then it says it mentions Cooper pair electron effects as well which I thought was interesting because that brings up the idea of superc conductivity having some relationship um I don't know exactly it doesn't really go into depth there but

(1:14:49) then it says they will also behave like longitudinal waves in a plasma and grow via propagation on a nonoptical uh branch of the WK space I don't know exactly what that means um but I just thought that that that seemed like to be right on the nose because when we talk about longitudinal waves versus transverse waves supposedly I think all waves in The Ether supposedly are longitudinal I'm not sure about that I think that's what Thomas beardon said uh the so this speaks to the notion of entropy and neg entropy so what we

(1:15:19) consider transverse waves we could argue are the unfolding effects of the longitudinal waves so to speak and so that is why again we talk about this notion of Boman uh

after David bom uh coherence and decoherence this notion of infolding and outfolding which speaks to a morphogenic fractal holographic reality that we may very well be living within now what's interesting about this is that you brought up Cooper Pairs and one thing that I'll leave a hint to you and your audience for which is that uh the BCS Theory Bon Cooper Schaefer

(1:15:50) Theory which is those there were three different gentlemen that won the Nobel Prize uh because they basically uh gave a a general model of understanding superconductors superc conductivity and so on and so forth there's one coincidentally there's one component they missed in terms of what the Cooper pairs or where the Cooper pairs actually stem from that doesn't necessarily seem to be addressed within their Theory and I know this because I've looked into their into their literature very extensively and at least to my best

(1:16:20) knowledge I and best efforts I couldn't find anything that addresses this and what what that that missing component essentially has to do with our uh we could say certain elements that are geometric in the composition of the superconductors that are not really mentioned I think uh I know that geometry in physics uh is not really looked at as something um super prominent in the engineering as in the engineering World although for certain projects they certainly are don't get me wrong but um I would say

(1:16:55) that we need to emphasize geometric um alignment and positioning much more um uh strongly than we currently are if we're looking to induce these type of effects it may be possible that uh you know you can do certain things with superconductors in a certain geometrical Arrangement that would induce phenomena or observable macroscopic effects that otherwise would not be able to be induced if those superconductors were say not you know geometrically positioned in a certain formation for example um we see for example as well

(1:17:26) whether it's Sal pz's patents or whether it is U other individuals in the past uh with their patents as well we see this reoccurrence of you know the uh the the squaring the circle um I know not who was it uh Graham Hancock I talked about I think the the Mayans being being being into that uh long time ago squaring the circle a triangle this notion of uh quite often we'll find in a lot of these patents uh geometric shapes very Sim similar to that of uh um you know occult groups um and so I I certainly think

(1:18:00) there's something there um and then that also unifies a for both uh physics with metaphysics if you will so that that's that's my personal take in on that so okay well I appreciate that and uh Jake thank you very much huge donation wow wants to know more about the ether just keep watching we're definitely going to talk more about it what I will say we're going to go into the paper here right now is that I think the ether solves a lot of the problems that we have related to physics out there with especially

(1:18:25) with respect to anti-gravity capabilities but what you're going to see is there is a direct relationship between between this idea of The Ether and extra Dimension and dark energy which uh can is also I think effectively equivalent to negative energy um and so we're going to talk about that that's actually definitely getting brought up in these papers so actually it'll be

coming up here in the next five or 10 minutes so thank you very much Jake and let's get this bad boy going so the first paper anti-gravity for Aerospace

(1:18:53) applications and when you dig through this right in some of the the contents here we're not going to go through all of these but you know anti-gravity via Geo gra gravitomagnetic forces n negating nutonian gravity kind of goes through what the definitions are for us out there and I've already explain some of those uh the vacuum energy of Einstein's cosmological constant Dark Energy anti-gravity propulsion applications for dark and vacuum energy talks about uh zero point fluctuations so anti-gravity

(1:19:24) via Quantum Zer Point fluctuations Force I think yeah that's one of the ones we're going to talk about here and what you'll find too is the Kazmir effect comes up in all of these papers every single time which the Casmir effect uh from what I've seen is potentially a way of proving that there is a negative energy density that's out there that in the zero point fluctuations that we don't that we don't perceive uh any quick comments before we get to our first thing sure 100% I mean in with

(1:19:52) regards to this paper in relation to some of the comments that I'm seeing in in terms of people asking about you know double slit experiment all of that we have to continually look at this notion of interference as even Mr Bearden talked about this notion of interferometry or the overlapping of various uh of various energies whether that is photons or electricity or so on and so forth yeah being able to produce some certain effects that we see discussed even here right anti-gravity via gravitomagnetic forces yeah and the

(1:20:23) one thing actually is probably not going to get brought up appear so I'll say it is that I think the double slit experiments is also explained by The Ether because the speed of light is only constant because we see it in the medium that we're living in all the time which is our reality but if you rip away this reality and you go to that when we looked at that dark hole in the MH370 video what is the speed of light through the ether what if it's infinite if it's infinite now every point in space and

(1:20:48) time is connected from a causal perspective and if that's true now you can begin to understand how you could have non-local effects which are quantum entanglement Quantum tunneling quantum teleportation and then when you look at it from that perspective time is no longer linear time is now a flat circle as they would say in the uh True Detective TV show and and to your point I think that you would agree that you know you think of time more as a circle that you know each in event doesn't necessarily come one before the other

(1:21:15) and we're not going to take too much of the time aspect but I think that that's where you can now understand how you can have particle wave Duality and how there might be an answer to that and how it acts differently 100% particularly when you look at the notion of rotating um reference frames and this notion of frame dragging via gravitomagnetic forces the same way that for example you were to drag an image on a computer and const and you see sort of on older computers if you were to drag an or your mouse across you would see

(1:21:42) that lag it's very possible that that may be a very similar effect that would be seen in in the laboratory when these when these effects are induced and you hear that and you think lag did I isn't that like when I'm playing Call of Duty and I'm playing against the or playing Starcraft against the Korean kids and I've got the lag well it kind of is it kind of is because the lag is based on the speed of light so you know you could imagine this is why I think absolutely we live in a holographic universe that

(1:22:05) that is you know we are like living in some kind of Matrix that our reality is painted on because that's why we have a lag effect that's why we experience this lens theing effect which is exactly what I was going to ask you first here that was the very first thing I wanted to bring up which is how you explain the lens thring effect because the way I understood it when I read this here as well is this idea that you are just kind kind of pulling space around you uh potentially and then that's how you can

(1:22:30) kind of the basis for some of these effects these gravitational effects uh what what is your thought on how would you explain the lens thr effect to our uh you know this is where it gets interesting because the lens throwing effect directly implies for example that when you have a this type of observation occur both microscopic microscopically but even macroscopically it implies that there's some type of medium in which that frame dragging occurred within right and so which directly speaks to this notion of space and time or the metric of

(1:23:03) SpaceTime itself being that of some type of simulation or holographic principle that is ultimately com uh comprised of information matrixes or matrices for example and so when we look at these different type of information Matrix structures that naturally may be orthogonal in nature it wouldn't be all that out there or far-fetched to be able to again as uh His Highness says here create a shift in SpaceTime in which we see this Frame dragging effect occur the same way that for example uh people would see when people see craft claim to

(1:23:40) see craft shoot off they see almost the sort of lag behind it in a certain aspect right um the lens throwing effect is is without a shadow of a doubt very very significant and very important to understanding the nonlinear aspect of both taking all four polarizations of a photon in in correspondence with curving space and time electrically yeah because imagine you were looking at something that's manipulating space time it's going to look super weird bending and we can even tell like imagine just gravitational lensing when

(1:24:13) we look at a star behind a dark a black hole and you see it bend on all four sides of it so we know that there's going to be some bizarre lensing effect and actually we're going to talk in the later paper a little bit more about the lensing effect but I want to go to the next thing here right away which is toids toids at the center of all of this and so this paper here specifically mentions I think the part that I thought was interesting was how you could um what was it add the current oh I didn't

(1:24:43) make it I didn't take a lot of notes on here actually on this one um but I think the big issue here was that we can show that we can uh potentially manipulate gravity but on small

scales here where you can see this  $G$  I believe going up correct me if I'm wrong on this but that the difficulty here is how you scale it up like you were saying before but really for me I think the point here is that the toroid is really this this shape that comes up all the time when it comes to plasma physics or when it comes

(1:25:12) to anti-gravity type effects it constantly shows up do you have any uh comments about the toroid in general while I look through and see if I can find the well I can I can certainly say uh one second here if I saw someone had mentioned His Highness had mentioned gravity is curvature I would say that the the curvature induces and couples to gravity much more effectively and I I I agree now that is what Mr forward is proposing here this notion that again various toroidal geometries inherently enable uh curvature because of their

(1:25:43) curval linear um what was it uh uh azimuthal angles I think that's how you pronounce it but anyways point being uh is that Mr forward essentially proposed here and I'm I'm paraphrasing that I think they had said they would need a toroid um the size of like a football stadium or something like that in order to induce the effects now is right here actually right there says so yes this is the part I wanted to actually go show that there would need to be an accelerated matter with the density of a dwarf star through pipes as wide as a

(1:26:14) football field wound around the Taurus with kilometer dimensions in order to produce an anti-gravity field of  $g$  equals 10 to the 10 10 yeah yeah a very strong one like seems like it would be very difficult but I have a feeling there's going to be ways to cheat that that we yes and this is where it gets very interesting because this is what I mean when I say that again this is where the papers were towing a certain line and I think that it's also possible that these papers were published with the intent to see who may as well be

(1:26:43) interested in this type of aspect of physics and Science and to sort of get an understanding from various perspectives of other agencies as to who's who's interested in what and so on but the point being here from the science angle is that when you look at this toroidal nature of things we see again whether it's Bob greener's fractal toroidal moment or we see for example all of P's patents having to do with this notion of you know square root electric permittivity that then speaks to a uh we could say again the squaring of

(1:27:12) a circular motion or counter rotating cones and so on and so forth it's it's there's a very it may be possible that there's a shortcut without a shadow of a doubt instead of it was still using the toroidal geometry that's not to dismiss anything of what this paper is discussing conceptually but from an engineering perspective I don't think we would need something the size of a football field yeah and this is the part right here where it starts talking about spinning as well which is the lens

(1:27:38) theing effect as well like when the planet spins Earth spins there's a lens thring effect that we've been able to measure now you imagine if you speed that spinning up and you increase that lens theing effect you are kind of warping gravity your SpaceTime around the object now the reason why I thought this was really interesting is if I change my presentation for

just a second to my other video here that's what's going on in the MH370 videos especially when you get to the part here where they reorient around the plane is

(1:28:07) now they're spinning so remember that comment we read on [Reddit](#) where it says you know perhaps they're when they're spinning like this this is actually a specific reason for that and Bob Greener brings this up and he says they are their own toroid each orb is and they're creating a larger torus minus one above them at a higher level which is they're creating a Taurus around the plane itself I thought that there was a relationship here to this paper because in this next part in the paper it's specifically and

(1:28:34) this is the part about the Catapult that I wanted to mention which is one can view this genre of devices as a gravity catapult machine which with the machine pushes a body away using its General relativistic anti-gravity forces to impart a change in velocity a space launcher operator on the ground wanting to send a payload into orbit would just ratchet up the strength of the upward directed anti-gravity field to some value above minus  $g$  or  $1 - g$  and after pressing the release button on the payload accelerate Up and Away into

(1:29:07) orbit these devices could be placed on Earth orbit so basically what they're saying here is that you set this this toroid up and then you just boom shoot something in outer space as long as the the force is greater than gravity it's just going to accelerate upward and I I look at this and I go well this one isn't accelerating upward it's accelerating back backs consistent with the right hand rule um and so I don't know any thoughts on that because I went whoa there's my my yatsi moment right

(1:29:31) there I I would certainly say that I would encourage you to pursue that that angle that that's that's the most I could probably say there comes a point where just sometimes you know it's like oh it's so uh ins so I want us to say whatever we can say but I don't want anybody to get any knocks on the door well except for me I'm trying to get a knock in the door but I don't want you to get any knocks in the door because we need to keep you protected um so uh the next one here is the negative energy

(1:29:59) densities of The Ether so going back to what Jake was asking about the ether and what even is negative energy um and I'm probably gonna have you know ask you to kind of describe it but from what I read through here it's essentially the pressure that we have out there and that when we write our equations we think of it in terms of repulsion and attraction and so when we think of like positive and negative we're not thinking of like something that is the opposite of something else but it is kind of like

(1:30:27) that from a force perspective so that is producing a a contrary Force to what we would expect to be uh a normal uh everyday energetic uh reaction essentially have opposing unidirectional or unilateral um uh forces yes essentially so they exhibit the same characteristics as the the particles we understand to be all around us right now and observable and interactable but except simply with the opposite Direction so to speak in that aspect the thing I like about it is that there's always symmetry in the universe and so

(1:31:00) it's like well what's the symmetry of our reality our reality itself seems like it's something doesn't have an opposite but what if the opposite is like that we are the painting on the canvas and the canvas is The Ether underneath it and if we rip through it now we have the exact opposite of and now you're you're going through the exact same line of thought that was gone through post World War II yes that was the same notion that again what if the answer was more geometric than numerical

(1:31:26) right that was the other aspect of this as well yep and then in the next page here so we talk about that there's negative energy has been found in nature all over one of the examples you know it talks about squeezed vacuum States uh uh static radial dependent Electric magnetic fields the Casmir effect gets mentioned here as well so for people who don't know the Casmir effect we take two plates and we put them close to one another they will compress together they create a force between them and the idea

(1:31:56) here is that the wavelength certain wavelengths can't get between those plates anymore and that this creates a negative pressure Zone where they come together negative energy um and so we know that it exists that it's out there and we know it's happen on the quantum scale go ahead right and we also know by the way with the Casmir effect we know that it is actually possible to induce an aluar warp drive with uh positive energy but negative pressure so we can we don't necessarily always need to have

(1:32:23) negative energy occurring all the time now with that said it has its benefits but in the case of aluar warp drive there is a way to also induce a scenario where it's purely uh negative pressure with positive energy and so if you can induce some of that negative pressure in a way that could uh enable a gradient within excuse me the vacuum or The Ether then you would have a Thrust a unilateral thrust just like a surfer would on a on riding a wave that's interesting and then um this idea of the cosmological uh um inflation

(1:32:58) comes up and this is where Dark Energy came from which is the Big Bang we know the universe expanded faster than the speed of light right how is that possible and this is uh where we've entered to this idea of dark energy and we think it's constantly expanding so we think that the dark energy is what's causing the universe to expand well what if the dark energy is just the relationship between the ether and our reality and if you look at it from that perspective from an extradimensional perspective now you can solve the

(1:33:25) problem of dark energy entirely and then this now opens up to the door to exactly what we're talking about with these uh very powerful anti-grav uh gravitic effects and potentially warping SpaceTime itself using the dark energy which is really just the the medium of The Ether and um like what I think we see in the MH370 videos I couldn't agree with you more brother what you're doing um is essentially you're bringing back you specifically you're bringing back essentially I would argue that we are

(1:33:53) fish living within a vast ocean but we are still debating as to whether or not the ocean could be used as a form of power and and and you know uh harnessing that power and

and so on and so forth you're helping to bring back that the realization of the ocean that was always there and so I I I thank you for that and I couldn't I couldn't agree more with you that's a great analogy because I do think it's a matter of you're fish and a fishbowl and you don't realize you're in a fishbowl you think the

(1:34:19) Fishbowl is all there is but if moment you look outside the Fishbowl and look into it you go oh there's this whole other thing that we don't even realize is there um and that's where you know you imagine if you there's no such thing as nothing and kind of Concepts like that become prominent right um now as well in here the next one was um yeah I was just going to say I think I already mentioned this but we know negative energy exists because of the Casmir effect somewhere in here as well as it

(1:34:46) mentions that we've actually been able to produce negative energy in Labs as well so we know it's possible and it just comes down to a situation of how we scale it up to a point where we can get some of the effects that we need for something like a wormhole right right um yep now I mean the if I could say the a lot of these Dia papers the theory in the physics is not a disinformation in my opinion misinformation there may be a few things here or there that are just trying to cover for something else that's not even

(1:35:15) mentioned in the paper but um the theory is not wrong in any of these papers I think what what's missing is largely the pers the engineering perspective Ive one has to take to then apply this Theory into something that could actually work because you may find quite a handful of physicists that may not necessarily disagree with a lot of the concepts brought into these papers but the Practical engineering aspect is where a lot of them start to become very doubtful and so I think that's something we need to keep in mind uh as well yeah

(1:35:44) and Engineering stuff isn't easy either so I think just the theories can be accurate but a matter of trying to figure out how you engineer it uh gets to be somewhat difficult so then here again it's more stuff about the cosmological constant as as I described how pressure could be a source of gravity as well um and then uh the vacuum energy of Einstein's cos cosmological constant so a lot of this is bringing in what Einstein had worked on and looking at it through this other lens of how can we manipulate the

(1:36:11) Einstein equations to get these anti-gravity effects um as well as like you know what do we have to adjust anything like where are the inconsistencies that might be out there um in page 15 here it also talks about the stress on the medium as well uh and and the stress between you know the what we are talking about as The Ether here um it actually even mentions it right here it says uh the cure for this apparent energy conservation problem is the vacuum equation State given by equation 17 which is right up here and

(1:36:46) then it says um a negative pressure is something like a tension in a rubber band there you go there we go the rubber band uh analogy that we have it takes work to expand the volume rather than work to compress it the proof of this is as follows the energy created in the vacuum by increasing expanding Space by a volume element which must be supplied by the

work done by the  $V$  the the vacuum pressure during the expansion of space therefore  $P_{ac}$  equals minus  $P_{ac}$  in other words the work done by the vacuum pressure maintains the constant vacuum

(1:37:18) energy density as the space expands therefore the vacuum acts as a reservoir of limited energy that provides as much energy as needed to inflate any region of space to Any Given size at the constant energy density when I read that I just think that's the ether you're just explaining The Ether with extra steps here like this is you know and it explains what we see in the videos too where it's like there's this relationship uh between The Ether and our reality that's constantly pulling and and and pushing to get to this

(1:37:47) equilibrium State and if you break it out of the equilibrium State it's going to try to close back up and go back to the equilibrium state like immediately and but if you can if you can engineer something in which you stabilize that disequilibrium you may start to see some very interesting effects yeah like maybe we can make a Stargate it's possib it's we have to wonder what happens when negative energy is macroscopically scaled up and some of that that symmetry of the vacuum is is uh destabilized

(1:38:17) yeah yep okay and then it talks about Dark Energy here as well which I think we can uh pretty adequately explain with the idea of The Ether and the negative energy that we see out there there seems to be a direct relationship between those two and then uh Pages 19 and 20 talk about anti-gravity via Quantum flu vacuum zero point fluctuation force and this talks about the Casmir effect uh here as well it mentions it by name right here in this paper so we kind of touched upon this already but this idea that and this goes back to like stuff

(1:38:48) like the EM drive for example that they I think Charles ber was just got a lot of lot of attention on social media last week about which is this idea that we can actually get propulsion with without propellant um utilizing this type of effect um right and that and this to me in my mind would be your basic Star Trek impulse drive like if we just want to go slow speeds like slow relativ relativistically speaking then we would use some type of effect like this but then we take the same effect and we scale it up we get to that second order

(1:39:19) effect where now we can create a literal warp bubble and just you know location the other go ahead 100% if I could say with regards to Mr berer I have nothing but respect for him and his team and the work they're doing uh particularly that he he was you know very well versed for many decades in electrostatics that what they're working on there and if I I if I could help clarify momentarily um is something that I would call electrogravitic and I'll explain why I call it that so they seem to be inducing a very similar effect to

(1:39:48) that of the Byfield Brown effect you know Thomas Townson Brown now a lot of people to play Devil's Advocate a lot of people will say well that's been disproven or it's not practically feasible because in order for it to be something that could carry people because what we're dealing with there is lon wind and we're not dealing with a direct connection between uh electrons and gravity and and that sort of aspect and you know electricity being able to display

some Mass so to speak now when

(1:40:14) the I believe it was the Navy that provided Mr Brown with a large vacuum chamber in which the results of those tests were never uh Declassified however uh there was a video of Mr Brown and his colleagues drinking champagne and celebrating indicating there was some successful result Mr Brown had written some uh handwritten notes and letters to colleagues before he passed that yes it does work in a vacuum chamber now uh this is where it gets interesting again I've conversed within many individuals who try to replicate that same effect

(1:40:46) privately in a vacuum chamber in very controlled private uh Laboratories DOD Affiliated admittedly and they said largely what happens is as expected when you put uh when you try and do this ion Thruster in a vacuum chamber obviously there's no thrust because in a vacuum there are no ions but this is what this individual told me they said with specific geometrical Arrangements we were able to get the effect to work in a vacuum chamber and so that makes you think again if you're able to have some type of geometrical structure that

(1:41:19) conforms to the V to The Ether then you it's Poss then that vacuum chamber that's placed over the whole experiment doesn't mean anything interesting and so this is how this is the this was the attempt in my humble opinion many years ago to conflate and dismiss Mr Brown's work with simply ion wind now there is a difference between the two to be clear but yeah and this paper here actually even mentions this idea that uh colog uh Kon uh proposed an experimental device that could significantly magnify the

(1:41:52) repulsive Force up to a measurable scale their proposed device is a multi-layered series of rigid chasmier cavities with each cavity consisting of two Thin metallic discs that are separated by a dielectric material which is inserted to main maintain rigid rigidity they suggest uh silicon oxide for the dielectric material because it is an efficient dielectric with low absorption over a wide range of frequencies and as inexpensive material as even e easy to fabricate into layers so right away already and it's not necessarily given

(1:42:23) us the exact answer but it is proposing this idea that we can scale up these effects to achieve something that would be measurable um and that's the part too where I I see stuff like this and I I again start to think about superc conductivity and the idea of how we can like try to cheat the equations to get effects that are going to scale up to a point where they're can not just become measurable but like actually lift a person off the ground and things like that absolutely without a doubt yep yep um now the last part on this paper

(1:42:53) skipping a little bit there's some more stuff on here as well uh we're not going to talk about the the non-retarded quantum interatomic because I don't want to get canceled just kid uh but no there's some other different ways that can be done here but the Casmir Effect one is the one I wanted to focus on the most because you see that come up time and time again on all three of these papers which seems to be the uh kind of consistent theme now in the conclusions here as well it goes through a lot of

(1:43:19) the conclusions of anti-gravity via negative energy and you'll see there's a lot of stuff on here again Casimir effect it's mentioned again as well uh but I also noticed this part about Quantum coherent effects and this part stuck out to me because a lot of what we've been talking about a lot of salvator passes papers super conductivity everything seems to come down to these Quantum coherent type effects the idea of uh Bose Einstein condensates fermion changing to bosons spin going from half integer spins to

(1:43:49) full integer spins um so I just thought this was interesting says other types of quantum coherence effects not already identified or invented should be theoretically developed and explored for the possibility of finding new free field or interacting field configurations that produce significant magnitude of negative energy which could be produced by a technological means so I see that and right away I'm thinking how about some plasma orbs that can converge and break down the nonlinear or you know break down the linearity of

(1:44:20) SpaceTime itself right and it blows me away because I had never read these papers before I'm sitting out there back in October going we need quantum computers super conductivity and you know we need to understand how warp drives work and it's like well these papers were out there the whole time so definitely gets a little bit spooky when you predict something and then people are talking about it right there in front of you 100% 100% if I could say very quickly before we end up wrapping this up because yes as to your point

(1:44:49) there are a handful of different ways that have been proposed in order to induce anti-gravity or vacuum polarization effects uh dealing precisely with the notion of for example different um uh isotopic ratio uh separation for example you talk about uh again we talk about things like the Casimir effect we talk about things like lasers uh you know femto pulse lasers being shot through a plasma um and then out on the through a toroidal coil if uh we talk about you know the Gerstein effect running a photon

(1:45:19) through a very strong static B field and having a graviton come out on the other end uh so there's more than certainly more than one way to skin this cat without a shadow of a doubt um the other thing if I could say quickly that I wanted to address with regards to the comments here is that I notice a lot of you have questions and things like that and I want to thank Ashton for bringing my Twitter up at podcast Z or my my ex profile um my I also do for a handful of private individuals that are not DOD related um in-person and remote

(1:45:51) Consulting on ph helix.com I notice a lot of people have that uh a lot of questions so um unfortunately I couldn't get to all your questions but um this side up says Dave so everything is infolded into The Ether we become aware of things only when they're outfolded from The Ether well my friend it depends on what level or layer we're speaking on because if we're talking more of a metaphysical aspect then you can argue that you are the source of what the Ether expresses to a large extent um if we're talking about more of

(1:46:17) an engineering aspect of things um we only become aware of things when they're self it forgive me it's hard for me to answer that question without knowing what level or quote

unquote layer of this conversation you're speaking to um if you're it depends you're talking below the playing scale so we're talking philosophy at that point or are we talking more physicality so I will have to unfortunately leave that one there but so actually there's a little bit more so we if you want to take a

(1:46:46) note of those questions because um there's two more papers I now they're not going to have as many points as I had for the first one uh we've already talked about a lot of the same Concepts do want to go through these other ones real quick as well which on warp drive dark energy and manipulation of extra Dimensions now we've already if you've been listening for the last hour and 45 minutes you know we've addressed a lot of these Concepts but the key aspects I want to get to here here is alub berry

(1:47:06) warp drive so right away you find out that what we're talking about here is alabar warp drive here's the visual that you see that uh perfectly matches what you would see if you look up alabar warp drive um so what we're talking about here is expanding and and Contracting space either in front and behind your object um created warp bubbles if you guys look up uh was it Harold Sunny White uh the NASA scientist he experimentally showed some warping effects on straight lines that were out there um I I've watched a couple of

(1:47:36) these uh science physics influencers try to discuss his work but to me it seems pretty robust that he he shows that we can create a we real warp bubble out there um particularly when it's based off of Einstein's metric tensors when you base it off of Einstein's work it becomes difficult to refute yeah yeah and then uh the next part is so how do we make this to be possible and here again it talks about the cosmo electrical constant all this is based on Einstein's uh work that's out there um

(1:48:08) and then it'll talk here as well about what in order for us we need negative energy to make this happen so how do we get negative energy talks about the Casmir effect here again here's a good example of the plates and then it talks about Kusa clim so we need this extra spatial Dimension this idea of The Ether we're bringing back the ether because it's a cool ass name and you know I don't care people think it's metaphysical too bad because it's just it's awesome name and so that's what

(1:48:34) we're gonna use the Robertson fredman Walker time Evolution metric also has a very similar model to the Kusa Klein one so there have been propositions for this it's just again you don't really see them discuss much yeah and if you just read it it essentially says um inspired by unification physicists from the early 20th century wanted to unify gravity and electromagnetism the first attempt was by Nordstrom in 1914 who used a SC scalar potential for the gravitational field that's that's what we're the

(1:49:04) stress in the medium guys scaler potential 10 10 10 to 11 years prior to that and we had 1903 190 yeah 1903 ET Whitaker proposing the longitudinal aspect of of the Met of The Ether which is again is what this seems to build on yeah so we're going back over a hundred years then in 1919 105 years ago Kusa offered a unique approach to unifying gravity and

electromagnetism which involved adding an additional spatial Dimension to general relativity and populate in this extra Dimension with two mathematical objects called Vector

(1:49:38) potential and scalar potential can I just say this there's no textbook at least in North America that ever uh calculates the uh magnitude of a potential at best they talk about potential intensity if you can have a scenario where you look at the pointing vector and the magnitude of that potential extending past that Vector you have a scenario in which you can extend the orthon orthonormal tetrads within that we could you have your left hand to your right hand rule basically occurring within the quadripolar nature of the

(1:50:09) vacuum itself so in other words this this even this model in and of itself is linking back to every other major model that has discuss this like a bondi's model a pof's model and pz's model and so on yeah and then there was an issue with Kusa that uh I think it it didn't come out from observation so then Klein came in and solv the problem from looking at it I think geometrically if I remember correctly and so that's why it's called the Kusa Klein is that that's how they kind of fix the issue to make it now

(1:50:40) consistent again with einsteinian uh physics right yep and then page 16 here so we're going to scroll down through some of this stuff because then it talks about here too the idea of dark energy is a higher dimension arct now what is it saying right there it's talking about like just think of dark energy as The Ether full of negative energy I mean that in my mind that's how I perceive this is don't just think of dark energy as this thing that's pulling St around think of it as an extra Dimension that's filled with unlimited

(1:51:07) negative energy which is exactly what we need for these effects to occur and this is where I would push back on sabrin hossenfelder who's a prominent physicist out there where she says she kind of um condescendingly replied to me saying oh you can't just add an extra dimension and I justed because no the physicist literally did just add an extra Dimension that's what we did and physicist the aof B effect shows that there's a feasibility to adding an extra Dimension that magnetic Vector potential

(1:51:35) could be treated as an extra dimensional uh form of uh I mean look at look at brain Theory B ran the Chung freeze model as well I mean it's it's yeah yeah yeah so it's not an it's not like this some Fringe thing adding this extra Dimension it's been out there for a long time right um and then on page 16 here it talks about uh let me see oh yeah this because then here starts talking about warp drive and higher dimensional manipulation which now even just looking at the image looks like what we're

(1:52:05) looking at the m370 videos of this idea of ripping open through the fabric of SpaceTime out there and it says here if one were to locally uh adjust the higher dimensional radius then the dark energy density would also change locally more specifically if one were to adjust the radius of the extra dimension in the direct vicinity of a spacecraft then the dark energy density would also change only in the vicinity of the spacecraft as would the expansion of space and when I think about that phrase I'm thinking

(1:52:37) okay expand it right around your object this is why we're mapping our plane and then we're going to expand space around it and poof that plane is going to move somewhere else uh seemingly faster than the speed of light from the outside Observer perspective um and even here when you look at this graph now this picture here is black and white so it's hard to see but there's a ring around the the spacecraft here which you'll Al often see if you look up spacecraft and warp drive this ring around them which I

(1:53:04) I think is intentional to show and then just imagine instead of a ring around our craft we don't even need it to be connected to the craft we just have orbs that float around the craft to produce that exact same gravity effect that we need right right exactly now page 19 here and then it talks about the geometry of extra Dimensions which you're better at understanding this than I am with the orthogonal which I barely understand the orthogonal thing which when I think of orthogonal I think of like a literal Matrix like if you

(1:53:29) imagine the Matrix movie and you have the four like cubes on top of cubes and then each point connecting them would be your orthogonal yeah four points that's um so for people who think that we're just making up fancy terms or what have you there is some functional thing imagine a literal Matrix in front of you and like a cube like those another another example would be also in interstellar the scene where Matthew mccon is and contct hister that in my opinion is a very eloquent visual of both the longitudinal waves and the orthogonality

(1:54:03) of the V of the Matrix or of the vacuum or The Ether Y and then here on page 19 the key to creating warp drive is to create a false vacuum minimum I.E to modify the vacuum spectrum and inject some field which creates a desitter minimum at the rear of the craft and an anti ID sitter minimum at the front of the craft what this requires is a technology that allow us to artificially manipulate the field uh content Illustrated in figure seven here so Casmir could be one one approach right interesting yeah and the desitter stuff I have to look up

(1:54:38) again as well but I understand the idea of Contracting and expanding space like the alry drive going forward 100% yeah and I'm honestly I'm impressing myself with how much I'm able to keep up with some of this because it's it's a lot but what i' say to people out there is like anyone can figure this out is once you start to understand the major Concepts and start to Google it what have you I have a lot of people ask me like how do I begin to understand this physics and this science right uh start with the basics you just

(1:55:03) like I started with just like how an electrical circuit works and uh you know read out as many of the scientific Concepts you can and then start to dig into some of these papers and then the concepts will start to make sense to you and then it's all about repetition is like just keep looking back because it makes you think if it's if there was a possibility that some of our ancestors and their respective civilizations were able to understand this they didn't go through you know thousands of hours of

(1:55:31) uh you know uh vessel functions and trying to understand these things and but but allegedly these some of these civilizations the entire population maybe they weren't you know

intricate in understanding the uh full details but they generally understood how thing you know a unified understanding of the world so to speak and so if they were able to understand it at the time perhaps through a form of geometry more than uh numerically or a bit of both I'm certain that we can yeah yeah and this is the part where you realize we've

(1:56:01) blinded ourselves it's like we blinded one of our eyes with the Maxwell's equations where you could imagine that because science is the measure of observable reality scientific papers don't determine what's real observable reality does is that you could imagine that from an intuition perspective the other civilizations could have figured out the anti-gravity aspects of it they might not have had iPhones but they can still understand the relationship because they can uh you know find and see those properties you know even using

(1:56:28) sound potentially now page 21 here starts to talk about what the energy requirements would be for pulling this off and they go it's really really high um and this is where Jack Sara's uh clip that I posted um on Twitter where he mentions this idea well we can reduce  $C$  and if we reduce  $C$  now the mass energy requirement goes way down and then Sebastian who was also on that call with alien scientist and Jeremy says well I think we can do that with plasmoids and I went whoa we're looking at plasmoids in my videos

(1:57:01) here not mine but the MH370 videos and I'm going well maybe we can reduce energy requirement another way this paper talks about is the bubble that you make around your craft just make it really thin because the thicker it is the more energy requirement but the thinner it is like a soap bubble like something very tiny because we don't need it to be very thick we just need it to be enough to warp SpaceTime you know we're getting the same effect regardless of if the bubble is you know hypothetically an inch thick versus a

(1:57:26) millimeter thick or a you know um very small scale thinness to it so those are one ways where we can reduce it and then if you look at Salvador P's work he mentions the idea of amplifying energy which I think we see when we look at that kum's law where we see the orbs conversion so maybe all of them are correct we also call and unfortunately s in the next few minutes brother I do have to jet but we also we also must recall when uh Sal payz said on Kur mongle show in very first public appearance in any in any capacity where

(1:57:56) he said essentially um it is not possible the **truth** of the matter is it is not possible to achieve these energy densities with solids but it may be possible with plasmas very interesting yeah okay so then uh I'll go kind of quick here because so then one thing it mentions here as well is the idea that the large hadron collider might be able to detect these extra Dimensions which I think is odd because it's been running for a while and this hasn't come up so I don't know if it's being hamstrung on page 23

(1:58:22) it mentions the idea that we could use pwat lasers here in labs around the country which I imagine only these private Labs from thirdparty defense contractors would have access to these you would need something like the department of energy Z pinch machine yeah and so that's the downside because people want know how do you create this and you go and you look

here well we need something that can create an energy density of  $10$  to the  $16$  joules per meter cubed which I imagine is a lot um especially because I believe breaking

(1:58:46) the swinger limit is like  $10$  to the  $32$  or something like that so these are going to be very powerful lasers but if we can get some very powerful lasers this is where you probably saw my clip if you're watching of the the dark energy laser this is essentially what I'm talking about is that you don't necessarily need to create a huge warp bubble even if you have a laser very focused one like this is potentially how you can create a geodesic in your path now real quick on this last paper I just want to bring up the idea of a

(1:59:12) traversible wormhole so a couple things that were brought up on this paper uh and I won't even go through it here I'll just list them off is first of all the idea of er equals epr that we bring up which is Einstein Rosen Bridge equals Einstein pki Rosen Quantum re quantum mechanics quantum entanglement are equivalent to a wormhole um it talks about that they are humanly traversible like we said there's no vet Horizon on these so you can go through it and it's going to be like going through a doorway

(1:59:37) you're not going to have any gravitational forces that would rip you apart um but The Travelers must not couple with the material that is being used to generate the curvature and if you imagine the The Philadelphia Experiment people get stuck in the walls like this might be a situation where we didn't do it right the first time um it mentions that there might not be any time dilation effect which is something we should talk about in a followup for sure because I strugg I think we like I don't know we I like our debate back and

(2:00:02) forth about what the time dilation stuff um Y and yeah and then that's that's pretty much it the last thing is that there's this teleportation physics study that's out there as well that talks about the idea of VM teleportation by Eric Davis which I think is what explains all of these things uh wormholes uh warp drive Stargates everything out there so any uh last comments on that before we wrap it up no I mean I I'm I'm very impressed with uh how how much you've learned in such a

(2:00:33) short period of time to be honest with you so I I'm I'm pretty good man you've basically covered uh everything that I didn't and vice versa so I think uh it I know it's been a great stream and I want to thank both you for inviting me on and also for everyone in the audience who's been just absolutely fantastic well thanks a lot Dave and if you want to go ahead and plug anything else that you didn't plug already I appreciate it man I appreciate your time as well for sure thank you so much so if

(2:00:57) anyone's interested uh with any questions or anything like that davef helix.com also if you go to phas helix.com as well for anyone that is interested serious inquiries pertaining to any type of uh uh remote Consulting in person Consulting so on and so forth um anyone interested in certain um uh building some of these devices albeit I will admittedly say that it's it's uh we don't we only do it for private groups and for uh DOD Associated uh uh groups because of the um simply because of the the financial uh strain that some

(2:01:32) of these resources are required for it to be built with that said though uh there are many people as well that that uh go to the website or reach out to me as well because they're just curious about simply learning and we also provide uh educational packages and things like that so if anyone is interested feel free uh to reach out but uh again I want to thank you so much Ashton for for having me on other than that I'm us I'm some I'm fairly uh active on X certainly not the way that Ashton is in terms of uh providing just

(2:02:00) immense details into a lot of what he's learning uh but uh at podcast Z onx and uh yeah I want to thank you so very much for for having me on yeah I appreciate you brother uh you're one of my favorite people on the planet love talking science with you so just as a quick recap of what we talked about here today guys we talked about uh the idea of like an em drive we went through warp drive capability we talked about cold f Fusion free energy how we are uh we can potentially conserve the law of moment

(2:02:29) conservational momentum yeah um but that thermodynamics is potentially violated and we have the idea of opening up our system and that conservation of energy probably will have to be Rewritten assuming this this physics is real and um I think that we are hopefully being Pioneers I hope that people look back on these interviews one day and they go wow these guys had had it figured out and you know because I think that both both of us want to do is help change the world for the better so thank you everybody who's out there um thank you

(2:02:56) everybody for watching today and you guys have a good one peace everybody [Music] SEC h37 until you do some research don't talk to me I'm going to find the **truth** while I sit this Mar you're a it means to me it's m m m m m h37 not all heroes capes I wear glasses to see I'm going to find the **truth** while I sit this Mar the trolls hate seeing me [Music] succeed but guess what and then and then [Music]

(2:04:11) h37 s y m m370 not all heroes I we to see I'm going to find the **truth** while I sit this Martin your opinion to me your opinion M3 now her Ro keep glasses to see I'm going to find the **truth** why I S this party we sued but guess what

Transcript:

(00:05) it's m h37 until you do some research don't talk to me I'm going to find the **truth** while I sit this Mar your opinion it means me it's m m m m M A3 said capes I we glasses to see I'm going to find the **truth** while I sit this Mar the trolls hate seeing me [Music] succeed but guess what m m H3 [Music]

(01:10) gu what M M37 not all heroes I wear glasses to see I'm going to find the **truth** this Martin your opinion it me S to me your opinion m m h37 hero glasses to see I'm going to find the **truth** why part gu what [Music]

(03:20) let's go I might switch the order around guys and do the song second and just do the countdown first so it doesn't feel like this uh we got to get down to this like normal Point again that song Hypes me up everybody who is not familiar with the uh M uh MH370 song you just heard it uh we will play it again also happy Saturday guys we're casual Saturday we got our MH370 shirt on right now we're keeping a cash thank you guys for being here tonight appreciate you um guys uh I'm gonna go through and say

(03:54) hi to everybody since we're you guys jumped on early appreciate your fancy Flint uh Doran Rogers memory hole 370 nice to see you man chip Messiah Scotty Chadwell bill will uh Will William Bill John hold Ryan Joey Jason Martin good to see you Joe Moss Scotty debrina GP uh Brandon Billy Bru nice to see you guys PJ Mike glad you guys are in here Dorian cutney appreciate you stay haian Jason always nice to see you and say your name Paul Shields Dalton uh His Highness good to see you fancy Fint Poss friend uh who else did I get Ros Pamela

(04:34) good to see you CB sham 6 JK Philly fans on the house uh born 100 years too late yeah um actually maybe 100 Years too early debrina good to see you UFO nut chat uh Craig Chase catch cat cans sorry guys uh it's gon be one of those nights Pier Scotty uh who else we get here oh wipi 01 my channel good to see you guys here delete nice to see you as well Ashen for orbs yeah okay guys beas thanks everybody else is in the chat appreciate you guys for getting here early okay guys uh what did me I got you I didn't see you in the chat I'm

(05:14) not ignoring my exf followers appreciate you guys yeah jump over to to YouTube if you want though uh for the best experience but uh X is fine as well uh yo guys how's it going tonight uh first thing I'm going to do for the early risers if you want a Discord invite I'm going to put one of those in the chat so if you came here you're watching this in under 24 hours you might be able to use this to get in if you want only rules are no trolling uh and be kind to other people in the Discord okay there you go you have to

(05:45) see the Discord invite from YouTube it's in the chat right now okay guys well it's been wow things have been going crazy so tonight we're going to talk a little bit about uh debrief I hope you guys enjoy your Saturday uh I was wasn't going to have a drink but we're just going to do it so cheers everybody yes you might notice these are not blue cheese stuffed olives I ran out of blue cheese it's very sad so we've had some major developments uh we went on Glenn Beck uh first thing I want to say is I

(06:21) apologize that it was not a formal debate if you've listened to some of the spaces that I've been on since the Glen Beck interview over the last day um I've talked about a times where I thought it was going to be more adversarial than it was uh so and we also really limited like 40 minutes or something like that so the reason why I spoke really fast during their interview was that it was I had very limited time and I had a full list of stuff I wanted to get through I wanted to

hit all the major things that

(06:50) were out there um in fact I have it behind me right now we can probably take a look at it together if you want uh but I think that I got mostly positive reception Len back posted on Instagram that it blew his mind um because I think a lot of people come into it thinking yeah you can't this somebody's talking about teleporting a plane warping a plane uh you know everyone's initial reactions that's not possible but the more you look into it the more you realize you look at the evidence you go wow not only is it possible that's what

(07:20) we did to MH370 that's what we did to it um and like I said in the very beginning I was never a conspiracy guy or a UFO guy on any of this stuff I'm not an experimenter uh there was never any major conspiracy that I had before this where I was like oh I got to go find the **truth** for that uh I didn't even expect the MH370 situation to be a conspiracy I had thought and believed all the narratives out there I was thinking that this plane that we SE in this video has to be in the South Indian Ocean and now you find out the whole

(07:52) media can lie to us the government controls the media it's uh it's eye opening it's very eye opening and then you dig into the science and you realize holy crap like I we're going to go over a paper tonight uh we're switching it up a little bit there's a letter from Thomas Bearden or not even necessarily from Thomas Bearden a CIA letter that was Declassified in 2001 we gotta look at it guys it's incredible so uh the Glenn Beck stuff was good though um you know I think it got a lot

(08:24) of attention and it brings us to a more mainstream audience where people are going to realize that um you know this stuff is worthy of consideration which is what we need like this is a situation where you have to build up to it like you have to deconstruct the LIE for people that's the first thing because otherwise most people go oh didn't that plane crash somewhere they found a couple pieces and that's the misinformation they want you to believe um the other thing is that this is getting this is getting pretty

(08:54) serious actually like so the people that are like wishing me well and and blah blah blah I really do appreciate it because uh we're backing the intelligence Community into a corner on this there is like nothing they can say to deny this we've got so much evidence it's overwhelming people are waking up to the vast amount of deception that's been going on in the United States from our intelligence community and that we are potentially the bad guys now the downside of this is that I've heard through the grapevine

(09:27) that like I'm actually like really pissing people off like they might actually try to take me out or silence me somehow um which whatever I've always said I'm Not Afraid no big deal if it happens you guys take the Reigns happy to be a martyr if that's how they want to play this out um and then they will be anyone can take my evidence and run with it make sure you get the **truth** for the families of the victims um but this is like the biggest conspiracy ever and I don't mean that to be uh any way have with any sense of

(10:01) hui I just mean it literally is I mean we're talking free energy is actually real and they've been lying to us in the science textbooks for 100 years um now the good news is the more attention that I get the probably the safer I am because if they were to come after me try to silence me in any way shape or form you guys are going to notice hell if I even stop posting you guys will notice and yeah I'm not suicidal I need to be like 100% clear about that I had to kind of tell my f my family as well

(10:29) just in case like because here's the reality guys um whether or not you believe this or not don't really care but they've got a million ways to take you out without people drawing suspicion they could poison your food they can you know take out the brakes on your car you know whatever they think of they're going to be able to make it look natural so you know cheers I guess cheers are the good ones who aren't killing me by the way appreciate you um now another front on a positive note yeah the good news is I didn't take

(11:04) the I didn't take the shot so uh you can't you can't make up any [REDACTED] about reaction from some shots that I didn't take uh didn't take the shot no no died suddenly heart attacks um I'm I'm pretty healthy guy not overweight young so nothing should happen to me uh but on the what was I going to say crap yeah on the good news like we are making a lot of waves and we're getting the information out there and people are absorbing the information with an open mind which is awesome we had Ariel

(11:37) retweet us earlier today um and you know the the thing is there's a lot of crossover with some of this stuff it will not surprise me if it turns out that there's some weird sketchiness in ancient Earth with past civilizations or something like that at this point yeah um yeah everybody will raise hell appreciate that man and I'm I'm not I don't talk about it very much because it's dark and you know it doesn't matter anyway but I guess just for the record like I wouldn't have any regrets if

(12:11) anything happened I would do it all again every single time uh I'm happy to be a martyr for free energy uh if that's what this leads to which 99% sure that it does so what do I want to do here today um I want to go over some of the most recent updates with you guys first take a look at that um I mean we we've got you know the crazy part is like there guys there's no such thing as hoax videos that have this much corroborating evidence that just doesn't exist this is a one in the lifetime opportunity and

(12:39) one in lifetime case um and we now also found drone video footage uh that is actually very similar potentially the exact same cameras that were used um and when you watch it I mean it it looks just like the way the camera operates in the MH370 video and the best part is that they can't uh the debunkers can't say that somebody looked at that and that's how they chose to make the video because that video is uh only released in 2015 so it was released after the Drone video so they couldn't even have used that as a

(13:11) reference um but the the way it looks at the C at the plane in the video is exactly the same so I'm going to show that show some of the recent updates and then we're going to look

at this scientific paper and then I'm gonna make an announcement near the end here as well exciting announcement okay let's take a look can I switch this somehow wonder if there's a way to like make this not suck oh yeah look at that yeah okay that's not bad um so where is it let's start with we'll start with the

(13:57) camera um so uh who is it that found this in my Discord uh Ray Tracer found this and I edited it up so this is the mx25 uh and this is a West cam drone camera this is a military grade camera here uh there's a website that this is where I pull or the the YouTube channel is where I pulled these details from they have way more as well I just only pulled the relevant Ones high definition EO and IR dual Channel color and low light EO wide angle Zoom so this is a fully digital camera and it has the zoom capabilities that we

(14:35) need in order to uh recreate the shake that there is there but even better it talks about in the YouTube solid state inside technology five AIS active stabilization so this is the reason why there's not more uh disturbance is that it's got super Advanced stabilization software that's why we only see a little bit of disturbance otherwise trying to do this camera underneath the wing should be moving around way more and that's what the **debunkers** tried to argue and it turns out they were wrong again

(15:05) Guys these videos are 100% real you have to be in straight up denial at this point to believe these videos aren't real there's no such thing as like finding the real capabilities that explain every single question people have about the videos every single question there's no there's no one person that would have enough knowledge to put this all together uh I already sent the Discord invite but I'll post it again for you guys for on the YouTube so as we just saw there High defition color and then look at this plane track

(15:35) this is a real real plane real commercial jet that they're filming on this camera it's almost the same distance away as well actually does it even say that the distance yeah 2,619 feet away I think that's the is this the altitude or is this how far away it is and look this was actually filmed on in July of 2014 right here as well on the top left so this is actually probably exactly the camera that was used uh to film MH370 or a camera very similar to it look at the way it's being manually tracked so the other thing that the

(16:12) **debunkers** argued the **debunkers** as well argued that because it wasn't automatically tracking the plane that it couldn't be real so literally every single thing that the bunkers have lied about has been proven to be a lie they lied about and not being able to do the color we proved that they have color capability they lied about the automatically tracking the uh they lied about the shake as well so when you're out there guys some of these **debunkers** are straight up disinformation agents just straight up their goal is to

(16:40) push lies out there to cast doubt onto things but we have absolute proof we have proof of the satellite video using Google Earth and quick terrain modeler which is exactly what we need and what we were able to deduce before we knew that was even a thing um the Drone capabilities in the wing underneath the wing exactly like this is an mq1 SE like you have to be in

utter complete total denial at this point it's like if I just filmed like a a video of me walking around and people were trying to **debunk** it to say it's not real like that's how

(17:09) silly we're getting to that point now I mean look at this thing tracking it it looks just like when they're trying to track manually track the Drone video and and these like idiot **debunkers** are like oh it's uh they added in a some kind of like wiggle into the after effects which it you can't even use after effects to make the videos guys literally can't find the other the real software if you're going to do that but after effects was not used even if these videos were fake that made 370 videos

(17:37) were fake you would not be able to use after effects to make them it requires a full 3d rendered environment get it through your head full 3d we have Dynamic Parallax clouds look at this look at this and this is the kicker this one is the kicker look at how hot the engines are so you imagine if they were in color these are going to be red there's no heat coming out of the bottom of this you have a slight tiny little thing here which kind of goes away but the heat coming out of this is should match like what we see here in

(18:08) the engine because when we look at the Drone video you can see very clearly there's way more heat coming out the heat coming out in the Drone video is equivalent to what's coming out of the engines so now if we go look at the Drone video I'm going to go to the slow-mo one I made so I made a slow-mo of just the Heat Signature look at how hot that heat signature is look at how wide it is compared to the engine as well this is as as hot as the engine is and it's at probably a higher altitude than the other one we were

(18:45) looking at you can even see the smoke coming out like you can tell the smoke is coming right here this is the smoke coming out of the bottom of the engine right there and it's wrapping around the belly of the plane that's why you're getting two smoke trails it's not coming from here we know because we're looking at a real a footage of a real plane in the other one um that doesn't have the color over it and there is no like smoke coming out of this and also we know it's too low for contrails like science says

(19:15) this cannot be contrails it's not possible it's too low cumulus clouds rule out contrails so I mean just look at that look at this chat somebody faked every single one of these frames with accurate heat signature just coming out of the belly of the plane I that video uh this this uh West cam camera here is straight up proof that what we're looking at here is a real video that's a real video so here again is the just the part with the thermal again to compare and the reason why it's longer here is because it's lower

(19:54) altitude this is much lower altitude um the one the m370 video is several thousand feet higher most likely than this one is I don't know exact altitude of this plane but we estimated the MH 3701 could be somewhere around 7,000 feet 5,000 to 7,000 hard to say uh and then here the heat exhaust ports the heat vents are right here near the landing gear right here and there might be second I don't think these are the heat exhaust ports but this one down here is where we have we have there's another image I didn't

(20:28) post but has the heat exhaust right there so you can imagine the smoke coming out of these wrapping around the plane on both sides and then here's like the debris that was found that has clear Scorch marks all over it this is heat damage the narrative out there somebody like I don't even know if who supported it said this is resin from the ocean resin from the ocean and it's only on this piece or the two pieces that they found like this no chance man this is straight up burn marks I mean no one can

(20:58) G Gaslight me and tell me this is not Scorch marks look at this it's fire damage MH370 had a fire yeah amazing the undercat GL red and so guys some of you who haven't been around this whole time back in October you can find my post this is where we first found out about the fire this whole thing almost blew up when we found out about the fire scenario we found out of the glowing orange plane and then I was staring at my profile let pull it up my profile pick right here let me pull this back up one night

(21:34) I was staring at my profile pick after the glowing orange plane and I'm looking at it I'm going wait the Heat Signature right here on the overlay is in the exact spot as the landing gear are at that's you're not seeing through the plane to the other side here the Heat Signature doesn't even match the engine this is coming from the heat exhaust ports and then we looked up and we found the heat exhaust ports are right there and we went holy [REDACTED] this was a fire and somebody had already pieced together

(21:56) if there was a fire on board in the forward cargo B the smoke would pump through the air conditioning system and when it pumps through the air conditioning system then the smoke is going to come out through that spot right there I mean I was like that's that's 100% proof like 100% this plane was on fire nobody's hoaxing a detail that no one knew about you now they're speculating now they're somehow getting the location of the plane correct they're somehow getting a completely unsupported like fire scenario that

(22:26) nobody out there has been running with like you're making up a whole new original story for what happened to this plane based on a bunch of lithium batteries that nobody knew were dangerous in 2014 like there's just no way this is clearly what happened to the plane I don't know it's crazy like the only reason why we have to struggle with people on it is that they can't believe that we have warp drive technology which fair enough it's hard to believe it's true though apparently um yeah and some people ask about the

(22:56) debris guys I've robbed the debris so here's if you're new to the case too please go look through my history uh and not just the history like I've set it up so you can go to the highlights so if you press highlights and just start scrolling back you're going to find these are only things related to MH370 so you scroll back through this and I don't even think you have to go that far to find the debris honestly um let's just go back and see how far you have to go to find the debris here's where we found out about

(23:24) quick train modeler uh Cloud rebunk so if you have questions about whether or not like the **debunks** that are out there you can find all this stuff here it is right here so if you have

question about the debris you only had to go back like uh two weeks and you can find debris Barnacle analysis so people are aware the few pieces of debris from MH370 washed up in Africa Africa what people don't realize is the massive inconsistencies the only scenario that's consistent with the debris washing up in Africa is the one

(23:51) I'm telling you right now nobody else's story matches that bre there not the pilot suicide not the crash in the South Indian Ocean they basically basically just fabricated a fake model to convince themselves that the that the flapp Ron could wash up in The Reunion Island and the problem is the fla Ron doesn't have Barnacles on the area where they say the fla Ron where when they tested it the fla Ron was sticking out of the water there was no Barnacles or there no there was Barnacles I mean up on the spot where there shouldn't be any

(24:17) Barnacles and the Barnacles don't have enough growth on them they only have four months of growth on them and they supposedly were in the water for 16 months and four months is not a long enough time for that flap around to have washed up and Union Island the rest of the debris literally couldn't have washed up in like South Africa 3,000 miles away it's actually just impossible uh and it's funny that no one realizes that that's just impossible so it's funny because the people that argue

(24:40) about the debris don't realize that the debris contraindicates a crash in the South Indian Ocean that's why people don't bring up the debris that often the experts they don't bring up the debris because they have no explanation for it that's why I was wondering before why did they not confirm more pieces of the debris to the plane uh because and the one piece actually wasn't connected the flaperon they didn't connect it with a unique serial number either I mean I think it's from M 370 but they did not

(25:05) use a unique serial number with that they used a part number the unique serial plate was actually missing none of them have been matched with any unique serial numbers that's actually just fake news basically crazy huh this just does this just not wake people up in terms of like how much you've been lied to what I'm telling you right now are absolute facts facts not just opinions like literally look at this is the Rolls-Royce engine colen this is from the engine and it's clearly from a tri 7 it's got

(25:31) the giant RR on it Rolls-Royce Rolls-Royce never released their public their information publicly this showed up in South Africa 3,000 miles away look at the shape of this this could never float 3,000 miles in like 16 months or however long it was actually impossible in fact if you look at the ocean currents uh I don't have the ocean currents listed on here the ocean currents actually go east the ocean currents go east down where this plane supposedly crashed this engine C is one of the pieces that they say is highly likely right here 2016 on

(26:06) mozzle Bay South Africa actually couldn't have washed up there should have washed up in a in Australia zero pieces washed up in Australia so if you want to know the **truth** the debris is only consistent with the theory of a fire and somehow this plane getting over to the malds which we've explained as a as a warp drive event so please if you're new to the case look

through my highlights and you will find a ton of information that's consistent with the science the videos all your main questions are the videos **debunked** no

(26:35) they're not **debunked** etc etc etc and just add more credits to it there's a **debunker** in the chat right now in the X chat who spent like 20 hours trying to recreate these videos while she's been live streaming it because I challenged people to live stream it and they can't even come close can't even come close and she's already spent I think like 20 hours or so on it and live streamed it and you can watch a record of it so people that are out there think like you can make these videos in like five minutes or whatever

(27:06) zero% chance and this is somebody who actually is literally just comparing to the real video and trying to match it and the person who made the videos to begin with would have had nothing to compare to it' be completely original have to come with a storyboard I mean they have to invent the fire story and be like oh this lithium ion batteries most to start a fire I'm going to build a fire into my fake hoax videos you know the thing is like if you believe the videos are fake this is what I want to tell

(27:29) you what is the story what is the full comprehensive story for these videos that is consistent with all the evidence that we've put forth we've got a 17-page evidence list now you need to tell me what story it is that makes all this evidence makes sense um because that the **debunkers** think that they can just try to puncture one hole in your story and that **debunks** it but that's not how logic and reason work um so here is the full evidence list you need to explain and you can ignore the parts like the videos If you

(28:02) think the videos are fake then you got to explain all the rest a lot of this evidence has nothing to do with the videos I don't even need the videos to prove the lie so if you can explain all this evidence like especially just start like if you're a **debunker** the way you need to start is right here at the uh where is it what the requirements to hoax the videos where is that right near the top here it is fake video requirements just start here work your way down the list build a comprehensive story that you can

(28:31) tell somebody else and then you can tell it to me and I will I will listen to it tell me who the person is who didn't want \$150,000 who couldn't bring forward the proof who somehow produce these within four to 72 days that must be reged on otherwise you only have four days where there's no reference with full 3d volumetric clouds how the clouds look at low altitudes so they're what a meteorologist they're a military person that knows how military software works know what the mq1 C looks like back in

(29:01) 2014 they're better VFX skills than top gun Maverick uh in terms of an engineering perspective of the planes scaling it down that they have better skills than the lead VFX expert at uh at Marvel Studios uh Jeffrey Ford better understanding of physics than most phds do they understand scaler physics because the physics on display isn't even actually mainstream it's like suppressed physics that's out there but that isn't considered mainstream but checks out and then they have to know that this

(29:34) is a 3D rendered environment we got two different perspectives and they somehow after all that have to know the coordinates of the plane have to know that we'll never find a plane in 10 years so you know what go do all that **debunkers** and then I'll begin to take you seriously again in the meantime everybody else uh is going to come with us to the Future and we are going to uh reveal free energy to the world pretty cool huh pretty cool yeah just the **debunkers** are literally **redditors** like literally **redditors** like here's the thing guys um

(30:10) Hey Jake Chanley in the chat brother Jake Jake We Are Gonna Change the World Jake we literally are like I either either we're gonna disappear we're gonna change the world and if I disappear I want Jake to pick up the Reigns Jake and I have been promoting Salvador P's patents and those patents are going to probably go down in history uh it's going to be one of those things where like they're going to be like this dude was a genius like he was Einstein that's how they're going to look at those

(30:37) patents because you know there's some of the first patents out there that talk about this technology um you know and this technology is going to change everything brother change everything free energy man and Jake and I did a bunch of streams or uh spaces early we talked about the patents and everything um you know they're they're awesome so oh crap I forgot what I was going to say now oh yeah so the **debunkers** guys so I'm going to I'm going to bring up politics for a second here guys so you

(31:06) guys have been following all these protests going along in uh on college campuses in the United States and if you watch any of them you'll notice that everybody's wearing a mask they're all like basically they're all giant losers right they have nothing going on they have nothing else better to do they don't even know what they're probably protesting for the most part they just want a reason to go be annoying that is like the **redditor debunkers** like that is them there's like a vend diagram it's it's a perfect

(31:38) circle you know so like these **debunkers** have nothing going on in their lives um you know they just want to feel smug and Superior to other people like they're doing something to help they need a purpose in life uh and it's sad because if they would get on our bandwagon they could help solve the mystery help uh reveal free energy to the world so yeah it's rough um but that's why I like people like like Jake who are out there you know and you don't have to agree with everything like you don't have to

(32:06) agree with our politics uh anyone else's politics or anything like that like a lot of this should just be a matter of us agree together that we all want to help make the world a better place like if you support green energy you should want the United States government to give an opinion on these videos because it's very very likely that they are hiding free green energy from the planet right now and that we could be living in basically Utopia exactly what all the bleeding hearts want we could we could have that

(32:37) we don't need to fight about how many times I turned the light switch off or on in fact I'm G to turn it off right now oh too dark huh one sec there we go okay yeah we don't need to

be fighting about all this stuff we can just be on the same side you know so okay um now the other thing too is that this is getting a lot of attention the case is getting a lot of attention faster than I thought you guys can tell as well this is never going away um there's just something authentic about it that resonates with people um and that's

(33:15) because it's real uh so this is why like you're seen it get bigger and bigger and bigger I honestly expected after I retired that I would get at least six months before people would start to bring it back up and it would start to get big again um but I've got a lot of requests uh and ideally I want to go on bigger platforms at this point because we've just reached that point but of course I'm also going to prioritize the people that I've already been on with a lot of people want to do follow-ups

(33:38) about the case and the more recent evidence uh that's out there so I am probably going to do those to accommodate them I want everyone to be it to be clear though that I have made zero money from the podcast I've gone on I don't know if people even charge for that uh but I uh have never charged anybody for any of my appearances because this has always just been about getting the **truth** out there related to this um you know at some point in the future I probably will end up making money from this I hope I mean if it's

(34:05) true uh because I need to live but uh that's not the goal um and until we get that answer from the government we'll see now the other big uh update as well if I go back to uh the Twitter the twitters is that there's a new search new search guys and a lot of my conspiracy-minded followers are like oh they've got this new search going going on they're um you know they're going to go plant debris in the ocean technically it's possible yeah and this is why I love Jake like Jake also he doesn't make

(34:40) money on his podcast that he does out there either because real people they don't want money they just want the **truth** to get out the **truth** is far more valuable than money is integrity exactly um so I think that's how you can tell you know whether or not anyone agrees with me or Jake or other people that are out there um you should realize that we're not Liars at least I think that's the most important part you can disagree you don't want to believe warp drive is real that we have free energy great but

(35:06) realize I'm not lying you know I'm telling the **truth** as I see it which is based in this case on a [ ] ton of evidence now a lot of people in here said well can they can they warp the plane down into the bottom of the ocean I'm gonna go ahead and say probably not no so the **debunkers** probably think that I'm going to say blah blah blah oh even if they find the plane it doesn't mean anything no it would mean a lot if they find a an intact Plane full of skeletons down there with a black box and the black box

(35:35) is like this plane went down to the South Indian Ocean then I'm definitely gonna say that that's what happened because that's a lot of evidence it's a lot of evidence uh now does it completely rule out everything just to be honest probably not but it would absolutely make me highly reevaluate the story that I put forth because I'm somebody who's just been following the

evidence that's out there now of course I will screw scrutinize that very heavily I want to know where they searched did they search

(36:02) there before how did they not miss it Etc the **truth** is they're not g to find [ ] they're not going to find anything the best case scenario be they try for them is that they find like some piece some significant piece that they can try to say is from MH370 and be like well we just missed the rest but we found this one piece that's got this serial number on and it's got to be from MH370 that's what they could pull off but that would not be enough because the story out there is like why did we not find a debris field

(36:31) and if you listen to Larry Vance on Ross Kart's reality check show whatever it's called he says well I know what happened I know that the pilot did A Perfect Landing in the ocean and the plane didn't rip apart and then it just sank perfectly down into the water and then nothing floated and that's how we found nothing uh so if that's the case then we need to find a full plane down there somewhere maybe it's broken in half but even if it's broken in half then all the stuff should have gone floating into the

(36:59) surface all the seats the luggage the bodies should have been a giant debris field so the **truth** is they're not going to find [ ] they're GNA find nothing down there in the bottom of the ocean and when they find nothing down in the bottom of the ocean I want people to start to realize these videos are what happened to the plane man this is what happened it's hard to believe but it's true okay um and then the last last thing I want to reiterate is I I posted this thing about quantum teleportation so I need to

(37:32) clarify a few concepts for people uh especially for the people if you're not if you're not big into the science I want to run through some of the concepts with you okay so quantum teleportation is not the same as warp drive not at all but the implications are the same so the quantum physics and uh general relativity when we combine them we are opening up our entire Pandora's box full of information and we're saying okay Pandora's boxes open up we get everything that comes along with it one of those things that

(38:03) comes along with it is faster than light communication so faster than light communication here is essentially what quantum teleportation is when you read this article that I linked down here and there's a scientific paper that goes along with it I decided not to link the scientific paper because they go over people's heads um this is basically saying that we can actually produce faster and light communication that we can send information and it's not a decoherence so when I say decoherence is you need these states these Quantum

(38:31) states to be in coherence so that you can basically say okay if I spin this one over here it automatically spins this one and we can glean information from that uh entanglement but what happens is if somebody looks at it just like in the double slit experiment you try to measure it you try to observe it uh it breaks down what these people did is they found out a way to make it so it doesn't break down so that we can actually use this like a telephone and call somebody and have faster than than light communication how crazy is that we are

(39:02) on the verge of faster just faster than light communication gets me excited guys faster than light real faster and light communication it's coming now I'm just going to go out on a limb and I'm going to say the military already has had it probably for decades Simon uh Professor Simon uh how he and I actually did a a video and we talked a little bit about that because I found his video from several months ago where he was told by his sources that we already have it and we've been like getting signals sending

(39:28) signals um so that's pretty wild and then so that's one thing though okay and then you also have em drive so em Drive is this microwave drive that uses like a a cylinder basically abuses the kmir effect and the Casmir effect is like if I put two plates next to each other like this well what I've done is I made so the the quantum wavelengths for anything that's shorter than or longer than this can't fit in there anymore so if your wavelength can't fit in this space anymore what happens is a pressure and

(39:59) the pressure causes it to close you use that same effect in a cone and that cone can be used to produce thrust just from what they would say from the virtual particles and the the quantum uh what is it uh fluctuations that's what conventional physics would say The Ether would say that we don't need that anymore because we can just simply manipulate the Casmir effect which is the pressure between our reality and The Ether and that we can utilize that to create an engine and that engine is Star Trek impulse drive so we have faster light

(40:35) communication we have impulse drive and yes em Drive is going to be real as well because it all comes along with the idea of The Ether and then the last one is wormholes warp drive so these are three separate Concepts that are all very closely related but I want people to understand the difference faster than light communication is simply entangling cubits of information be able to read it from Another Side faster than the speed of light this is also Quantum tunneling is a is another concept here and again Quantum tunneling what what does that

(41:05) mean well it means that this information over here is teleporting over here but there're skipping this area in between how can it skip that area in between Wormhole quantum wormhole quantum entanglement so eer equals epr is the overall physics science that explains how all three of these concepts are possible with the warp drive we're creating a warp bubble aluer Drive literally all kubar drive a warp bubble this allows for Mass reduction because once our object is completely encased in a bubble now it just floats away now it

(41:35) has zero mass and now we can just push it along and imagine that you're pushing it along through the extra Dimension but from our perspective visually it's just going to look like it instantly appears somewhere else was over here now it's over here so again you can imagine that like a rubber band analogy there we're just boom slingshotting that bad boy somewhere else uh now what we found recently which I thought was incredible and I couldn't believe I didn't figure it out before we're going to go ahead

(42:00) and show off uh is this chaos chaotic Goods uh thing here just came across chaotic good

here's your fourth orb this is your fourth orb Theory now she has it backwards here but that's fine we'll give her a we'll give her a pass on this so if you're looking at the plane here and the orbs are spinning as you're looking at the plane in a clockwise rotation now use the right hand rule the right hand rule would say if you have your curling Vector here which is your your orbs spinning around and then you

(42:30) have your electric uh Force going downward using the right hand then the direction of travel is going to be your thumb here straight forward so in this case and actually I have it I have it backwards so in this case it's not going to be straightforward it's going to be going backwards so the vector here should actually be going backwards getting pulled backwards based on the orientation of the orb Spin and this is consistent again with the right hand rule they're converging because of kum's law so if these videos are I'm pretty

(42:58) sure we wouldn't be discovering laws of physics based on them just just throwing that out there guys throwing them and and they definitely wouldn't be consistent with existing laws of physics as well um so this is your example of what they're doing with that um and that was a big Discovery the other day I don't remember if we talked about this before the Glen Beck thing but I want to pull it up again just to show you guys it should have been in my highlights yeah also my interview with uh Ian Carol should be um interview with

(43:30) Ian Carol should be dropping pretty soon as well I think next week we had an awesome conversation probably be a lot of here it is okay so the orbs guys look at how perfect this this is the tracking of the orbs do you guys think if these videos were fake that you would have like these very realistic like this is the orbs coming onto the plane getting into orientation and then right away you can tell they begin this resonance pattern here they be this perfect sine wave resonance look at this you kidding me yeah Ian's awesome dude Ian's legit

(44:06) legitimately um no homo uh the best investigative journalist on the planet right now I watched I looked at some of his stuff we talked beforehand a little bit like dude is on point I've got to take some notes from him we might start building like little like models in that obsidian software where we have like all the pictures of the physicist and stuff like that um there was a part where he had all the Lockheed Martin like you're GNA see this but Ian had all the Lockheed Martin guys all the boards of

(44:36) directors around the locked Martin logo in the middle like it's like a big like web and there was **General Joseph F Dunford** and I looked at it and I went dude we're gonna have to say we won't kill ourselves uh because we're we're starting to like play around with the big boys now uh **General Joseph F Dunford** was there so during the interview with him I talk about the story Joseph F **Dunford** and he looks at he's like dude he's like on this specific subcommittee in the locked Martin board of directors

(45:04) related to like Intel or you know Advanced science or whatever it is with like some other generals I'm just like do you know he was like the top ranked General uh right after this and so yeah the Ian Carol interview guys is gonna be it's gonna be juicy uh I have gone yes I've gone on

higher side chats Higher Side chats is the only person who like wanted to know about all of my post history and like the age of my accounts and all this stuff which fair enough like it's it's fair to question whether or not I'm

(45:37) myself like a government agent uh I am not I am not I can tell you that much and that's the beauty of this like this is why the intelligence Community is flipping out I'm just a normal guy that was like not even in conspiracies before this that never would have touched any of this and I find the craziest [REDACTED] I've ever seen in my life and I'm like no no no and just I'm like I'm going to dig into this and that's how you get to where we are at now and so imagine the intelligence Community like is this guy

(46:05) a spy like the United States intelligence Community is trying to figure out if I'm like a Russian spy or a Chinese spy and they looked me up and they're like wait no we just gave him a security clearance related to his job and we did a whole full thorough background check on him and there's nothing he's got nothing like this random guy just starts figuring all this out figures all the videos out you know like they gotta be losing their [REDACTED] minds I just I love to think about it because it's hilarious so I don't mind

(46:30) that people think that but no I'm I'm no spy and no spy would be implicated in their own country either uh the way I am and exposing them am I British how dare you sir how dare you t44 never never would I be British a limey no no absolutely not um and and general Flynn follows me that's awesome I love that General Flynn follows me and the reason why the General Flynn following me thing is so crazy is that uh all the papers we've been looking at are defense intelligence agency papers he was the director of the defense

(47:06) intelligence agency like I want to ask General Flynn why did these papers get created are these real uh and if you don't know what I'm talking about we'll probably take a look at one later tonight but uh the three papers I think I wrote them down on my interview with Glenn Beck so oh also dude Jake yo we got to start talking about we might have to do a dude yeah we might have to do a space on the DIA papers Jake that might be the next one we do that might break the internet the I think we should do a

(47:36) a a space on the DIA papers there and maybe even the teleportation physics study uh teleportation physics study the uh anti-gravity research for propulsion mechanisms the other two I have written down here somewhere oh here they are uh warp drive dark energy in the manipulation of extra Dimensions wow and then traversible wormholes Stargates and negative energy like why do you guys think all these papers exist Bros why do you think these papers exist warp drive Dark Energy manipulation of extra Dimensions traversible wormholes

(48:18) Stargates and negative energy those are both di papers from 2010 was wild bro hey crypto nice to see you man yeah cuz it's real like this is the thing that people don't want to realize like people are like trying to come with these elaborate reasons for why these papers exist and like our disinformation or something no they're just real in fact these are plausible deniability for the government I'll pull one up right now for you guys so that we don't have to

act like you don't know what we're talking about here um here's

(48:50) one of them this is the one we were going to go over today this one so this is the one we were going to go over today anti-gravity for Aerospace applications and so supposedly Eric Davis at least helped write some of these I would not surprise me if Hal PUD off had input I can just kind of some of the topics they talk about when they talk about like Quantum vacuum Zero Point Energy Zero Point fluctuations Dark Energy so guys we I think have solved Dark Energy dark Dark Energy isn't even really a thing dark

(49:29) energy is just the interaction between The Ether and our reality that's it that that explains all of it it gives us the the literal negative energy we need in order for the Big Bang to be possible I mean dude when I first looked at these papers before understanding any of this it just seemed like mumbo jumbo but you look at it after you understand it you're like this is literally plausible deniability so that when warp drive comes out and people are losing their minds about it going why did we keep this secret the government's go we

(49:58) didn't keep it secret we put these papers out in 2010 why did you not think we had warp drive capability and the whole world's going to be like Oh okay that's fine then oh they have warp drive capability but it's okay that they lied to us about free energy being possible oh okay God man papers are just real chat yeah I oh USS Forbes that's that's honestly a great honor if there's a USS Forbes in the future that that would actually be the best way to honor my uh my contributions so this a the orbs are

(50:34) three phase 0. 120 degree pattern is that also a coincidence is that also a coincidence there's no way that it's a perfect sine wave pattern just like a three-phase electrical engineering pattern the orbs art and then I went back and looked at the old [Reddit](#) posts and I found this Guy this is n months ago back then I actually thought it was still Annihilation I thought that the plane was being destroyed but the plane is not being destroyed I know three phase power well and the three orbs seem to perform a

(51:13) perfect synchronous motion forming 120 degree out of phase s cosine waves that op neatly grafted out that was from the where I pulled the graphs from I may do some wild speculation the Wormhole generator May require this specific motion from these craft where they act as the poles of a hypothetical motor motor or generator generating an electromagnetic field between them that's exactly what Bob Greener said I'm gonna even play the Bob Greener thing after this for you guys just so you guys get your minds blown another thing to

(51:45) notice is the rotation of the orbs is clockwise if you are looking at the plane from front on this is interesting because an electromagnetic field generated by the generator is a vector quantity and it's Direction it's generated in a direction perpendicular right hand rule uh perpendicular to the plane of rotation as given by the right hand rule if we use this rule on rotation of the orbs around the plane the direction of the resulting em with f would be backwards towards the tail of the plane this is interesting to me because we saw

(52:17) a little while ago that the Wormhole opens up behind the plane and is pulled backwards into it this would make sense if whatever phenomenon these orbs use to create this wormhole had a basis in electromagnetism what are you kidding me Chad I mean there's no such thing as videos that are this scientifically accurate that are hoax videos especially not from two military assets like we got the best videos in the history of the world best videos in you know what I'm gonna play them real quick and then we'll look at some other stuff

(52:50) I'm going to play the videos uh I'm going to go through this other quick paper it's only three pages long and then we're going to look at the bottom green your thing as well after that so technically the First Quality is side by side but I'm playing this satellite video because it's just higher quality it's better it's easier to see the details in this but this is not the original one this is just a very uh one that came out a couple months later and also the fact that there's a

(53:16) higher quality video that was released after regicide andon says that reges andon is not the leaker that combined with the fact that uh the uh was I going to say that this the Telemetry data wasn't known and that they only had four days if if Regan is not the leaker makes this 100% real okay and yeah the the the or oh yeah I forgot the uh the plasma thing so that clip with uh well here we go poof right there so we see our right hand rule we can tell that they're they're spinning around the plane and they Chang their

(54:03) orientation right here now you can see they're spinning clockwise around the plane right here if you're looking at from the front you can tell they're spinning clockwise that always bugged me but now it makes perfect sense on why they're doing that now you can see them spinning clockwise if you're looking at from the front it's wild yeah look it's clockwise huh wild and so then the uh jackar F message jackar fty thing I'll play that in between and then I'll post the other one that's the mass energy right but if

(54:43)  $C^2$  gets small that thing goes down see it goes down it's it's but like a as a you know so he's pointing the  $c^2$  in this equation for how much negative energy you need  $c^2$  is a huge number but if  $c^2$  lowers and that means the amount of energy you need goes down a lot it's here here the total mass you need is a  $c^2$  but  $C^2$  becomes uh if it goes from from uh you know 10 to the 8 meters a second to u to one meter per second then you're down by a factor of 10 to the 16 right this calculation

(55:24) but he doesn't say that see they don't say that chain C that that's what they're missing crap sorry guys I was muted okay so when you watch the letter to Ashen Forbes this is why Jack basically says that we don't need a lot of energy to warp an object because we can reduce C here which reduces the negative energy requirement that's what the the letter Ashton forb says uh that this is a low energy phase transition but this is you know this is fine

(56:26) yeah it might I think you can achieve that using a stable plasmoid or vertical I hope you're right yeah it might I think you can achieve that using a stable plasmoid or vertical stable plasmoid can lower C that's what he just says and Jack goes yeah you're right well I hope you're right so do me a favor write it up and send it to me I hope you're right I'm not saying you can't

okay look that's a stable plasmoid can theoretically do this chat what are we looking at in the MH370 videos well let's go we're looking

(56:58) at a stable plasmoid is that also a coincidence that we just happen to have stable plasmoids on demand here when that's what we need to lower C and and potentially have enough energy to create a wormhole there's a lot of coincidences adding up guys that's why these videos are just real I mean there's no other explanation as hard as it to believe there's no other explanation guys the **redditors** in the chat chill out man why are you guys so aggro yeah they're not you're not creating a 3D render environment Tech

(57:41) before 2014 and like four days so not a full story weren even searching in the right place then this is your PL I mean there is your plasmoid you're staring at it the heat signatures as well weren't even known and the heat signatures seem to be consistent with a a magnetic monopole or a topological monopole as well which is something that even now people don't even agree necessarily that it's been predicted to exist but people had not seen it before then yeah so the big poo says the the plasmoid would create a resonant cavity

(58:19) that could Bunch up or Clump up in that case and the plasma sheaths are exactly what they use in Hypersonic weapons for this exact purpose so that the object doesn't get ripped to shreds from the uh atmosphere or the friction in the sky so is that just a coincidence as well that Hypersonic weapons literally use a plasma sheath and we're looking at a plasma field around a smaller object here no way man and nobody knows what America's Hypersonic weapons look like nobody has any idea what they look like Jack is Jack are he is a pretty

(58:59) well-known physicist that worked with the CIA believes he got a call from future US future humans that told him that he would figure out how anti-gravity worked and if he sticks with me he probably will find out maybe he'll even win a Nobel Prize oh and he hates dogs too I don't know why I don't know why yeah I I would even argue I would go so far as to say if this video came out in 2024 that it wouldn't mean nearly as much as it means now or in in terms of like knowing it came out in 2014 the fact that it came out in 2014 is huge

(59:37) because it predates all commercial Ai and commercial deep fake like that means really the only people that could have fake this is the government so okay we showed those let's go and take a look at this other scientific paper that we found crazy huh so if you're new to this go back yeah I did a podcast with Jack but it wasn't that great I mean it was it was rough man he drops an end bomb in there he's uh he lets his politics fly I'll show you guys a screenshot this is so I'm back on the the email chains with

(1:00:08) Jack sarfati again he unbanned me thank God I mean actually I don't really care but um so I sent him in this email group uh a message I replied back to one of his emails I'm on the I'm in the oh my God come on I'm in the email Jesus man I hate this thing that like locks every window I do to my tries to lock it to my screen oh and also who let me see the donations real quick how do I somebody else donated but I can't see the super chats Wang Wang thank you very much appreciate you um wow I don't have the super chats

(1:00:47) thing on my I don't know sorry if you donated and I didn't see it okay so here's the screenshot let me just make sure there's nothing this is what Jack sarfatti replies back to me this isn't the whole email I'm not going to show the whole email but um look you I assume that means [REDACTED] for brains you make Biden look like Einstein The observed UFOs are not breaking the swinger limit with high-powered lasers I think they probably are I've heard on social media that Eric Davis has at

(1:01:19) least partially wrote These in addition to other fascinating paper teleportation physics study blah blah blah and then Jack says yes Eric wrote it and I give give him a B I said great job to all those involved I'm a Believer in support of your work it's good to be an American so you guys can imagine who this who's on this email chain all these memes to the email why is he attaching all these memes to the email the working dead there it is the dumbest [REDACTED] thing I've read all day and then another

(1:01:49) one about idiocracy idiocracy was just supposed to be a movie not a documentary he's like got angry man syndrome he comes at me makes a Biden joke that was rude I make Biden look like Einstein and then he memes on me with like three memes guys there's like accomplished physicist in this in this email chain there's like real serious physicist in that email and he's just posting that in Jack has no filter I love it I love Jack sarfatti I got that back I was just cracking up man that was cracking up yeah F rdit okay so

(1:02:32) somebody sent another paper as well that I'm going to pull up right now and this one's only three minutes long it's pretty good yeah serial number plates should also not fall off the missing serial plate is super sketchy I I don't know the good news is my story doesn't require the debris to be fake so I don't really care I'll leave that to the other people I'll leave that to the other people to figure out people that need the debris to be fake which is like literally every other

(1:03:06) story out there or the worse is the South Indian Ocean narrative like picks and chooses like oh this piece of debris is real but all the other debris isn't real okay let's see yeah people are just often wrong it shouldn't be no one should feel bad about being wrong unless you're one of these people who's been like dedicated your whole life to trying to **debunk** these videos in that case you should feel bad you definitely should feel bad and you should reevaluate your life decisions because your life sounds

(1:03:39) pretty sad okay here we go okay this is only three pages I'm probably not going to be able to understand the equations just yet but on my list is to try to understand all the electromagnetic equations and memorize them I'm more theoretical than mathematical on this stuff oh for the benefit of the dumb trolls nor tracks everything above a certain above the atmosphere so yeah the idea that a plane just disappeared is frankly absurd there's no chance no chance guys yeah the serial plates are riveted on as well somebody mentioned it's

(1:04:18) actually crazy if you guys just Google the MH370 serial plate thing like I'll just do it in front of you guys look at this uh oh there you can already see the one of the articles there

missing ID plate delays confirmation of MH370 like you just literally click on the top link here and there's only like a couple links that even talk about this like mainstream media just doesn't even mention that the unique serial play that's riveted on is just Myster seriously missing from the flapper on the one piece that they're like saying

(1:04:59) that this proves the plane crashed I mean I think this can be from m370 but this is weird a critical identification play in the flaper washed on Shore you can just look at it you can see there's bolts on it like this had to be bolted on okay whatever you guys got me you guys get it we don't need to we don't need to H harp on this man some of the **redditors** are melting down in the chat right now yeah I think they're starting to get scared a lot of the reders are starting to get scared because the evidence is

(1:05:32) starting to become overwhelming getting getting hard to deny at this point how do I can I zoom this in more are we stuck with this crap on the left or guys you know is there a way to get this thing on the left to go away whatever okay I think you guys can see it I'm just going to read it uh subject scalar waves reference verbal request for summary statement on scalar waves I'm already excited chat oh also Jake scalar physics that's something we got to bring back as well we're bringing back the ether we're bringing back

(1:06:04) scalar physics apparently scalar physics is like kind of a no no term uh but I don't know it's a great I I like it so much of science is just making up a fancy sounding words to like explain your your physics theories we're getting R of dark energy we're getting rid of uh dark matter as well we're just getting rid of all the crap words we're getting rid of quantum fluctuations in the in the vacuum we're getting rid of virtual particles and we're just bringing back ether and scalar physics just going to

(1:06:39) solve all their problems okay so for reference the writer will provide a summary below of his understanding of the nature of scalar waves these are unconventional waves that are not necessarily a contradiction to Maxwell's equations if some have suggested but might represent an EXT ention to Maxwell understanding at the time if realizable the scalar wave could represent a new form of wave propagation that could penetrate seawater resulting in a new method of Submarine Communications and possibly a new form of technology for ASW I don't

(1:07:14) know what ASW stands for thus the potential applications are of high interest to the United States research and development community and the intelligence Community particularly if some some promise to shown to the re realizability this is a CIA confidential document that was approved for release in 2001 so it probably comes from the 90s there's a community in the US that believes that scalar waves are realizable in a recent conference sponsored by thee something electrical engineers or something these were openly

(1:07:51) discussed and proceeding on the conference ex and proceedings on the conference the conference was dedicated to Nicola Tesla and his work and the papers presented claim some of Tesla's work used scalar wave Concepts there is an implied Tesla Connection in all of this why is this all blacked out why is this all blacked out what is in this black spot I would

basically kill to find out what's in this black stuff that they felt like they if they're saying all of this but they have to Black something out what the hell are

(1:08:24) they blacking out does this talk about the Philadelphia Experiment or something like what what is this talking about Emily is on fire e is the noise **redditors** Make when someone proves them [Music] wrong it's scalar not scalar you got me scalar the scalar wave as the writer understands is not an electromagnetic magnetic wave an electromagnetic wave has both an electric field and a magnetic fields and the power flow in the EM waves is meant by the realization of the pointing Vector right hand rule pointing Vector

(1:09:10) as follows scalar wave equals  $\vec{E} \cdot \vec{B}$  I think that's what that means the energy per second crossing a unit of area whose normal is oriented in the direction of  $\vec{s}$  is the energy flow in the EM wave that's the right hand rule I believe a scalar wave has no time varying B field in some cases it also has no e field so what they're saying here is if you remove the B field or the E field the magnetic field or the electric field the potentials remember we talked to Tom mon talk about this then we can produce a scalar

(1:09:46) potential the stress in the medium and what is the stress in the medium gravity uh thus so a scalar wave has no time varying B field has no energy propagated in the electromagnetic wave form it must be recognized however that any Vector could be added that could integrate to the zero over a closed surface and the pointing theorem still applies thus there is some ambiguity even stating the same thing before is the total energy of the is the total em energy flow the scalar wave could be accompanied by a vector potential A and E and yet remains

(1:10:24) zero in the far field so here they're talking about we can actually shoot a scalar potential we can actually direct it somewhere theoretically at least according to this and that's exactly what I'll uh the uh Thomas Bearden would argue damn chat you guys are on fire right now yo guys get those uh get those **debunkers** guys yes this ties into monopole stuff directly Focus scalar waves Bearden talked about uh parsing the waves around this damn I might have to yeah you guys are chat is going nuts right

(1:11:01) now uh from the EM Theory we can write the following so now here's some equations B field equals  $\Delta \vec{A}$  so I think that this is normally where they zero it out but in the new equations but back in Maxwell's equations is different I need to ask I actually almost want to do a followup with uh Tom monok on this in this case Zero is the scalar potential and  $\vec{A}$  is the magnetic Vector potential Maxwell's equations then predict and here's some stuff scalar potential waves Vector potential waves

(1:11:32) here's a solution where they calculate  $\vec{E} \cdot \vec{B}$  so generally it says mathematically  $\vec{s}$  is the potential with a wave equation one suggests the propagation of this wave even through  $\vec{E}$  equals  $\vec{B}$  equals  $\vec{z}$  and the pointing theorem indicates no em power flow so what they're saying here is that technically there shouldn't be a power flow we would not detect something if we look at it from an electromagnetic perspective but because we are propagating this wave

Through The Ether uh this wave is is still there it's not

(1:12:05) that zero doesn't equal nothing in this case oh oh and for the record the funny part is the science is the stuff that I'm least confident in least confident out of everything like you want to just talk to me about what happened to MH370 I would go for days talking about what happened to MH370 the science is the part where like I am trying to catch up desper to understand the science so if I'm doing well I I appreciate it because I'm I'm trying hard um okay where are we at right here from paragraph four above there's

(1:12:36) suggestion of a solution to Maxwell's equations involving a scalar wave with potential s that can propagate without pointing Vector em power flow but the question arises is to where the energy is drawn from to sustain such a flow of energy because the question is where's that energy coming from a vector that integrates to zero over a closed surface might be added in the theory as suggested in part three above another is the possibility of drawing energy from the vacuum assuming net energy could be drawn from free space

(1:13:12) they're talking about drawing energy from The Ether quantum mechanics allows random energy in free space but conventional em theory has not allowed this to date random energy in free space that is built of force fields that sum to zero is a possible approach so that's what we just talked about summing your field to zero so you create a zero magnetic ve Vector potential or electric potential um if so these might be a possible source of energy to drive the S waves drawn from free space a number of engineer scientists in the community

(1:13:50) suggested in paragraph two are now claiming this a chief proponent of this is Lieutenant Colonel Tom Bearden who also lectured at thee Tesla Symposium he is known for his fer Elance briefing on Soviet scaler weapons we watched that yeah Aronoff bom effect as well guys all of these theories like there's a reason why they were out there because people were science is the study of observable reality and these people were studying observable reality so in summary scalar waves refer to non- electromag magnetic waves with

(1:14:26) the potential for unconventional wave propagation they appear to have some properties of uh Sol Solon waves they may not attenuate like EM waves do their existence is not proven but if they exist their energy source is not clear they have quantum mechanical flavors about them if such scalar waves exist then they will be transformed via Collective phenomenon from microscopic waves to macroscopic waves they're talking about wave inter or mixed uh scaler interferometry there as in they will the case of Joseph Junction Theory

(1:15:02) Cooper pair electron effects all of a sudden they start talking about superconductivity right here Cooper pairs are super conductivity when super conductivity happens they electrons form Cooper pairs so there's a direct relationship to Super conductivity right here that's wild what there's a there's a relationship between scalar waves and superc conductivity they will also behave like longitudinal waves in a plasma what they will also behave like longitudinal waves in a plasma and grow via propagation on a non-optical branch

(1:15:44) of the WK space they will result from Collective phenomenon and as in plasma waves grow via energy supplied by the medium free space sea Etc should they exist new Vistas in wave propagation and long distance ranging and detection will result do you know what longdistance ranging in detection is Radar Radar this all goes back to radar super conductivity and mic and semi semiconductors and plasma physics if you want to be an expert at science those are the three things you need to understand radar plasma physics and whatever the last one

(1:16:30) was um superc conductor semiconductors semiconductors and superconductors guys 100% the freescale semiconductor Engineers were the motive aboard mh150 those guys were the motive no doubt in my mind whatsoever semiconductors are the secrets to all of this I couldn't even have imagined it tiny semiconductors like the smaller the better that's what allows magic to happen the locki Martin coherent matter wave beam patent that is a transducer like we have the answers somebody says radar is what brought down the flying saucers wouldn't

(1:17:08) surprise me at all if they use this type of science to fly then this is exactly how you would bring them down it's crazy so I'm gonna play the Bob Greener thing again and before I do that I'm gonna make the announcement tomorrow at what time did I tell him hold on I gotta double check I want to make sure I tell you the right time I'm gonna I'm gonna do a a post on it though for you guys so you don't have to remember this um 500 PM Eastern tomorrow I'm gonna be talking to Dave Rossy one more time I'm

(1:17:48) gonna talk to Dave Rossy tomorrow uh he is a DOD contractor and engineer who has gone on the the record with me on Tim pool and said that he believes what we see in the videos is is real he had Works in uh private labs and he also came up with the theory of the fourth orb as well based on stuff that he's seen in the labs so tomorrow I will talk with Dave Rossy we're gonna at 5:00 P PM eastern time we're going to go for two hours and we are going to review all these papers we are going to review the warp drive dark energy and

(1:18:26) manipulation of extra Dimensions we're going to review traversible wormholes Stargates and negative energy we are going to review uh possibly the teleportation physics study as well and anti-gravity for Aerospace applications we're going to look at all the DIA papers uh we're not going to probably go through every every single you know paragraph but I'm going to highlight the parts that I want to talk to and then I'm also going to pull up that thing that we just looked at there or something equivalent related to Thomas

(1:18:54) Bearden we'll talk about Thomas Bearden Dave met Thomas Bearden hopefully it's okay that I I say that and uh we're going to understand the science together tomorrow so tomorrow 5:00 pm it's going to go down get hyped uh if you want to understand the science if you want to listen to a conversation similar to what I had with uh Tom Monto tomorrow we are potentially gonna be making history if these videos are real some of these interviews like people will look back at them the same way they looked back at like the Thomas

(1:19:24) like we looking back at Thomas Bearden like 20 years from now they'll go these guys had figured it out and the world was blissfully unaware we had they're going to look in the chat

and they're going on to see these people trying to **debunk** it and they're gonna be laughing at them being like these people are idiots that were like trying to deny that like the Earth revolved around the Sun or like the people that are the **debunkers** are going to be like considered like flat earther people are now like just completely

(1:19:49) absurd um so let's play the clip I saw the Jeremy Reese interview and okay so I'm playing this clip uh because I want to get some people caught up if you've been around for a while some of this is going to be repetitive for you um but this is Bob Greener low energy nuclear reactions low energy nuclear reactions lenr getting that into your vocabulary that's equivalent to Cold Fusion cold fusion Bob Green this is before I met Bob Greener now I talk to Bob Greener almost every single day um he's an absolute genius when it comes to

(1:20:27) low energy nuclear reactions uh potentially we've already found out how cold fusion works the general public just doesn't know this is the video he made about my case and the videos before I met him realized that this was a video from 2014 and with the context that I've just given you and what you see um and knowing that this can cause things to disappear uh and when they tend to do that disappearance they go in a Flash I was compelled to do this so for those that like to attack uh the project uh

(1:21:07) when they feel that we're going off subject um I'm sorry for you um uh but I believe that this is fully on subject and I think that um at some point we've got to address uh ways in which this technology has been used um uh because we need to wake up to its possibility if it turns out to be fake well um it's a pretty well-informed fake is all I can say uh and I didn't go back in time and force them to make this video with what we know now oh crap thank you so Bob Greener first thing he says here is that he didn't go

(1:22:05) back in time and that these videos like he felt compelled to make these videos because he's the one who's been studying plasmoids and exotic vacuum objects so he needed to say that he didn't go back in time because there's nobody on Earth other than him who's been looking into this like he has like this is not mainstream stuff that a bunch of people are studying I mean there are people studying it but it's like a small knit group of people and they all know each other so how does this random guy like he's like how how

(1:22:33) would some random hoaxer even know what these should look like that's his first comment I'm Gonna Make It full screen this would kind of imply that these are warmer than the environment and for that to happen one might expect that if they didn't have their own energy source they must be extracting the energy from the environment so right there he just says extracting energy from the environment that's what we just read in the CIA thing from 2001 that where are they getting their energy from they're getting it from The

(1:23:04) Ether they're getting it from the quantum V the fluctuations or whatever the freaking physicist want to say the virtual particles no they're just straight up extracting energy from the environment that the Exotic vacuum objects will fire a thing or it has some sort of projected field out in front of it that will cause other EXO exotic vacuum objects to orbit around them so

there is something that goes out in front I believe that this is the total moment the beam that goes out far faster in front of it and that along with the

(1:23:41) let's say the Ukon of assara the this part of the fractal toroidal structure this this part here uh this changes  $\epsilon_0$  of the physical vacuum and it has like a beam that comes out and front of it and um that enables all of the funky magic uh that these things can do off so Epsilon zero that is the vacuum permittivity of free space so this is where you're starting to wonder okay if you're changing the vacuum permittivity of free space are you just straight up extracting dark energy from The Ether

(1:24:14) at that point you know like it just it's a matter of semantics I believe often we are seeing and maybe I don't know if I can zoom in I can't zoom in we are seeing the non radiating boundary and you can go and look at this V uh video itself but inside that there is a much smaller thing and it does tend to be offset so right there and I think he and I would maybe disagree a little bit on this is that you're seeing a field you're seeing an exotic vacuum object a field a plasma field around the other

(1:24:45) object and I had realized this without knowing anything about low energy nuclear reactions just from watching the videos as a normal Normie person back in September of last year don't sent to offset and that would be consistent with the uh pidal structure in the center and the kind of mushroom that it creates uh with the material as it goes around the orbiting the fractal toroidal structure in the center of the Exotic vacuum object look here we go we have our non-radiating boundary okay and we have this little tter thing at the top right

(1:25:19) now I'm going to go you back go back to the monopole in this presentation and we we have shown that our work is actually more accurate uh than this so if you can imagine this here this this is where the the the the Taurus is kind of focusing its um moment to lead to the monopole location the topological monopole here this is this Dome that you get so here this is this top so that the monopole is actually at the base of this bit here okay and this is the glowy bit that you see as material is pushed through but then

(1:25:59) it it hits the top of the non-radiating boundary and it's fed back into the coherent structure okay here this is very very clear this is this is almost exactly looking like um the alto University peer- reviewed published structure so the alto University paper he talking about came out in late 2014 2015 after these videos were already published there wasn't even the topological monopole science in the public literature when these videos came out so another question for the debunkers is who came up with this heat signature the

(1:26:34) debunkers have no story whatsoever that makes any sense and what they want to do is handwave everything we've got a hundred smoking guns that these videos are real maybe not a 100 but at least 25 different smoking guns that are basically impossible for these videos to be fake and the debunkers have their argument is well somebody found a cloud picture that has clouds in there even though it's easier to make a 3D video that has 3D red environment into a 2d Cloud picture than it is to do the opposite they just have rank speculation

(1:27:04) that falls apart on even cursory scrutiny we have hard evidence hard facts so the monopole would be at this point the tidal moment would be going out this way and you can see the dark area in front so it's cohering energy from here okay so this is traveling in this direction and it's cohering energy from in front of it uh and uh that comes into what I call the Bor yeah it becomes part of the collective there this is very very clear okay so the monopole location is here this is the non-radiating boundary okay this is the phase

(1:27:42) inversion uh the dark area above um will be where it's cohering energy uh and you will have the disruption beam coming in uh to the monopole at the bottom here so when I saw this video it was like well to fake this one back in 2014 showed incredible understanding of technology that no one had an understanding outside of the black world so first thing he says right there is that the one on the right the satellite video no one could even know what spy satellite surveillance would look like or how we would even render spy satellite

(1:28:18) surveillance we were able to deduce that just from the videos because the bunkers kept coming coming up with reasons why they didn't think it could be real and it end of just proven that's because it literally uses Google Earth and a quick Trin modeler to produce a virtual playback of anywhere on the planet using the cber system and potentially other satellites as well we don't even really know the exact how much of their mechanism is because we're just using only open source no you know no secret

(1:28:46) sources or anything behind the scenes this is all publicly available information and then the second video he's about to say there's nobody on Earth who could have known what these orbs should look like at the time cuz he didn't even know and he was one of the people on The Cutting Edge even if there was anyone that had an understanding in the black world all to fake this one and and have the thermal imaging uh correctly representing and the non-radiating boundary and everything uh is beyond imagining here if that doesn't tell you

(1:29:14) you've got your uh Ukon of vasara there I don't know what will right it looks like this okay that is the bit that changes  $\epsilon_0$  okay the permittivity of the vacuum okay and so you know basically he's throwing out the science here now one thing I want to point out is this I actually use this in my arguments all the time have you seen in the movie Enemy of the State yes in Enemy of the State all the satellites look straight down before this video most people that look at the satellite video think we're looking up That's how

(1:29:45) little understanding people have of our satellite capabilities now in 2024 Enemy of the State is a 30-year old movie from the 90s and in that movie The Sates look straight down and everyone thought we'd look through down through the satellites but if you think about 30 years later of course we use groundbased computer systems and render uh a a 3D video playback that's much better than looking down through a satellite way makes way more sense and then the followup on this is do you know that the Hollywood

(1:30:13) inspires the military no it's exact opposite the military inspires Hollywood the reason why so many movies talk about wormholes and stuff like this is because the science gets out

real people know it's real and they've done the science and they tell movie Producers this is what it should look like this is why we have the movie Interstellar where it explains time dilation this is why we have situations like Inception where they talk about the flow of time and going backwards because real physicists are

(1:30:38) explaining to people explaining to Christopher Nolan this is how it should work in real life how it really works and it's pulling it in here it's correctly facing forward as it is at the moment and so what you would want to do is you would want to um bring these in get them into their alignment get them tracking the device uh accurately get them equidistant and then what you would do is you would um rotate their orientation so their total moments link up and make a super Tor that would then have its axis going through the center

(1:31:13) of the craft that you are wanting to either disappear or teleport if you reduce the so he's pretty much explaining right there that the right hand rule I think I kind of was criticizing him because I didn't think he explained it but there when he talks about he's kind of saying the vector is going to go through the aircraft based on them lining up and creating a field around them when he says T minus one he's saying that they have a toroid within them which is creating the the plasma field but they're going to create a toroid

(1:31:39) around the plane itself as well they're going to create a toroid minus one around the plane he's thinking higher level uh also check out the Glen Beck interview that was really great overall diameter of the toroid minus one the field strength in both in the toroid minus one and through the axis uh goes up exponentially and this is already experimentally proven if we generally get accepted that this is technologically possible we have the most incredible future ahead of us just the most incredible future at this point

(1:32:17) they seem to be tumbling the that's my favorite quote from Bob Greener by the way is that if if we can accept that this is real we have the most incredible future Bob Greener is a forward-thinking guy like my buddy Jake in the chat they see the implications of this technology and what it means for Humanity this is the greatest discovery in the history of the world this is why these videos are the most important videos in the history of the world not just for the conspiracy angle but because free energy is real

(1:32:49) and being suppressed from us free energy guys just rap this was the actual plot of this Fallout movie that just came out because that's how big of a thing this is free energy or TV show not movie sorry the the monopoles so it's not going forward it's starting to rotate itself and okay do they align do they start to get into alignment cuz what you want is the the monopoles to have their their own axis uh to produce a ring to create a another toroid above and then you pull these in and that creates the uh unification of

(1:33:36) forces uh at the at phase Singularity of the minus one uh toroids look okay so that's they're pulling in at that point right that's exactly what you want right right before so they're rotating and pulling in okay that is exactly what you would need to do and boom it disappears and it goes in a Flash so pulling in part I didn't even realize what he was talking about the pulling

in part and then I realized he was talking about amplifying the energy and then we found out about kum's law and that's literally what would happen

(1:34:11) if you have magnetic monopoles the same charge converging it's going to increase the force is going to increase exponentially uh so that is just absolutely unbelievable that that is possible and then we looked at the paper yesterday uh was it yesterday I think it was yesterday two days ago we looked at the paper two days ago and it explained the flash as well the photons are hitting the uh the mouth of the Wormhole and they're reflecting back off of it it's creating a flash when that happens and it's not a uh what do they call it

(1:34:43) there's no Event Horizon so you're not going to get ripped to shreds there's not an event horizon on the mouth of the Wormhole but the photons that are hitting like all the light that's hitting even if it's like basically we would think it was almost pitch black there's still photons hitting that and they're just like bouncing off of it and that's what the paper said as well how crazy is that okay um okay I do want to show I want to show a little bit of the Y files not much cuz they talked about free energy

(1:35:21) as well but yeah that clip is probably one of the best Clips when I die I hope I get resurrected as an orb and then I will find **MC West** and just follow him around they they hovering above about Out Of Reach guys don't cross Emily McKenzie gez um we don't know if the plasma I think there's something smaller within the plasma field uh but we don't know for sure uh I think Bob Greener that's where he and I disagree I think he thinks it's a self sustaining plasma orb and I think there's some mechanical

(1:35:52) object in the inside where we have like our coherent matter wave beam patent uh but the coherent matter wave be uh coherent matter wave beam microchip is only 10 microns across so this thing is like extremely tiny okay Wormhole five hours ago oh okay uh yeah this will work here we go just make sure we don't have anything okay um where are my Clips there's only three Clips um okay first clip is just funny part so this is about a guy that goes to Antarctica and they find a pyramid down there Doug wanted to know but the two

(1:36:45) guys black right they realized they just said too much Doug left the warehouse resumed his duties and kept quiet but after he left the he went public with the story it turned out that not only is the pyramid real the military knows exactly where it is they also know what the pyramid is how because they're the ones operating it YSI YSI Heckle fish just dropped a yatsi guys who is saying that nobody says yatsi anymore wrong wrong wrong why files just dropped to yatsi chat and we are back yatsi is coming back guys

(1:37:26) okay next part 40s he worked with transistors so hello guys microchips transistors there is definitely a connection here like where did transistors even come from these little devices revolutionized Electronics he had no idea how Belle came up with the idea but wow did they change everything the aliens gave them the transistors Maybe [Music] pretty wild so TR I think that's the only part he says about transistors but I've wondered about transistors for a while we all of a sudden get this very powerful mechanism uh that is used in electrical

(1:38:11) engineering everywhere so pretty pretty spicy and I again uh semiconductors are definitely the reason why we stole MH370 semiconductors are huge and superconductors are even [Music] Huger pyramids as power plants sounds like science fiction but if made of the right materials it could possibly work I have an entire episode on how the Great Pyramid of Giza could have created energy and there's scientific evidence that supports this Theory Pyramid Power link below so if you like um free energy I think this is the part where it's hard not to

(1:39:00) fall down in this rabbit hole but this idea that the pyramids might have been a power plant and I maybe I missed it but let me see no okay I think here we go Marty Johnson was very specific about the site and the technology he said the pyramid was is he said the pyramid is 550 feet tall with the base 700 ft below the surface the angles of the pyramid were 48° not 45 I don't know why this is important but Marty said it was there were enclosed control rooms at Each corner the control room so basically they're saying this pyramid seemed like

(1:39:38) a power generator have I reached out to Ryan Graves yeah he he ghosted me I don't Ryan Graves doesn't have firsthand experience as far as I've been told he's just friends with people that have seen the the orbs and the or the drones in the sky just for the record guys so you have to realize for a lot of these people if you don't see it for yourself if you don't have verifiable evidence uh it's going to be hard for you to believe anything but whatever electricity out of the 0 field and trans let me rewind a little

(1:40:13) bit this mini pyramid produced more than enough electricity to power their entire house and farm it's been theorized that the pyramids in Alaska Egypt Indonesia and other places formed an ancient energy grid they pulled electricity out of the zero point field and transmitted it around the planet maybe even around the solar system free energy cover up link below right I have an entire episode about inventors who discovered ways to pull energy from the quantum field that exists everywhere and what happened to

(1:40:45) those inventors all died of mysterious causes uhuh so is the dark pyramid an energy device we don't know we have to find it first and some people think they [Music] have so there we go with that um why is that not damn it I I had my thing ready to go I need to have this just ready on a hand on a moment's notice to drop this free energy free energy chat we're in the free energy chat tomorrow I'm probably going to clip uh the Thomas Bearden part of the wi files where they show the free energy thing I actually found the

(1:41:40) YouTube video for it where Thomas Bearden goes to the guy's place and shows the free energy machine pretty sweet I I so guys I mean free energy has been out there for a while and everybody's just straight up ignoring it cuz cuz these mainstream academic physicists are just really off theark like because everybody's just trying to build on what is socially acceptable instead of how many of these physicists are actually experimental you find that a lot of people just call themselves theoretical physicists if you are like

(1:42:11) somebody making YouTube videos you're a theoretical physicist like slightly more than I am that's just conceptualizing things as opposed to actually engineering them and actually

seeing them firsthand and doing experiment firsthand free energy is real guys um and if I get disappeared you'll know for sure that it's real because there's no reason to disappear me over a fake hoax video uh hopefully I won't get hit with that heart attack gun okay the next thing I want to do um okay actually we're we're almost

(1:42:47) done here we're pretty good okay so the next video I want to play is the letter to Ashton Forbes so so I want to play this letter again because **I want you** guys to think about all the concepts that we have looked at here today **I want you** to think about the fire scenario that we looked at because this letter I'm fairly certain at this point this letter was produced by the intelligence Community either somebody on our side somebody who's trying to throw us off whoever wrote this letter to Ashton Forbes has inside information

(1:43:19) information that we have not pushed out there it's uh pretty wild uh what is a white hat is a white hat a good guy I hope white hat is good guy I don't know what that means um there's a lot of stuff I don't know what it means out there uh but I hope that there's good guys that are on our side oh okay where the white hats okay well protect me CH white hat Chen uh a letter oh wait there it is submission sent to us the 8th of January of 2020 4 it's a letter to an Ashton Forbes telling a new story of

(1:43:57) what happened to Malaysian Airlines MH370 that disappeared back in 2014 and as always don't trust what you read on the news trust your own capability to see the world for what it really is here we go I work or have worked at a military base in the Maldives and I know exactly what happened to Malaysian Airlines MH370 okay so they come in right away this is a letter to me tells you to not not listen to what you hear in the news this person's claiming right off the bat that essentially they work in the mald

(1:44:28) got to be Diego Garcia or they have worked there and again this is either intelligence Community from the United States producing this somebody's a friend or this is a situation where like a foreign intelligence Community produced this like **Russia** or **China** or somebody who's trying to screw over the United States by getting this information out uh I really don't know but I I never been copyright tried and I played this video through like multiple times over nobody's ever come forward to say that they made this video

(1:44:54) it's way too detailed the AI is like an actual AI voice changer it's not as simple as like having AI produce this like they wrote a script and they had an AI like change the voice on it this is also a letter to Ashton Forbes you are not wrong and what you do are much bigger than you even can imagine don't so right there back when this letter came out I was just on the whole like teleportation thing but now we realized it's all about free energy that could be what they were saying it's bigger than

(1:45:26) what we even imagined it's about free energy this is about everything stop what you are doing I won't tell anything about myself more than that I currently or in the past has spent time at a military base in the mald that I have done this type of work since I joined the military when I was young and that was many decades ago still in the game but the years are starting to

get to me I write this because I want the world to know that most of the trouble on Earth are created for political reasons so he's already

(1:45:59) spitting facts most of the trouble in the world are created for political reasons United States or at least a covert administrative Elite of the US has at will complete control and this has been true since the 60s Flight MH370 arrived at our Base by our hand at 1856 UTC after we picked it up now this time I don't know this is very specific this makes me wonder because it doesn't really fit with the mald time this is one of the few things where it doesn't it doesn't quite ring true so I don't know if this was

(1:46:33) somebody who's making this up maybe they threw in some data in there to throw people off or maybe they're just you know maybe they don't have all the whole story maybe they only have part of it and they're telling it from their perspective midair outside the island of great nicobar just one of many many things we do we can pick up anything any where and deliver it in an instant like a magic FedEx some facts about why it happened MH370 had defectors on board they were running to China with American

(1:47:07) Technology they are Chinese by Blood and had gotten themselves into a situation with the Chinese regime who got them to choose to defect the whole so I wasn't even I I had known about all the facts related to that but I was on the full-on rescue mission why would somebody who's making this if you were my fan you would write this like the United States was saving this plane from fire because that's what I've been promoting on all my podcast before this but no they come out with the theory that I thought I had pieced

(1:47:41) together or like I knew it was possible but I rarely talked about it the Espionage scenario why is this video promoting the Espionage scenario in elaborate detail very weird play everything and I mean everything about it was a political play to show the Chinese who's their daddy that's us some facts about how it happened all passengers are dead all but the handful of defectors the plane did not crash the plane was on fire we know because we started it the plane was picked up by us on fire midair right in

(1:48:21) front of the Chinese so remember we just proved earlier today this plane was on fire the heat signature is not consistent with a plane that doesn't have hot smoke coming out of the bottom of the AC exhaust ports we showed a thermal video earlier today uh so this Theory also goes ahead and says that the United States put the batteries on the plane to divert the plane which is something that I don't think I ever promoted in any podcast so if somebody faked this they were coming up with original information that I the number

(1:48:53) one person disclosing these videos that isn't the exact same same thing that I put out there yeah Defector is defle deflector is Defector this actually shows that the person who is talking has an accent and probably has an Asian accent like East Asian accent this person's probably like potentially Taiwanese Chinese Malaysian Singaporean somewhere in that area which tells us quite a lot this could be produced by the Chinese intelligence Community Tai intelligence Community it could be someone that got the videos from Edward

(1:49:26) C Linn uh it could be somebody that knew him it could be it could even be Edward cin although I doubt it um so that's just think about that the Chinese regime knows exactly what happened and that was the whole point of the operation okay this is what I want to share with you as I said I have been doing this for a long time I know the technology and have been a part of hundreds of operations so let's start with the tech the foundation is not super conductivity super conductivity is a product of the technology so there is wow this is crazy

(1:50:07) because I did not say that when this video came out I was wondering if superconductivity was how this occurred but as I've recently learned superc conductivity is a byproduct of this of coherent matter wave beams just it induces super conductivity so what he's saying here is very specific to how the technology works for somebody would have to be in the know and know more than I knew at the time when this came out we have had this since the 1960s and from that first day we have used it to make sure that no one else can have it the

(1:50:38) big break through to apply the tech as we do today came in the beginning of the 2000s with quantum computers and by this the paradigm for AI technology what we had to do programmatically before we now can do with something akin to machine intuition this lets us operate in fast-moving environments where event-based logic in linear programming was very limited okay so this is huge as well because now only now over the last week or two have we realized that these papers that we were looking at here um from the defense intelligence agency are

(1:51:18) from 2010 so it is very possible that we only figured out technology in the early 2000s mid 2000s and this person actually just breaks it out and says this warp technology is stuff that we figured out when we got Quantum quantum computers and before that we were limited uh guys I'm going to correct you right now you do not know that it's not voice changing technology deflector is not a misspelled word no it can just be because of an accent use the if you guys use the voice technology for yourself you'll find out that people with accents

(1:51:55) sometimes mess up the voice translators it's not necessarily misspelled no um and I don't want I'm not going to harp on it guys because like if you weren't here when we first went through this we've discussed everything you could imagine about the AI thing you're not going to find anything new about the AI thing in terms of the voice and how this was produced we dug into everything every single thing that's out there so just listen and absorb the information as I said what you have

(1:52:20) found is not the technology itself it's just one of many derivatives of the technology I encourage you to keep on with what you are doing but you should also be aware that there is a deeper layer that you could focus on instead of the Miami aliens that I see you have been posting about I will give you some pointers for this at the end of this letter the products or application you are now working on is correctly based on super conductivity the number of orbs you've been speculating about is correct the fourth orb decides where the object

(1:52:54) ends up the technology it's very weird that they go along with the fourth orb thing

they make fun of me pretty much there for talking about Miami aliens which is weird because this account made like three videos before this about the Miami aliens like it felt like they were trying to get my attention but then they make fun of me for posting about the Miami aliens when when this video is published the only other videos about it were fake stories from the Miami aliens thing but now they're making fun of me

(1:53:23) talking about it and they're talking about Dave rossy's fourth orb Theory here I actually asked Dave Rossy if he made this video because I asked Bob Greener I asked Dave Rossy I'm like somebody either who knows me made this or this is like some weird intelligence Community play from somebody who I like I don't really even understand their motivations is based on structures simple and beautiful struct just just for a record **redd**itors 100% did not make this video 0.

(1:53:53) 0% change chance **redd**itors aren't even a fraction of smart enough to be able to make this video not even remotely smart enough making a raw file **scam** is nothing compared to the detail and complexity required to make this AI video and they made like eight others as well so there's no way zero% chance was made by a **redd**itor because also if it was made by a **redd**itor they literally would have come out and already pulled the curtain over my eyes and and made fun of me these people are trying to get me and they would have been making fun

(1:54:22) of me this video came out five months ago so no this is not a **redd**itor uh thanks for playing also the **redd**itors tried to make another version of the video to try to show how easy it was to make one of these AI videos you can go find it uh it's by it's by Nick obar and it's dog [ ] I can't even listen to like 30 seconds of it it's so bad because they literally just used an AI to like try to take my information and try to prove how an AI could do it and it's obvious that this is not an AI

(1:54:51) this is not an AI script obviously it's an AI voice that we're listening to but that's because it's a voice cheres that lets us use the unlimited power that is everywhere and step yeah so every and everybody I know I've asked everybody so if you say like s pz or like Dave Rossi Bob Greener I asked all these people I asked everyone if they made this video or if they knew anything about it uh question them nobody knew anything about it outside what I would like to describe as in fact what I'm

(1:55:21) going to say real quick is that I asked asked Dave about this and I I had Dave listen to it and he thought that I made it because it was so crazy he's like you made that I'm like no dude some random person made this and he's like oh [ ] he's like that's that's nuts dude um because it it's like he's a smart guy I can realize like this is way too elaborate like this is somebody trying to send me a message perceived reality the structure that is used for what you are looking at is a meta

(1:55:51) structure that creates a low complexity and relative low energy phase transition the beauty of this technology lies in its elegance and simplicity the structures are inherently stable and self-regulating and the okay the simple inherently regulating and self stabilizing what does

that sound like plasmoid it's a plasmoid it's exactly the same thing that Bob Greener was just talking about before extracting energy from the environment this guy brings it up right here earlier challenges to conduct operation were 100% based on the

(1:56:25) limits of man with the same technology just a slightly altered mono structure gives us an infinite power generator that without maintenance can run forever combine structures to a meta product again and you have the propulsion for a transm medium object moving faster than light okay so we just basically mentions so here's the thing too is it combines theories from multiple different people Jax are body's low energy phase transition that he talks about salvator Pas is neral mass reduction craft talks about that as well

(1:56:59) and it's talking about evos exotic vacuum objects it's combining Bob Greener uh Sal pz and I didn't even talk to Jack sarfati when this letter came out so why is it combining all these theories from all these people that I think now in retrospect they're all true and it can amplify energy to just make a weapon was what it mentions here as well it's the definition of magic there are endless applications and the **truth** is that it would change the world in an instant but that won't happen I bet

(1:57:33) yourself or at least most of your audience have heard a version of the yeah and free energy and they will change the world in an instant like free energy that's what this is all about story that the aliens are here and they want to bless us with new clean and revolutionary technology but we are too young and rowdy civilization and would not be able to be responsible enough with the gifts from them that's probably made up but that is at the same time completely true it's just not aliens saying this it's us again the technology

(1:58:08) is infinite in its power and if two rivaling parties had access to it this world wouldn't last a day the same Tech okay so he drops the bomb on us there it's being hidden from us from our own good because we're going to destroy ourselves with this technology it's not aliens it's us again so this also drops the bomb that the UFOs we're seeing out there are us it's not aliens we most of what we're seeing out there is our technology it's us it's **China** it's **Russia** they've got floaty orbs and

(1:58:43) drones that we are seeing as UFOs because the governments won't declassify this advanced technology that they have it's us we with a combination of mono structures makes a terrifying weapon that turns any matter into dust and that dust turns into air it does not matter if the object is a small bird or a aircraft carrier it cannot be stopped it does not miss and when the object has been hit the phasing cannot be stopped okay so back to MH370 we knew about the deflectors as soon as they made their decision well

(1:59:23) before that but then they weren't deflectors anyway we knew when how and why back in December and as we do we made it into politics we let them go we took them back and sent the Chinese a clear message of who is in control and we did this with a brilliantly produced show that is fit for a Hollywood production any good movie has fire desperation regret and drama and every movie villain should see their plan fall apart and in really good movies just

when the villain has accepted that the plan has failed the heroes of the movie

(2:00:01) steps in and makes it worse this is what happened as soon as we knew what plane was the last leg of their Journey we planned and delivered so the plane was loaded up with lithium ion batteries built by us for this occasion lithium ion batteries cannot be put out has a pred burn rate and we made sure that the volume was just right for a long burn that would allow for a full length show so that right there is wild to just come on and boldly claim that we put the lithium ion batteries on there we put just enough that it wouldn't destroy the

(2:00:39) plane but it would force the diversion and we knew lithium ion batteries couldn't be put out by the the Halon 1301 fire extinguishing devices whoa that's the part I listen to that I'm like okay okay it's a kind of thing where like you don't go there until somebody just straight up admits it and then you're like okay yeah that makes sense like that that could work that could be it when you look at this plane and the Mystery around the plane regarding the without the videos the lithium ion batteries in the cargo base

(2:01:07) stick out like a sore thumb they're not allowed in the cargo of passenger planes anymore because they're so dangerous and this thing was loaded with them I argued it's loaded with only 500 pounds which is a lot mentor pilot supposedly says there's 5,000 pounds of them on there this thing is a ticking Time Bomb the Chinese were following the plane since it was on the tarmac and got to see their most close to success operation go up in flames and just as all hope was lost we made it worse right in front of their

(2:01:43) eyes 2 hours and 13 minutes in they saw the plane get phased out of there by the same technology they were trying to get access to and 5 days later the chinese officially made a gesture of submissiveness by publishing a frame from the satellite of the phase moment via the state Administration for science the publishing was talked about in American newspapers as a possible debris field so that right there blew my mind because I had I think I'm the only person in the world that had reported that those satellite pictures were

(2:02:18) spycraft to the United States and I had speculated that it was them the United States we know you took MH370 this is a little bit of a Twist on it that that **China** was and I I think I reported the hacking I know I did I reported that **China** hacked the Malaysian government the next day stole the crisis medium minute notes about the plane you can go find my tweet from like October November maybe where I brought this up they stole the crisis Med minute notes they were trying to figure out what happened to the plane they knew their

(2:02:47) plan had gotten destroyed to get these guys the free scale semiconductor scientists are the motive semiconductors are the secret to this technology this is why we did it and we we wanted to just show them stop messing with us stop trying to do this but when you know what you are looking at it's clear what the frame shows the aftermath I went back I have I'm gonna do a quick side quest on this very quick I actually wait no I don't have it somewhere I have the Chinese satellite images and people looked at the

(2:03:20) satellites they were from I have a somewhere the problem is they were basing it on the wrong time they were basing the images on the time in the morning not when the satellite when not when this video or when the mh37 videos happened at 1840 UTC we need to see where the Chinese satellites were on 8 at 1840 UTC on March 7th I have a feeling we're going to find out they were right over the nicobar islands able to take these shots during the 5 days after the show the Chinese found out about the batteries that we both made and placed

(2:03:53) them on the plane they accepted that we have been playing with them the whole time and at the same time could accept that the people they had convinced to deflect did what they wanted it was us that stopped them the deflectors had a good corrective experience when it comes to staying loyal and were back on the job as usual but with a new understanding both of their importance and the consequences of their actions what was nothing more than another Friday at the office for the administrative Elite 200 people had the

(2:04:26) most confusing death experience you could imagine 15500 people lived a tragedy losing family members in a mystery and 10 thousands spent months searching and millions speculating for years then in 2014 military footage of the event got published on YouTube not our problem the person responsible for the leak was identified and taken care of not by us not our problem then came you hi Ashton impressive this is what I want to leave you with there was a guest on The Joe Rogan podcast that was talking about sacred geometry and some new technology

(2:05:12) his friends had discovered on some Island somewhere he did record another episode but it never been published doesn't the wording sacred geometry remind you of something if you choose to spend time on this which I think you should instead of maul aliens keep in mind that your case is one product of the technology what happens on the other Island you will understand this if you pursue it is another more rudimentary product what if those in combination could lead you on the right path to the actual technology so basically this

(2:05:50) person tells me that what I'm doing is impressive which is like okay so you're on my side here this is this is never something redditors don't even have the capability to say that redditors they can't they literally could never say Ashton impressive like never could they possibly say that then it says that you know follow Randall Carlson sacred geometry I'm imagining the sacred geometry has to do with either toids or the zero point fields that we see uh that are necessary for the pump waves to

(2:06:19) make this happen I also think this could be Edward C Lyn somebody that's trying to write the story from Edward C Lyn's perspective we found out recently someone told me a source told me and I don't know if this is credible or not I just take it at face value that the VP squadrons the vpu2 wizards they potentially are deployed to Diego Garcia as one of their deployments so he literally could have worked at Diego Garcia the gray bearded man is the key and he probably has no idea that he is finally I want to say this

(2:06:52) how do you defeat someone who can turn skyscrapers to dust completely erase whole

neighborhoods in an afternoon and steal a burning Boeing Tri 7 midair someone who when needed has the complete control of all media and crafts the perception of events and has most of humanity eating from its hands after almost a full life in their service I think I know the answer you talk about them and you don't stop talking this whoa well you talk about them and you don't stop talking how do you defeat somebody that has unlimited power so now

(2:07:32) you guys know why every single week I say I'm not going to hurt myself and GNA be very careful where I go um because if these videos are real you see the implications that's the creepiest thing that would probably ever happen to me in my life I hope I don't get anything creepier than that happened to me in my life because that's enough um you can imagine if you get a letter like that especially in the middle of this case like this is we can already make a movie that's going to be like a blockbuster

(2:08:01) just because of how Wild this whole thing is even if these videos ended up not being real I'd still say this is pro if these are somehow a hoax this is probably the greatest hoax in human history uh because they made it set it up with a real event where we never found a plane where you know they're going to go search again and probably find nothing again because there's no plane in the South Indian Ocean um absolutely wild um totally crazy yeah can you imagine sending a message like that with innocent people on board like we're the

(2:08:35) baddies if these are if these videos are real we're the bades this is why it can never come out Obama is implicated in this Obama President Obama this would have gone up to him like this would go straight to the top of the United States uh and maybe they'll say they're Justified because we are preventing our adversaries from getting this technology the CIA is 100% involved on this 100% um it's it's a foreign action the CIA would absolutely be involved there's probably people in the CIA right now who

(2:09:06) absolutely want to strangle me for revealing this about them um it's just man it's that dark guys so um yeah I hope I live a long life I really do but the same time I hope we just can admit what we did to this plane because we got warp drive technology everybody warp drive so uh to reiterate all my arguments cold fusion is real free energy is real faster than light communication is real em Drive impulse Drive is real and warp drive is real we can manipulate gravity we can manipulate SpaceTime itself check out this sweet ass

(2:09:49) shirt if you do want this shirt and I get no profit from this I found a link to this on [Reddit](#) like Way Way Back uh when I was early on on this from I think it was on Etsy by Arana a RC n a i don't know if they're still out there but I bought three of them so if you want a shirt like this that's where you can find them I just thought it was good to support the case uh you know you go out there and I I have people ask me like what is that and you're like well that's Malaysian Airlines getting warped by

(2:10:17) some orbs and people are like wait what uh so yeah pretty sweet guys yeah people are people are pretty salty out there but no this is not my merch uh maybe I'll have four orbs merch one day but um not anytime soon for now okay what other questions do you guys have either

about the stuff we talked out about today otherwise once again the announcement Dave Rossy interview tomorrow we are going to look through the DIA papers I probably will turn it into a hard TRS episode uh but I don't have anything set

(2:10:49) up for that yet I was really just planning on it being like kind of an informal discussion but every discussion with uh Dave Ross is awesome so if it goes really well like I expected to then we will uh turn it into a hard TRS episode as well uh well what are the questions that people have okay so if so secretive why would they put you wait why would they you put on how to follow the path and find out the information publicly what's the motive of publicity now about I'm not sure I really follow that um I think

(2:11:21) the question is how did they surprise how do they keep this secret um which video **leaked** first the satellite video did there there's a lot of intention in the way the videos were **leaked** as well which makes me wonder if the person who **leaked** them like how much did they really know because they **leaked** the satellite video with the nr22 and the coordinates that should have been enough the reason why it wasn't enough is because people started searching in the South Indian Ocean if the end point of the plane was the nicobar islands

(2:11:52) and then you look at that video and you see it's got coordinates of the nicobar islands people are going to figure it out in fact the videos might have been the reason why they changed the search area to South Indian Ocean why the United States had to send people on a wild goose chase and then the second video drops in excuse me in June early June couple weeks later the Drone video and the Drone video is just absolute proof the Drone video super high quality shows us all the science right up front like the

(2:12:21) satellite video doesn't really explain all the science very well especially because the zap is white uh which is probably just a reverse thermal so that white is like hotter or something like that but we don't know it's just a false rendered view so it might just be for tracking and it's not even heat based at all uh but the Drone video shows us everything like without the Drone video we wouldn't be able to figure this all out so uh pretty wild uh you can't get this shirt on Amazon I think it's only on Etsy

(2:12:52) and I think they they the people that have been hiding this definitely underestimated this community and this movement I think they thought the LA **debunks** that they did that they do for other videos they thought this would go away they didn't think that I would be able to shoot down their lazy **debunks** left and right and that the community would rally around it because people are waking up and that's what makes me a threat is that I'm just a normal guy with a giant following now we've gained I was looking at the metrics 16,000

(2:13:18) followers in the last week just in the last like three days I've gained like 10,000 followers from Glenn Beck people waking up on Glenn Beck People sharing the content bigger influencers becoming less afraid to share the content out there I mean the influencers that are sharing my content have more followers than anyone in the UFO Community has like we're leaving the UFO community in the dust they're obsolete uh the people that came from the UFO

community that are following they're getting raised up

(2:13:44) to the next level we're starting to talk about the stuff that really matters which is the technology um and you can follow the Glen back thing I posted a link at the Glen Beck on audio there is a YouTube link that I'll probably post as well but I think it's only like half the interview uh the part from like the videos onward which was the second half uh so I probably will post that as well and it wasn't much of a debate I've talked about this before in the past but um I I would pref I think I want to do

(2:14:11) another debate but who am I going to debate who is there to debate that has the knowledge of both the MH370 situation the videos and the science there isn't anybody that's on my level on this um because there's people that individually like there's people that that could debate me on the science like you could I could talk to like Eric Weinstein or Sabine hossenfelder or anybody else right on the science and they would be way better than me on that and I would bring someone with but with respect to the videos there's nobody On

(2:14:41) My Level **Mick** West would be what people would recommend but he had four chances and he wouldn't last like five minutes with me there isn't anybody that lasts would be able to last on the evidence with me and then with MH370 in general like yeah I could debate what Larry Vance and he's going to sit there and say I know what happened because I looked at a flapper on rips in a flaperon and I was able to Divine exactly what happened to the plane and then they would just ignore everything I say about the fire the witnesses it just

(2:15:06) get embarrassing so there just isn't anybody that has all the Spectrum to debate but I would like to I think instead probably it's going to be a matter of finding people who are skeptical that are higher and higher profile and then convincing them like I did with Glenn Beck which is prove the LIE explain what really happened in the plane related to the fire event and then the warp drive and the videos and then explain how that science works and how it's been suppressed and how it leads to free energy and then bonus points what

(2:15:35) it means for the world uh you know and this is what I loved about when Jake went on with Tucker Carlson when Jake went on with Tucker Carlson he talks about the salvator P patents and how the patents specifically allow this corrupt Elite to manipulate us and treat just like cattle I know they know what happened to this plane the and the elites like uh even Elon Musk almost certainly knows about this he's been read in probably because he's got his contracts he's a billionaire he's had to sign ndas where he can't talk about this

(2:16:08) stuff that's why he wrote the weird there's no aliens blah blah blah or I haven't seen aliens that's like a disclaimer that statement he made was a disclaimer he completely dodged everything around the videos and I've got to be one of the fastest growing Twitter accounts out there like I've got to be in like the top 10 over the last eight months you know by volume at least uh from going from a small account to 110,000 followers so Elon Musk definitely knows he knows something for sure um and yeah we'll just keep going I

(2:16:39) think guys okay so one more I'll do one more Discord invite and I think we're going to close it up for tonight I got to read some scientific papers this is going to be the same invite so the first 25 people can get in on this one we'll do more you know tomorrow I'll probably drop another one after the Dave Rossy interview what is the role of Bose Einstein condensate um Bose Einstein condensate exhibits macroscopic phenomenon or um Quantum phenomenon at the macroscopic level so that's why Bose

(2:17:13) Einstein condensate is so interesting is the whole idea is something goes from a fermion to a boson where now you can have more than one uh atom be in the same location at the same time and you can imagine how this is similar to uh Quantum phenomenon that we see with like double slit experiment uh Randall Carl okay yeah so Randall Carlson the tech and the Maldives yes that is that's Malcolm Bendle that's Malcolm Bendle so Malcolm Bendle I'm also talked to pretty frequently now Bob Greener actually was hanging out with him when

(2:17:52) that video dropped hanging out with him made a video saying Hey here we are in the malds when that video dropped pretty damn weird I don't know about 911 stuff I don't know if it was per this technology was perfected before then I would doubt that we had the ability to warp a plane during 911 it would not surprise me if we developed it afterwards as a defense mechanism for that happening again but I don't know for the record I'm not going to be going into 911 stuff that's never going to happen uh no offense but that's I'm not

(2:18:24) your guy if you want to look into the 911 stuff there's about a million different people you should follow I would recommend maybe taking a look at alien scientist stuff um I'm not gonna be digging into that but I am happy that you know this science can help other people with their particular Endeavors and stuff that they're trying to disclose no problem Ashton is packing a scalar weapon that's funny uh survey flights Over America I don't know what that means no idea what that means uh yeah get on Tucker will be awesome

(2:18:54) yeah so Jake gets there's competing compartmentalized factions in the government and I have no NDA that that's huge so I can say whatever the hell I want this is the reason why I think a lot of these UFO celebrities get really quiet about certain stuff because once it broaches on National Defense that's where they have to quiet down and this is definitely National Defense 100 if these videos are real we're looking at the most powerful most secretive super weapons on the face of the Earth this is

(2:19:21) like figuring out that nukes existed in like 1943 like two years before we dropped the bomb that's how huge this is and I hope General Flynn is on my side because if you want if people want help getting this information out there uh the people that on the good guys side I'm I'm happy to help out people don't have to kill me and disappear me like you can just give me a call on my phone and we can talk about this because I don't really enjoy revealing my stuff about my own country it's not doesn't

(2:19:48) bring me a lot of Joy uh but nobody wants to see him to speak up about these videos and tell the **truth** so until somebody calls me and tells me we're going to keep talking about

them I'm a I'm a nice guy too like I don't need uh I mean you don't be afraid to talk to me and yeah Liars can't debate the **truth** that's a thing like this is why like people like Jake and I when we go on interviews you can tell that we're being honest I have nothing to hide at all a lot of people they are afraid about who

(2:20:15) they go on with because you know they're going to get exposed and they they're going to remember what lies they told the last time for me it's like I have nothing to fear because I'm just giv my unfiltered opinion **truthful** opinions all the time Jeff Johnson yeah you can't put this Genie back in the bottle this is going for a while uh Jeff wise has full CNN brain I don't think Jeff is a is a a Fed I think he's just too stupid to be a Fed um but he's smart enough to figure out that the debris has some issues with it

(2:20:44) that but for some reason he just Adam and it's got to be **Russia** it's not **Russia** I don't think R **Russia** doesn't have this technology **Russia** would be uh acting way different if they were ahead of us on this technology we we're basically bitching **Russia** around right now yeah **debunkers** missed obvious stuff like military satellite tracking I mean we have USA 229 that literally had to have seen this plane turn in the South Indian Ocean it's didn't right there if this plane turned into the South Indian

(2:21:11) Ocean then uh this satellite would have caught it and since we just filled up the invites we just maxed out the invites I'm going to do another new Discord invite so if you stuck around this long or watching the replay this one will last 24 hours so if you want to join the Discord feel free only rules you have to not be uh troll uh warp driven aware so everybody always ask same questions I'm probably going to start backing off of exactly where the plane went because I don't think it's necessary but everybody wants

(2:21:45) to know this is our best bet based on everything we saw today uh all the evidence we went through the the scientific evidence as well this is our best bet on where the plane went somewhere to the West based on the direction of travel of the plane starts off over here where K T sees it warped over here to the West Somewhere over here Poss it could be anywhere along this line but probably somewhere over here because these Islanders uh fire suppression device washes up on shore Islanders see the plane flying south

(2:22:16) towards Diego Garcia military base lock it up if I had to bet my life on it that's probably where I'd put my money I'd say that this plane would ended up in Diego Garcia military base we tore it apart we probably threw some of the pieces in the water and then those pieces in the water washed up over to the West in the mald OR into Africa and that actually makes way more sense than a crash in the South Indian Ocean AJ axj thank you very much man appreciate you guys axj has been around retweeting our stuff from the early days

(2:22:49) from the early early days uh which big thanks to the people that followed this early on I definitely want to help you guys out um just because like I think that this can raise all you know uh raising tide uh raises All Ships you know the people that have been following this and been kind of promoting and supporting definitely want to give back to those people I think they

deserve it and the people that have been hiding this and **debunking** and trying to prove it wrong those people will also get what's coming to them as well um that's

(2:23:20) just how Karma works so oh Nick Fuentes came back and gain 150,000 followers damn so he's probably G to get more followers than me doesn't surprise me though guys um okay guys well I think that's going to be it oh yeah Tim Ventura I'm probably gonna try to talk to Tim Ventura the discussion I want to do with Tim Ventura is I want to talk to him about the Philadelphia Experiment I want to know how far back this goes Tim Ventura is basically like me but from like the early 2000s like 20 years ago

(2:23:52) um he's been talking to these Engineers he talked to Thomas Bearden he's talked to Al bck uh he's talked to a lot of these guys um so he's got to have some insights now he never saw videos like this that's the difference we are working with the answer sheet the cheat sheet to the answers um so this is the benefit that we have that's why we don't have to be physicist and scientists we literally can see what happens it's so much easier to work backwards from the answer than it is to work forward from

(2:24:20) speculation was Tesla correct over Einstein here's the other thing too so I've got these flat earthers yelling at me now okay first of all I'm not a flat earther second of all I don't care if you're a flat earther that's fine science is not as simple as this person was right and this person was wrong jack sarfati is probably right that we don't need infinite like essentially a huge amount of energy to produce a warp effect but that doesn't mean that salvator pz is wrong about being able to amplify energy

(2:24:49) both of those people can be true it's not mutually exclusive same thing with Einstein and Tesla Tesla can be right about The Ether and longitudinal waves Through The Ether and Einstein can be right about curvature it's absurd to claim that we don't have curvature everything we see out there in the universe is circular everything and if you want to say there's not a third dimension therefore it's not a sphere like why do you have two eyes if everything was flat you would only have one eye the reason why we have two eyes

(2:25:18) so we can see in 3d otherwise so when I look at something that's circular at a distance it if I only have one eye it's going to look flat if I have two eyes the only point of two eyes is so I can see depth so I can see this actually a sphere that's curvature everything in the universe is based in curvature you can't warp an object without curvature either so if you want to call it something else that's fine but it gets silly when these people say like oh Tesla was right and Tesla said that he

(2:25:46) didn't believe the universe needs curvature well he's not speaking uh absolutely Ely there in a sense he's speaking metaphorically but he's speaking it from a terms of his understanding based on what he's seen and he can be partially right and partially wrong that's totally fine Einstein's equations check out it's just that they have some some gaps in them that we need to fill and Tesla's theories fill those gaps that's how you should look at the problem and that's

(2:26:12) how a science really moves forward is not just saying that this person's right and this person is wrong it's a matter of finding out the middle like what is the story that makes sense that weaves all this together um Navy underwater signals intelligence yeah the Sosa system is called the sound surveillance system I never actually looked up what the name of that was until recently but that should have absolutely heard this plane Yeah Ik99 we actually don't need meta materials for this but meta materials are probably going to take it

(2:26:40) to the next level where it becomes this is the thing too is that even when we get to warp drive technology we still have so far to go people look at warp drive just like caveman looks like like in an iPhone caveman would look at an iPhone and think that like that's the Pinnacle of Technology but no we can take it even further meta materials are going to allow us to take all these Concepts even further so it's going to get wild guys like we are living in an amazing time right now amazing time and I want to

(2:27:08) thank Jake my buddy like I I'm so happy to have met Jake I knew Jake got railroaded on the j6 crap I just I knew it uh in my heart I knew it when I watched uh Tucker Carlson showed videos where this guy is getting escorted around he gets vilified by people out there I love defending people that the media vilifies because when you learn and talk to somebody firsthand it's so much harder to vilify them than it is to listen to what the media says about somebody and just like pretend like they're the worst human being on the

(2:27:40) planet and it's funny because when you talk to Jake he's the exact opposite of what the media portrays him to be it's just so personally I love it I have no problem people want to try to hate on me for built by association because I'm proud to be his friend uh don't trust Flynn guys I'm not going to tie my wagon to him but my gut feeling on Flynn is that he also got railroaded and that he probably wants the information out there so he's the former director of the defense intelligence agency these are the papers

(2:28:12) these papers we're looking at are defense intelligence agency papers that he would be familiar with and he's sitting there talking about the ETS controlling the government so so he's an interesting dude at a minimum plus he follows me for some reason is he following me to he's not saying anything to me he's not sharing my content I don't I don't know what but yeah and I this is the part where Ariel was just retweeting some of my stuff big props to Ariel check out Ariel by the way uh I don't know how he knows

(2:28:40) all this stuff but AR a lot of what Ariel says I agree with I don't necessarily agree with 100% of what he says but a lot of it um but he doesn't like General Flynn at all I don't know let's see what else yeah General Flynn does follow me guys if you guys look at my followers like there are some big ass names on my followers list like you know Joe Rogan follows me uh you know um Flynn follows me a lot of the people in ufology do uh that are big like there's some pretty big people that are watching

(2:29:11) what I'm doing for sure and I've been told by the behind the scenes as well that like people in the intelligence Community are paying close attention to the stuff that pushing out

there which I'm pretty sure that's not going to happen if you're disclosing some fake hoax UFO video I don't think that's ever happened before in history so pretty wild man only when you're talking about free energy does that stuff happen what was Emily saying woke extremist leftist are trying to trans the

(2:29:42) orbs crack me up uh Michelle perr uh what qu what other questions we have yeah there's a lot of recommendations out there guys I'm trying I mean this is going to be a long journey of trying to figure this stuff out I'm trying to catch up as far as I can man yeah the Navy system 100% the sound the ocean surveillance system the sound surveillance system is what's it called yeah sound sound surveillance system absolutely should have heard the plane crash they actually pinpointed a meteor a tiny meteor crashing into the ocean

(2:30:13) that's how Al lobe went and picked up those like sphericals off the bottom of the ocean they there's an article about that that I posted on Twitter a while back there's no doubt the sound surveillance system should have pinpointed this plane crash it's crazy should you watch Ozark a second time I don't know I only watched Ozark once it was good but I don't know if I want to watch it again a lot of people asked did it move to a parallel timeline this is the part where I would disagree with Ariel I it

(2:30:40) did not go to another dimension uh I think that there can be parallel timelines but this is a part where it's like I I don't know guys I'm not psychic um so best case scenario based on the evidence that I showed you guys earlier is this plane went somewhere else in our reality um potentially in the future to some degree but we're not talking years in the future like minutes or maybe at most hours okay I think that's it guys yes thank you axj appreciate you back man if Nick wanted to talk about the

(2:31:13) case I don't know who Nick is are you talking about Nick Fuentes yeah sure anybody with a big following I'm going to talk to I don't care what their political orientation is or any of that stuff guys uh I'm going to talk to basically anyone yeah the big question is would Nick talk to me a lot of these people realize that whether you're not you're on the conservative side or the liberal side a lot of people have a big aversion to this UFO stuff they think it's all a big distraction and they

(2:31:40) don't realize that there can be really advanced technology out there you know no matter which side you're on this is a giant ontological shock to accept this so um share this with chis Chris blede no I'm definitely not talking to Chris blede no offense but I'm not interested in people who are summoning orbs who have psychic powers so don't interest me whatsoever um you know even if there is a connection to that I'm not going to rule it out but I'm not going there on that I don't because I don't need to and I

(2:32:12) honestly don't really believe it either so it's already hard enough for me to believe that the conspiracy angle to this and then science and the suppression angle to this you know both of these combin free energy is enough guys like if I reveal free energy I've revealed enough everybody else can figure out if we can mind control the orbs or if we can remote view or if

aliens are here I'll leave that to everybody else I'm good with just having stamped my name  
Ashton Forbes on helped got free energy out to the

(2:32:41) world you know okay let's see I think that's it wow guys chat is just I can't even keep up with chat you guys are on fire dude yeah it's a big equation with a lot of variables um and there's a lot of people out there that will tell you those answers that you guys are asking about the stuff that's like more on the esoteric side for me you know I'm just trying to get out what I can get out there wow okay I'm not close I do think the Philadelphia Experiment though I do think it's very likely this went back

(2:33:18) to the Philadelphia Experiment I think it win surprised me at all if that's the first time where we accidentally figured out how to manipulate SpaceTime and that what happened there wasn't necessarily teleportation but the time in the bubble is acting differently than the time outside the bubble so when they created the bubble they sped up the time for the people inside and then they show up instantaneously from the perspective of the outside Observer and then the people inside are getting sick and getting

(2:33:41) warped into the wall and some of them are like what just happened you know and that wouldn't surprise me if that's the first time we figured it out 18 1943 and then since then we've been trying to figure out how to make it work like without getting people stuck into the wall you know um yeah my followers on on YouTube also increased a lot so if you've been following on YouTube thank you very much I appreciate it uh I have seen the Greer interview on Shan Ryan people ask me all the time about Greer I think that Greer

(2:34:12) knew about the technology whether or not he knows like the alien stuff I don't know I don't know if he's right or wrong technology I think he's definitely right and you'll find out that the technology like he's talked to Thomas Bearden and some of these other people that we've also figured out that's why I think he figured it out uh Greer has not contacted me but his people have I've talked to some of his people in his ambassador program and we definitely see eye to eye but Greer

(2:34:39) is not contacted me which is weird in my opinion but doesn't really matter I don't really want to tie myself to Greer people will call me a grifter because they don't like what Greer does I'm not going to tie myself to anybody from here on out I am happy to have people help promote the content but I'm not going to tie myself directly to anyone that I played that game once with Kim and we got burned so we're not doing that ever again that that was a mistake learn and keep going from

(2:35:04) it okay guys I'm gonna play you out I'm tired it's been a long night thank you everybody who's watching all the people on Twitter who are watching I appreciate you guys and um you guys have a great night make sure you guys check out the interview tomorrow with Dave Rossy 5:00 pm eastern time we're going to go over all three CIA papers we'll take a look at the Thomas beard and stuff as well we're going to get Dave's opinion I'm going to bring the videos up during the interview we're going to go hard into

(2:35:28) the science with Dave on the orbs on everything there'll probably be some big disclosures in there as well um it's going to be sweet guys have a great night thank you Jake for being here thank you everybody else for being here in the chat enjoy the song guys it's m it's m m 37 z0 okay so I suck at it here we go m m h37 until you do some research don't talk to me I'm going to find the **truth** while I sit this your opinion it means to me it's m m m m m h37 not all heroes wear capes I wear

(2:36:18) glasses to see I'm going to find the **truth** while I sit this Mar the trolls hate see me [Music] succeed but guess what M Mt [Music] M 37 not all heroes to see I'm going to find the **truth** while I this Martin your opinion it me S to me your opinion and then and then h37 now hero K glasses to see I'm going

(00:06) [Music] h37 until you do some research don't talk to me I'm going to find the **truth** while I sit this Mar your opinion it means to me it's m m m m m h37 not all heroes were capes I wear glasses to see I'm going to find the **truth** while I S this Mar the trolls hate seeing me [Music] succeed but guess what m m h37 [Music]

(01:13) s m m 370 now all heroes gles to see I'm going to find the **truth** while I sit this Martin you're opinion it me to me your opinion and M h37 now hero keep glasses to see I'm going to find the **truth** why I this party trolls see [Music] [Music]

(03:32) let's go chat let's freaking go guys welcome to this live stream tonight I'm your host ashon Forbes I hope you guys enjoy it things have been getting absolutely wild recently thank you guys for being here I appreciate you very much um thank you John B for being here fancy Flint uh Keith anley Joe Kathy D sassy Ramos uh good to see you guys Gustavo Turtles all the way uh Nature's wisdom appreciate you st and Jason's in the house UAP Zack m m M37 Z love it um mystical Wonderland appreciat you sham 6

(04:17) Joe Moss Justin B Devin yeah when are we gonna have that collab with uh you know Scala granny yva good to see you John sprow fourth orb kerion webc Paul c k stack good to see you Alex D Castillo awesome to have you here my man Amanda good to see you uh William glad you're in the house uh langy I'm scaling out on on an ounce of nose beers okay well that's that's good for you Darth MC buttfort awesome good to have you here as well I think I said hi to

Mystic werland if not hello again Johnny party William Bill good to see

(04:56) you as well Martini por awesome uh alaki stew yeah no martinis tonight guys Johnny party good to see you going to see Dune 2 hope you enjoy it it was great Goosebumps lfg oh totally agree man totally agree Egon good to see you Ray Tracer good to see you in the chat Chris dear DeMarco awesome Goosebumps Billy Brew wow we got lots of people here Jess is here hanging out uh Antonello good to see you Mike man me good to see you boo good to see you Noah Jean's here as well awesome yes I'm unmuted you you made me check right

(05:33) there as well Jeff uh mushroom from Mars uh from thought uh L whoever that is appreciate you uh Meridian nice to see you uh Joe Moss let's see I think we got that's oh CW Scott Paul pistol Justin Jason Hill David karate uh Monero daero good to see you as well well uh Al JK 999 good to see you Christopher George Adam God you guys are in the house cryptic uh the juggler assistant good to see you there short order cook Chase UFO nut good to see you uh Brandon Rudder Craig Chase lot of names I recognize in

(06:18) here Jake bble guys you get thank you for jumping in early uh D good to see you man um and whatever the smiley face person is Alex bad uh baldman yeah baldman uh comrey good to see you as well Devas in the house uh kin Sensei good to see you so lots of people up in the house right now I will actually start this with the Discord invite for you guys who want to join who haven't been able to get in uh this Discord invite only lasts for one day so make sure you use it make sure you uh verify right away if you want to

(06:50) get into the Discord appreciate you guys see you to Vic um you have to also see the Discord invite in the YouTube channel I can't post in X for some reason so if you are watching on x you need to jump over to the YouTube channel and then you'll find the Discord invite which is uh currently in the chat right now you can scroll up and find it if one of my mods can pin it I'd appreciate that I don't know if they're allowed to okay guys uh so let's just start with a quick rundown what's been going on um

(07:16) we're not going to uh spam the Kim uh.com thing uh because I don't know I'm not trying to start beef with anybody out there as long as he stays out of my business I stay out of his business and uh you know I think things are fine um but as you did see he did uh threaten me with a lawsuit uh seemingly I don't know what he's going to sue me over usually when you're suing someone over a civil matter usually you try to talk to them first about what the grievance is in general um and you know I'm always

(07:47) **truth**ful and honest 100% with everybody I've recorded everything out there him on the other hand he's very deceptive so um you know for me I gave him the best advice he was going to get which was to walk away from this this will not go well even if your name is kim.com it doesn't matter if your name's even Elon Musk do not stand in the way of me and this community getting to the answers uh there's no positive outcome for you whatsoever if you are in the way that's just the **truth** um and I think

(08:13) that everybody kind of knows that and we've seen what's happened to every single person that's tried to stand on the way they've all been completely destroyed uh so you know just don't do it and then we won't have to uh have any more unpleasantness it's not enjoyable for any of us uh so let's go ahead and take a quick look at the recent posts um let me check the Discord invite uh what day is it today wow a lot of people joined the Discord I think no it's working unless not no

(08:50) Discord invite Works a bunch of people just joined uh if you can't figure it out you can't figure it out but it's it's working okay first thing I want to say is that Elon Musk almost certainly knows about the video uh so let's go to the Twitter real quick um so you guys can see what the updates have been recently here let's get this party rolling so we are going to do a quick review of uh the the recent comings and goings we're going to look at this traversible wormholes and then

(09:16) I'm going to go over the Glenn Beck prep and then we'll call it a night I'm gonna try to get to sleep early tonight uh because man I need to be prepared for tomorrow need be fresh uh so if you didn't catch it uh quite frankly TV uh the I did a quick appearance 20-minute appearance with him uh I was on with Emerald as well uh this morning or what was the afternoon I don't know earlier today and I actually just downloaded that so I'm going to post that on my Twitter after the live stream tonight so you guys can watch it

(09:44) it's only about a 10-minute segment I had to Crunch in a lot of stuff in there um so uh the Glenn uh we'll go to the Glen Beck stuff too as well so let's start let's just start with the Glenn Beck stuff so I heard back from Glen Beck People he wanted to do it tomorrow so said yes uh I think it's going to be respectful it's probably not going to be a traditional debate so hopefully people don't feel uh like I deceived them at all but he is going to be skeptical so it is going to be a situation where

(10:12) we're going to try to convince him I think that means we should expect the **debunks** to show up um maybe he'll play a clip from the corridor crew idiots or whoever it doesn't matter they're gonna if he pulls up any of the **debunk** stuff I've got like literally lists of things to go over if he pulls up the cloud **debunk** then the first thing I'll ask him is uh go ahead and I'll give you 20 minutes and you go try to find the cloud picture on the internet good luck and because there's no conceivable way that

(10:37) anybody found this random Cloud picture on the internet in 20 minutes uh it's not even realistic that somebody would be able to identify a picture and go oh those are the clouds I saw in that one uh that one video um it's completely unbelievable um so just even right off the bat the story falls apart for the cloud picture and that's before we even get to the part where like the videos are proven to be a 3D rendered environment whether or not that's a hoax 3D rendered environment or we're just

(11:03) looking at a real environment it is conclusively three dimensions there is no possible argument to make that we're looking at any type of 2D backgrounds um so you know it's if he

does do those **debunks** great then I will address them and then we'll move on to the other more important parts related to this technology and the science behind it uh which we're going to be digging into today so this I believe is going to be live around 10: a.

(11:28) m eastern time tomorrow I believe it's 10: a.m. eastern time tomorrow so I will probably post an update uh once I confirm that it's going to be live but I think 10 AM Eastern tomorrow should be the time when the debate happens on the radio it's going to be Audio Only so it's not it's kind of disappointing because I was hoping we'd have video face to face and I could we could show video and what have you uh that does open the door up to there being some Shenanigans but uh I've gotten it from his people that it should

(11:56) be respectful uh and he's not going to try to Ambush me with anything we'll see um so yeah spread the word on that if you guys want should be good you have a screenshot of Kate's messaging I mean I could pull up screenshots of me messaging back and forth with her I did talk to her though I'm not really worried I don't think people I mean people think that I'm lying but I've literally never lied about anything related to this case so uh if they think I'm lying and they're going to catch me I just say good luck I

(12:25) mean when you have the **truth** on your side you don't lied you're not afraid of people trying to trying catch you in a lie it's no big deal um yeah why is a debate instead of a conversation because he's going to come in skeptical so the first engagement I got was that Glenn Beck was not going to take it seriously that's how it was worded to me and so if he's going to come in and not take it seriously like he's going to think he's talking to a flat earther or something like that he's

(12:52) in for a rude awakening um and that's why I'm going to turn it into a debate where I'll ask him the questions then you know so what even is a debate debate is a just a conversation of ideas where you go back and forth right so you know if he thinks the videos are fake then I just tell him okay what do you think happened to the plane you know so that's how it'll go back and I I will be respectful I'm not gonna not gonna tack backck for any reason come on he's a good guy I even did him a favor and showed him all the

(13:18) evidence and I gave him all the Talking Points which we'll go through later today as well so let's come back to that um actually maybe we will just start with that I'm going to go through the talking points real quick with Glenn Beck and then we'll get to some of the other stuff that we've got out there um so the talking points vers uh for Glenn Beck are um first of all the three questions that I said I was going to ask him right off the bat what does he think happened to MH370 based on what evidence I presume

(13:50) he'll say something about pilot suicide because that's the prevailing narrative that's out there uh I presume that he will say that well the plane went dark and while BL and I'll just explain the flight path does not counter indicate suicide the's no debris field was found which is not possible for a 777 I even actually have a thing here where somebody did the math on the 250 seats on the plane that comprise four to eight pounds of **foam** each so that's 1,500 pounds

of foam that floats that is

(14:19) somehow missing and not anywhere in the Indian Ocean um the Rolls-Royce data was not made publicly available if he says that the ocean's really big then I'll inform him of the fact that the narrative out there has the plane running out of fuel and there's nowhere else for the plane to go they already searched everywhere which means that either those satellite pings are wrong or I mean it pretty much means the satellite pings have to be wrong if he thinks that the plane crashed otherwise the plane just didn't

(14:40) crash and if the satellite pings are wrong then that opens the door to this narrative the fire narrative is by far the most prevailing narrative the satellite pings are wrong um then of course I'll ask how does the plane crash into the ocean without leaving a debris field which we all know is impossible uh and then after that we'll jump into how does the United States not know exactly what happened to the plane so we W aren't even going to start with the videos we're going to just start with the straight up hard

(15:06) evidence around the MH370 case which will show that we don't even need the videos to prove that something mysterious happened in this plane we don't even need them um and that's how we'll set the framework so that he understands that there is objectively a conspiracy at play with this plane United States has covered it all up they've been involved in the cover story since the beginning as well um and then we'll move on to the other questions as well so again once again 10: a.m.

(15:31) tomorrow 10: a.m. tomorrow is happening I presume it'll be live on the radio on whatever Glenn Beck's radio station is I think it's on the blaze um then I gave them a list of talking points so that they're prepared and if you guys think I'm missing anything let me know I in 45 minutes I doubt we'll get through more than this and since it's going to be Audio Only uh I will have my list of evidence up so that I just I make sure I don't miss anything uh we're going to start with the United

(16:00) States knowing exactly what happened to MH370 we'll talk about the civer system the Sosa system the Over the Horizon radar the spy satellite USA 229 that was in the correct location uh uh that should have known so like the the Spy satellites staring down at the location that the narrative and the and the satellite pings say the plane turned into the South Indian Ocean so the United States knows if this plane really turn into the South Indian Ocean or not and if there was no debris field where we saw the P where we went down and

(16:28) found the pings not didn't find one piece of the plane there that the debris contraindicates that then it throws into question those satellite pings entirety and then the question is well if United States knows the plane didn't go to the South Indian Ocean they have the spy satellite staring down um yes radio it's going to be one hour segment but 45 minutes because of commercials so there's going to be like blocks so that's why I tried to frame the the um talking points around that because it's going to be a lot like

(16:54) Coast to Coast AM was uh then we'll talk about how the coordinates in the satellite video the relocation of MH370 in the nicobar islands around 1840 UTC uh published N9 days before the raw Telemetry data was made publicly available uh so that goes to show that this I mean unless the the hoaxer is psychic there's no way they could know that even the debunkers out there just say like they literally have no counterargument to this the debunkers counterargument to the Telemetry data not being published nine days later is

(17:22) well they were searching in the in the Andaman sea in the nicobar islands so what so what they were in the South chin see too how does the person know that that's the spot where the plane actually was they can't can't actually know that um and this goes to show like how like these debunkers like they're just at this point their brains are so broken and they've now got to the point where uh they're they're so committed now like they have skin in the game at this point because if the videos get proven real

(17:51) now it ends the debunkers forever like nothing they ever say will ever be taken seriously ever again anytime they say anything and try to debunk anything they'll just people people just go well you were wrong about the MH370 videos you guys were trying to cover up and lie about us having warp technology um so this is the reason why the debunkers are so committed at this point to trying to prove the videos are fake and they they're willing to fabricate anything now the thing too is that there's some chance that Glenn Beck

(18:17) comes up with some new debunk thing or something like that I doubt it uh but I should be prepared for that as well and that would be really suspicious if all of a sudden Glenn Beck got some new debunk that nobody's ever heard of you guys should presume that he's probably uh on the payroll of the CIA or somebody else because at this point there should be no more debunks that are appearing like new net new debunks these videos have been poured through everybody's looked online the thousands of the

(18:44) bunkers have been looking for ways to prove them fake and nobody's found anything so if all of a sudden Glenn Beck mysteriously out of nowhere comes up with some brand new thing that would be extremely sketchy um and that's part of the reason why like retiring from the case and now the the bunkers brought it all back it helps a lot because it shows that there's really like we know the intelligence community at this point is probably trying to figure out a way to make these videos go away um but anything they try

(19:11) to put forth at this point is going to be extremely sketchy um unless they have another debunk that they prepared years and years and years ago potentially like the cloud debunk played out uh although that's of course specula we can't know for sure uh okay so let's stick on to some of these other talking points real quick uh no sign of manipulation or editing on a single SLE frame in either video the clouds move and evolve naturally in the satellite video and the zap illuminates the volumetric clouds in three

(19:37) dimensions there's no reference as well to copy from which is generally a prerequisite for uh oh Frank was messaging me there uh that's a prerequisite for CGI generally so when they

do CGI you copy something you frame it you change it all around kind of like when you use AI to make uh thumbnails and stuff like that nowadays uh I have some screenshots of some uh artists talking about how difficult it would be to make a 3D rendered environment the 3D rendered environment is actually probably one of the hardest

(20:13) things to do and that's why the **debunkers** are trying to be adamant and lie about the fact that they think they can be produced with two-dimensional software uh it can't it can't and they know that and the problem is that if they were to admit it and admit that you need a full 3d render environment using software and Hardware from 2014 it's not happening practically impossible so this again goes to show how dishonest they are is that they have to delude themselves and make up these fake scenarios in order for these videos to

(20:38) be fake which is just honestly sad at this point um one of these **debunkers** out there too has been sitting out there trying to recreate the videos on live stream and I think she's put like already 20 hours or something into it and hasn't even come remotely close it was sad when she was like trying to get the lighting to work where like you literally have to use 3D rendered environment software to get the lighting to work and she's using using software from 2024 that isn't 3D render software to

(21:03) try to like fake the lighting and wall comparing it to the video it's like at some point you just wonder like can you just give up like it's getting pathetic but they're never going to give up they have skin in the game at this point um so like I said no debris found not a single piece uh the plane supposedly ran out of fuel actually I'll probably share this with you guys here so you guys can see there we go **I want you** guys to see this so I mean we are again we're playing with our our cards face up we're not

(21:41) trying to catch Glen Beck in anything we're not trying to trick him or anything like that um we're telling everybody what our arguments are ahead of time I've already sent these to Glen Beck's people so he has all the arguments um so there's no excuse to not be prepared uh although I think he will be prepared because you know he's a professional guy but we'll see um so if the plane ran out of fuel there's nowhere else for it to go are the satellite pings correct or not that's

(22:05) the question we have to ask people the few pieces of debris that washed out because we have to imagine what are the Normy brain people going to think they're going to think oh it was some pilot Rogue pilot suicide there's no indication of that whatsoever uh the simulator data was mh150 conclusively it was ruled out by the FBI and the officials all the officials ruled out the pilot um nobody has actually pinned the pilot whatsoever except for random people that are making a fake narratives uh uh there's actually literally no

(22:30) evidence whatsoever pilot suicide it's actually contraindicated by the flight path um you don't go to the nearest airport to land when you're in a a suicidal scenario you just crash the plane like every other suicidal pilot has done um you also don't go to try to hide the plane either that's that's not something a suicidal pilot does that's something a um a foreign State actor does

to try to cover up what they did with the plane uh the debris is actually this scenario is the only scenario that the

(22:56) debris is consistent with all the other scenarios around the missing MH370 plane none of them can account for the debris not the crash in the South Indian Ocean not pilot suicide not playing the plane to **Russia** I mean Jeff wise needs all the debris to be fake um and as well as the people who think the plane was shot down in South Tennessee again those people need all the debris to be fake and there's I don't know like eight or 10 pieces of debris minimum that are like pretty likely to be from MH370 this scenario that debris can be

(23:26) from MH370 this is the only scenario that that debris can be from MH370 parts of it even had burn marks on it we'll point that out some of the debris actually had burn marks and Scorch marks on it which no other scenario can account for uh all the debris most of the debris is too far away to have drifted from the south Indian Ocean uh none of the debris washed up in Australia which contraindicates that uh and then we'll we'll we'll get them with the flapper on as well no cereal barnacles so there's no serial number on the on

(24:00) the flat run meaning it could be from another plane uh it's just a part number they use uh the Barnacle growth is inconsistent with the drift models that they did the has Barnacles in the part where it's out of the water that they need in order for it to uh blow over to The Reunion Island and then lastly the Barnacles do not have uh have only grown for four months so four months is not a long enough time for that to have been in the water for it to drifted that far so the more logical location is that

(24:28) this plane either crashed somewhere further west near the malds which would be easier to get to Africa uh or it was simply ripped apart near in Diego Garcia military base and thrown in the water there which is consistent with what our scenario is in terms of the fire scenario and parts of it falling off um we also may talk about how they falsified the first drift analysis they didn't talk about how the very first drift analysis they did uh ruled out the crash site and this is the funniest part is that when you actually are trying to

(24:58) develop a story you to use all the evidence instead what they do is they do a model they throw drift stuff into the water from the supposed crash site and they immediately find out there's a zero percent chance it would wash up in the union Island so instead of just admitting they're wrong what do they do then they get the Americans to give them a flapper on and they basically just do a completely different test and then convince themselves this this somehow makes it right um okay let's go through the next pieces

(25:24) uh 19 family members signed in the joint statement saying their phones were still ringing for up to 4 days how do you explain that there's really no explanation for that including one that proved it on National Television the shows those phones were not in the bottom of the ocean they were somewhere else probably in a bag somewhere on Diego Garcia if I had to guess uh also Ken recently showed that there is uh cell service there's a I think a commercial cell service cell service is it cell or wireless

(25:54) service uh Ken's been doing some pretty good analysis so Ken actually showed that the pings are actually 100% consistent with the plane being in the location that we have it estimated within 10 minutes of our estimation time which to me is plenty enough of a window um I mean that's convi having potentially narrowed down when the videos are happening to a 10minute window 10 years later to me is incredible and when I talk about Ken I'm talking about t Ken stabin he's one of the people that's been looking into

(26:25) these videos for or Not the videos but he has been looking at the videos as well but looking at the MH370 case for many years he's been on the conspiracy bandwagon CIA taking it he really the only difference in our opinions is he thinks that the zap was edited in but he still thinks the videos are real which I'm not even against that like you know that the **debunkers** they try to attack the zap the the portal the the Wormhole but they don't realize that even if that was fake that doesn't mean the rest of

(26:51) the video is fake even in that scenario Ken realizes that so uh we may point that out as well so let me put that up um this is why like it there just basic logic and reason just breaks **debunker** Minds like this I think I even mentioned this on Danny Jones where I was like even if the VFX was a match which is objectively not it's objectively not a match everybody's agreed to that **Mick** West has agreed it's not a match their argument is that it has been modified all around it's not even the same frame

(27:27) rate uh you know if you were like can play it real time side by side doesn't even match up the zap happens in a fraction of a second like the the explosion is like a second and a half or something like that or maybe not quite but definitely longer um but yeah even if that was a match it wouldn't **debunk** the rest of the videos I think I remember saying that to **Jonas** and then **Jonas** is just like or not **Jonas** sorry Danny Jones uh I got **Jonas** on the mind and Danny Jones just like uh well but uh CU they you know they just they

(27:59) they sort uh the NPC is just like short circuit when you bring up like logic basic logic reasoning um the two fake passports I'm probably not going to bring up the fake passport stuff we just don't really have time for it if he brings it up we may talk about the the people with the fake passports let's keep going uh I want to try to get through this so we can get to the scientific paper I don't want to be up all night tonight uh the details in the videos are scientifically accurate but to only non-stream main

(28:26) non-mainstream science promoted by by Tesla Thomas Bearden and others regarding the ether and scalar physics I'm probably going to change this um I may not even talk about this apparently scalar physics is like a a no no word people don't like it um let's say scalar potentials cold explosion scaler inter and let's say mixed wave interferometry uh and then I'm also going to bring up it's not actually just non-mainstream some of it accur I'm gonna say scientifically accurate in general I'm going change cuz he may

(29:27) attack me and say oh well it's not mainstream science so it's fake science or something like that well even if you say that then the question is like oh well they'll say I'll say okay well so

this person is what somebody who who believes in non you know these other alternative theories out there and they're what an expert at all those and they made their video 100% scientifically accurate to science that's not even mainstream in 2014 like 10 years before any the traversible Wormhole stuff has come out

(29:54) and all this like come on uh yeah these videos are are I'm at this point 100% sure these videos are real yeah 100% sure um far too much detail related to them uh all of the evidence that we put forth uh it's it's practically undeniable at this point and and that's even despite the fact that we're making some extremely serious claims regarding the conspiracy side of this and literally being able to warp drive warp a plane but we found the scientific papers we found the defense intelligence

(30:23) agency reports talking about this kind of stuff I I don't think that they do reports on science that's uh not real for the most part now you might argue remote viewing stuff like that I'm I don't know I'm open-minded about that kind of stuff as well uh but I it makes sense also um let's wait for a second actually on that I think hold I'm G write this down when did we figure out warp techn warp drive okay um I may do a clip on that actually oh okay yeah so the warp event is macroscopic Phase conjugation which

(31:04) is an endothermic event an absorption of energy consistent with Thomas bearden's cold explosion so I already wrote all this so this is kind of duplicative um that he talked about 1985 so who and this is like as far as I know endothermic events is there even such a a thing as a real endothermic event that anyone's ever seen before other than these videos I I don't think so uh maybe first endothermic event ever recorded question mark I'm not sure because if somebody was faking this they would have faked it with an

(31:41) explosion or or an implosion which is actually what the stock effect is so uh it doesn't make sense that they would change the type of event entirely okay um so for the people that are the doubters there first of all I'm not going to try to be rude to you here but I do want to say that you are going to be proven 100% wrong about the videos if you don't think the videos are real so that's fine if you want to ask questions about it that's fine as well uh but everything you ask uh has been addressed

(32:21) uh mainly with respect to the satellites people all try mix stff clouds aren't moving enough uh satellite should be we be seen the satellite move you are all 100% wrong you have to again realize that it is a groundbased computers that are building this perspective imagine just think about how someone's using it someone is using it to track objects in the military they can't be watching a satellites moving 16,000 miles per hour that doesn't work we've got groundbased computers that are pulling satellite

(32:50) data using Google Earth we've proven that they use Google Earth with quick Trin modeler to make a rendered environment for tracking purposes just like this so just think about it logically about how you would use a tracking system a satellite system practically um and that's the reason why and somebody actually posted in the comments that it's even better than

what we've been speculating and that they can actually move the perspective around when they're looking down in three dimensions anywhere on Earth that they

(33:18) want and see video playback recorded um and then potentially they're using like it's even possible they literally render the plane or the objects they're tracking separately to the background although I don't know how we would ever be able to show that in general but the fact that we have USA 229 staring down with its sister satellite right at that location at the right time is a good enough proof that they have the capability to have seen the plane you know no doubt so um and last this is going to be the last

(33:52) time I talked to you Rob uh in like ever uh but I'm definitely not wrong uh you don't know what the hell you're talk talking about and I've seen you post before and you constantly lie and make false things and this is like this he's like the epitome of **Reddit** brain people **Reddit** brain people think they know everything they have this smug sense of like they think they know all stuff but they don't think about anything logically whatsoever and that's the big problem people like this is that they

(34:16) think they know everything but they actually know nothing whatsoever uh they haven't looked into any of the stuff like we've actually shown all the evidence about how it works it's not it's not arguable like literally uses Google Earth we actually deduced that months ago before even figuring it out conclusively so this is the problem that with a lot of the people that are out there the **redditors** that are out there is that like they have cognitive dissonance going on where like I have to be wrong or be a liar because if I'm not

(34:42) a liar then it means that their whole world is a lie that they're wrong and for a lot of people they just can't admit they're wrong and I think that just to the **redditors** that are out there like that guy and other people like you need to learn to admit that you're wrong it's not a vice to be wrong like to be wrong is to be human that's how we grow that's how we get smarter that's how we get more intelligent and we should be our own biggest critics if you're coming out there pretending like you know

(35:05) everything one 100% you don't know anything uh the stuff that I've been my own biggest critic on all of this stuff from the beginning in terms of and this is why I'm G tell Glenn back tomorrow in terms of questioning second and second guessing every piece of evidence that's out there but you know the final nail in the coffin is the evidence on the evidence list is universal the evidence on the evidence list is not restricted just to the scenario anybody that's coming up with what happened to the plane has to come up

(35:31) with a story that's consistent with all the evidence that's out there if you're throwing evidence out out there you have to have a plausible reason to throw it out this Theory throws out the least amount of evidence and the only evidence it throws out is the satellite pings after 1840 where we never found the plane that's indicated by those S PS not just never found the plane never found anything whatsoever so uh and you're going to get blocked Rob as well uh nothing personal but you need to just move on with your life

(36:02) okay now let's go on to the next thing oh yeah and the people that get blocked I just want to address this real quick because I see uh people ping me and then I go see that these like people are crying about getting blocked or whatever and you go look at the replies and they're sitting there going you're an idiot this is fake you're a scammer blah blah blah like if you say any of that kind of stuff if you are disparaging at all you're going to immediately be blocked and I don't give a about you you're an idiot uh

(36:29) you're never going to be unblocked ever there's not going to be another unblocking in or anything like that so if you want to cry about it or whatever um you know go cry about it somewhere else go cry to your mom or whatever you is like the fact that you're crying about being blocked by somebody who you think is promoting something fake just shows how like absolutely pathetic you are as a person let's go back to this and I think I already muted that guy because like normally when I see people

(37:02) who are just trolling like rers whatever first thing I do is mute them and then when they push too much and they start attacking whatever that's when I just come back and I just block them for the most part the truth is there he is right there okay so he's getting blocked right now he's gone he won't be back um he just got blocked uh and but the truth is I normally don't until they like push a little too far but a lot of these guys like these videos have broken their brains so they unfortunately most of the

(37:29) time the way it plays out is um I mute them and then they keep pushing keep pushing keep pushing keep pushing they get blocked okay um and yeah if you want to cry about it go cry about it you know what go join the nut job rers like the literal nut jobs like the drug addict guy and the gambling addict guy and the other guy who's like literally whole job it is is to you know be obsessed with me you know kim.

(37:53) com follows him you guys can join up with those guys uh if you want to have you know hang out with kim.com the guy who's a convict On The Run who's facing extradition you want to join up with him go nuts man I think it's a very fitting match okay let's get back to some of this uh the dark lines in front of the orbs are a high powerered pulse laser that can create space geodesic that allows the orbs to Glide surf like a gravity well we found this this is from the scientific paper that we saw about warp drives um and the warp drive talks

(38:24) about the pwat laser so this actually gives us hope that we might actually be able to create this and even talks about high powerered pulse and there was some other details that I read as well about um like how exactly they could use this to amplify the laser energy as well which I thought was pretty cool now if you want to think about the laser thing this is where like you're imagining this laser shooting forward and the laser is actually able to uh create the same type of effect on a very smaller scale that we see from

(38:53) the plane itself where we see this negative uh Energy Event happen so it's this idea that's kind of poking a hole in reality to get to The Ether if you want to think of it it could even do something more complicated than that because we don't see it close back up again right

away it's like it's just creating space and then moving down through it um the next one here as well is uh the plane was on fire uh from 500 pounds of lithium ion batteries uh this is supported by the flight path as well as 19 real Witnesses

(39:25) including Katherine T who is in agreed upon location of the plane by everybody uh so it's weird that they try to discredit her because everybody agrees that she was in the right location to see the plane I just killed a mosquito feels bad um yeah in the locations uh within like uh not even that far from the coordinates and the thing is too we don't know exactly how far away she was from the plane like I would guess has probably 50 miles but that's just a pure guess how far away she was um at 10,000 ft that's that's a

(40:05) pretty reasonable uh visual but could be could be closer the semiconductor scientist Engineers are the motive counter Espionage is the most likely reason um we had the \$150,000 Bounty for the person to come forward nobody ever came forward with the source work uh despite hundreds of millions of Impressions and having gone on 70 plus podcast so there's literally no excuse to be like oh this person just didn't know that his videos were being promoted on all of social media and every major podcast on Alex Jones that we were talked about

(40:36) about **Rogan** like the fact that no hoaxer ever came forward is probably the death Nowell to these videos they pretty much just have to be real at that point any other fake videos that got this much attention I don't think any any any videos out there have ever gotten this much attention anomalous videos like this uh any hoax video that come out with this much attention the hoaxer would have come forward long long long a go um so now they have to come up with a complete story that somehow also explains why the hoer never came forward

(41:04) uh some people say oh he's dead like how old was the hoaxer guys life expectancy is like 76 years old in the United States the hoaxer was 66 years old when they made these videos these videos like K like keemstar pointed out these videos were not created if they were fake they were not created by a somebody in their 70s or 60s these videos have been created by somebody who's younger for sure but they're not they're just real military videos um and then Edward C Lynn so Edward C Lynn is the guy that **leaked** the videos

(41:36) like we're like 99.9999% sure uh evidence basically pinpoints him uh anybody else if you were doing a criminal investigation into who **leaked** uh anything that's out there like there'd be no doubt whatsoever that Edward C Linn is the guy uh the timeline matches up February 2014 starts to get investigated April 2nd 2014 he's in the vpu2 Wizard Squadron that's deployed to Diego Garcia uh reportedly uh deployed to Diego Garcia classified information is available on the internet um oh yeah his assignment matches uh

(42:16) timeline matches his position his position matches Lieutenant Lieutenant Commander so he would add access to the videos um they put him in in prison they made him sign a plea deal they were afraid uh that if he went to trial they'd have to show what it was publicly that he **leaked** the **Foya** was rejected to the NCIS and total to be kept secret in the interest of National Defense foreign policy uh okay so the VFX frame rate's not the same number of frames not the

same even if it was a match it wouldn't

(42:47) **debunk** the videos um only one frame is similar **debunkers** argue that they would have to move everything around changed every aspect of it uh can't can't provide uh Recreation steps to reproduce and then uh what else so the can't provide Recreation steps to reproduce and um oh yeah and it was used in four places four major media without a single without any major adjustment so it's actually literally never been adjusted the way that **debunkers** claim never there's not even one example where the **debunkers** can

(43:37) point to where this VFX has ever been modified the way it's been modified they claim it's been modified for these videos uh so I can list those out I better just type them out as well um killing time um Attack on Titan Starship Troopers and East B and down do I nuke mck West here as well uh let's say I'm also going to say VFX found by one day old **Reddit** account **Mick** West claims he found it inexplicably an obscure 3DO video game within hours the same day used to ban all conversation on **Reddit** yeah so here's your **debunk** guys

(44:37) for the should we just do a Let me just uh I think I'm going to go ahead and snip this room let's do a quick thing one sec guys okay so here's the **debunk** for the VFX Pyromania VFX sorry here's the **debunk** for the Pyromania VFX so the VFX was found by a one-day old **Reddit** account uh **Mick** West claims he found it inexplicably in a 3dio video game within hours the same day on August 19th 2023 it was used to ban all conversation of the MH370 videos on **Reddit** uh the VFX is not the same frame rate or the same

(45:20) number of frames even if the VFX was a match uh it it would not **debunk** the entire videos only one frame is even similar and it's only similar along the edge it's not even similar in the middle **debunkers** argue that they changed every aspect of the VFX uh pixel by pixel and uh can't reproduce the recreation steps to to uh make it and then it's also been used in four major media without any major adjustments uh The Killing Time video game tack on Titan advertisement uh Starship Troopers major motion

(45:53) picture and Eastbound and Down very popular TV show on HBO okay uh the AO so I actually provided the information to the AO um we had I can probably list off the reply in the email to Glenn Beck as well which shows that the Aro will be able to confirm this footage is real whether or not they tell the **truth** or they come back to me um you know we've given it to them so one way or another we should be able to get to the **truth** of this uh I don't think that they can overtly lie like if they were to find the stuff

(46:23) because all they have to do is find Lieutenant Commander Edward C they're going to find he **leaked** these videos that's the end uh and then I don't know what they do maybe they just lie about it or I'm not sure uh the other part too is that like I'm not a liar you don't have to believe me you can just literally look at the evidence I've made the full list of evidence publicly available for everyone to look at to date not a single person has refuted the evidence list um and then this is really

(46:46) Our Moment to take back uh power from the elite people so uh I know I can't prove it but I know that the elites know about stuff like overunity devices like over Unity generators that can produce just Unlimited energy without being plugged in and that they're hoarding it and various other Elite people know about this type of Technology as well it would not surprise me if Elon Musk knows uh the fact that Elon Musk hasn't responded at all is very sketchy because especially considering he's got

(47:11) government contracts he most likely has been read in on this and he has probably signed an NDA honestly at this point that's the only explanation I can come up with for why he hasn't made a comment on it um guys if there's trolls in the chat you can just uh okay I'm just going to ban this guy he's gone don't worry okay um and yeah and if anyone thinks I am a liar well I've been publishing every single thing on social media uh all my Twitter has been public I've done live streams basically every single night uh

(47:43) I've done 70 podcast you guys can go look for discrepancies in the story or any uh evidence that I'm lying uh it's possible that I'm wrong but I'm not a liar so I would wish uh people the best of luck on that front um guys we got some mentally ill people in the chat here tonight as well just uh mods if you're out there and you just see like these mentally ill people that are spamming the chat just ban them just ban them the **redditors** are having the full meltdown right now because they're

(48:09) realizing that the gig's up like there's no more **debunking** there's nothing more that they can really do um to stop this from coming out anymore uh the intelligence Community is melting down as well as uh you know the **debunkers** are because for these videos represent the end of the lives of the **debunkers** and I don't mean that literally I don't mean they're going to I mean some of them may hurt themselves but for most of these people like it will shatter their worldview uh irreparably irreparably and

(48:36) it will it will prove that everything that they've thought was true and all the effort they've gone to to try to explain stuff to be normal has all been a lie over their entire lives so when you see people attacking um with like the Bots and stuff like they're doing right now in the chat like that's the reason why um because like they're just literally these videos have just actually broken their minds to a degree where like they can't accept reality anymore and this is why the government

(49:03) probably um is hiding it because they know that people like this are going to like literally have mental breakdowns like is like is actually going on right now scary stuff man it's really scary dude yeah it's childish but it's also like actually legitimately scary that people might actually just harm themselves because they're going to find out that their whole existence is a lie as opposed to like normal people will just deal with it right the normal people are going to go okay well so what my my world's a

(49:33) construct cool we're going to have warp travel that's awesome you know the people that's uh you know just getting red pillled these people like for a lot of them they've just tied

their whole personality to these videos must have to be fake and this is actually part of the reason why I intentionally polarized the topic like I wanted to polarize these people to a point where like they that they get exposed as the frauds that they are which is what you see because rational logical people uh don't come at

(50:01) you that hard so when you polarize it and you show that they're going to have real world consequences for lying about the stuff in the videos this is where it just breaks them entirely like this is they're trying to do little psychological operations on me to get me mad well I just pulled one on you guys and it's worked good luck uh so yeah this is catastrophic disclosure guys um this is the situation where it's not a slow drip um and and this is what I think a lot of these UFO celebrity type people that are

(50:31) out there you know they are trying to have this be a slow drip process where like these nut jobs and stuff like that that their minds are going to be broken that they get like slowly eased into it like over decades or something like that and I'm not doing any of that I'm just literally pulling off the uh pulling off the The Band-aid like if if certain people hurt themselves or whatever we can't stop that man we really can't if if certain people have to go to prison because they were you know trying to

(50:57) cover this up then then they're just going to go to prison you know or at least maybe not go to prison but they get sued and get all their money taken from them hopefully that will serve as a lesson to people in the future uh to be more open-minded and not be like Gatekeepers or whatever and that's why I made my post about The Gatekeepers is that like I this investigation is the worst enemy to The Gatekeepers that are out there um those people have no power whatsoever with respect to this and uh you know it it just shatters all all of

(51:30) their their tiny little imagined power that they have yeah locki probably holds the keys to the castle as well some other people so let's dig into some other stuff here as well there's so many comments too where like people are still like there's a lot of people that are never going to be able to accept this to be real guys so like and uh if you look at a lot of the um like the protests that are going on right now if you go look at those protests on these college campuses every single person is wearing a mask every

(52:05) single one these are the types of NPCs that they would never they're never going to be able to accept these videos to be real for a lot of these people like whatever the government told them that's that's their reality like we have to just accept the fact that we live in a world where a very large percentage of people are just straight up NPCs they don't have any original thoughts like they're literally Pro they might not even be conscious like only 50% of people out there I think it was a study

(52:29) have an inner voice a lot of people out there aren't even conscious they're just robots that are just spewing stuff out that they've absorbed and they don't have any critical thinking abilities whatsoever um so it's not a matter of us trying to convince every single person on the planet the videos are real that's never going to happen it's really a matter of situation where we

get enough people where we can take power back where we can either get the information out there where people can utilize it

(52:52) themselves or to a point where we can force uh a statement from the government because the same way the government telling people oh a mask might help you from a virus now everybody's going to perpetually wear masks for the rest of their lives uh that can do the same kind of uh the benefit that we need in order for the videos to get the attention they need my ex uh no it's not because the I mean it's it's partially probably because the camera's thing but not really I mean what do you have to hide it's hilarious

(53:28) um can you please explain what will happen to this what will come of this discovery and how it affects everyday man uh free energy how about that imagine just free energy you have free energy let's say you have a generator produces free energy for you all the time take that to its logical conclusion anything and everything you want will change every aspect of our lives every single one no it is definitely NPC Behavior bro definitely NPC uh if you can't look at the evidence and come to the logical conclusion or at least another

(54:03) conclusion that's consistent with evidence then you're an NPC simple as that so we've got the evidence list I'll pull it up here again right so look at this evidence list and if there's something on the evidence list that you think is wrong well then you know that's that's debatable but to Simply say that you think this can't be real and that you don't have an alternative story that fits with the evidence list that we see uh that's NPC that's what NPC is that's

(54:27) not that's not critical thinking so that's Lally the opposite of critical thinking uh critical thinking is uh using the scientific method which is coming up with the hypothesis for what you think could have happened reviewing it against the evidence and trying to come up with a story that makes sense and then potentially going back and reanalyzing your hypotheses here uh based on the evidence list that we have here and what you'll see is a lot of people are just straight up NPCs where they you ask them and this is why if

(54:51) you're an NPC I I'll do I'll give you what the NPC test is okay if you want to know if you're an NPC or not I'm going to ask you a question and I will tell you if you're NPC if the answer to this question is you don't know then you're an NPC what happened to the plane what happened to MH370 if your answer is you don't know then you're an NPC your answer should be well here's the possibilities and here's what's based on the evidence that's out there yeah and then the next question

(55:18) again is what's the evidence and you should be able to say what the evidence is if your answer is just you don't know and it's some unknowable thing then you're just an NPC because you're just waiting for for your programming to come in to be told what to think so there's your answer yeah the idea that I don't know and you don't know and nobody can know that's NPC Behavior yeah we can know things are knowable and that's how you do it use the scientific method to come up with evidence and uh review the

(55:47) evidence so there you go now are you guys ready I just showed the evidence by the way so uh there's a link to it I'll post it in the YouTube chat for you guys so you can uh hold on let me do for got the sharable link so if you want to review the evidence uh take a look I'll go ahead and add it up uh we searched for the plane for 10 years uh actually they searched for like what four years for the plane and didn't find a single piece so we're never going to find the plane that's not going to happen guys it's

(56:14) it's not 2014 2015 it's it's 2024 now um they searched every year with the most advanced technology that they have and we already know the United States knows what happened to the plane so there's no excuse to not find it United States knows what happened to the plane um so again you just have to use logical basic critical thinking you know um that's all it takes so the moment you realize the United States has to know what happened to the plane then it Narrows down the possibilities significantly so again you know we can

(56:41) know and all you have to do is if you want to realize that you're if you want to know if you're an NPC or not just ask yourself what happened to the plane and what the evidence is simple as that yeah the amount of foam in the water I'm going to probably bring that up uh with Glenn back tomorrow okay I think we've addressed enough of this it's already an hour in okay let's go to yeah the foam in the water thing is pretty much the death Nowell to the the debris people because that actually proves that the experts

(57:13) that think that the plane sunk into the water they're objectively wrong um the plane uh the the parts of the stuff would have floated and it would have floated to the surface um so again this goes to show that even a lot of the experts are just NPC brains they can't even use basic critical thinking skills it's it's just sad man of course you can ask a question you don't have to ask you just have to ask it the plane was made by Boeing yes the US spends more on their surveillance and Military than the next

(57:45) eight countries combined yet somehow our acoustic system doesn't see the plane our our satellite system doesn't see the plane and our multiple Radars that can see for thousands of miles somehow don't see the plane even though it's flying for hours guys it's just basic critical thinking guys yeah it's aisc not incompetence it's not incompetence it's it's aisc it's and yeah okay let's go ahead and get to this the good stuff guys pull this over here okay can we see this okay we can see it

(58:33) kind of want to edit one of these so that I can hold on let me see if I can edit this layout there we go kind of want to do it like that okay that's better now we can see me much better here um do I think these crafts are being funded by the trillions of dollars we lost track of course they are of course they are man this is this is definitely a defense contractor technology that's out there are the orbs ours yeah it's ours it's our stuff I mean if you want to think it's aliens you feel you you can

(59:19) feel free but you don't uh need to use aliens to explain something that doesn't require aliens to understand we've got scientific paper from 2010 here that literally explain essentially

every aspect of these orbs uh then plasma physics as well we found some of that as well so um government try to pull some stuff and make a discovery in the middle of nowhere that contains pieces it's pretty impossible for them to pull that right now because it's been too long like if it was 2016 or 2017 and then these

(59:50) videos got popular then yes it could throw some stuff in the water but at this point it's 10 years later so at this point Point like the best bet for them would be like what would be their best move probably to sink some a plane and then be like that's it but there's not going to be enough rust on it like you need to have 10 years of Decay at the bottom of the ocean at this point you'd have to have the bodies and the skeletons in there the skeletons are preserved at the bottom of the ocean as

(1:00:15) well so there's just literally nothing they can do they can't hide it but we have to give them the least amount of time we have to like show and get them to make a statement before they can come up with some other **debunk** or whatever which is definitely what the intelligence community's next play is at this point um but also their next play at this point because they don't have any chance of **debunk**s their next play is to try to discredit me probably um my guess is that they'll try to attack me

(1:00:39) on as many fronts as possible including psychological uh to try to you know make it seem like I'm unhinged or something but you guys know that that's not true I I you know I don't have any mental issues or anything like that um but that's probably what they do is they try to apply stress and have people personally attack me try to get people to think that uh make false statements about me so that they think that um which is why the kim.

(1:01:04) com move was super weird because that's exactly what their play would be is to have some guy come out there and try to wriggle away a popular opinion um but that's not going to work either uh I'm sure aliens are out there somewhere I don't know if the aliens are here with us though I think that's pretty unlikely the Glen Beck thing once again it's if it's live it's at 10: a.m.

(1:01:25) tomorrow it's probably on his channel I don't know exactly where but it's the blaze so I believe it's going to be on the radio but it should be probably available online yeah I'm giving free knowledge out as well like I haven't put anything behind a pay wall ever I haven't tried to sell anything like I'm actually like the least grifter of everybody on the internet who's you know promoting you know information or what have you out there like a lot of these people you know and and you can make

(1:01:51) money I've got nothing against people are making money you know you like John John Greenwald sells dildos he does **foas** and dildos um people don't call him a grifter I I told him we could go into business we can sell MH370 dildos but I guess he was not interested um how did I come into this guys so read through the evidence list but it goes back to uh social media site **Reddit** where I was a lurker Once Upon a Time uh and then I made an account using uh one of my email addresses and it had been used by some

(1:02:22) kind of Bot or something so I have like the dumbest name ever like additional ad three 746 or something like that um but I've only posted on [Reddit](#) like I don't know uh well after our sub[reddit](#) got banned I only posted a few times um why is scalar physics a no-o word uh so a lot of it is that this point the next play will be to try to get some of the science influencers that the government has under their thumb to try to say that the science isn't real and if we start using terms that uh open ourselves up to scrutiny then they

(1:02:58) probably will it'll make it easier for them to do that like they'll be like scalar physics isn't a real thing so that's why we really need to talk about the scalar potential in Maxwell's equations which is real and talk about the reduction in Maxwell's equations but I'm talking about The Ether anyway I don't care if people want to hate on The Ether ether is real we're bringing The Ether back ether is a cool name um so we're going with that we're getting rid of the the quantum fluctuations in the

(1:03:20) virtual particles we're just going to we're Call It The Ether that's just ether with extra steps um guys just for one last time I don't care about aliens so a lot of people out there just really really really want to know about aliens not me I don't care I don't care they're real or not they're here or not it doesn't matter to me just don't care um if you care about that that's great I think that this uh science being real opens the door to aliens visiting us but I just don't

(1:03:53) care um I just want to help change the change the world that's all I want to do yeah Co showed us we have trouble admitting we're wrong um boy did it in fact instead of people admitting they were wrong everybody just kept doubling down on covid pretty pretty ridiculous man uh I I don't have any comment in Z particularly or any any crap like that um hey everybody who's here sorry a lot the chat's moving too fast for me to keep up I'm trying everyone just wants to know what rare cheeks they

(1:04:32) have okay I'll address this one was Bob oh wait that's not right was Bob Lazar misled I don't know I think Bob Lazar seems like he's telling the [truth](#) but could he have been fed some misinformation uh maybe I don't think we need Element 115 or any of that to make this happen the stuff we see here these electrogravitic effects we don't need uh some special fuel source uh we can just literally extract energy from the environment which is the idea of unlimited free energy that's where that

(1:05:01) that idea comes from from The Ether yeah let's get into the paper guys we we've distracted enough I agree I agree okay so traversible Wormhole Stargates and negative energy I had a list I'm not going to read through the whole thing tonight and there's been some parts that I didn't quite read on yet but let's look at the summary so it reviews traversible wormholes the Stargate solution what a wormhole would look like in real life uh General Relativistic definition of exotic matter generating

(1:05:33) negative energy in the lab uh and then constructing to reversible Wormhole is not easy and it talks about the negative energy requirements and the energy condition violations so I believe the energy condition violations if I'm correct I have to go back and look is uh problem is

trying to be consistent with the conservation of energy I believe that's the problem but double check couldn't remember so right off the bat um it talks about how it's important to uh achieve faster and light travel because

(1:06:02) if we don't have faster light travel we can't really get anywhere that's out there and the biggest issue is that it says that we would need exotic matter negative energy to pull off the answer there is The Ether so the ether is unlimited negative energy um which is the framework of our reality so if we rip through that then we have all the negative energy we need um the other thing too is that we need a bubble around our craft we need to make a bubble around our craft and the the thicker our bubble is the more energy

(1:06:29) we're going to need but if we make that bubble really thin as we found out that energy requirement goes down a ton uh so actually I wanted to play I have it closed here okay let's go look at oh one interesting thing I I read here right away was that um Carl Sean when he talked about contact that was one of the first times that they talked about the principle of traversable Wormhole so this actually goes back to 1985 based on Einstein's theory of general relativity so this goes back a really long way the idea that we could

(1:07:04) create a wormhole now based on these papers coming out in 2010 I think we can narrow down how long we've had warp drive to probably just a few years before this I think MH370 is probably not the first time but one of the first times where we had these orbs like this where we could produce uh a real Wormhole and warp drive capability I don't think it it was uh like a test but it probably was still one of the first times we pulled it off on something like that um let me see here so this part two is good so here we go uh The Travelers

(1:07:52) would move at uh less than the speed of light Through the Wormhole and therefore not violate special relativity relativity but the external observers would view The Travelers as traveling multi- Lightyear distances through space at faster than light speed so this is important because it brings up this uh issue of time dilation now this paper is going to argue that there is no time dilation which would mean that if you are on Mars and you go through a a wormhole and you come back to earth that you could look up and you

(1:08:26) could see yourself waving at yourself because that you would move faster than the speed of light but this is important because it brings the idea up that from a wormhole perspective it's like you walking through a doorway but for people that are observing the the external Observer frame of reference it looks like you instantly traveled from one point to the other and when we look at the MH370 videos that's exactly what we see we see an object just disappear from our external Observer perspective it looks like that plane's disappearing at

(1:08:54) one point and it's going to reappear in another Point um okay so the difference between the and I'm actually G to just paraphrase most of this instead of just reading it out people would ask okay well what about a black hole isn't a black hole potentially a wormhole the problem with the black hole is there's so much mass that it's going to collapse and Crush you when you try to get to it the difference between these wormholes there's no Event Horizon so if

there's no Event Horizon this is extremely that

(1:09:26) means that you can actually pass Through the Wormhole unscathed The Event Horizon of the black hole is the point where nothing can escape not even light so if you went into the the vent Horizon the black hole there's no coming out you're just getting sucked in squished down crunched down uh you probably die before you get to that point but at that point it's it's impossible for you to then uh get out and escape with respect to a wormhole you can get out which means that you can go through that Wormhole

(1:09:52) and you can come out the other side you're not going to get squished so this opens the door to humanly traversible wormholes which Juan Malina has argued are possible if we have enough negative energy to pull it off somebody said something about fire event um yeah the fire event leads us to believe that this was Espionage um as opposed but it could also be a rescue operation so we we can't say with 100% certainty um if they just wanted them dead you just let the plane crash after the fire but the fact that

(1:10:28) uho the fact that they tried to to warp them or whatever would tell us that they weren't they didn't want them dead there's easier ways to kill people much easier ways although you could still say that they were killing them as a show of force but that's that's really dark that's really dark um and there's some percent I'd say there's like a 1% chance that this was Annihilation event but when you look at what's going on those videos and we looked through these papers it's pretty clear what we're

(1:10:52) looking at here is a warp drive it's a wormhole is what we're looking at uh yeah time actually shouldn't be removed from equations because time dilation is real so actually you should you can argue almost the opposite is that maybe you remove Gravity from the equations and instead all you get is time hard to say I don't I don't know truthfully one way or another um so yeah right here it says explorers would enter one side of the tunnel travel through the throat and exit on the other side

(1:11:20) traversible wormholes do not possess an event horizon which is the region of high gravitational field strength separating the inside Space surroundings from uh the black hole Singularity from the outside Universe once you go to a black hole Horizon you can never come back on the outside because you'll have to obtain faster and light speed to escape it not even light can escape the faster and light the the black hole um see here okay let's go to one of these says something about time dilation I think I already spoke about the time

(1:12:00) dilation stuff though as well um and the big issue with standard physics is that the faster we approach the speed of light the more massive we get the more energy we need to increase our speed so this breaks that we we get past that because instead of moving the object we're moving the bubble we're moving the medium we're moving SpaceTime itself and this may be as well what the orbs are doing the orbs may be actually doing a smaller version of alaer drive just bending space around them pulling space so it's like you're on a conveyor

(1:12:33) belt so you're on the conveyor belt are you moving or is the conveyor belt moving we just have the conveyor belt move so we move the conveyor belt and then that's kind of an analogy to what we'll be doing with warp drive we can be standing still but the conveyor belt is still going and we can walk on the conveyor belt and we can go even faster if we want um but that's that's not quite the same here in this case the moment you put the bubble around it you're instantaneously going to here in

(1:12:56) another Point another Point okay damn you guys are going crazy uh let's see yeah so this is basically these paragraphs here just kind of talk about getting away from that because there's no way using classical propulsion that we can ever reasonably get to even the closest star system it would take hundreds of years so we really need something that's faster that's out there so we need faster and light Interstellar travel and traversible wormholes are the answer so if you are somebody that believes aliens are visiting us you

(1:13:34) should be all in on this because this is the only way that makes any sense whatsoever there's no way aliens are taking hundreds and hundreds and hundreds of years to get to us um that would be just I mean just the and the travel through Interstellar space would be very uh scary in general okay so how does study the physics of faster and light space times within the framework of general relativity when studying the physics the normal philosophy is to take the general relativistic field equation add some form of matter uh make simplifying

(1:14:06) assumptions and then to solve to deduce what geometry of SpaceTime might be it's very difficult to do this because there are 10 nonlinear second order partial differential equations blah blah blah uh thank you for that donation um hay 10 appreciate you NASA's new fuess engine the the new engine is uh em Drive the one that's been talked about by Charles berer H it's not necessarily NASA's he was former NASA he's working for a private company uh but the um the former NASA guy the private company um they

(1:14:40) basically produced em Drive which is the equivalent of Star Trek impulse drive we are talking about taking that to the next level so we are like light years ahead of that and we are talking about uh actually Star Trek warp drive one is simply using using uh the vacuum energy if you want to call it or like just taking the fact that there's our realities interacting with The Ether and using that connection to to and the Casmir effect to create a situation where we get propellantless propulsion so that like it's like if you're like

(1:15:12) when I push like this like the chair doesn't move but imagine if there's something here and I can push off of it and now the chair will move that's propellantless propulsion same idea with the EM Drive uh but with this drive we're actually talking about literally warping space time around our object and then moving the medium stretching the medium scary do I think it's safe yeah I actually do think it's safe for biological organisms to move this way like I said it's just like walking

(1:15:36) through a door there are three different papers about humanly traversible wormholes three different papers of humanly traversible wormholes um so I absolutely think that this this is

real and can happen and all those papers humanly traversible wormholes are all from 2020 and Beyond so that's how new the idea of a humanly traversible Wormhole is some of them argue we don't even need exotic matter some of them argue that we can produce it without exotic matter which would be negative energy we are actually we don't think we

(1:16:03) even need that at this point because of the ether idea that just solves that problem as well so let's re let's go back to traversible wormholes in terms of what this says regarding them time travel Through the Wormhole tunnel should be less than one year as seen by both Travelers and outside static observers I don't know exactly what that means proper time measured by The Traveler should not be dilated by relativist effect so this means again that there would potentially not be a time dilation effect I'm not sure I

(1:16:30) agree with that I would have to see it to know for sure but one way or another like this would mean that the the plane showed up instantly somewhere else if it's if there's no time dilation if there is a time dilation effect then the plane's going to show up slightly in the future it's going to show up in the future based on the distance traveled um the gravity ational acceleration and tial gravity accelerations between different parts of the Traveler's body should be less than 1 g0 so g0 is the

(1:17:02) acceleration of gravity near the Earth's surface so essentially you're not going to experience any more gravity than what you would experience just walking through the door right now uh travel speed through the throat or tunnel should be less than the speed of light which is obvious so that just means like the plane is flying at normal speed that's what this means less than the speed of light is any normal speeds um The Travelers must not couple strongly to the material that generates the warp of the Wormhole curvature the

(1:17:28) Wormhole must be threaded by a vacuum tube through which the Travelers can move so this is important because this means here that the Philadelphia Experiment could have been that the people were coupled to the field to the bubble that was being created you don't want to be touching the bubble that's what this means if they make a bubble around you don't touch that bubble if you touch that bubble bad stuff's going to happen you're going to get stuck into the wall you don't want that and then there's no

(1:17:58) Event Horizon at the Wormhole throat which lends the idea that you could actually Traverse through it's not a black hole that we're looking at here it's a phase State change so pretty cool um the bubble's not going to pop but as you see when we look at the MH370 videos the bubble disappears like instantaneous like it's a fraction of a second the whole event which I think is interesting because it's not in instantaneous but it's pretty close to instantaneous so when we look at this

(1:18:31) drone zap here and this is super slow-mo what we're looking at right here so we're looking at in super slowmo and there's only four frames so this is like almost one tenth of a second maybe less than maybe around one tenen of a second somewhere like that uh maybe a little bit more than one10 of a second and the whole plane's gone that fast and then it's

instantly going to appear on the other side so it's not like chilling in the middle of the Wormhole it's not going to be like in some of the TV shows

(1:19:00) where you're like flying Through the Wormhole and you've uh that it's not like you're flying through it and you're looking on the sides and you're looking at this Wormhole no you walk through it like a doorway and now you're just on the other side that's a real Wormhole not a science fiction one and it's not dematerializing or rematerializing either that's also science fiction I do think that the Philadelphia Experiment I I I don't have any like proof but I think that if this is real

(1:19:27) then the Philadelphia Experiment is probably the first time where we accidentally figured this type of effect out we bent SpaceTime too much without considering what would happen and then probably the situation was because the way we had the field set up people literally were like touching the the throat of the Wormhole and when they or the uh the mouth of the Wormhole when they touched it they just got stuck into like the the craft and all kinds of other weird displacement effects happened which is dark and sketchy

(1:19:55) um one part in here here it is oh I found it right there the throat of the Wormhole is spherically shaped well that's a yatsi moment the throat is spherically shaped so this actually tells us that what we're looking at this video so someone either knew what a wormhole would look like in 2014 where technically I guess they could have seen these papers I don't know when these papers were made publicly available but if these papers weren't made publicly available there's not really been a lot of Wormhole

(1:20:22) science out there uh so how did the person who was making this Wormhole know what a real Wormhole would look like that's a spherically shaped Wormhole right there and before you say no it's not perfectly spherical don't worry there's going to be more evidence going to come up here in a minute um so we've got that in here as well now you can see this is kind of the idea of how SpaceTime if you imagine SpaceTime bending but again you're not going to like be in the Wormhole like this you're this this part where you're

(1:20:54) actually through the throat of the Wormhole is going to be instantaneous so you're not even going to see that visually but this goes to just help you imagine how this is possible where our SpaceTime geometry is this flatness and then The Ether represents kind of an underlying code which connects all points in space and time that's why when I talk about The Ether connecting all points in space and time faster than the speed of light that's why it's so important is this idea that this here is really infinitely

(1:21:22) short um and so when you go through one point you just instantly appear on the other side pretty cool stuff right uh now let's see what else so you need either exotic or negative energy to create the diversal Wormhole but the answer to that is very easy we have if we have unlimited energy which is also what we see because people ask well what's powering the orbs so those orbs must be cohering energy from the environment um which maybe there's enough energy just like around them but I think really need the ether in order

(1:21:56) to explain how those orbs have enough energy to produce the effects that we see although we will go look at Jack area's message which is why it's so important that we did today um so this okay the Stargate solution this one I'm going to read because I'm I'm curious it is straightforward exercise to design a real Stargate from Wormhole physics a Stargate is essentially a traversible wormhole with a flat face shape for a throat as opposed to a spherical shape so this is going to be like your

(1:22:27) mirror um The Traveler going through the Stargate will simply be shunted to the other uh a remote SpaceTime region within our universe or Another Universe okay so this is literally just talking about a actual uh Stargate like the TV show like right here down here when you look at this one where if you could just walk through it so and I've talked to some people that like there is some possibility if this is real that like defense contractors might have Underground bunkers that have real Stargates in them that connect two

(1:22:57) different bases and you can just walk through and show up on the other side I think Rick and Morty had this like the president in the United States and Rick and Morty I think they had something like this which is pretty wild if the if the show uh Stargate is actually real and we actually have that kind of capability that to me is just wild now here's some of the math so all the math seems to check out um in terms of being possible presuming that we do have uh negative energy requirement um so the surface tension is required uh to

(1:23:31) keep the the throat open and stable against collapse to make this thin shell Wormhole entirely flat requires that one chooses the throat to have at least one flat face uh this means that the traveler encountering and going through such a wormhole starget will feel no tital gravitational forces and see no exotic matter threading the throat so The Traveler uh stepping through the throat will simply be shun into the another remote SpaceTime region or to another Universe um therefore one can construct a Stargate by generating a thin shell or

(1:24:09) Surface layer of exotic material much like a thin film of soap stretched across a loop of wire so again your shell doesn't have to be that thick as long as you are bending SpaceTime itself the shell can be extremely thin it's pretty cool have you seen the Taylor Swift Wormhole traversing map she's really abusing her privileges yeah um okay what would a wormhole look like in the real world uh let's see looks like a sphere that contains a mirror image of the whole other Universe of remote region now this

(1:24:53) is the part where I when I was talking to Brad Vorhees he was like you should be able to see through it I don't know how to explain it but I don't think that's going to be the case for the type of Wormhole that we see with MH370 uh what we're seeing there is an extraction of energy an endothermic event and absorption of energy um but it does beg the question like there's something there that I don't fully understand maybe some Advanced physicists can talk to us now maybe a Stargate if you make a Stargate then you

(1:25:23) probably are just looking straight through but with respect to the MH370 type of portal that we're making uh my guesses has to do with the scalar interferometry and that it's

using some type of an entanglement effect as opposed to uh something that's more of a traditional uh Wormhole that we would expect but I'm not 100% sure on that and this paper while this doesn't mean that this paper is 100% accurate like this is a hypothetical physics uh research paper theoretical one not one that's based on experimental data so if

(1:25:57) we have to rewrite some of the laws of physics then that's going to throw some of the conclusions here through a loop but this is the one that I think John Oliver was making fun of the one with the dinosaur on it uh which is interesting because there is this question of if you don't have a time dilation effect then the question comes up of well can we go back in time or can we look into the past I don't think that that's possible because if it was I feel like our reality be vastly different but maybe

(1:26:24) that's part of the reason why they're hiding this from us like maybe they don't want people changing the past or messing with the past that's out there let's see what else we've got okay so the energy conditions here as well um I think we've already addressed why and how we need negative energy I didn't really find when I was reading through this any uh big gacha points although I may have to take another look at it and see if I come up with any others um and but it does talk about the idea of

(1:26:59) cosmological inflation is what we essentially need for Dark Energy um and I think that the ether can answer that problem as well uh so it shows that there must be some way where we can move faster than the speed of light um but so okay so yeah cosmological inflation cosmological particle production which is probably the quantum particle or Quantum or virtual particles class iCal scalar fields and the conformal anomaly and gravitational vacuum polarization are among many other examples that also violate energy

(1:27:34) conditions since the laws of quantum field Theory place no strong restrictions on negative energy and fluxes then it might be possible to produce exotic phenomenon such as faster light travel traversible wormholes violations of the second law of Thermodynamics and time machines there are several other exotic phenomena made possible by the effects of negative energy but they lie outside the scope of the present study okay so there we we have our thing so the second law of Thermodynamics uh is the idea that hot

(1:28:07) always flows to cold so there may be some kind of reverse thing that happens there which I think would be the idea that we can produce like coal like if we make a free energy device that it's going to produce it's not going to heat up it's actually going to produce uh cold air around it or cooling effect around it would be the right way to point it out um so we are I think going to end up uh rewriting I can't believe I'm even saying this but I think we are going to end up oh I'm not even presenting this

(1:28:34) Jesus guys we are going to end up possibly rewriting the law of conservation of energy and I think we have to re understand the second law of Thermodynamics we may have to rewrite it as well we're not going to rewrite all physics with this uh but just some parts of it does seem grandiose to make that statement but yeah that's what it is it is what it is chat okay and

then there's a bunch of stuff about generating negative energy in the lab so suffice to say that ultra high intensity tabletop lasers have been

(1:29:07) used to generate extreme electric and magnetic field strengths in the lab ultra high intensity lasers use chirp pulse amplification CPA technique to boost the total output beam power all laser systems simply repackage energy as a coherent package of optical power so we're talking about converging the laser down onto a single point but CPA lasers repackage the laser pulse itself during the amplification process I don't really know what that means in typical high power short pulse laser systems it is the peak intensity not the energy or

(1:29:45) the fluence which creates the pulse Distortion or laser damage however CPA lasers dissect a laser pulse according to its frequency components and re orders it into a Tim stretched lower Peak intensity pulse of the same energy this benign pulse can then be Amplified safely to a high energy and then only afterwards reconstru reconstituted as a very short pulse of enormous Peak power a pulse which could never itself have passed safely through the laser system made a more Trace uh made a more tracable way this pulse can be Amplified

(1:30:18) to substantial energies without encountering energy intensity related problems this is the part here where this is the answer to what the orbs are doing with the beams in front of them yeah the phase uh phase conjugate pump wave so I think this is both what we see with the orbs when we look at the trails in front of them here I'll show the video I believe this is what we're seeing right here is we're seeing a laser and that's funny because I speculated that they these could be using a laser before I had any idea

(1:30:46) about the science before I even talked to salvad I was like this looks like a laser being shot forward and they were like yeah so this I think is actually a pulse as well there and do they disappear afterwards like how quickly did the the dark Trails go away that's one of the things I'm not sure it does look like they dissipate pretty quickly so it's actually using a laser beam to produce this effect and I think it's using a very powerful pulse laser effect in order to pull that off and these scientific papers would seem to

(1:31:17) confirm that and then they potentially use this exact same apparatus to induce the gravitation effect from the entire plane itself which is pretty cool you've got two completely different effects happening from well not completely different but similar but different effects happening from the same mechanism here yeah the trail does seem to fade right so maybe it is really just doing this exact same thing yeah the trail fade Fades really quick you can see it like right here like right there you can see the trail starting to fade

(1:31:48) already yeah it's already fading so maybe that trail does fade really quickly so maybe it literally is making space or tapping in creating a very Focus point of negative energy from The Ether that is immediately self-organizing within a few seconds yeah and black means cold um okay so let's go back to the other paper yeah gravity wave I mean what even is a gravity wave right so gravity wave a geodesic um I think that there's definitely a direct link there between the two of them very interesting um so the power

(1:32:27) intensity we looked at this with the other paper as well and the magnetic field intensity a Vigilant reader might assert that the electric and magnetic fields generated by ultra high intensity laser are not static but in fact these fields are static over the duration of the pulse width while at Peak intensity the data above illustrates the high intensity lasers can generate an electric field energy density uh that's really high so that's  $10^{16}$  to  $10^{28}$  per meter cubed that's super high this is really high to break the swinger limit

(1:32:59) you just need to get 10 to the 33 and this might be producing that the laser might be the delivery mechanism for the scalar potential so the scalar potential is the stress in the medium so if we're touching our squish ball the stress in the medium is gravity that's our interaction between The Ether and reality so the laser is allowing us to direct that so that's what's allowing us to create the gravitational wave along the path of the laser pretty incredible I'm pretty sure if these videos are fake

(1:33:29) we wouldn't be able to figure this all out and some people might say well you're just making it all up I mean I didn't make I didn't write these papers these paper been out there forever how are there scientific papers from the defense intelligence agency exactly explaining what we see um and then this is talking about the zero point fluctuation this is going to be talking about the Casmir effect as well so again the squeezing this is going to be that stress in the medium that we're interacting with and abusing

(1:33:57) that is potentially allowing us to produce some of these types of effects I'm going to skip through some of this even though I haven't read all of it uh because I want to go to some of the other Stuff gravitationally squeezed electromagnetic zero point fluctuations um vacuums field stress negative energy from the Casmir effect so the Casmir effect is definitely definitely a it's kind of how we can explain how the fluctuations of the vacuum can cause these types of stress events to have the plates move together and so I don't know

(1:34:39) that we're doing the exact same thing but I think it's very similar to how we can create these uh types of effects where we are creating this geodesic that we're traveling down as well I look forward to learning more about this maybe I will become a physicist at one point in time but I've got a lot more to uh to learn William um I don't mean to offend but like the way that you were spamming uh all your links probably got you triggered for engagement farming like when you reply to people you can't just

(1:35:14) like always retweet your own content because that the system sees that and it looks like it's engagement farming um so I mean if you care that I think that's why you're getting banned um sucks though so just be careful about that man they're they're probably going to come down on you for that like I've never reported you for that because I I don't believe in that but um I wouldn't be surprised the algo gets you for that so just be careful um okay so now talks about many times of this whatever let's skip this

(1:35:43) what's the next one I want to look at um okay there's something about the light here that I want to look at oh and actually okay here yeah I think this is it right here I think this is the

same equation let's just read this one we're almost to the end anyway here one knows how to make small quantities of negative energy in the lab but one does not know if it is possible to make large quantities of negative energy it was pointed out in section three that one some or all of the classical energy

(1:36:14) conditions must be violated in order to build a traversible wormhole and it would also be cautioned that this was not a showstopper because the energy conditions have all been violated by nature or by lab experiments prior to the formulation we've already violated them however the reader should be forewarned that there are a number of published claims that the energy condition violations uh can be avoided the claims are are just semantic games whereby investigators universally invoke the following scenario divide the total

(1:36:40) stress energy into weird matter plus normal matter push all the energy condition violations to the weird matter so that the normal matter does not violate the energy conditions given that the energy conditions are not absolute such rearranging approaches are not necessary to verble Wormhole throats violate the uh NEC which is negative energy net energy condition I think um so how big a violation is required to answer that there is only one need to calculate the amount of negative energy that will be needed to generate and hold

(1:37:09) open a wormhole throat a simple formula for a short uh throat Wormhole using the thin shell formulation gives a quantity in the terms of equivalent Mass so basically what they do here is they tell you the amount of mass but what they mean is since  $E = mc^2$  uh we can figure out exactly how much mass energy we need so mass and energy are still one and the same they calculate in terms of mass but they're really talking about energy required so when you look at this equation you see Mass here you can just

(1:37:36) convert that to energy to figure out how much energy that you might need mass is the equivalent Mass required to build the Wormhole um and then here's the thing about how much energy you potentially need in order to produce it but this is the part where if you scale down the how how how much the shell is on there you potentially need less and less so this is the part where I want to go and I want to show the jackar fotti clip from earlier because I think that jackar Fat's thing that I've always wondered

(1:38:08) about oops is this idea that we can produce oh sh that we can get the energy densities that we need uh by not just achieving higher amounts of energy but requiring less energy so the difference there is if we need less energy to produce it then that's another cheat mechanism one thing is that we can either produce a ton we can make our shell thinner we can amplify energy up to achieve the energy we need but another way to approach the problem is to reduce the amount of energy that we need in order to produce

(1:38:42) the effect and I think that both are happening here now I think the jackar F's right and Salvador Pi pias is right uh hay 10 Ash please give checkout nine days ago new anti-gravity device yeah uh I've already talked about this I've already posted it got hundreds of thousands of views like 300,000 views um this is uh em drive this is not the same so again guys just to

reiterate because you donated I appreciate there are multiple types of anti-gravity just means a repulsive Force that counteracts gravity so if I take this this uh this

(1:39:15) is a screw right here if I drop this screw it hits the ground uh anti-gravity would just be a force that allows it to suspend in midair freely so that's that's cool and if I were allowed to push forward without propulsion like is talked about uh by Charles ber then that is impulse drive that's Star Trek impulse drive so when you want to go a short distance and float you use the impulse drive when you want to warp yourself to Mars you need straight up warp drive the stuff that we are talking about here is warp drive and the reason

(1:39:45) why we're talking about warp drive is warp drive is level whole another level warp drive is like taking that to the extreme so let's switch over and show this okay look that's the mass energy right but if  $c$  gets small that thing goes down see it goes down it's it's but like a as a you know it's here here the total mass you need is a  $c$  squ but  $c$  s becomes uh if it goes from from uh you know 10 to the 8 meters a second to to one meter per second then you're down by a factor of 10 to the 16 right this

(1:40:38) calculation but he doesn't say that see they don't say that change  $C$  so he's looking at the this is the same thing that we were just looking at chat exotic matter energy requirements so this is why I clipped came over to this one so here's the equation again the mass energy requirement on the left now notice the  $r$  in the one that we were looking at was just one so we're dividing by the gravitational constant I think that's big  $G$  and then  $C$  squared here  $C$  is the speed of light so speed of

(1:41:06) light is a huge number so speed of light squared is gigantic so jaxs are F saying that we can cheat the system because we can reduce the speed of light requirement down to one we can lower the speed of light here um and he says well he doesn't mention this because if we can lower the speed of light from this giant number Square to one now you've reduced the requirements of mass like you know by 10 to the 16 which is a huge number basically becomes much more plausible this is why Jack sarati argues that we don't need a lot of energy in

(1:41:40) order to produce these effects so contrary to the schmuck Factor here I totally understand what Jack zfa is mentioning I understand why he thinks we can teleport an object using a very low low amount of energy um I'm not sure I agree with him here but the next part is very interesting that that's what they're missing but this is you know this is fine yeah might I think you can achieve that using a stable plasmoid or vertical a stable plasmoid chat uh is that a yatsi so he says that we can achieve that lower Sea by using a

(1:42:20) stable plasmoid you guys got any stable plasmoids out there can anyone think of a plasmoid where does that what does stable plasmoid remind you of does that remind you of anything that we've been looking at recently here chat oh what about what about this video right here that we've got what about these orbs that are plasma Fields going on so just for the record I had never seen this before I've been talking about plasma Fields I've been talking about plasma fields around the orbs for months and

(1:42:52) months and months and months so either I'm just psychic and I magically figured out that we literally would need the thing that I already said that we were seeing or it seems like this is the answer for how we're able to reduce C here reduce the energy requirements so there's potentially two things happening we are reducing the energy requirements this may be why Hypersonic weapons use plasma sheaths is because it now helps from the mathematical equation perspective this is how we're able to achieve speeds that

(1:43:20) would otherwise just rip the object apart due to friction they're using plasma sheets this is why the guy says we might be able to achieve that with a plasmoid or vortical engine a Vortex a Vortex stable plasmoid that's literally what we're seeing Bob Greener said that's literally what we're seeing right here these are exotic vacuum objects these are stable self-contained self-sustaining ball field of energy pretty wild right there it is right there that you're looking at that's what the that's

(1:43:50) why we see that heat signature in there the person that this wanted us to know these were real they wanted us to know these were real let's listen to that one more time I think you can achieve that using a stable plasmoid or vertical you can achieve that using a stable plasmoid or vertical well I hope you're right so do me a favor write it all up and send it to me I hope you're right I mean to me that's a yachi moment chat to me that's a yatsi moment so this gets around so we've basically just deduced from looking at

(1:44:27) the videos that we can get around the energy requirement we can potentially need less energy than what the papers say we can amplify energy as necessary we can produce a shell that's very thin that also reduces the amount of energy combined all these Concepts together and now Wormhole becomes very feasible we can reduce the amount of negative energy required we can amplify negative energy potentially using our super powerful lasers and our orbs converging Rel the kums law make the the whole medium go nonlinear the idea of

(1:44:58) the medium going nonlinear is the idea of literally ripping open in the localized area fabric of SpaceTime um and then we can also uh crap what was the third one oh and create our shell very thin so our shell is very thin and now we don't need very much as well you combine all those factors together much more reasonable and to get the negative energy we have The Ether itself so we can and this said using High powerful lasers we can actually uh achieve uh negative energy from them okay so uh oops I actually removed the wrong

(1:45:31) one screen share again wish there was a way to get this a default to the right one uh the last thing I want to go through here on this paper I might have to search for it search okay here we go observing negative energy in the lab guys get ready for this I hope you guys are excited when background light rays strike a negative energy lensing region they are swept out of the central region thus creating an umbra region of zero intensity so it's going to get completely dark at the edges of the Umbra the Rays accumulate and create a

(1:46:18) rainbow light cosmic which with enhanced light intensity the lensing of a negative energy region is not analogous to a diverging lens because in the certain circumstances it can

produce more light enhancement than does the lensing of an equivalent positive energy region real background sources and lensing effects have a nonuniform brightness distributions on their surfaces and a dependency of their emission with the observable frequency um guys this just explained two more factors of the videos are you guys with me right now watch this this

(1:47:02) this just explained two more aspects of the videos which if somebody faked these they were an expert physicist now 100% expert physicist that must have created the videos with these scientific papers in mind from 2010 they had to have because that's what we're seeing right here the lensing effect this is the lensing effect we we've been a gravitational lensing effect right here you're seeing it you're seeing it right there that's the lensing effect that they're talking about right there where

(1:47:32) the objects are bending this is happening right beforehand now not just that so not only do this paper explain the lensing effect but remember it talks about the light rays and then having this uh producing more light enhancement and so the idea that the the rays are accumulating around the edges of the The Vortex of the of the Wormhole so what's that going to cause that's going to cause our brightness effect that's going to cause our zap to happen so this actually also explains why the zap is illuminating the background as

(1:48:06) well we found out the answer that's what we would expect from a wormhole is that the light that's normally hitting that area so because it creates this this uh localized area of this Wormhole throat the light that is normally hitting that area collect onto the surface it radiates outwards poof in fact I might play the other one let me see so here it is when you see the zap look for it poof we see that zap that's why I'm going to play it on my other one I think I'm going to play the highest quality

(1:48:47) one if I have it somewhere sorry I'm looking for it maybe I don't have it that's the red blue [Music] glasses oh here it is I got it okay we're good no worries we got it let's do okay so here's this one is a a version that somebody seem to have tracked down that they say is higher quality than the other ones also there's all these different qualities of these videos too which seems interesting I'm going to skip ahead to this part now look at that look at that zap accurate illumination in three

(1:49:38) dimensions can I catch it there it is so look at this zap here it's radiating photons outward from that are basically have bounced off of it and we can even see it here with this extra this splotch that's over the top of it which as far as I know none of the debunkers have found any match for this thing here either um so this can explain two different aspects that we see in the videos from this paper so this paper is pretty big and there's probably some other stuff that I've maybe overlooked regarding this I

(1:50:11) hope not but um so if you guys find anything else as well in this paper feel free to let me know and we can review them again tomorrow um but I think that's most of it and then yeah so the conclusion is basically like we need to have this in order to get faster than light travel we can't depend upon stuff that's going slower than that uh we need comprehensive

quantum gravity Theory uh in order for a lot of this to make sense but again I think this this is kind of goes along with what I've been saying

(1:50:39) for NE uh the unification field Theory okay so let's just read the summary oh boy that's a lot okay we need negative energy in the lab we can already make small amounts of negative energy in the lab yet we do not know if we can access larger amount squeeze Quantum vacuum generators U so that's the Casmir effect Casmir effect listed again moving mirrors um yeah I'm going to skip that one dra field States superposition of two single particle electron States or the superposition of multi-electron particle

(1:51:20) States this is a a Nas naskan nent uh topic of study in Quantum field Theory however mankind already possesses a great deal of Technology that's dedicated to the manipulation and storage of electrons and positrons Via State condensed matter devices and particle accelerators uh Quantum coherence effects other types of quantum coherence effects not already identified or invented should be theoretically developed and explored for the possibility of finding new free field or interacting field configurations that

(1:51:50) produce significant magnitude of negative energy which could wow could be produced by technical means so Quantum coherence literally allows us to produce negative energy well there you go chat Kaboom I didn't even see this one holy crap guys locked Martin's patent coherent matter wave beam chat coherent matter wave beam this is how they're producing the negative energy so potentially they this is why we've always been talking about this is why the physicists and scientists are telling us that we need

(1:52:21) coherent electrons we need a coherent matter wave beam this is what uh Bob Greener was talking about John archal Wheeler this is what we need in order to produce the effects that we need right there Quantum coherent effects uh trapping and storing negative energy I'm not sure that we're necessarily storing negative energy but that's interesting to consider and then constructing a traversible wormhole in the lab uh Einstein's theory of general relativity does not provide instructions on how to construct reversible

(1:52:51) Wormhole uh the field equation only provides a prescription for designating a special localized SpaceTime geometry and calculating the physical characteristics of the source matter that is required to induce it if one zaps a region of SpaceTime with a beam of negative energy will its traversible Wormhole appear one doesn't know maybe one has to poke a hole in space with an intense beam of negative energy or maybe we have to use the negative energy to inflate the quantum SpaceTime fluctuation theoretical studies need to

(1:53:22) be implemented to address this question and the author believes that empirical studies will be necessary to find the answer we we have the answer we are we are staring at it so the benefit of knowing the MH370 videos are real with all the real world data that backs them up as being real and being the real story of the the plane is that we can look at this and we can realize that they are inflating it that's what they're doing here is they are actually inflating uh what does it say uh yeah NE negative energy to inflate the

(1:53:55) quantum SpaceTime fluctuation so that's why they're amplifying their energy here is they're making their hole and they're ripping that hole open here and then this is the part where you need to have the direction of travel so this is the part where you need the rubber band you need the fourth orb for the quantum entanglement so that you can snapshot it to the location that you want it to go to so pretty awesome um I'd say that we found what four or five things in here that would indicate

(1:54:25) that the videos are real consistent with this paper that we just read so this was a really good find um I like the I think the other one was even better the warp drive ones because I mean it really addressed it but this one was also pretty good so any last questions uh before we close out for tonight because otherwise I'm going to go to sleep and get ready for the The Glenn Beck interview tomorrow um yeah I think that's pretty good let me take a quick look at my Twitter and see if there was anything else I wanted

(1:54:54) to post oh I guess I'll I'll show you guys real quick as well the um let's see what we got here 55,000 views on that already oh yeah okay so this other one as well here um it's got 400,000 views already okay so this is the movement of the orbs as well which which Guys somebody faked the movement of the orbs where they're getting into a sine wave pattern after 3 seconds and then they're in a perfect sine wave pattern after that here it is again look at this what the hell I mean to me this is like too

(1:55:39) perfect to potentially um have been some kind of hoaxer that they set this up this is a lot of crazy details man and it just happens to match a three-wave phase pattern in electrical engineering as well creating a zero point in the middle of  $120^\circ$  and then check out this comment so I want to point out the context for this comment uh how did I find this oh yeah I went back to the old [Reddit](#) thread to pull these images where I pulled these images from right here for these so I have everything saved and the person

(1:56:13) that has like deleted their account that posted this their their account is deleted now which is weird um but I saw this comment and this comment back when this comment was posted n months ago this was like early August I thought this was an Annihilation event I thought the people talking about wormholes and teleportation were out of their minds I didn't think it was possible I thought that the uh the plane got zapped that's actually what I thought I thought the plane got zapped and that the plane was

(1:56:44) annihilated so I wasn't even giving credit to this stuff so I read it again and I went holy smokes this person like had it figured out so it says my first thought is well I oops I know a three-phase power uh three-phase Power very well and the three orbs seem to form a perfect synchronous motion forming the 120 degree out of phase s cosine waves at op neatly graft out if I may do some wild speculation the Wormhole generator may require this specific motion from these craft where they act as poles of a hypothetical

(1:57:17) motor or generator and generate an EMF field between that's an electromag field between them and we know that's what they're doing because when they're converging they're

increasing the electromagnetic uh Force another thing to notice is the rotation of the orbs is clockwise if you're looking at it from the front of the plane on now this is the part where normally when I think about it I'm thinking about from the back of the plane so that's why I'm saying they're they're counterclockwise

(1:57:41) but if you're looking at from the front of the plane then it's clockwise and this is the spice this is interesting because the EMF generated by the generator is a vector quantity and is generated in the direction perpendicular to the plane of rotation and is given by the right hand rule we didn't even know about the right hand rule guys the right hand rule so he's saying if it's rotating that way then the right hand rule is going to indicate that the plane's going to go backwards that's

(1:58:10) going to be the vector so if we use this rule on the rotation of the orbs around the plane then the direction of the resulting EMF would be backwards towards the tail of the plane this is interesting to me because we saw a little while ago that the Wormhole opens up behind the plane and the plane is pulled backwards into it this would make sense if whatever phenomenon these orbs are using to create the Wormhole had a basis in electromagnetism okay chat this is the part where these videos are real chat there is no such thing as hoax

(1:58:45) videos that have this much detail where literal people who are electrical engineers and experts are going yeah that's all 100% accurate exactly how I would expect it to play out in the real world there's no such thing as that when you see a random uh Flying Saucer video whatever they're not consistent like there's not people writing up uh elaborate posts and comments about yes I'm a electrical expert and this is exactly what I would see based on on these graphs of the of the orbs movements and then here's the

(1:59:14) video of it getting suck pack now I don't know if people are confused about this this is literally just somebody overlaying the the two frames on top of one another so that we can see that clearly like right here it got pulled backwards between this Frame and the next frame now this isn't a huge distance but you can clearly see that it got pulled backwards so once again this shows right hand rule Vector potential based on the rotation of the orbs is going to pull this thing backwards and then what's

(1:59:43) backwards oh well if we generally look at the direction of travel from the plane which we can figure out from the coordinates we can figure out the vector of the plane from the coordinates we can tell it's going to the east because of the coordinate shifts that means the plan's going over to the West just so happens that's the exact place we need the plane to go that's where the B7 fire suppression device washes up this is where a tiny Island over here 20 Islanders see the plane it was big and making a lot of

(2:00:14) noise he saw the aircraft pass overhead he pointed to where it was coming from West Northwest and then they say was headed south towards Diego Garcia military base one of these people also this person saw some red under the port holes and some red around the door somebody else saw the red and blue stripe of Malaysian Airlines on it as well that's how low it

was they could actually make out the color of the plane so guys this matches up with more evidence than anything else before like how were people actually seeing the

(2:00:48) plane consistent where we think the plane teleported if the videos are fake um pretty wild man yeah for hey Emily nice to see you the bunkers hate this one huge graph yeah I mean that graph right there is kind of the death blow that this stuff is just 100% consistent with exactly what we would expect from physics and electrical engineering yeah we're on it man like this thing is these are videos are not going away there is way way way too much evidence that these videos are real and your counter argu is well I just think

(2:01:21) it's video game effects BR just get the F out of here just go somewhere else people that don't want to come to Star Trek don't have to come with us but these are the and I'm I'm just going to read my post now to close out with this because man now you guys see why like and and the crazy part is this is like the stuff that I people have talked to me and told me about like I've got my own sources and stuff as well a lot of them you've kind of already seen on my hardre podcast out there um but even

(2:01:49) without those people I'd still think this is real even without the random people coming to my DMs being like yeah that's real like you need to not stop looking into this or you need to be careful because you're looking into this um you know even without that I'd still be convinced because that's just how crazy powerful the evidence is um but then I have other people out there telling me like Yep this has been suppressed and like you know some people want it to come out some people don't

(2:02:11) want it to come out and I'm like oh boy this is this is dark bro so this is the statement that I want to make here wait let me switch this over oh what the go cool the greatest trick that de ever okay let's try this again the greatest trick the devil ever God chat struggling chat the greatest trick the devil ever pulled was convincing the world he didn't exist we are exposing the most top secret military super weapons on the face of the planet science and mainstream Academia will not catch up for years if not

(2:02:51) decades Hypersonic weapons I have dubbed them super harmonic conductive orbs super conductive harmonic orbs I have dubbed them super conductive harmonic orbs I am every gatekeeper's worst nightmare a normal guy who is able to piece together publicly available information to expose technology that has been intentionally suppressed from the public that's the only way this has been suppressed the largest conspiracy in history this leads to free energy that's the explanation for all of this now months ago I said we would learn and

(2:03:31) show how the science works and we have already begun that process we are well along the way we can Now understand the defense intelligence agency papers that were written by physicists and Engineers who work directly on special access programs people like Hal POF Eric Davis Etc they explain warp drive and traversible wormhole they're from 2010 four years before the plane disappeared science like this is not an invention it is a discovery and that means it cannot be hidden forever eventually this will become self-evident

(2:04:07) even to mainstream Academia that we can warp SpaceTime nothing on this planet is going to stop us from exposing the **truth** of the MH370 videos and the technology that comes with them for those who want to live in the past go ahead no one's going to make you come with us but for those who want to live in a new technological future join us this is m370x warp speed engage that's what we're looking at here chat that's it right there that's the future we're staring at unification of general relativity and

(2:04:49) Quantum field mechanics hard to believe absolutely I even have a hard time believing it sometimes um but that's what it is we are MH370 X guys moment of silence for the families um you know we have a lot of fun talking about this stuff but we have to remember that 239 people were either killed or kidnapped and we had the United States government and sub other governments cover it up for the I don't know whatever reasons they are that we're not ready for it or for the greater good or for our own good or

(2:05:32) whatever uh but there are family members that are out there that they're never going to get the **truth** um because it implicates the United States government it does make me wonder if the United States government and other governments didn't pay them knowing that they did this to keep them quiet to me that's the only logical explanation um because uh you know at at this point uh why would they have not have reached out even with an incredible story like this why would they have not reached out uh I think that a lot of them have

(2:06:04) been silenced with money so um do we think they're alive I I do not I do not think they're alive but I think it's possible some are alive so moment of silence for them and that's all for tonight guys thank you very much check out the glenbeck interview I will post the emerald interview that I did earlier today and uh it'll be 10 a.m.

(2:06:40) eastern time tomorrow make sure you're checking out Glen backck thing I'll probably post a link uh tomorrow morning so that you guys can and check it out the exact time and watch it if you want hopefully we can turn Glenn backck because if we can convince Glenn back that at a minimum the United States government knows what happens this plane I think we can escalate this case to a point where we can get mainstream media and other major podcasters to take it more seriously and if we get to that point we can force United States government to issue a

(2:07:06) statement on it guys I love you guys you're the best we have the best community out there period uh no one can stop us let's do this thing peace MH370 [Music] mm h37 until until you do some research don't talk to me I'm going to find the **truth** while I sit this Mar your opinion it means qu to me it's m m m m m h37 not all heroes were capes I wear glasses to see I'm going to find the **truth** while I S this Mar the trolls hatte see me [Music] succeed but guess what m m h [Music]

(2:08:32) m370 not all heroes gles to see I'm going to find the **truth** while I sit this Martin your opinion it me to me your opinion and then and H7 now hero K glasses to see I'm going to find the **truth** why I this party trolls see me [Music]

## Glenn Beck Debate Discussion & Preparation - YouTube

<https://www.youtube.com/watch?v=hwxsgdIA750>

### Transcript:

(00:06) [Music] M h37 until you do some research don't talk to me I'm going to find the **truth** while I this Mar your opinion it means to me it's m m m h37 not all heroes my capes I wear glasses to see I'm going to find the **truth** while I this Mar the trolls hate see me [Music] succeed but guess what m m [Music]

(01:13) s y m m370 not all heroes gles to see I'm going to find the **truth** while I this Mar your opinion it means to me your opinion h37 now hero keeps our glasses to see I'm going to find the **truth** why I this party trolls gu world where rich douchebags like kim.com take advantage of all the rest of us and they know this shit's real and they have no problem lying to the world about it

(02:22) us came it all the way a good boy get hisc # why do you blow [Music] so. what is hiding in your.com St from Hollywood inside of training and embezzlement Ste now he's on Twitter calling **scam** with the only thing the FBI left but when the call he sh it te now he's calling other people SC out ofar he got empty pockets and hard from the USA the government came and took it all away why do you go so

(03:32) G what is hiding in [Applause] your G.C store from Hollywood inside of trading in Ste now he's on for the Callas with the [Music] only why you go so hard why you why you go so hard me why you so hard why you why you go so hard why you go so hard why you why you go so hard why you go so hard why you why you go so high 10 9 8 7 6 5 4 3 2

(05:54) [Music] one e e oh I'm just muted the whole time okay

(07:02) sweet we're just chilling we're just muted uh welcome everybody to the stream uh so sorry that was only probably like a minute and a half um apologies for being muted that was weird why was it muting me uh so anyway I don't know why uh if you guys want to follow there I just showed uh the guy uh I don't know how to pronounce your name pepper zogan whatever peo pgo Zen so uh thank you very much for making that meme appreciate your brother that's a good one follow him guys we'll probably be

(07:34) listening to that some more uh now uh I don't know I keep giving like the best advice to uh all these trolls and people like that that are out there and for some reason they just keep coming at me like I just keep telling them like just stop hitting yourself my followers are the best memers on the planet like you guys are I wouldn't want to go to a memor against you guys I'm glad I have you guys on my side let's put it that way I mean because that that intro is brutal on

Kim guys um and we'll talk about that in a

(08:03) little bit but I want to get straight uh to thanking the people that got here early on uh Randy sham 6 s sassy I appreciate you mystical Wonderland Hasty snack Nathanastro esoteric gold uh fancy Flint Chris D Seward uh Nikki I'm just going up the list John nice to see you man thank you for the sound alert appreciate you uh Greg Cole Scout Nate UFO nut casual links oh thank you very much appreciate that super sticker it's nice of you uh Krypto Arwin Ian uh Vic elor Edgar uh Jamies who else do I got up here CB s25 some of you guys

(08:48) thank for jumping in early I appreciate you man I actually there's so many of you guys in here I can't even get to everybody so um thank you everybody else who jumped on early for the stream I hope you enjoyed our intro music we'll play that again in a little bit so straight off the bat um I got a message from somebody connected with Glenn Beck and they want to do they're they're considering doing a debate and the reason why I'm even bringing it up is because uh they like they're not going

(09:15) to take it seriously probably or they may try to you know they want to like try to **debunk** it or something like that and I said that's totally fine uh in fact I said that not only is that totally fine as long as you I appreciate that you would tell me up front because most of these people just try to Ambush me as long as it's not Ambush it's no problem I even said not only is it okay not only will I debate Glenn Beck but I will actually give him a handicap because he's going to need it I said

(09:39) I'll tell you what my first three questions are you can work with that to uh you know do do your best honestly and those three questions are uh what do you think happened to the plane number one number two what evidence do you have to support what you think happened to the plane and then number three is do you think the United States government was tracking a rogue triple seven uh for eight hours and in fact I probably just change number three to how does a plane crash without leaving a debris field in fact I to write that down right

(10:14) now how does a plane crash without leaving a debris field it's a pretty simple one um and here's the other thing about it so the reason why I'm excited for a debate with Glenn Beck is because I'm actually not somebody to judge Glenn Beck Glenn Beck's somebody that a lot of people think that he did some sketchy stuff in the past with his reporting and weren't like big fans of him in general hyper conservative uh and I'm actually not somebody that's judged him in any of the ways that the media has I think the

(10:43) media came after him and tried to crucify him so I would love to have a respectful debate about the MH370 incident and turn and the videos uh I think that Glenn Beck would be great because he's somebody that is pretty high-profile and if my options if I'm going to do a debate about the plane that I don't think it gets any better than that uh I don't want to debate **Mick** West he's an idiot his his cultists are morons debating any of them just elevates them um like the ones that are attacking me

(11:15) all Twitter and what have you you guys have probably seen them um there's no point debating in them first of all they're too stupid second of all like I don't want to elevate any of them it's better to be going after somebody who's higher up uh and then even the experts like the MH370 experts like most of them are kind of CI shoes as well like you guys saw that Larry Vance guy on uh Ross cart's reality check like that guy's not going to last even five minutes with me I mean he this guy just thinks

(11:40) he divined exactly what happened to the plane based on a a ripped flapper on um so uh you know I think that that and I don't want to debate somebody like Florence dangi because I respect her too much so the next best thing is we just get to a biggest audience and even if he doesn't take it seriously um you know I I make it sort serious you know I have serious questions and that way I think that even if a lot of people don't believe it because I went through and I looked at uh the um some of the comments

(12:09) on the uh Pat Unleashed which is the The Blaze which is the same channel that Glenn Becks on a lot of people really skeptical you know and a lot of people too just kind of rude uh but you got to realize that there's going to be a significant percentage of people that are never going to believe the MH370 videos to be real um and then while I'm talking about it I'm going to show it what the is that Euros what is that is that a currency that's a lot of money wow thank you very much um even though

(12:36) I'm you know just by having super Chats on like people are criticizing me saying that I'm uh grifting people just because I have super Chats on um so I'm gonna say my thing again which is that I if you need your money please don't donate to me uh I appreciate it um but at the moment it's like I don't really need you know donations uh you know but of course if you if you want to donate and help out I appreciate it and I will put it to a good use to trying to get the **truth** for these videos and the families and um

(13:05) you know uh the technology you know so yeah thank you very much I think it's a it's a good time to be alive and then the other thing too is like you may say well by talking and here's this is for Glenn Beck so if he wants to study up on the videos right here we're going to show them while we talk about it um oh crap I just lost my train of thought um uh so yeah by talk people may say okay by talking about it like what if he cancels out okay that's fine if he's going to coward it out of it now after

(13:38) already wanting to try to make a mockery of it I think it just shows the strength of the videos because at this point I basically said go go to your homework and if he goes and does his homework and looks at this and thinks he's going to **debunk** it I can predict every single thing that he'll say um he may say he may go after like the corridor crew stuff so I'll just have every single argument ready to go against the **debunks** in fact I was already preparing on making a a **debunk** rebunk video that addresses all of the **debunks** as well um

(14:09) and then he'll probably say like we can literally predict his thoughts like I wouldn't want to embarrass him but I could tell Glenn Beck you know like and this goes for all the **debunkers**

out there as well uh you know I could say you're G to say that the ocean's really big and he'll go yeah well it is really big like uh you know John Greenwalt like that's just full NPC like just straight up this the script you were told to think and um I can also then say okay well you know it is really big but the plane ran out

(14:38) of fuel and they have these satellite pings that they claim they know exactly the arc on which it was on and we search the whole Arc so point on the map where you think the plane crashed exactly where you think that somehow we wouldn't have seen a debris field from a seven uh Triple 7 as well as that's consistent with where the debris washed up in a afca um and so like I'll just be ready to go with pretty much every counterargument for anything that Glen Beck's going to say so if he were to like you know um for lack of a better

(15:11) word like coward out uh at this point you know it would just look good for me in general so that's the reason why I'm bringing it up because I think this is also a good opportunity for the **debunkers** where the **debunkers** can go chat with Glenn Beck they can side with Glenn Beck especially the ones that are super hyper liberal that'll be really awkward for them my guesses will take this Narrative of like oh well he got something right uh but it'll be pretty funny if they want to be on his side and then

(15:38) just like completely forsake their prior programming um and then they can also feed him lines right because they'll be like hey here's these **debunk**s someone filed This Cloud picture and Glenn Beck will have no idea that I'll just be like okay yeah well I've already got the best **debunk** for that I'll just say like how long if I give you 20 minutes Glen Beck could you go find that cloud picture on the internet right now they'll be like no no chance and uh so like you know even if the **redditors** were like to try to help him

(16:06) out or whatever like that'll just trap him in just getting completely destroyed in debate and then if he you know responds and goes down to like what they do which is just becomes like personal attacks or you you must be crazy to think that this is possible then I just start talking about the science um so then I can just literally just say yeah we have an ether there's an extra Dimensions what we need to be able to explain dark energy and it's kind of silly that we didn't already figure it out because Tesla had figured

(16:31) it out 100 years ago uh cloa Klein Theory back in 1919 had it figured out as well it's not like I'm discovering anything new and you know if he were to even bring physicists on board or even study the science which I doubt but um he would find out that that all checks out so that's and then we could even talk about like Maxwell and stuff like that so um yeah I think I'm ready for the Glen back debate guys what do you guys think oh definitely uh on the topic or to platform you no he he wants I I think I

(17:08) mean he can do whatever he wants I'm not I'm not the uh Arbiter of What Glenn Beck does also uh Wang Wang thank you very much Glenn Beck is usually open-minded just remember to treat people how you would want to be treated it broke my heart to see D J Dory uh Jay Dory treat you with such disdain um yeah no I would I'm not going to come at him so and

my thing too like I'm I'm literally just streaming what my strategy is right now this is my honest strategy I'm literally telling him the

(17:32) answers to the first few questions of the debate right now live on stream um is I always just fight to the level of the opponent you know like if uh you know if he wants to get personal or whatever we can do that too like I'll look up some stuff about him as well just to have like you know if he wants to make it personal I'll be able to just kind of counter that as well um which I don't think will be hard for for Glenn Beck no no disrespect I think he's a good guy uh but I don't think he'll do

(17:59) that hopefully that's now he takes it my guess is that the way most people it's just ridicule right it's ridicule they they want to say like oh this is just so silly you must be crazy to believe this is possible um but they don't have active duty Navy Engineers uh in their corner or uh DOD contractors that work at private Labs um and that's the difference between people that want to ridicule it and the people that actually know how the science works and we have the scientific papers to go along with it as well

(18:30) oh yeah no I'm not backing down I was never backing down I wasn't backing down even for one minute uh I would that this is honestly me doing this stream about it is a challenge to him now so it's it's factual that his people were interested in setting up a debate and uh I'm not running away from it I think that's going to be a great opportunity to get the information out there guys so part of what I want to do today is go over that uh I also want to give some other kind of uh you know

(18:59) break the fourth wall updates regarding what I've been kind of working on um and what's coming out and then we are going to uh after that dig into a little bit of the science and and excuse me probably update the evidence list I think we're going to update the evidence list a little bit and just make sure that it's up to date so that if people want to look at it that they can get uh the most accurate information because we've had a lot of stuff happened recently so this is mostly going to be

(19:25) an MH370 stream and then we might uh do a little bit of science as well later on um because if you guys saw from my Twitter uh I did find or somebody sent me and I apologize if I don't credit you when you send me like links and stuff like that I just I get way too many DMS and links um but if you want you know credit you can reply in there and say hey I found this or whatever um I appreciate it it was an a tip document that has a bunch of scientific papers in it and let me just pull it up actually here it is

(20:00) this is easier to show sometimes chat okay there we go uh so this was in uh some kind of atip document which I didn't I don't really know or care about what a tip's all about but this does have a list of 25 scientific papers so the first thing I noticed was the warp drive dark energy and manipulation of extra Dimensions which this paper we reviewed on Monday uh and also last week as well with because that's probably the Holy Grail in all of this like that paper basically argues for these videos being real um

(20:33) pretty incredible I didn't think that we would find something like that that was so on point it even actually talks about using a laser to create like a gravitational well uh they say dark energy I called it dark energy laser people might you know rip me on that a little bit but that's fine um Dark Energy laser sounds badass and really we're just talking about a situation where the lasers creating gravity well in front of it uh Wang Wang thank you for the donation have you spoken to talk Carlson um no I've not

(21:00) spoken Tucker Carlson uh but this I think if we could show up for the Glenn Beck debate um and and have a decent number of people still think that this is possible um then I think that would open the door to someone like Tucker Carlson and I also think that Joe Rogan would probably think again as well um he's been doing a lot of interviews Joe Rogan has with people that are uh you know on a lot of the same topics uh especially when it comes to like kind of what the technology quantum mechanics type stuff old history so I I

(21:35) definitely think that Joe Rogan's got in the back of his mind and if not he should which is like wait do we have how crazy is the technology that's hidden like can we actually like teleport an object warp an object um because it actually does if he thinks about it and if everybody else thinks about it out there it explains ufology also so this Segways into uh let me actually finish looking or showing that for you guys okay so oh boy I need to fix some of these up okay so this document here the first page of this document has

(22:11) a bunch of other papers that I I highlighted the ones I thought were interesting the other ones are interesting too but you know Advanced space propulsion based in a vacuum Okay the reason why that's interesting is got how P off so probably going to take a look at that one I don't think I've read that one yet it might be on like one of my links in the background here traversal ible wormholes Stargates and negative energy now this is the one by Eric Davis that a lot of people are familiar with and it's got like the picture of

(22:38) the portal with the dinosaur I think uh John Oliver uh guy's an idiot I think he made fun of uh that one which kind of shows that these people like generally still don't take this stuff seriously uh what I'm saying is you probably should start taking it very seriously uh the next one high frequency gravitational Wave Communications now the reversible wormholes Stargate one uh that's different than the teleportation one so we probably will take another look at that one high frequency gravitational Wave

(23:06) Communications by Bob Baker Robert Baker is also known as Bob Baker this guy is basically a legend when it comes to government Engineers as well like if you're on this list like people are probably going to remember you in the future because these people are the people who are like actually putting the science out there and the whole world's just straight up ignoring it um because these people are like literally work with the government they're the scientists who are in the know the only question is which one of them are lying

(23:33) about it and which other ones are like don't want to talk about it because they have no incentive to because they're getting paid millions of dollars um and it would not surprise me at

all if these people are getting paid literally millions of dollars uh so who else then the next one we have is role of superconductors in Gravity Research so that's something we're probably going to get to at the end here as well so we might even start with that one I'm just going to write this down uh and now I don't remember I don't

(24:00) recognize George Hathaway but I'm guessing I'm going to learn his name pretty quick because this is very uh consistent with I'm struggling to talk tonight uh the Ning Lee as well what can we do to help you we got your back the only thing you can do to help me is just I don't know keep sharing the content talking about it you know making sure that the word gets out um quick side note uh so if you are uh one of these people a lot of people are out there they want to share the information with people

(24:30) especially out there who are you know talking to friends and family just be cautious about it like yes you should and want talk about this type of stuff but you got to ease people into it there's a real ontological shock where people are immediately going to just dismiss you because it can't possibly be real from multiple aspects for number one the idea that the government would steal an airplane covered up lie to the world that's already too much for a lot of people and then that's before we even

(24:58) get to the orbs that are floating creating their own gravity wells in front of them and literally warping a plane uh consistent with Tesla being right because you get to that part and now people are like wait no I was lied to by school like our government is potentially even writing the textbooks to lie to us uh answer is yes so if you're talking to people out there ease them into the idea uh don't just drop it on them and if they are against it don't be argumentative about it is like the situation here is we're trying to raise

(25:25) people's Collective conscious and we need to raise it to a point where they can realize this stuff is real I think this is exactly what a lot of the control disclosure is trying to do so uh thanks everybody out there just remember that please appreciate it now back to the paper here as well the high frequency gravitational Wave Communications is also that might be faster than like communication and that's very similar to high frequency gravitational wave generator that we've seen from Salvador Pas which has got

(25:55) millions of views on social media so we're probably going to take a look at that as well um and the role of superconductors this is where we talk about ning Lee and pinov oh I think I said his name correctly uh as well as potentially people like Amy Eskridge where we try to figure out like okay did these people figure out at least one way of anti-gravity and which one is the one that will kind of allow us to uh get those energy densities that we're trying to get in order for the medium SpaceTime to get nonlinear which is what we see

(26:27) when we break the swinger limit um so another thing I want to say right after we look at this here dudes anti-gravity for Aerospace applications that's another one by Eric Davis so that one my guess is we're gonna we're going to learn the applications of some of this that he's been talking about and we should take that very seriously I think that Eric Davis definitely knows

what's going on um but he uh I think he's just lying about it sorry I'm being kind of distracted okay so the next thing I want

(26:58) to explain is is science related so we have proposed the idea of The Ether which has already been out there uh I'm going to just repeat that sorry so the next thing I want to talk about is something science related here we've already proposed the idea of The Ether we have seen it in one of those papers that we were just looking at about Dark Energy uh and uh warp warp drive things like that that it's potentially a source of unlimited negative energy so the idea here is if we rip through the ether that or through

(27:27) SpaceTime we get to The Ether this is why we don't see it we don't see it all around us because it's the canvas in which our reality is painted on but if we strip that paint away we can see it but think of it like this is that it kind of is self self correcting or uh uh what's the word for it um self-organizing it's self-organizing and so when it's self-organizing what happens is the moment we rip through it it immediately comes and closes back up so we have to try to keep it open this is the idea of

(27:58) Wormhole and that negative energy so we are trying to achieve a point where we can hit it and we can open it up and now we have unlimited speed it's like you're playing a game and you've got all of a sudden you get the super speed boost and then you super speed and now you're just immediately somewhere else so we only need to keep it open for a little short period of time and we need to put a thin bubble around it it's like when you blow a bubble the bubble's not really thick the bubble's really thin and that

(28:22) reduces the amount of energy that we need in order for warp drive to exist okay good um now with that being said I want to uh talk about some other stuff that I've been working on so first thing is uh Christian of the big things I think that should be dropping already or right now if not so if somebody in there can check out Christian of the big things uh big things podcast and tell me if that interview already dropped because if it did I want to go ahead and I want to post that and if you guys have any good

(28:54) clips from it uh let me know and I will uh give me the time stamps and I'll post it on social media uh I think it was a really good conversation I think it was about an hour maybe a little bit more so I actually addressed like all the **debunks** in the uh Christian uh big things um interview uh that's one of the things he asked about is you know whether or not people think it's fake what have you so I believe I addressed all of them there um at this point just to clear it up for people let's address

(29:21) the **debunks** and I'm not even going to go through all of them I'm just going to explain high level here so first the cloud **debunk** uh in order for you to even begin to think the cloud **debunk** is legitimate you have to believe that a uh brand new **Reddit** account uh within 20 minutes was able to look through the millions of cloud pictures on the internet and somehow identify the cloud picture that after you stretch the clouds realign the clouds that they and Stitch them together that it fits in the MH370 video so that's the first hurdle

(29:56) after you get through the first hurdle then you have to explain how somebody used a 2d static Cloud picture to create 3D uh evolving and moving clouds with a 3D lighting uh on it there was a **redditor** I think yesterday that it almost got sad where they were trying to actually literally figure out how to do the lighting in After Effects in a 2d software in order to try to get accurate 3D lighting um it just goes to show some people you know they just can't accept basic facts so and then after that you have to figure

(30:29) out in the cloud picture how we have two different videos from two completely different perspectives so we have one like this and we have one like this and you can see the same clouds when you line them up so we're not looking at a 2d Cloud picture in any of this you need a full 3d rendered environment for that that's a lot of work for 2014 for some random board person uh so that's your Cloud **debunk** and then after that you have to deal with the VFX **debunk** okay well the VFX **debunk** is one of the easiest ones out there um three **debunks**

(30:57) that are out there all come from **Mick West** **Mick** West came up with the Pyromania VFX **debunk** he's the first one to post it April 19th after a one-day old reddit account finds it um and he's the one who has recently admitted that it actually does not match the argument that they are making that they are asserting is that somebody modified it to make it look like an endothermic event changed up all the frames touched up and pixelated every pixel to make it match to what we see there and we know that this is true because we found this

(31:28) in four major media and the asset has never been adjusted they've never even changed the color on the asset it's always been an explosion it's not even the same kind of event uh so if they believe that somebody modified it the VFX then why has nobody produced a list of steps to make it into a 100% match I mean supposedly if some lazy person was just switching around saying oh let's change this to an endothermic event you'd be able to easily figure out the the steps that they did in order to turn it into

(31:58) that right you have the software so go ahead and make a list of the steps let us know so that we can recreate it to make it into a 100% match pixel perfect match should be simple um and then the last **debunk** is the jittery contrails **debunk** now the jittery contrails **debunk** is are I mean that's probably the weakest one out of all of them and again comes from **Mick West** again uh he was told by experts that that's not how that the way that looks is normal and he completely ignored them somebody that is literally either an

(32:27) engineer a pilot or somebody that worked on uh those cameras uh and then uh you know he just ignored that person so then he kept pushing this idea like we had already told him months and months and months ago back in November that it was a situation where the uh the background the the smoke trails are very are blue in the in the video and it that it was the stabilization software was actually connecting it to the background and that's why when he stabilized it it uh falsely made it look like the smoke Trails were not lined up with a plane

(32:56) they are and to prove that somebody actually turned it into black and white I think it was kopis Michael turned it into black and white and then showed and did the stabilization software

and showed the that the jitteriness completely went away um so that proved 100% no doubt whatsoever uh no argument honestly that the Jitter contrails **debunk** was falsified by **MC West** completely falsified so that makes him a liar objectively speaking um people should use that against him because you shouldn't be falsifying fake **debunks**

(33:27) things and claiming that's 100% proof and that that's all you need which he did multiple times we have on record saying that um and then especially not apologizing afterwards uh and admitting you were wrong like that's just straight up [ ] Behavior like anybody who looks up to **Mick** West like you have the worst hero ever um he's literally probably the number one grifter on the entire planet which is ironic because people call me a grifter but and he has a literal Cults of weirdo like mentally ill people that

(33:54) follow him around um and he so he's fabricated multiple fake **debunks** and why is he connected to two like directly connected to two fake **debunks** the Pyromania VFX and he's also connected to the Jerry contrails and the Pyromania one was actually used uh to stop the conversation on **Reddit** now the last part about it as well is that um he's actually connected to the Philip wood **debunk** as well do you guys know that the Philip wood exit picture that's black **Mick** West is the one that **debunked** that picture that's not even a UFO thing

(34:36) he also **debunked** that a metabunk I I found his post I have his records guys I always have the receipts by the way um and he made seven points against it saying that it wasn't consistent with a Picasso iPhone 5 picture and then I found uh a technical analysis that actually proves that it is 100% consistent with a Picasso iPhone picture you can find this on my Twitter uh if you guys go and search back for uh what would be the best search term probably Philip wood if you search for Philip wood uh in my posts you will find

(35:07) this back from probably September or October where I found that analysis and uh so Phil so **Mick** West might have actually covered up a literal kidnapping imagine like you've been kidnapped and you sent a message out saying help me help me help me to the world and then somebody **debunks** you your thing say no that wasn't a real person ignore that and and lies about it and all he was left with in his argument was that it's easy to modify exif data because the Philip wood picture has coordinates in it that indicate Diego Garcia

(35:39) military base spicy guys how is it that one guy has got three **debunks** related to a missing plane um to me that's extremely suspicious uh I don't know about you guys the same guy has three different **debunks** related to a missing in plane one doesn't have anything to do with the videos at all just completely incidentally connected to MH370 where he's potentially covering up a criminal activity pretty scary man and that was from years ago years ago well before all this **Mick** West has been connected to

(36:13) MH370 for years scary stuff man um so the other thing I want to address here as well is that **Mick** West is also connected to all the **redditors** that are out there um I'm going to shift gears for one second we'll go back to actually is that I also talked with Ian Carol we had an awesome conversation Ian Carol and I did uh yesterday was it yeah yesterday so that was the

reason why I wasn't streaming I was chatting with him uh I think that is going to be awesome I didn't know he did long form content so wherever we post that long

(36:44) form content just like make that blow up like we had such an awesome conversation about a little bit about the pl the the videos but mostly about like the UFO disclosure and what's going on with UFO disclosure I reviewed the Kona Blue document we looked at that scientific paper and actually Ian had read the scientific paper the the um War warp drives Dark Energy whatever it is um and he had some pretty good insightful comments on it I I was extremely impressed by him I'm Ian Ian Carroll is legit guys uh and

(37:15) then at the end we talked a little bit about what's the nature of the UFO phenomenon so you know is it aliens what do we think US government technology that kind of stuff I think there's going to be a lot of good shorts and clips that people can make from it a lot of really good takes on both sides so make sure you guys check that out guys um what was I gonna say so yeah the other thing I was going to say is that he had this uh software that he uses to take notes which I might end up using I think it's called

(37:49) obsidian um because one of the things that lets you do is it lets you put these pictures all over it and you can kind of like build like if you were in a crime scene you can build like who's connected to who so Ian had this one spoiler alert for the uh interview whenever it drops he had this one that said locked Martin in the middle and it had all the boards of directors on locked Martin and who's on the board of directors **General Joseph F Dunford** so Joseph F **Dunford** is on the board of lock Martin and Ian had

(38:20) been looking at him because he's in a group of like four or five people who are like either generals or former military that are all board of directors at locki Martin and they're in some kind of like special intel committee or something like that uh with the company and I was like holy crap Ian like we better say we won't kill ourselves right now uh and we really did have to say that because uh this these are people you don't want to mess with like we're definitely getting ourselves into a lot

(38:49) of heat right now um this technology being real and them covering it up which locky Martin definitely has covered it up north of Grumman uh all these defense contractors are covering this up I would it wouldn't surprise me if they all know like that's how Wild this is and uh yeah when you're when you're disclosing This and like the general might have had his nephew like if the general I don't even know for a fact the general has a nephew so if the general turns out **General Joseph F Dunford** that he actually has a

(39:18) nephew then I'd say it's like a 99.9% chance that nephew showed the general the MH370 videos and that that General has seen the MH 370 videos um so and that he didn't laugh at them like a **debunker** did so that's pretty spicy chat if anyone if anything happens to me you should definitely go have a chat with **General Joseph F Dunford** and uh ask him about his his nephew okay oh boy so much drama okay more drama uh and then we'll get to some fun stuff here uh so kim.

(40:04) COV gov sorry formerly known as kim.com uh I don't know what this guy's play is here but after he got embarrassed on Monday he just went completely dark stop posting on Twitter uh somebody set up a three-way DM uh conversation with us to try to smooth things over and I basically just told him to kick rocks I mean I don't know what this guy's play is but the play that he should be making is get the hell out of here and I know people think that we need allies uh in the MH370 videos we don't we really don't that's the **truth**

(40:38) we don't really need big allies we don't need influencers we just need people to look at the videos that's it oh we just need people to look at the videos and uh it doesn't matter like you know uh what a lot of these like big name influencer people are we already have so much engagement as well that you know this is not a race for us so people that are trying to rushes in this stuff um you no no thanks like you you guys heard the ontological shock I talked about it what would talk about earlier uh in terms of

(41:06) how this impacts people so it's not the kind of thing that we're trying to immediately wake everybody up but we are throwing a wrench in this slow disclosure acclamation process that's out there uh we're trying to make sure that people realize that you know we're going to rip the bandaid off as fast as we want to and get this information technology to the people as fast as possible um but kim.

(41:28) com apparently has connected with the **redd**itors um I I couldn't believe it but there's one especially and I and I mean this literally uh mentally needs actual psych psych psychiatric treatment uh person who's been coming at me on Twitter and uh I forget what his name is exactly I think it's t Powell uh and kim.

(41:53) go apparently follows him all of a sudden this is a guy who like literally need psychological assistance and kim. gogov is cover as kim.go is uh following him now which is very unusual uh it feels like he realized that he can't get into a public Twitter beef with me so instead he's going to try to connect with these like **redd**itors and what I say is good luck man good luck bro those are the people you want to be on your side good luck my man um just like I did with the Glen Beck stuff before like I'll I'll even tell you what my strategy is ahead of

(42:24) time man that's how confident I am so uh in this case I'm gonna tell you you know go crazy best advice I could ever give kim.com kim.go whatever you want to call them at this point um is stop coming at me and don't try to help the people coming at me uh so and the reason why I say that is because kim.

(42:46) go is literally a lifelong career criminal he has uh ratted people out to the authorities multiple times uh confirmed as well as suspected um he's a guy that only cares about himself and nobody should trust anything he says the United States government is literally trying to extradite him for criminal charges uh related to his massive intellectual property theft on mega upload they actually seized his assets um and that's why he hides and lives in uh New Zealand so when I showed that video earlier that was a real raid on kim.com house in New

(43:25) Zealand they actually raided him um that's how sketchy this guy is so and I don't think people realize that so the first thing that everybody started doing because I'm an investigator the moment uh kim.go came after me is everybody started digging up his past and it turns out he's got the sketchiest past out there he's like literally **scam** people we're talking credit card **scam**ming um we're talking hacking like dude's just a total piece of [ ] um so this is why like don't come at people who are

(43:55) literally are investigators who are finding out about happening in airplanes and able to deduce like very detailed scientific physics about videos that are out there cuz it's never going to go well for you man like never going to go well for you it doesn't matter if you have a million and a half followers like you you're going to get exposed like in a horrible horrible not fun way for anybody um and and just the same way where like you're connecting with **redd**itors now like are you gonna talk to

(44:20) **Mick** West next like **Mick** West Eats vanilla ice cream you know um and then there's some these other people too they like it's not even worth mentioning them because like they're just like nobody's in the UFO community that like have failed careers and now they're just trying to they're just like I think most of it's just jealousy is that they've never had attention but um let's watch the kim.

(44:44) go thing one more time in a world where rich douchebags like kim.com take advant it was actually accidental that I played that one that wasn't even the one I was trying to play [Music] real raid on kim.com guys that's a real video If a good boy get his allow Warriors why do you glow so [Music] hard what is hiding in your.

(45:35) com stole from Hollywood inside of training and embezzlement sting now he's on Twitter calling **scam**mers with the only thing the FBI left a but when theow calling he shed it tear now he's calling other people **scam** out of fear he got empty buckets and Harding from the USA the government came and took it all away why do you [Applause] SOC what is hiding in [Applause] your sto from Hollywood inside trading in now he's on to calling Camas but the only thing bfbf left him much [Music] string why you go so hard why you why you go so [Music]

(46:41) hard why you so hard why you why you go so high why you go so hard why you why you go so hard why you why you I Kim Kim Kim don't come at me bro those those are my followers that's less than one day's work less than one day work that person might be able to make the m370 videos amazing work amazing work that's the drop the mic okay I gotta recover from that man I gotta recover from that that is just

(47:47) brutal dude you guys let's do some work okay I'm going to pull up the uh evidence review document let's go ahead and give uh Glenn Beck the **debunk**ers um a quick update now I'm not going to go through everything on this list but what I'm gonna do is I'm gonna kind of review the evidence list a little bit um maybe prune up a couple things uh hash out some of the stuff with some of our new understanding if you guys have questions in terms of stuff on the evidence list that you don't know about you want me to

(48:20) go into more depth on try to put in the chat and I'll let you know um let me see I'm going to do this I'm going to actually export this first there we go okay sweet um so I'll try to monitor that oh crap I need to uh I just screwed up chat hold on I need to have the other document up I have too many windows guys oh here it is share this real quick this is the one okay you guys can see that um and this will be good for the people who are relatively new there's a lot of people that have a lot of

(49:17) questions so let's hit up the the most common questions that people ask right away um how is this MH370 or how actually we'll just go through it here we'll just go through it it's it's not worth trying to go it that way I'm actually going to edit it over here in my my Google share drive as well that I have for you guys so if you want to follow along I'll post this link in the chat by the way you can only uh you can only check out my comments that I post if you are on YouTube so if you're watching

(49:47) over on X come over to YouTube to take a look uh at the uh comments and the evidence links and I'll throw a Discord invite out in a little bit as well also quick bit of housekeeping uh if you are dm'ing me and stuff like I can't I can't really respond to DMS anymore um really like of course if you're somebody who's doing like a podcast request or whatever you should DM me but if it's a situation where like you're just like especially like random videos and stuff like that unless it's related somehow to

(50:18) MH370 um I'm I'm probably not gonna be able to respond anymore I just got way too much unfortunately so it's not personal if you don't get a response okay um you know the requirements for the videos to understand them be real do we still need this at the top I'm not sure we even need that but for a lot of people it's just a matter of immediately understanding like how can we even understand these videos could be possibly real so the first thing is of course what the videos look like the

(50:45) first one is the 2017 DOD Navy UAP drone videos that showed this dark black and white Flier I think we know now why they only show black and white because the color ones give way more information away look at how much we were able to Ed just from the fact that it was color because it was color it showed us the endothermic event that we could see and we could make out exactly what we were seeing there so that may be one of the things where like they actually change the color for public consumption so that the the public doesn't know the

(51:12) satellite picture from Trump this showed us that we have some idea of what like a you know uh technically they're color but they're like a washed color which I think is like a like maybe like a false color Flier for or false color IR kind of color picture but that's very similar to the Trump image that's out there maybe I need to post a link to the Trump image I wonder if I should just add like straight up images to this document not sure um the advanced physical theories physics uh  $E = mc^2$  so if we ever

(51:50) talk about the science then we just bring up Juan Malina ER equals epr Leonard susin macroscopic Quantum coherence I think this can apply to uh essentially superconductivity is

what we're talking about there is the idea that the electrons are flowing freely the locky Martin Paton coherent matter wave beam and then Bose Einstein condensate which is really just the difference between fons and bons uh so people don't know the Trump stuff okay well maybe I'll post that that's what I was wondering if

(52:17) people don't know I might actually um just take the image and post it in the in the document go okay so this is the Trump picture is there can I really not make it bigger do we have to click on for we'll click on Forbes because my name is Forbes hopefully there was a good picture here nope nope gotta be kidding me right now man I mean is this just like even Forbes.

(53:02) com is just like looking like garbage right now okay okay I'm just going to copy this picture and pull it up somewhere else because this is ridiculous man there we go this right here so this picture here is from USA 2 29 or 224 sorry and this one here you can see it has the same type of angle now the benefit of this picture here is that you've got this shadow so they were able to figure out where the sun was and this was able to help them determine exactly where the satellite would need to be to get this

(53:43) shot now we don't see video here but the video part is the part that makes you wonder like okay you know how why do we not have video capabilities you would think we must have video satellite capabilities the moment you think about it so this is the part where this was one the first clue about the ciber system uh and there might be also a Navy system as well so we might not even be 100% locked into the cbers one we found out the naval ocean surveillance satellite has its own constellation and maybe it's integrated with cbers maybe

(54:11) not uh but the nr22 in the bottom left is a good indication that uh uh that what we're looking at is uh the cber system I'm actually am going to post the Trump picture in there hold on there we go perfect okay so I posted that on the evidence list I think I'm going to add some of this stuff in there lk99 the emergence of super conductivity uh room temperature super conductivity I don't think we necessarily need uh oh crap super conductivity any or um room temperature super conductivity at least from a meta

(54:51) material we don't really need it from a meta material anymore chat but you know what I'm just going to share the other one this is this is so annoying I don't think I'm worried about anything on here there you go yeah we're good okay I could add some more screenshots in here and then the last one's AI quantum computers um cloud images do not match Sky photos taking 10 minutes minutes later yeah that's probably a good one to add put it on my notes here till we get get down to that yeah if you guys find

(55:34) anything else to add you have any thoughts please put it in the chat as well I appreciate it that is really weird I think he didn't the **debunker** uh even point that out um in his own pictures and say that was something that looked weird about them make sure that you always emphasize that the cop tiger and Cobra gold had Assets in the area yeah I actually Foy them for those assets so hopefully I'll get a list of what those assets are thanks Bill appreciate you man uh pod thank you keep up the good work you will be approved

(56:11) right in the end respect from the UK yeah I appreciate that man I think so too I think so too um the part about yeah see 535 of the **debunk** yeah okay I appreciate that man thanks Eve appreciate the the tip there on that one that's a really good point why is this a shot of the monitor with the image I don't know what he's saying there okay um oh yeah I need to clip James O'Keefe as well yeah he didn't really give us much it was kind of a debate um like yeah he so we got uh you got in touch with a CIA person that says CIA runs the

(57:00) world it's not really going to move the needle we already know that unfortunately what we need is actionable information um but still good can I link the **Foya** document from Monday I don't know what the **Foya** document is for Monday uh maybe you're talking about the energy one it should be in one of my posts if you guys go back and look okay thanks Eve appreciate that so he even pointed that out that's actually a really good point that we're going to add to uh the the counter **debunk** or the rebunk appreciate it uh Phantom phone

(57:32) calls yeah that's that's included in here as well so like if we go on with Glen Beck he's gonna have to answer why 19 family phone members were uh able to call their loved ones and and signed a joint statement and that one of them proved it on TV that's a that's a pretty awkward conversation that's definitely already in here so no worries um I don't know who that is Optical physicist um okay Bruce mcab I don't know who that is people ask me to reach out to a lot of people guys I'm a really really busy guy um that's

(58:10) just the state that's just the state of it at the moment uh so you know if people are interested in the videos and want to talk to me then they can you know ping me or what have you um but otherwise I'll I'll get to people when I get to them I don't think we need to go through the evidence on the videos here we have the cop Tiger exercise likely drone deployment locations are cop tiger excises car car nicobar or Port Blair we already have that listed in here um we talk about the satellite coordinates I think all this stuff is

(58:42) still pretty up to date could be Init payload as well I think or L Lin Lin I think see I don't even know about all these like different signals intelligence uh L lint I think is another one um you know it's just using some communication to communicate with all these assets because these are drones are remote controlled very important uh old school UFO researcher I'm not I'm I'm done on the UFO Community guys I'm done with them uh no offense I mean if the guys who have been following me from the UFO

(59:18) Community I appreciate it but I don't really want to have anything to do with a lot of those people I don't think they have anything any idea what's going on okay see ride defend the veracity drone see what have these people you can't get to come to the chat edlin yeah the eyewitness reports of the plane flying low we'll get to that I'm going to skip past the videos here okay the fake video requirements I'm going to read these out just in case people are not familiar with them um

(59:59) unclaimed \$150,000 Bounty uh I'm going to put expired in here so that people know that that's no longer available I mean based on reaction with kim.com that's definitely no longer

available kim.com also lied about the Bounty so I'm gonna actually add on here as well so that people can't um can't try to make false statements about what the Bounty was all about that was so weird when he lied about it uh hoaxer plus Source work uh let's say draft so the idea is proof right they had to bring proof uh hoer plus

(1:00:40) proof of source let's change this around okay so they had like what five months or something like that uh never claimed the Bounty kind of embarrassing I mean somebody could still come forward just because they would want to be a good person uh but at this point I mean how would they not know about this you're going have to have some story about I don't use the internet and didn't didn't see that my videos of that have been going viral for eight months on the internet and getting hundreds of

(1:01:07) millions of views um that's already you already got a pretty steep hurdle there especially considering everybody's polarized on this topic the debunkers and the Believers alike um and people are like talking about with their random family members and stuff like that too so you either have uh you have unless you think reeside andan is a person that made the videos then you have like four days for these videos to get made and we were still searching in the South China Sea on March 12th actually I think they

(1:01:34) were starting to search Somewhere over the animy and the nicobar islands but um they were still mostly like the media was still thinking South China C at this point uh and that's that's really odd as well because then the issue there is if Reger side n's not lying you don't have enough time to make the videos and you don't have no way to know enough details to make the videos accurate like they are May 19th gives you 72 days but even 72 days isn't according to Marvel VFX expert Jeffrey Ford who's on this list

(1:02:02) um they would need at least I think it was three to six months let's say this is actually should say like four to six months I think he said four to six months but we can go back to the clip I'm I'm pretty sure he said four to six months uh so 72 days is not really enough time to create this and there's a lot of details including the real volumetric clouds the cumulus clouds at low udes uh the 3D accurate zap let's change this one a little bit how to accurately light three-dimensional let's just

(1:02:38) say 3D volumetric clouds let's let's just add that um because when we look at the cloud picture I think we're going to put the cloud picture in here as well I want people to have access to all the evidence so that you guys can post it yourselves that way I don't have to like always be the one Wang Wang thank you very much what is your ultimate goal what does it take for you to consider a win uh I want the United States government to issue a statement on these videos I mean I know the videos are real

(1:03:06) but I want the United States government to admit it and that way you know we can get you know answers for the family and then once they admit it then it's a matter of everybody just being pissed off about why they're hiding this technology even if they admit these videos are real um that doesn't mean they're going to give us the technology that's just the first step so

after they Adit these videos real then I imagine a lot of people want to talk to me and at that point we'll talk about the technology and how how

(1:03:33) the technology works and how we get it out there for people um like regular people um because I think people should be able to build like their own overunity devices for example um and I think they'll be able to the problem is it's just going to be extremely expensive H it doesn't fit up there there we go let's do it like that that's good okay so that's proof of 3D clouds I see Chrisley in the chat Chrisley I saw you struggling um I saw you struggling the other day trying to do the 3D clouds feel bad for

(1:04:05) you like if you're really like that delusional thinking that like you're going to try to make accurate 3D Lighting in a 2d environment and then you're going to try to use that to **debunk** like that's just sad that's just sad so recreate exactly what MH370 would look like uh have that picture crap MH370 thermal I think is what I called it there it is oh this is one with the Skyfire logo on it I don't really want to put the Skyfire logo one on there um I'll I'll show you guys though I may

(1:04:53) I'll just flip this out later on I got rid of the Skyfire logo because there was everybody was just hating on on Skyfire felt bad for them they don't need to take on all my personal [ ] and drama but so this is a perfect overlay of the the plane over the thermal so there's some people that say like it's not a 777 what are you talking about man it's a 100% perfect overlay to the plane some people are just like they I think they're just desperate to come up with any answer in their heads um a lot

(1:05:31) of people are lying and feel like they're just like the word energy vampires comes out a lot because they people are just like trying to suck your energy away but doesn't really work on us yeah Skyfire are friends uh T Tac Cabra who got her back got her back um huh where is it oh there it is thermal match okay I got I got the better one we'll switch that out so if anyone says why is that MH370 you just literally show them this this is a literal picture not even just of a different 77 that's like actually

(1:06:10) MH370 uh their turn radius so the the plane has accurate turning in the videos uh where the plane would have been at the exact time so this two uh I've seen some of the **debunkers** try to say well they found a news article or a Blog that talked about the search moving from the South **China** Sea to the nicobar islands yeah and and the fact that they ran that they were searching in The malaka Straits in the anaman sea and even the nicobar islands does not mean that this person knows to put the plane there the whole point is that's where

(1:06:46) later on turns out the plane actually turned into the South Indian Ocean before that everybody thought the plane just went straight over Indonesia like that's what a normal person would do like why would you not take a direct route somewhere it's like no I'm going to go fly up over this way and then I'm going to turn and make a 270 degree cut and go back a completely different direction um and that just happens to be the same location where Katherine T later on they were able to use like coordinates to figure out exactly where

(1:07:13) she was it turns out that's where she was as well and that's situation where we have the coordinates in the videos so unless this person is some kind of psychic uh that knew about that raw data that wasn't out until May 28th I mean to me that's that's just Smoking Gun um so did I not update that on here no I didn't wow that needs to be updated okay so so location of turn in the South Indian Ocean nine days nine plus days so know the location of the turn in the southan ocean 9 plus days where the

(1:08:09) rod made public as indicated by coordinates k s cool so that one right there honestly is probably should be up at the top that's fine uh because that's the best then the ACT active coordinate shifts too like people don't even realize you need to have like a computer system that actually creates the coordinate shifts the coordinate shifts are accurate to six decimal places and we can see them shifting like really small number shifts through there that are accurate real accurate coordinate shifts not just

(1:08:48) random numbers flipping around on a screen uh so like the already the list requirements in my opinions already proves videos are real where do we have the citric session okay there's citric session um I'm going to move this up so do I have it anywhere listed it's a screen recording I don't think I do yeah let's do let's do here uh I don't think we really need to explain it so the mouse comes in off the top right of the screen and then goes

(1:09:51) off the bottom left which indicates we're looking at the screen recording on there um what the weather was like in the nicobar islands I could add more images on some of this maybe I'll do that later I don't want to keep you guys since we're live streaming how to accurately create the smoke trail from the plane using particles in two videos that's that's pretty incredible this one's really tough guys like accurate smoke Trail and there's actually diffusion in the Smoke Trail as well um I think I have a video

(1:10:18) of that somewhere too um how to animate the heat signature in the belly of the plane accurate camera shake so this is the part where the jittery contrails they fabricated a jittery contrails **debunk** which served two purposes is that they were denying objective reality that the camera shakes accurately because they didn't have an explanation for that so they fabricated a fake **debunk** to make it look like the camera Shake was actually a **debunk** with jittery contrails it's pretty funny so they're they're

(1:10:45) pretty sophisticated in the way they coordinate and they have uh by the way the **debunkers** have actually a full Discord where they coordinate attacks on me and um most likely some them are in communication with **Mick** West and other chat rooms and things like that like that's how these people operate so if you're not familiar with that um it's very highly coordinated and it actually is You could argue sophisticated from a criminal perspective in the way that they coordinate with one another um I don't really do any of that stuff by the

(1:11:12) way uh I don't I don't hang around with chat rooms trying to like uh you know figure out ways to bring people down for the most part uh I do have one Discord though that does have like uh you know information about people that are um you know coming at me just to

have a record of it so if I need to save it for later for whatever reason um because honestly like there's a lot of weirdos out there okay let's keep going so in addition to all the stuff that we've already mentioned you'd have

(1:11:45) to have knowledge of military classified systems that are out there how and why this the crop satellite video oh I did have it right there damn it I missed that before I actually like this one better this wordan better make silite video okay there we go oops what the uh what's going on here what the satellites that had an operation because they found USA 229 uh Naval ocean surveillance satellite maybe I'll put that in here let's see any other questions on stuff um if you missed the start then Glen back his people reached out for

(1:12:44) potential I'm going to call it a debate let's let's just use adult terms here a debate over the videos and their authenticity and I'm all for it in fact I'm all for the **debunkers** chatting with L back and trying to sit in this corner and work them up because I can take them all down in one shot and is a great ability or a great opportunity to show the world evidence and see how strong it is to show that it can even stand up against somebody like Len Beck um so I'm I'm all for it and that's the reason why

(1:13:10) I'm even talking about it because normally if I were to talk to a podcaster behind the scenes I don't really talk about it publicly because usually they'll have all these nut jobs go and talk to them and tell them not to talk to me and all this weird stuff multiple people have told me that it's it's it's super creepy but if it's somebody who's doing going to try to **debunk** the videos then who cares honestly I'm calling them out at this point if Glen Beck backs out uh it should tell you a

(1:13:39) lot and we have to expect it too so people may wonder why would you want to debate somebody that's going to be against the videos so why would I want to debate somebody against the videos the answer is that first of all I'm not afraid to talk to anybody that's out there and we have to do it at some point there are going to be people that are adversarial about the information you can see how personal a lot of the attacks have been um so we have to debate somebody and who's who better than to debate Glenn

(1:14:06) Beck I think it's a pretty good pretty good G honestly um and I think that he is a guy that will probably be respectful even though he'll probably be maybe a little bit indignant um and definitely um you know in a situation of disbelief regarding the science but you know what maybe we can convert him maybe we can convince them that hey man there's something to these videos so is a good challenge even if it's a trap I think it'll be good which I don't think it will be but we'll see and that's kind of

(1:14:32) what I told him is as long as it's not a situation where they're trying to Ambush me with something uh like the Danny Jones thing did then I have no problem with it if you're going to be dishonest and like you know say that we're taking a break and then keep recording like dirty ass **[redacted]** stuff like Danny Jones did or uh like having some people like try to get you with a video and then sit there and smile at you the whole time of course they don't show that during

the edit but he's sitt there

(1:14:58) like smiling about how he's going to have some video come out and it's going to be some [ ] sitting on a couch as long as you're not doing something like that I got no problem she's like tell me up front what the format is going to be you know no randomly having random sketch balls with pre-recorded videos that are all every single thing they say is wrong but then you still go but they're an expert I don't think Glen Beck will do that we'll see yeah when you have the truth on your

(1:15:28) side you're never afraid either so honestly like I don't know how people can think that I'm lying that like that part's the weirdest part like I I think there's some people that actually think that I'm lying like just heads up guys as well U I'm G make a note of this if anybody out there thinks that I am lying or making anything up uh I want to State for the record objectively I am not I have been 100% honest and open I'm actually probably one of the few people out there that isn't grifting the

(1:16:11) communities that uh I've been engaging in and that is actually trying to achieve the truth and the beauty of knowing the truths on your side is that you have absolutely nothing to hide and that's the reason why I stream about everything I don't keep any secrets uh I don't have a little secret conversation ations with people uh I just put it all out there in the open and let for the people judge and let the chips land where they may so when it comes to debates or anything like that of course I'm not afraid because everything I'm

(1:16:35) saying is true the thing about people that are liars is usually they weave a Web of Lies where that Web of Lies ends up becoming an issue and that's the reason why those people are afraid of debates and talking to people because they're afraid they have to remember what their lives were and they have to stick with them when you have the truth and the evidence on your side you're not afraid of anybody and I'm not afraid of anybody make another little clip there I'm trying to learn how to do

(1:17:05) social media better guys yeah and for the record for people who have been paying attention to the drama out there um Artis and Tony definitely showed his true colors as well he's been trolling my replies for weeks like just literal old school troll like comments little smiley faces while you know trying judging you and all this stuff all the time so I I regret promoting this show before where he gets like 100 viewers with 880,000 followers um because the moment I told him to stop trolling me or I was going

(1:17:40) to block him not only did he block me but then he sent me like a whole paragraph little Manifesto about how he was doing me a favor and he knows who the hoaxter of the videos is and he wanted to give me a option to get out or something like a plan B option who talks like that that sounds exactly like that other Nut Job guy I don't even remember what his name was anymore from like a couple weeks ago why are these people like so messed up in the head like obsessed with every single thing I do and they they think that

(1:18:12) they're like they've got the they've got the secret sauce and they're G to get me it's like what is wrong with these people what the hell so Tony Artis and Tony I would avoid the pii show I would avoid Artis and Tony I don't know what's wrong with that guy but he and the rest of these other redditors or whatever and they're weird madeup claims that they do and meltdowns that they have like just stay away from me man it's uncomfortable honestly at this point like just get a real life man I I

(1:18:46) don't get it but that's the part I don't understand is like why are these people so obsessed with me like just obsessed you know like the in the UFO Community there's some of these like the lowest life people that like have their careers done nothing and for some reason they're like on every single thing that I'm doing and they're trying to like defay me and incite these riots against me it's like whoa dude like get get get some professional help bro just I'm it's not that you don't you don't need to

(1:19:20) base your whole life about the stuff that I'm doing um especially if you're like trying to take me down or whatever uh anyway sorry we got sidetracked there um so you have to know a bunch of other stuff about the Drone the cameras are on the drones you have to know the engineering aspects so better VFX skills than lead VFX expert for top gun Maverick where like the biggest issue you guys got to realize with the planes is scaling it down and getting it to be accurate to how those planes actually fly and

(1:19:47) operate so who is this person that not only do they have secret information that the public didn't know about about the where the plane actually was and somehow guess the right exact location of the plane um they also are better at figuring out how VFX Works than actual engineers and if you look at the the Recreations the worst part of all the Recreations is always the plane turning they can never get it right because actually getting the real capabilities of a plane turning wall in descent is super difficult uh let alone doing it in

(1:20:17) two different videos and then you know the other part is the story that you have to come up with like how did they come up with this completely original story for what going to have the plane look like in these videos while it's a low altitude got smoke coming out of the back of it like how did they come up with all this like this is where the you have to come with a storyboard the people that are recreating the videos they just are literally copying exactly what they see even when you see the debunker yesterday who couldn't like I

(1:20:41) it was embarrassing watching her trying to do 3D Lighting on a 2d environment which is just impossible um but even when you look at their stuff they're just they're side by side comparing it and they're trying to get it to match they just don't realize that like the person who was making this originally if it's a fake they don't have the benefit of that it's going to take them like 10 to 100 times longer than it takes somebody who's trying to copy it side by side you actually have to come up with a

(1:21:05) script for what you're GNA say like you can't just wing it be like okay let's just put some stuff together it's not how it works now when you have two videos in perfect synchronization

takes a lot of effort um and it goes to show that somebody yesterday spent four hours spent four hours yesterday failing and they could didn't even come remotely close couldn't even get the the lighting even when you can have something to literally look at and copy from they spent four hours and didn't even come

(1:21:33) remotely close to even getting part of one effect on one video and there's people out there thinking that they can make the both videos in an hour or something like that and the other part too is that they didn't even have the the software they're using is current software and current Hardware 10-year-old software and Hardware is way different and way slower than software they have now so it's just like even the people are trying to recreate it's just getting kind of embarrassing honestly um and the

(1:22:03) people that think that oh I could just make that in five minutes like they quickly realize that we're talking something much more difficult um then understanding this scalar physics so zero point scalar infometer is the idea that we are having like this zero point system where the whole objective is to create that endothermic event so the way the videos are actually look and and work is consistent system with real physics that is not necessarily mainstream um but supported by a real government contract or government

(1:22:32) engineer uh Lieutenant Colonel Thomas Bearden uh and it's a a cold explosion exactly like he described in the 80s so maybe you could argue this VFX person who's got all these skills also um you know was a also an understudy of Thomas Bearden and for some reason decided to make his endothermic event consistent with what Thomas Bean had been talking about uh but like more updated and even more uh impressive than what would have been available in the 80s I don't know and then also they also need to be a low

(1:23:01) energy nuclear reaction expert as well because they need to understand what topological monopoles look like uh before the paper about them in Alto University was even published which was 2015 and then I don't know why they keep using 2D visual effects and and pictures when you need a full 3d rendered environment that also just doesn't even make logical sense like if you're a real VFX expert a lot there's a lot of fake VFX experts out there especially the **debunker** like almost more than half of

(1:23:27) them are lying more than half that's how many of them are lying about their VFX skills and um if you were actually because if you're honest and you making a full 3d render environment you're not even considering using 2D visual effects you're not even considering it you're literally going to build the 3D render environment from scratch I mean there may be effects you can use but you would use 3D effects because the whole point is you need to get the perfect angles from two different perfect shots from

(1:23:51) two different angles you don't try to line up perfect pictures that's not how any of that works so anybody who's not at least addressing that um with a logical answer is being deceptive dishonest which the **debunkers** are mostly dishonest about no they're 100% dishonest about literally everything they say uh which again is just it's getting embarrassing at this point

especially with all the attention that we've been getting on the MH370 videos uh because it does look very desperate um and it looks like they're

(1:24:19) having like mental issues comprehending the idea that those videos could be real and that they're just become invested in the idea that they have to prove those wrong otherwise like their whole world's a lie but even the last one is probably even one of the most implausible the hoaxer somehow has to know that we would never find the plane they have to know how you can how we would never find the plane ever like how did they know that a threeyear plus search wasn't going to find one piece of the plane in the

(1:24:48) location that they claimed they would be able to find it they didn't find a single thing and order and and that's the reason why that's important is because the story of the videos tells a story where the the plane's Journey ends in the nicobar islands not in the South Indian Ocean so how would they know that because if you find even one piece of the plane in the South Indian Ocean it's not in the same location in accordance to these videos then the whole story falls apart just one piece of the plane

(1:25:17) in the South Indian Ocean and the people say oh well they did find the debris um I'm going to skip past the flight path here the official search did not find one piece of debris above or below water they had submarine searching for debris field if you guys go look at the Titanic debris field it's it's huge now of course the plane's smaller than that but it still should have debris mile wide on the ocean floor um over 80 planes and boats were searching so when they search in the Sky Guys you can see for like over a 100

(1:25:50) miles potentially even up to like 300 miles at at cruising altitude now if you're searching you're flying a lot lower but you can still see let's say tens of miles so you can probably at least see at 10,000 fet you can see at least 50 miles so this idea when they're searching the sky they're searching for 50 miles radius around them and they're going to see a giant debris field and we had 40 planes and boats searching everywhere didn't find one piece of the plane so how does that **debunker** know

(1:26:20) that so where did the debris come from the debris shows up in Africa and I'm going to switch this one up a little bit which initially blew everybody away so a lot of people out there are going well what about the debris the funny part is this anyone who brings up the debris guys and **I want you** guys to uh maybe I'll even clip this as well anyone who brings up the debris about MH370 you should realize that this is the only story out of everybody's story where the debris is consistent with this story the people that think the plane

(1:26:58) was a suicidal pilot those people believe that you have to follow the immat pings which means that this plane crashed somewhere along the seventh Arc but we searched up and down the seventh Arc and they didn't find one piece of the plane the official search didn't find anything so you have to ask yourself where exactly did this plane crash if it was a suicidal pilot our scenario that Mage 370 X1 says this plane ended up in Diego Garcia which is actually halfway from those crash sites in Australia to the reunion Islands in Africa it's much

(1:27:32) simpler for that debris to have been put into the water or ended up in the water near the Maldives or Diego Garcia it's actually impossible for the engine Cing from Rolls-Royce which is on the list of CNN pieces to have washed up in Africa 3,000 miles away in the allotted time literally impossible so the question you have to ask yourself is do you believe that debris somehow **debunks** a story then you should realize that it actually **debunks** the suicide story it **debunks** the satellite pings it **debunks** the narratives out there that mainstream

(1:28:04) people believe are accurate it does not **debunk** that m370x story it's the only one that's consistent with it that was good okay and I'm gonna add I'm going to clip that I'm going to add the CNN um picture because the the Rolls-Royce engine cing is actually on the CNN picture uh in fact I'm going to take that CNN picture hold on uh one sec because people link this and it's funny because it actually proves them wrong and I I guess they don't realize that I'm the one who links this the most

(1:28:43) because it actually proves us correct let's see here oops uh they might be Shadow banning me I don't know guys it's all good though no worries we're just working on some uh evidence tonight preparing for our next debate um and we're waiting for uh I think Christian's link should be out there in fact I may go retweet it maybe I'll wait till after the stream uh but make sure you check out the big things interview as well where getting more and more interviews on this and um since the de

(1:29:27) bunkers have kind of just lost their they've just literally lost their minds um I'm just going to keep pushing it so as long as they keep pushing it and pushing on me and and lying about me and stuff like that then I'm going to keep pushing the videos um and so when they complain about like why is Ashton not retired um you can tell them that it's their own fault the reason why I haven't necessarily retired from this I mean I did technically retire so uh the reason why I retired and have come back is

(1:29:54) because now the **debunkers** are trying to make the videos go away again that it got so much attention that now they're getting worried and it's starting to threaten their worldview so as long as they keep coming at me and lying about me and stuff like that then I'm going to keep pushing back and keep talking about the videos more and more and more and more and more um so if they say anything about why is ash still talking about just realize they're the they're the reason um and if they were to have

(1:30:15) stopped then I don't have to talk with them anymore either because I'm not in a rush like the science is going to get proven real this is going to be proven real what happened to the plane uh no rush for me um so whatever they want to do we want to you want to keep pushing it want to make it more and more and more attention you want to have me debate Glenn back or go on uh you know CNN and talk to Anderson Cooper whatever sure I'll do that too not afraid of anybody um so you can see this is the engine

(1:30:53) cing piece right down here in the bottom left engine cing this washed up in Africa mile Bay South Africa you can read it right there right there highly likely it's literally a Rolls-Royce

engine col you can actually see the RR on it like it's literally 100% a a Triple 7 uh Rolls-Royce engine col so unless it was a different one um that that indicates that the plane could not have possibly crashed in the South Indian Ocean uh we just put here so engine C is completely inconsistent actually the flap run is as

(1:31:37) well so when you go down to the further Parts our story is consistent with the fire and we're going to call it warp drive now Barnacles and the flap Ron Contra indicate the drift analysis um yeah counter we're going to change this contraindicate uh the orientation of uh let's say flaperon Recreation uh drift Recreation yeah this what I say fla Ron drift Recreation not consistent with the Barnacle growth on the piece so the Barnacles are on the wrong spot on the flon so it couldn't have actually been

(1:32:33) consistent with the the analysis they did H I spent bar Barnacles wrong here the Barnacles and the flat R only show four months of growth which is impossible for it to have drifted in four 2,000 miles in 4 months so pretty big um and then people always asked why was it teleported why I was on fire where did it go what happened to people um once again guys so in a criminal investigation you can develop a story for what you think happened but you're generally focused on the evidence so when you look at this I I'm I'm focused

(1:33:09) on the evidence of what that is so everybody wants to be told what to think everybody wants to say why did they do it where did they go what did they do with them those are answers that only the perpetrators know the answer to only the perpetrator knows exactly why they did it uh where they took them and what they did with them so I appreciate the people ask me that question um but for the most part I'm probably going to stop responding to it because uh you should come to terms with based on looking at the evidence what you think happened

(1:33:39) that's what I want people out there to determine now I will say for one more time though that I do believe the most consistent explanation for this is a counter Espionage operation by the United States government on China a show of force these people were potentially defecting bringing intellectual property to China that China was going to have access to and this is why you diverted them and maybe you're sick and tired of having your intellectual property stolen and you don't want to allow this particular intellectual property to get

(1:34:07) stolen because this can enable the technology we see in the videos um and so you do this show of force to them that only they will understand because their intelligence Community knows this type of technology is real um but our general public has no idea so it's a really good play you the that would make the fire 100% intentional so the fire is intentional you divert the plane away from China where they have their assets over to the nicobar islands where the United States is having their organ or their exercises with Thailand and the

(1:34:38) theme that year is search and rescue pretty pretty convenient that the theme of the cop tiger exercises that year was search and rescue um okay now last thing I'll say about the debris on there there was burn marks on parts of the debris as well the like the amount of evidence that people with other stories have to throw out is incredible in fact this this proves

the only story that's consistent with the debris is that the fire scenario there's literally debris with burn marks on it and and not just like that there was

(1:35:13) like some explosion like Scorch marks like heat was on there melting the plastic away like that is and it's not like completely incinerated either so like that's actual just like high heat temperatures that burn parts of the plane and the only story that makes sense there is a fire event uh the flares don't match with unique serial number they used a they used a part number instead and then let's see this is this the MRI did I have this one wrong I think this might actually be the MRI uh rwin if RN's in the chat please let me

(1:35:47) know if it's the M or the MRK is the one that was purchased there was two different planes that were purchased from Malaysian Airlines uh but one of them I think is before and one of them was after MH370 so U Arwin if you can let me know because I mean actually may not matter that much as long as the uh the plane was scrapped before like 2015 to have enough time to get thrown in the water later on and found but the one we want is the one that's October 2013 ga tesis uh how come I don't say where it's

(1:36:18) from exact same model neither which one is it one of them was bought in 2013 but I literally have the the record of it I have I have actual screenshot uh in fact I have to we probably have to put that one up um what is it called plane let me see if I can find it real quick chat I have so much stuff that it actually gets really difficult to find it all now and search back through it nah it's sorry it's 2013 so I don't know I don't know which one one of the two was G tesis it's 2013 we've got we actually got the

(1:37:17) receipts I'm going to look for it real quick chat shouldn't take more than a minute or two God I have so much stuff oh flight spotter is that what it's called the website I think it's called flight flight spotter uh we also have pictures the the batteries which maybe we want to include the pictures of the batteries so like the fact that we had um Mentor Pilots say that there's no issue with the batteries that was just wild to me uh actual pilot comfortable with 5,000 pounds of lithiumion batteries extremely dangerous

(1:38:04) like probably some of the most dangerous cargo to even put in your plane tried to play it off like it was just normal oh here it is found it plane spotters yeah g it's 9M MRI yeah I was wrong um yeah it's October 2013 rwin you need to maybe update your evidence on that one I don't know but I'm going to post a picture just so you know for sure 9M MRI there it is right there there's absolute proof it's kind of small G8 tesis October 2013 right there okay okay so we fixed that one 9 m it's

(1:38:54) not the MRK that's the one no doesn't matter this is you can just RN you can just read this I'm I respect all the stuff you do but I've got the actual screenshot up here in front of me okay um this is the same Google doc I'm gonna just work off the one that's a shared Google doc for you guys well if you hey if you don't like Glenn Beck then you should probably want to watch even more cuz he's going to try to debunk the the case so um you know that's what I love about it is people that like him hate him

(1:39:34) whatever doesn't matter it's just going to bring more eyeballs he's actually probably one of the best things I could hope for in terms of **debunkers** trying to um you know going up against somebody on a on a major platform you know I don't want to go up against somebody who's like one of these random idiot **redditors** you know because first of all they're dumb asses but it does like dunking on one of them on like a major platform like let's just say like **Rogan** were to have me on but he's like I

(1:40:01) want to have somebody that was like against the case um you know **Mick** West would even wouldn't even be fun you know because then it's like there's too many people that have like cult of **mcwest** personality so like they're not going to listen no matter what uh random **redditor** Twitter person right like you don't even want to elevate them to that level um the best thing that you would want is someone like you know Glenn Beck who's not very familiar with the case who could actually be swayed potentially

(1:40:26) with the weight of the evidence um that's the best person to kind of like talk with against regarding um the case if you're going to have them take like an alternative stance which you know I've done like 80 podcasts I think it that I should do some where people ask hard questions but um I'm gonna be prepared for all of them here and the nice thing too is like I'm actually just showing uh we're showing the the opponent the debate opponent um all of our evidence ahead of time they can

(1:40:53) literally read everything so they can know everything that I'm going to say ahead of time so there's no excuse whatsoever uh for somebody to uh you know not be prepared so if they come in and they're not prepared I go well you didn't even read I made my evidence publicly available so that you could be prepared ahead of time so it's super embarrassing if they don't have an answer for any of the stuff that I've got on my list here so I can just go straight through it and they have no

(1:41:14) excuse not to know what the questions are going to be so if they're not prepared I mean just embarrassing yeah I mean I would destroy **mcwest** on any debate because he's just not a very smart guy um and I would be more prepared than him for sure as well like and his arguments are would all be telegraphed right like the thing about debating against somebody who's an NPC like **Mick** West is either disinformation agent or a literal NPC um you know just straight up guy that doesn't even have original thoughts that just reads off

(1:41:45) the script it wouldn't even surprise me if the **debunks** get given to him by people and then he just plays them off as their his own because that's like the level of depth that he understands related to them and then when people point out the inconsistency he just says no no no no like there's debating someone like that is like the easiest thing in the world because you literally know what their script is and you can just prepare your answers ahead of time and they're GNA have no counter whatsoever they're just going to say no

(1:42:09) no no no so like that's you know that's why it's just kind of embarrassing I that's why I want to talk to somebody like Glenn Beck you know um I don't know when it's going to

potentially happen hopefully um probably be in a in a little bit maybe not that long um we'll see hopefully you know I hope some of the people reach out to him and say yeah you should definitely debate Ashton these videos need to go away we need you to debate him I kind of want somebody to say that to him because a it shows how

(1:42:36) scared people are about these videos being real um and B because then it'll definitely happen so and if it doesn't happen then so what I'll just do debate somebody else so if there is anybody else out there that wants to debate that is uh you know in major media uh Glenn beex pretty major media just well-known name uh about the videos that they think that they you know know the answer or whatever or are just interested and want to have a you know friendly back and forth debate about the facts uh I'm open

(1:43:05) to it 100% 100% let me know yeah so like and like this TJ I think is one of the **redditors** like never debating that guy that guy has like actual mental problems like real life mental problems so I'm not going to debate a psychopath like somebody who just like needs actual psychiatric treatment I'm going to debate like a normal person because there's no point like you know you dunk on a psychopath it doesn't Elevate you at all people just go well of course he destroyed this psychopath in the debate the guy had mental issues

(1:43:41) like he was unstable and he's been stalking Ashton I'm not gonna I'm definitely not debating like a stalker guys so any of these people that are like defaming me you're never going to get a debate that's never happening because you need serious help um but again so if you can find somebody that is like you know either Glen backck or someone who's like him uh you know I think like Bill Mah would be like the liberal version of glenbeck you know someone like that um be happy to do that yeah when you argue with a fool

(1:44:12) there are two fools so that's that's the reason guys is it possible that we have raadar in the Drone video um you mean they that they caught the drone on radar yeah it's definitely possible uh but none of The Radars have been released and Malaysia's radar is really weird where it's just like this is where we last saw it oh okay cool so can we see like the whole radar and what was around that night no no there's a let's see like a fort or a base called Buttersworth that's right there actually

(1:44:43) right next to panang I remember I talked to Florence about this and she's like yeah there's no way that they wouldn't have tracked any other assets or anything over there there's this Base called Buttersworth that would have one 100% seeing and been tracking the plane they're not going to let the Rogue 777 fly over a military base so um pretty wild yeah Tucker as well I mean of course guys like yes of course big people like Tucker Carlson would of course be good to talk to and I don't

(1:45:12) even mind if it's G to be controversial the debate I don't even mind it so um as long as I know ahead of time now let's see did we get the other yeah so I mentioned the satellite coordinate thing twice I think it's good to have it there because it also explains why it's MH370 people wonder like actually wonder why this is the plane even though it's a perfect match to a

777 and a perfect overlay of the actual plane there's no other missing 777s uh but the actual location of the coordinates makes it no doubt the fact

(1:45:47) that it's in the nicobar islands at the location where the plane turned around the coast of Indonesia um is absolute proof that's MH370 in those videos there's just no denying it so there's even some **debunker** people that can't even accept that it's MH370 I mean that's the most basic most obvious thing there's no there's not even a debate to be had about it it's clearly MH370 um let's see yeah the United States government we might even change this well that's fine

(1:46:19) we'll leave that there USA 2 229 where is it I'm going to put USA 229 in parentheses here because we know the satellite was at the location uh able to film that event uh with sensor data and we found from the naval ocean surveillance satellite uh what was that link that I posted the other day that uh Diego Garcia actually they have a a setup for the naval ocean surveillance St the whole point of it is to track and surveil uh objects boats and planes so there's no way that it could have seen the plane 100% so we absolutely can

(1:46:58) prove Beyond any doubt even without the videos that the United States knows what happened to the plane and that they tracked it we we can prove that without any doubt um now May 22nd I might need to find that link guys someone may have to find the regicide they said watch this the Twitter link regicide Twitter watch this before it's deleted actually what I'll do is I'll take this there's actually keywords indicating MH370 in the video says Malaysian says flight 370 okay that's actually probably good

(1:48:18) enough t mh30 that's actually the reason why we use the hashtag MH370 is because uh regid a non posted in there okay what other questions you guys want to talk about um I probably only want to go for another 15 minutes or so pretty tired yeah I guys I don't decide which shows I go on actually so any shows that are out there uh it's I've probably been considered for them any of the major ones that you know about um I've already probably been considered so when you think of like Lex Freedman Shan Ryan Jo **Rogan** um I've had

(1:48:56) Communications with those people before uh I won't elaborate on how long or how much and although I don't know for a fact other than for Joe **Rogan** which is all public information about the um Jeremy Corbell thing that he said um I don't know the exact reasons why the other people wouldn't want to uh talk about it I don't know though my guess though would be that they probably just think that it's impossible to believe it's just it's too much of a conspiracy for even people like uh sha Ryan now

(1:49:25) when the videos do get proven to be real and the science ends up checking out that's when I think Lex fredman will want to talk about it because Lex Freeman's more of like oh what's the you know what's the uh implications of this on the world type stuff like what's the implications of free energy which I'm happy to give my my opinions on that and I think it would be good to have a science discussion with Lex Freedman about The Ether and why the ether is real and how it explains Dark Energy uh

(1:49:51) kind of packs that up into a nice bow explains how we can warp an object manipulate anti-gravity Etc let's see yeah Elon Musk probably knows about this like more and more I'm thinking Elon Musk might know about these videos and the technology which would break my heart if he's been hiding this um because he's a guy who wants to go to Mars or whatever so the idea that like that you know um Elon Musk would be like hiding anti-gravitational technology gravity manipulation SpaceTime manipulation that would honestly just

(1:50:32) crush me so hopefully he's not I appreciate I really hope he's not what do I think about Jeremy corell's authenticity as a ufologist um I think his heart's in the right place I think Jeremy corell's heart's in the right place but I I don't know I don't know enough about his past and his history uh but definitely seems like he is convinced the United States government is hiding aliens and that's what he wants to be out there uh I don't think Jeremy Corbell knows enough about

(1:51:03) the science to be able to judge whether or not the technology we're seeing could be our technology or alien technology and like many people they look at something they don't understand and they think that that has to be aliens but if you were to look at a phone like this you would you know 50 years ago you would say that must be aliens too probably you'd say that can't be possible how can you do that how can you make a device that small that can do your all that stuff that your phone can do um and so it's really a matter of

(1:51:31) understanding how far ahead the military-industrial complex is which seems like it's it's decades many decades people people could traditionally thought it was 20 years uh but this type of technology I think wouldn't get leaked out to the public for 50 or 100 years I mean it may even be that we die before this technology even comes out if this technology is allowed to be remain to be hidden there's just no safe way to disclose it in my opinion um yeah yeah it would crush the industry if the if the technology was

(1:52:03) real for sure um seeing if there's any other questions before we go back to the evidence here sassy I love sassy your rors are showing your true ignorance yeah the ciao so the James O'Keefe thing I'm gonna have to snip that later um I think it was about one hour 45 minutes into his thing I got up onto the speaker panel and I asked him what he thought the CIA was withholding from Donald Trump guys the reason why I asked that is because this kind of technology and I said you know I could they be hiding or I think that they're

(1:52:40) hiding weapons that are Beyond people's comprehension um and that that would be the type of thing that I imagine the CIA would hide from the the president and the intelligence communities not just the CIA um but that I don't think kim.com is trying to uh ride my relevance he has 15 times more followers than I do and I have a lot so no I don't think that's it I don't think that's it I think kim.

(1:53:07) com somebody talked to kim.com that's what I think for sure that's the only story that makes sense for kim.com to come out of the wwor five months later start lying about me to 1.5 million people um we caught him in 4k we had 14,000 people watching while kim.com was

making up objectively fake statements while I literally posted the DMS that prove that kim.

(1:53:30) com was lying L proved it so uh yeah so I don't know what his deal is but oh thank you for another donation guys APK 345 where did you see the video oh did you see the video flying over Spain yeah so a lot of people pointed this out um I have seen it guys I've actually probably posted it in the past but it was probably back in September I want to say and this is the part where it's like here's my opinion on it is that I don't know if I should repost stuff like that that I've already posted before um you know I've posted it it's

(1:54:05) out there I guess I could retweet my old post or something related to when some of these videos come up because people find there's there's more videos too I I know of like three different videos that have like triangle orbs very very similar to this and uh I don't know if I should repost them plus I just don't need to like we don't need it for the case the the point of posting that kind of stuff is just so people can see that these types of anomalies have been out there and are potentially still out

(1:54:29) there and they're very similar to what we've seen in that M 370 videos but it doesn't really Advance the case in a tangible credible way um because I think that you have to already come to terms with the fact that we have this crazy advanced technology that can warp a plane and if you think that we have that then there're being some floaty orbs that are consistent with plasmas totally already fine you already are cool with that um but here I'll go pull it up I think wasn't it Ken that posted it I

(1:54:56) think it was Ken so Ken stabin stabin k stabin right there he is okay sorry here we go I guess we're not going to talk too much about science today so we'll probably talk tomorrow about science but um Ken's been on point uh one of the things that he did here was he showed and I we already have like a picture of where the Drone is but he showed that the Drone is actually just cropped out of view here I mean he doesn't take a lot to figure this out but you can tell from the angle of the smoke here that

(1:55:43) this drone is just out of screen on the satellite video um so yeah and here's actually he did another followup with it so you can actually see you can actually even tell the direction the Drone is looking as well now the camera can be tracked to follow the plane um but this is like this is super bizarre for this to be faked in your in your video um where's the thing that he did and he's got he's got very similar story that he thinks happened to mine uh but significantly different enough and and I don't want to be

(1:56:21) um there it is I don't want to be kind of mixing my story up with other people I want to I want to stay independent on it I think that the more independent stories that we have the more likely it is we'll get the **truth** which is all I want anyway um and this is why like one last thing I'll say on the **debunkers** I'll go back to that picture that video is that uh it's if you read my message today the **debunkers** aren't trying to solve this case they don't care at all about the families of MH370 what happened to the

(1:56:48) plane uh the debunker only purpose is to try to make the videos go away and to try to get people to stop listening to me that's their only purpose uh that's why they're defaming me that's why they're spreading lies and stuff like that about me and about the videos is uh you know that you you'll never see them trying to solve what happened to the plane you're never going to see that um and that's one of the things I first noticed on Reddit on the debunker subreddit is none of them not a single

(1:57:16) one of them was trying to solve what happened to the plane none of them were looking into trying to figure out how the plane like the old Evans were on the plane the only that they were trying to do is trying to disprove my story and try to get people to stop talking to me and stop looking at my evidence and I put us out there which tells me that we're probably right over the target tells me that we probably have got the story down like 100% uh because that means there's no wiggle room for them to come up with the story so when and if

(1:57:40) you do see the debunkers lying the only thing you should ask them is what do they think happened to the plane this is how you push back on it to how you expose them is you ask them what do they think happened to the plane and they won't put their ideas forward because they know that their ideas don't have any evidentiary support and if they were to hold themselves to their own standard that their whole story would fall apart so if they say that this pilot suicide there's literally no evidence of pilot

(1:58:04) suicide it actually takes a bigger conspiracy for there to be a pilot suicide story than to hide this technology funny enough is that the story of the video the fire and the videos being the plane being literally warped actually has infinitely more evidence than a pilot suicide narrative which which has none none none at all so let's go back to this literally no evidence whatsoever of suicidal Intent no evidence in the flight path of a suicide literally no evidence whatsoever of suicide they didn't even find the

(1:58:40) plane so this one here you can see these orbs are in a very similar orientation right here and the reason why this is actually compelling I think is the idea that if we have this plasma balls that we can create this diamond shape in uh then you could see like maybe we do it other times too maybe we don't always warp a plane maybe this was with a plane coming out somewhere else although probably not because the in this one you're looking at contrails here because this plane's much higher than the MH370

(1:59:09) video see what else we got Ashton Forbes for president and no I don't want to be president man president is a a job where you are just you're a puppet on a string yeah you think Mick West talked to kim.com how embarrassing would that be if we can prove that Mick West talked kim.

(1:59:33) com like Kim that would just destroy kim.com credibility um let me switch over my other screen I don't even know what WeChat is guys so sorry about that um also one more thing I want to address this is probably gonna be the last thing that you can clip for tonight that we'll post um or I'll clip I already forgot what I was gonna say damn it um what was it oh yeah so

people think that I might be a CIA agent or distraction or whatever else people think some government uh operative and disinformation agent uh those make no sense whatsoever disinformation a first of all

(2:00:29) I'm not a CIA agent or disinformation I have been no contact with the government whatsoever regarding anything related to this case ever I wish oh that's not true a arrow I guess and the couple times I called the FBI usually I don't think CIA agents called the FBI to report their own country for the largest criminal conspiracy in the history of the world and cover up in the history of the world I don't think they generally report their evidence to AO generally I don't think they go on a bunch of podcasts and

(2:00:56) have a huge list of evidence and don't tell anyone to believe what they say but say just to review the evidence instead that's not what disinformation does and there's nothing to distract from the UFO Community is completely useless and they've done basically nothing for the last 30 years uh they've accomplished essentially zero they had UAP hearings that got nothing done that was just telling stories where nobody showed any evidence whatsoever um and that's not going to get us anywhere if we have more

(2:01:23) UAP hearings and we put up people like this Jason sans's guy that talking about telepathically communicating with blue aliens uh it's going to destroy the UFO community's credibility so what I'm doing here is the exact opposite of distraction there's nothing to distract from this going on in the UFO community and if anything the UFO Community needs credibility because it has literally zero credibility right now whatsoever they need people who are actually talking about the science and explaining

(2:01:49) the science that are bringing videos that have real World evidence along with them that can be actually shown in court and you can subpoena real people and have them come and give their witness testimony that's what the UFO Community needs chat we got a lot of Clips tonight we got a lot of Clips tonight this civilization is not making it to 2040 uh probably not you might be right yeah Ken Ken is a good investigator man he's uh we don't come to the same conclusions but he's a good investigator

(2:02:28) man saw one of the orbs personally in a village in Spain should have taken a picture yeah guys so and I don't want to uh dishearten anybody but I don't want people's random pictures that they took at home don't send them to me I got it like I I get you have no idea how much of that I get a lot um it's there's I appreciate that you had the experience and that you saw something anomalous uh but you have to realize that we can't do do anything with that the same reason why a person testifying to Congress

(2:02:55) about their telepathic blue alien doesn't do anything we just need actual evidence of like something that's much more detailed even if it's moving around anonymously anomalously that still doesn't prove anything at all um although I understand that you know if you have if I had a personal experience like that I would want to talk about it too U but it's not the kind of thing that we can launch a full investigation into that's out there um uh and I haven't actually

had a personal experience like that um it

(2:03:21) would be nice to have I guess someday uh guys so there's no there is no time on the Glenn Beck debate at the moment uh the reason why I was even talking about it is because I want to make sure that it happens I want to make sure he doesn't back out because I got a message from his people saying that they're interested but that he potentially you know wouldn't take it seriously which is I took as being a debate a gentleman's debate um and if that's how he thinks about it then now I want the world to know that I'm in all

(2:03:55) in Not Afraid and if anyone wants to back out then should tell you something right anytime anywhere I'll even give him three questions ahead of time let them know my first three questions as a handicap because I have a lot more experience looking into the videos and looking into the plane uh that way and I've got all my evidence here as well uh that he can read he can watch this stream to prepare to know exactly what I'm going to say so that he doesn't even have to be surprised by anything that

(2:04:24) I'm saying he can watch my interviews so he knows exactly what I'm going to say he can try to find pick some holes somewhere if he wants to uh I'll be ready 100% um let's see here I think we might end there for tonight let's just look through I have to redo the whole science part though so if if Glenn Beck or anybody else is watching I'm going to make the science part even more accurate now we've got the Chinese hack down here the Chinese hack might have to go up the list the fact that there was this random

(2:04:57) Chinese hack is just wild to me although we have so so much of our stuff is so good like the KT witness sighting that's got two blog posts from different years that are still consistent with four years apart and then a whole bunch of technical data from her automatic GPS that's just that's hard evidence uh Maas Chang guys we might even have to add like yeah arrest Maas Chang gets arrested while representing a whistleblower in the 1 MDB Scandal which actually happened in the same years that the plane went missing the prime

(2:05:33) minister of Malaysia might have been corrupted and paid off this is like circumstantial evidence that the Prime Minister was getting Kickbacks for lying about what happened to the plane because he actually said the plane ended in the South Indian Ocean he's on the record saying that and then the former prime minister the one that Mias Chang worked for is on the record saying that the CIA took the plane and that the Malaysia shouldn't have to pay the consequences for it so some of the evidence I've got

(2:06:00) on here that I don't even talk about on a lot of the videos on a lot of my podcasts like I mean I I'm not afraid of a courtroom I've got a huge amount of evidence uh or we do you know because this is this is for all of us um what else do we look at so the science though I have to update with macroscopic phase conjugation and we know way more about the science than we us to know um the wormholes The Ether I have to update all that I have to update all that that's the crazy part is that the science is

(2:06:32) the part where we were the weakest at so if you look at this here the science part here was the weakest part and that's why I even had like the high frequency of gravitational wave gener I'm probably I might keep these here because these are points from Salvador P's patent uh and I may add the to these like Sal p is pent yeah that's probably how I'm going to do it because these are consistent with what we're seeing but then I want to change the science part down to having like the topological

(2:07:11) monopole uh the kums law conversion I'm just going to add at the bottom and I'll I'll move it around uh is it so they're essentially breaking the swinger limit producing energy densities we also do what the dark energy laser we might have to come up with a better term for Dark Energy laser beam guys I feel like we're going to get people are going to make fun of us for calling it a dark energy laser beam although that I think might be literally what it is it's essentially a laser beam that can create space in front of it so

(2:08:13) that it can uh kind of run along that like train tracks which to me even to me sounds a little bit silly honestly uh let's just uh crowdfund a to build it but the reason why I called the dark energy laser beam is because that's literally what it was called in that one paper the the um warp drive paper so that one's uh pretty interesting and I think it's one of the best ones so yeah we saw this oh APK sent more uh yeah oh so you sent both these appreciate you bro the pick would have been two megapixel only yeah so that's part of

(2:08:43) the problem with a lot of these pictures is that it's just a light and yeah you probably saw something crazy because when you see with your eyes like when you see something crazy you know you're like oh man and when you take a picture it never does it justice even videos never really do it justice that's why these videos uh and we'll play them one more time are are so good because the MH370 videos have more detail in them than like any videos ever that we've seen from the UFO community and this is

(2:09:10) the part where I was talking to Ian Carol about and I was like dude this is why they protect this information so much because just like a random dude on Twitter from looking at two just two videos that are only a minute long each we're able to deduce like the entire us spy surveillance satellite cap uh apparatus just their entire surveillance apparatus capabilities um and then it's like you it's like finding the missile missing puzzle piece that just puts everything together because once you figure that

(2:09:43) out then you're like okay so what are these drones these drones we see here are not aliens this is we have some kind of crazy computer capabilities that can use these like automatic homing tracking objects they exotic vacuum objects they're mapping the plane here like there's so much intelligence that you get from these videos um and that's something you never see in UFO videos like normally you just see like a very stereotypical Flying Saucer with lights on it and then it just floats over the screen and then

(2:10:11) that's it the video ends these videos are telling a whole story and that whole story is consistent with what happened to the real plane um so this is the part where it's like you know

the strength of the evidence is just it's too strong here um even the fact that this this picture this video starts just as the plane gets in view the fact that the the video starts at the exact moment the plane gets in view is also a tell I think because this camera would not have been able to see the plane uh if the plane was on the

(2:10:48) left side of the Drone so that's how now that you just mention that holy [ ] that's another detail the camera the video starts at the same moment that the plane immediately becomes into into view from the angle of the camera wow I'm GNA put that on my list we're g to be talking about that because that also indicates this is a real video that we're seeing here as well is that the reason why this video starts at this moment is because this is the moment where the plane gets into view from this

(2:11:19) camera and from the other one it's the moment where probably the plane was not in the same frame as the Drone so they waited until the Drone just got separated from the plane and then that's where they they have the video started wow crazy that's honestly kind of a yatsi moment chat so you can tell people so somebody faked the the camera in terms of it being like an accurate real camera where the video starts at the exact same moment it would start based on the perspective of the Drone relative to the

(2:11:48) plane that's a pretty weird detail okay let me see what I got here so I said the Drone gets into the view at the same time where it uh where drone video starts at the same time when the plane gets into view on the right hand side camera uh evil forces yeah I don't guys I'm not really a person that believes that somebody's like all evil or all good I'm more of a person that believes that people good people can do evil things okay guys I think I'm going to probably call it there yeah I mean the thing is it's a

(2:12:51) matter of there's a lot of weird details and a lot of the weird details are scientifically accurate like these details that we're looking at right here and it's a matter of stacking them up and that's the reason why you look at it from a court case when you look at it from the court case perspective with totality of the evidence what is the story that's being told and this is where you shouldn't listen to any **debunker** I've had people literally come out and I'm going to stop this video and

(2:13:20) say that they don't have to address any evidence as long as they poke whole one hole in your story there's people that actually think that there's real people that think that if they poke one hole in your story they win and that's all there is to it that's not how anything works that's not how a court case works if you actually guys watch real court cases the whole point of the court case is that both sides tell the story that they want the jury to be able to believe so the story here for the

(2:13:44) **debunkers** they don't have one they literally don't even have one the best one so far is Tim P thinks that a Bitcoin billionaire was bored and made the videos as far as I know that's the only story still out there uh some people think that some guy made the videos named Joe Lancaster um and he's been caught lying so even the **redditors** didn't even believe this guy but

there's still some nut job **redd**itors that you know they're in denial and he they they think this guy's credible that has no evidence

(2:14:11) whatsoever that's been caught lying his story doesn't make any sense the website he uploaded wasn't even there says he just made up the look of the blue drone video even though it's turned out later on after he made that statement that it's actually real uh how really how the Drone looks and they do have uh color cameras like that um so yeah there's people out there that they believe honestly the irony of people like that who believe like a liar who's got his pronouns in his bio a

(2:14:37) picture of a mask on his face and free Palestine whatever the current thing is plugged into his brain thinks that he made these videos um it's ironic because you have to be you have to be more gullible than if these videos were fake for us to believe that like you have to be just completely ignorant of all reality to think that that guy made the videos okay so yes once again you need to come up with the full story how and why how long it took who the person was what their motivations were that's consistent with all the evidence we put

(2:15:14) out here because the evidence that we've put forth in this screenshot down here um this evidence is is evidence that's Universal so this evidence applies as well even for the **debunk**ers so your evidence for how the videos were faked have to be consistent with everything you see on this list so you need a story that's consistent with everything that you read on these 17 Pages why Katherine te's sightings like this why Mike MC's the plane on fire uh why maias Lang Chang told alternative media it would have to be it would have

(2:15:47) a global impact on the world's economy why would Maas who is uh advisers to the former prime minister of Malaysia tell alternative media it would have to be it would have a global impact on the world's economy why would he say that about a missing plane that's a really weird thing to say so what is the hoaxer narrative for why he said that so they have to address every single thing you see on this list it's not a matter of this is my story this actually here is a list of evidence um my story actually isn't even

(2:16:19) listed anywhere in here I'm and so this is why where my story comes from is the the evidence list and why my story is teleportation is here's the evidence for why what we see there is actually teleportation we're going to change this to warp drive let's see um why is it warp drive not Annihilation or cloaking the science the patents the **debunk**s uh okay what was that one I need to add the **debunk** to the cloud **debunk** um let's let's reword this one six day old **Reddit** account inexplicably

(2:17:32) found let's just say not even on the Obscure website because people might argue about that found a cloud image within 20 minutes out of millions cloud images where the clouds had to be stretched uh stitched uh and reoriented so a Six-Day old **Reddit** account I think I'm also just going to change this for posterity purposes six day old **Reddit** account inexplicably finds a cloud image within 20 minutes out of millions of cloud images where the cloud said to be stretch Stitch reoriented and M and reoriented to

(2:18:16) match that is that should have been the death Nowell to the cloud debu is that the story of the cloud image even being found is completely impossible that person's lying and the question is why are they lying about how they found the cloud image they didn't spend 20 minutes and randomly happen to go oh look at this Cloud image if I restretch these clouds here and Stitch this all together this this is these would be the clouds in the videos that's completely completely inexplicable so whoever that

(2:18:44) person was who found this Cloud image that person needs to come out and tell the **truth** about how they found this Cloud image because lying about it from the bat is super sketchy about the the **debunk** in general and that's before we get to the part about how there literally can't be a 2d Cloud image in the 3D videos because of the lighting um they couldn't be reversed image searched actually it wasn't even aons it was **redditors** that sent him the email so **redditors** and I don't know somebody actually found out which one it was I

(2:19:16) think they admitted it I think it was actually the T the T Powell guy um the same guy that's attacking me is the one guy who actually found the cloud that sent the email to **Jonas** to have **Jonas** attach his name to it so weird connection the guy who's defaming me on social media and like the guy who's got the me having like the literal mental break on social media um and completely 100% obsessed with me spending his whole life uh looking and talking about me um he's the guy that actually sent the

(2:19:47) email to **Jonas** as well so this already right away we can throw it out we can throw out the cloud picture there's no credibility to it whatsoever and we haven't even we haven't even Tech uh analyzed it technically yet um there's clear dripping bias and seething hatred uh these people and these same people these same **redditors** so the same group of TJ Powell in them they committed federal felony fraud against me already fabricating fake evidence they actually talk about it a lot in their discords

(2:20:14) people send me uh messages in their discords where they talk about sending me fake data and stuff like that as well so you have to realize like these people are compromised they're actually making fake **debunks** because in their head these videos break their minds and they need them to be fake so this is one thing I didn't anticipate is that people would actually fabricate fake evidence like maybe not even necessarily the CIA but people who have like mental problems are like fabricating fake evidence because

(2:20:42) they just want this to go away that badly because that's how much of a threat it is to their existential well-being think about that for a second that's scary man that's really scary and it's happened multiple times so uh then why would the photographer make the **debunk** video after that you get a random email from **Reddit** nut jobs who have mental problems and you're like yep I'll take this from here I'll go ahead and make a **debunk** video guys right now right now I'm not even G to look into it the images don't even go

(2:21:10) back past 2016 and even the image the even the the uh database data on the website host only goes back to October of 2 14 so even if they didn't fabricate that it still doesn't even

predate the videos on the database where it was uploaded so there's actually no evidence that that image even existed on the database when this when the plane went missing or in the duration of time where the video would have to be made no evidence whatsoever um the image the cloud image couldn't even be found in reverse image search

(2:21:48) even if you reverse image search the image it didn't go back to the website it actually doesn't even go back to the website well how could it goes back to **Reddit** but it doesn't go back to the website the other pictures in the set do this one doesn't and the image was actually modified as well they updated the image on December 6 I think it was 20 uh 23 I think it's December 6 I may have to update it but it's close enough it's basically around the same time that the six- day old **Reddit**

(2:22:25) account was made just so coincidentally enough the six day old **Reddit** account was made at the same time where the image gets updated in the database that doesn't reverse image search back to the website oh and then the bit and then the Super Kicker and this is where I revealed this on the DMS with kim.

(2:22:46) com the picture taker told us to go look at the Torrance so I I need to snip that actually where the picture taker told us that we should go look in the Torrance when kim.com asked how many people had downloaded the image he says well go look in the Torrance because all the torrent get this website used to get pirated all the time so we go look through as many torren as we could find I think we only found two or three none of them had the picture it picture doesn't even exist in the Torrance that I mean guys I don't

(2:23:13) know what else to tell you man um I'm I'm probably almost as certain that the the whole image was a elaborate ruse as I am that we can warp an airplane so um oh yeah and then I also recently posted the thing where you can create a higher quality Cloud image from a lower quality clouds in 45 seconds using conventional AI right now 45 seconds so the big question is um is it easier to to make a full 3d rendered environment from a 2d Cloud image or the opposite or uh you know what we're going to switch this

(2:24:21) yeah so is it easier to make a 2d Cloud image from a 3D rendered video or a full 3d rendered environment from a 2d Cloud image obviously the answer to that is the former anyone telling you otherwise is a liar uh it's not something you can argue it's obviously easier to take a 3D video and take a snapshot and now you have a 2d Cloud image throw it into your AI and then have your AI expand out the clouds around it in fact I even showed the thing that it was put into one of those AI sensors and the AI sensor thing

(2:24:46) so that it was 80% sure that the image had been created by AI there's even a tool out there to change the metadata to have it become a raw file also I don't know why the bunkers think that raw file is some kind of exclusive thing that can't be faked of course it can and we actually found applications that will let you do that as well um I I don't know they make a lot of weird claims oh yeah and then the best part is everybody involved is a VFX expert and they all know each other and they're all tied to the corridor crew

(2:25:23) so everybody involved was a VFX expert they all know each other and they're all tied to the corridor crew including the person that found the pictures including the six day old **Reddit** account so honestly the cloud **debunk** is probably starting to become worse than even the jittery contrails one just because there's so much forensic analysis and this actually doesn't even go into the forensic analysis uh so I'm actually adding this on here as well forensic analysis actually shows that a flicker image of Mount Fuji with

(2:26:10) the exact matching angle of the picture and Shadow on the on the mountain was used to generate the fake Cloud picture um so the idea here is that you just use that existing picture you paste over the top of it um your clouds from that Mage 370 video you put it into an AI and then it upscales the cloud picture and makes it look like the clouds from the video or at M Fuji which is contraindicated by the coordinates we see in the bottom left by the way um so pretty weird stuff man and actually there's more I'll probably add even more

(2:26:40) to this but we actually have a great animation maybe I can even add the animation in here uh where you can actually see it's a 100% perfect overlay from a Mount Fuji picture on flicker that we found uh exact same angle exact same Shadows on the the uh the mountain that match uh the the supposed image that has the clouds in them it's pretty wild huh yeah massive shout out to WS advisor he's the one I'll actually pull it up real quick so you guys can see because WS advisor basically he's like a

(2:27:12) hardcore forensic analysis uh when it comes to like pictures and stuff like that and that's not my area of expertise so I usually don't dig into that in general um but the the evidence that he put forth is pretty damn compelling man I mean I think it pretty conclusively shows that there's some manipulation that happened um and I I was trying to be nice to like this person who took the picture and I didn't want to like you know uh directly get them in trouble for you know they may have been used with

(2:27:42) respect to this picture being taken you know they may not have known that they were being lied to so I didn't really even want to dig into a lot of this but um you know that because all the **debunk**ers want to come and bring it back then you know we're just going to expose that guy unfortunately like he he I I gave him fair warning not to get himself involved in uh the situation without looking at the evidence and he ignored it so you shouldn't have too much sympathy for him um he asked for it 100%

(2:28:09) and not only just that like not only did he ask for it but he also did multiple ask me anything like not only did he he come into the case insert himself into it when he had no reason Reon to be he's just a guy that took a picture on the internet has no reason to get involved starts making **debunk** videos out there and then on top of that he starts doing ask me any things on **Reddit** for people like this is not the behaviors of somebody who is innocent in any of this stuff this is somebody who's getting

(2:28:39) directly involved uh without listening to any of the evidence and just to completely kill the cloud **debunk** in front of everybody who's watching thousands and thousands of people

right now um this is the flicker image overlaid over the exact Cloud image in question uh and you can see that it is a 100% pixel perfect match exact same angle exact same shadow in the The Ridge here as well exactly the same how do you get the exact same angle from the exact same shadow in this exact same picture that has Mount Fuji it's

(2:29:20) it's a 100% pixel perfect match look at that 100% match these are the people that think that a non-matching VFX this is this is what a real 100% match looks like this is no manipulation by the way guys no manipulation so this is actually just straight up you can see it's just shifting the opacity back and forth that's it that's it and so we've proven Beyond a doubt that this picture is clearly fabricated according to the **debunker** own standards the **debunkers** say that if you find something like this

(2:29:56) that matches that proves it to be fake that that's the standard of the **Reddit debunkers** of **mcwest** so we're just using their exact standard that's 100% pixel perfect match Now by comparison I'm going to show you something that's not a 100% pixel perfect match this is the actual comparison I'm going to show right now that is the best possible match for the Pyromania VFX oh wait where is it here it is here's the best possible match for the Pyromania VFX that's out there for the people that think that that doesn't

(2:30:31) match those people are saying that this matches okay they say that this is a 100% pixel perfect match it's a donut you guys it was a donut all along it was always a donut it's perfect match just kidding uh the the one in qu that I'm really trying to show here this is it that was just a joke gu that one was just a joke uh this is the one that supposedly they claim as a pixel perfect match right here can I make this bigger oh yeah I can okay so this is the best possible match and you can just tell without even doing a pixel

(2:31:11) comparison that it doesn't match along the edges you can tell there's dots just completely missing in the real thing like there's all these extra little effects in here that just aren't there anymore there's an extra dot that's missing this whole Edge right here doesn't even match and that's just the edge where the edge is is similar but doesn't match the middle is not even close it's not even remotely close you can see the plane sticking out of the real one this fake one here is weird

(2:31:35) like things shooting out of the top left and down the bottom right it doesn't even remotely match in the center here these are the people that are telling you that the Mount Fuji picture doesn't match are telling you that this is a pixel perfect match how do you even convert what you see in color to what you see in black how do you even do that what are the steps to modify it the steps for the Mount Fuji picture are really simple you literally just perfectly overlay it and then you just shift the opacity back and

(2:32:02) forth all you have to do for this one is literally just overlay it and shift the opacity back and forth and it's 100% pixel perfect match pretty funny huh so I am excited for the Glenn Beck debate I think that'll be great I hope that he gets some advice from the **redditors** if I was him I always give the best advice guys uh if I was Glenn Beck I would not take any advice from the

redditors I'm already ready I know everything that they're thinking uh I know that they're going to say that the

(2:32:37) ocean's really big though uh it was some kind of suicidal pilot even though there's literally no evidence for that I'm just going to say that and repeat that and I'm going to say something about the simulator without realizing that the simulator data is mh150 to Jetta perfect match for mh150 to Jetta uh I've got that ready to go too I have something that I haven't never showed related to that uh to the simulator data which will conclusively prove it um in fact here it is actually am going to show

(2:33:12) [Music] it okay so the simulator data that they have here is in red and they actually the simulator data does not like have this straight line like this path like here um it just has a there's a waypoint in the South Indian Ocean that they've manually connected you can see that the red path is a perfect overlay to the five most recent how many different in the top right here you can see mh150 flights this was like every four days there's a flight to Jetta from K lur and you can see this was their real flight

(2:33:45) path it's clearly just the flight path from mh150 this purple one they probably had to deviate because there was some weather or something like that but all these other ones are perfect overlay so this the flight path is conclusively not some pre-planned route it was literally from qual andur all the way up here it was literally jet the the one the flight from to Jetta and he was actually slated to fly this route in February right after he was practicing the route so the simulator route stuff is 100% fake H and

(2:34:14) it actually was ruled out uh officially as well not only with that but it was also ruled out officially the FBI ruled it out and so did the Malaysian um government that that was any type of suicide route so that just goes to show how much fake stuff people believe out there uh I can't wait to talk about these videos with someone like Glen Beck um hopefully he comes prepared so we can have an intelligent conversation thank you very much uh Bobby Lee guys you guys are triggering the debunkers with these

(2:34:41) donations because they're like he's making so much money in donations well I'm telling people not to donate to me if you need your money please do not donate to me I want you to keep that money but some people just love the case so much they love the investigation so much that they want to support it and I appreciate that because if I were to lose my job related to this and they try to ruin my life or whatever it'll be nice to have that extra money uh so that I can you know get on my feed or

(2:35:04) whatever is necessary so uh thank you guys very much for that I appreciate it and of course I'm going to use that to you know upgrade the equipment I'm actually thinking about changing my streaming setup changing the angle maybe having more depth in the background uh I have to just move stuff around for that the problem is the walls are always going to be white because I don't want to paint my walls too much effort uh but I may make it like a little bit better so that it's more visually appealing for

(2:35:28) people who are watching um let me just make sure I got all the donations uh once again Tom thank you very much oh Tracy Scott if you have kids please speak to their science teachers let's get the word out use your 10 minutes of time uh it will open many Minds yeah so what I would say is if you have kids that are in school even high school and they're learning physics or electrical engineering have them talk about Tesla have them talk about Maxwell's equations have them talk about the scalar potential that seems like

(2:35:58) it's uh like a hard thing but it's actually you know even if they don't take it seriously at least they the science teacher might think about it and go wait how does that person know about it you know so pretty cool um thank you very much guys now I think we're going to play it out here yeah the thing too is like if I would have lost my job and people started coming after me or something like that I feel like the community would rally around and uh and I'm grateful for that

(2:36:25) absolutely grateful for that honestly it makes me kind of choke up a little bit when I think about it because there's so many awesome people in this community that have been uh you know supporting finding evidence helping out here and there I'm glad to represent you I think that this is something here that if we get the outcome that we're looking for it's going to be one of the greatest stories ever and you guys will be able to go watch the movie later on and they'll have Jesse Eisenberg playing me or Sarah

(2:36:51) and you'll go damn I was part of that I was part of revealing that information that's going to be an awesome experience for everybody even the debunkers might appreciate it although the debunkers will end up getting played by like uh I don't know some troll actor okay guys uh I think I'm going to stop there for tonight we'll probably do a little bit more uh probably dig hard into the science tomorrow I'm going to read some of those papers that I listed up there so if you want to sneak peek

(2:37:17) take a look at those scientific papers and uh I'm going to post the clip from James O'Keefe later tonight before I go to sleep I think right after this and I'm going to probably post a link as well to the big things uh podcast so guys make sure you watch the big things podcast appearance I did with him uh let's get him as many views as we can get it was a good conversation that I had with him the debunkers get addressed everything he's a normal guy he had Jesse Michael on he had Alvi lob on

(2:37:42) recently so watch Christian with the big things podcast tonight uh watch my my short clip and question to James O'Keefe about the CIA and the weapons that they're hiding and uh yeah let's do this thing guys thanks everybody uh for hanging out tonight uh I'm going to play us out with uh the Kim uh song again which is hilarious and then we'll play out our our favorite song so thanks everybody thanks everybody who donated have a great night love you guys peace everybody [Music] us the government came and took it all

(2:38:35) away a good boy get his allow you see that why do you blow so [Music] hard. what is hiding in your.com stole from Hollywood inside of training and eminent sting now he's on Twitter

calling **scamm** with the only thing the FBI left string but when the call he sh it te now it's calling other people SC out of fear he got empty buckets and hard from the USA the government came and took it all away do you go [Applause] SOC what is hiding in

(2:39:41) [Applause] your back sto from Hollywood inside trading iness Ste now he's on calling **scam**ers but the only thing I him [Music] string why you go so hard why you why you go so hard me why you so hard why you why you go so hard why you go so hard why you why you go so why you go so hard why you m

(04:53) malan 370 Contact 120m 9 [Music] breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] [Music] [Applause] [Music] I remembered the line from the Hindu scripture of the Bhagavad G Vishnu is trying to

persuade the prince that he should do his duty and to

(05:58) impress him take takes on his multi-armed form and says now I am become deaf the destroyer of [Music] worlds good night everybody welcome it is going down tonight chat I hope you guys are ready for this this is your host Ashton Forbes it's not even technology tonight it is just uh yatsi tonight everybody this is going to be a huge stream uh glad you guys are here watching things have just been blowing up like you guys can tell it's just been getting bigger and bigger and bigger the debunkers have been marginalized people

(06:39) are sharing the content I've got people posting the content in like five other languages that I've Just Seen around there not even like retweeting me just reposting it exactly changing the languages posting in Chinese French Portuguese Spanish or just a few of the languages I saw out there people are starting to wake up that this is what happened in the plane that those videos are real um and they should be because that's what happened with those videos those are the MH370 videos that's what

(07:07) happened to Malaysian Airlines that's why the plane disappeared that's why all the bullshit's been going on United States government is implicated if you guys watched me the other night you saw that I posted a video directly accusing the United States military the intelligence communities and President Barack Obama in addition to other co-conspirators in The Disappearance and abduction and and conspiracy coverup of Malaysian Airlines Flight 37 70 I am not joking around with that that is a direct

(07:33) accusation I this is not satire uh this is a formal accusation of criminal activity uh I don't think that they will ever be prosecuted because I don't think there's any justice in this world and I don't think that uh the Judiciary in the United States uh I think is completely corrupt but the point stands and why is that important to make that statement that's important to make that statement because we've got people out there if you go on social media people have been coming at me they' have been making a

(08:00) excuses lies trying to discredit me trying to discredit the case lying about the case fabricating fake debunks about the case and I want those people who are doing that to know you are on notice and when these videos do get confirmed I am going to suggest to the Department of Justice that you face criminal charges for conspiracy for covering it up you're not going to be hidden behind your weird screen name I will um uh we will uh subpoena uh Twitter Reddit whatever to get your real names I just want you to

(08:30) be clear on that so that there's no confusion later on no lying about it so the best thing you can do here is not lie about these videos I am going to have the families come after you using the Alex Jones precedent Sandy Hook president and take all your money and everything you have so do not do that everybody who's been that has been officially warned that's why I made that statement that's out there so now get into the fun stuff um guys also and yes I and we do have records of your guys' posts and stuff

(09:02) that you're putting out there so just stop it man just stop it if you're one of these people there's people out there that are literally trying to make up lies about me and stuff like that I strongly suggest you stop doing that you guys know who you are that's out there strongly suggest that you stop if you've got some mental disability that can't make you stop just get off the internet for a while man get off the internet nothing is going to make these videos go away I want to say that right off the

(09:25) bat and before I do that I do want to say hi to people but there's way too many people in the chat today like guys this is our we already got a thousand people we're only a few minutes in um so if you guys are in there in the chat thank you guys very much greatly appreciate especially the people that have been following along for months and months and months especially in the down times when you know it just we haven't had as much traction I mean we're at probably the highest peak that we've

(09:48) been at with respect to this case this is not any grift nobody's doing this for money I'm not doing this for attention um I I think you can tell that if this was real obviously there would be like you know there's going to be huge things that come from this of course you can't deny that in general but that's not why I'm doing this we've always been doing this to get it to the answers for the families but also for the uh technology being out to the government out to the public uh from the

(10:15) government out to the public um so yes nothing is going to stop this I don't care what kind of influencer you are how many millions of followers you have on Twitter or on YouTube or anywhere else there's absolutely nothing you're going to be able to do to make this case go away without the United States government making a statement about it and if you are out there trying to make the case go away without the United States government then your motives are very suspect extremely suspect and it

(10:43) goes back to what I said before as well so do not do that do not try to make the case go away I don't care if you're kim.com I don't care if you're the corridor crew with your six million followers on on uh YouTube in fact the more followers and the more money you make the less you should be trying to come out against this case because you got a lot to lose because those families deserve a lot of money and I'm going to make sure they take your money and then it becomes their money so now let's jump right into this

(11:10) um with respect to what was going on with uh kim.com okay so people probably just saw that he finally he posted in uh in Twitter replied to one of my comments I'm going to go ahead and pull that up so we can just watch along at home we're going to start with that tonight let's see and where's my post about this right here share screen oh I'm gonna have to pop this screen out hold on gu now before I pop this out I want people to know that I muted kim.

(11:48) com um months ago because I never got a good feeling from this guy and when he hid okay let me just read it so and you can see he's been muted on my post here no Ashen it's stock footage and the photos that were used in the creation of these videos are that are holding

people back you have a gift use your talent to solve real problems now I don't want to expose kim.

(12:15) com uh more than I have to here but I absolutely will if necessary so I would prefer not to but don't stand in my way on this Kim or anybody else okay the the fact that kim.com is coming out of the woodwork four months later five month mon later when this is at this its peak once again is extremely suspicious extremely suspicious because I was already suspicious of why he was reaching out to me before when he has usually nothing to do with the UFO topic or anything related to that especially because he's facing extradition in the United States and he told me in a

(12:49) private message or in a private conversation that we had that his assets from mea mega upload were actually seized by the United States government and he gets them doled back as uh an allowance nobody in that situation should be trying to come out to me who I am exposing the United States government and trying to influence people it just makes you look bad kim.

(13:11) com don't do it man also this is not your wheelhouse you are not some kind of uh science expert you are not an expert on UFOs you're not an expert on any relevant things here whatsoever so stand out of my way and let me deal with the United States government I'm going to take them down and you can just enjoy it I'm going to do you a favor on this one one okay so I replied to this as well um where's my reply where's my reply oh I think I replied F further down here maybe so kim.com says I spent an hour on

(13:45) the phone with a photographer who took the cloud pictures in Japan so first of all kim.com offered this guy \$10,000 and he turned it down well actually he accepted it and you know what we're going to play that video as well just so that people can hear it kim.com actually told me to record this by the way so if anybody gets mad that I recorded this kim.

(14:04) com is the one who told me to record it so that we would have a record of it um I may have to find it I should have probably got this queued up before we do this there's the level up thing blah blah blah uh I may have to dig around and find it it's probably on my Twitter profile so um before I do that so then I said in response to him remember when he told us to look at the Torrance from this call that he's talking about we did the images didn't exist in the Torrance so why didn't they just find out who downloaded the images in the 7-Day

(14:46) window and also Kim how do you make a full 3d rendered environment out of a 2d Cloud picture because I'm open to logical answers on this one uh I haven't checked to see if he replied but I have a feeling that he didn't reply because he doesn't like to usually answer questions that he can't he doesn't have a logical answer for and I don't see any answer from kim.

(15:05) com on this one so let's jump back to my post then that was the post that I was just sharing there so here's my response when I see that and once again guys I'm not above coming at anybody so if you come at me man you better be ready dude you 100% better be ready Kim

you're facing extradition United States and they control your assets you told me this straight up I'm afraid I cannot trust you I think you're a smart guy but you completely ignored my DMs when I explained how it can't be a 2d Cloud

(15:36) image in these videos you hid my reply in your posts and that's when I muted you you also blew up on Dr Greer which was really weird like guys I don't know if you were there in that conversation December 16th of 2023 in the space but kim.com interaction with Greer was extremely bizarre and uh pretty unhinged if I'm being honest with you now I get it he doesn't believe the US has this technology first of all he's wrong but whatever you want to believe I don't really care you also think that aliens

(16:05) should give us the cure for cancer that's not how any of this works you don't seem to comprehend how this works is that once you unlock this unification theory of quantum field mechanics and general it doesn't have to do with cures for cancer the physics that we're talking about here is more borderline on metaphysics which is from a medical healing perspective we're talking about the ability to like reverse tumors and Cancers we're not talking about the cures for them and this physics also

(16:32) opens up the door to free energy uh warping an object and doomsday weapons you get everything it's Pandora's Box you don't get a pick it's not Burger King you don't get to have it your way uh making a 2d Cloud picture from a 3D video is the absolute bare minimum that the United States government intelligence Community would do to hide this video kim.

(16:55) com out of all people who literally got raided there's a video of his the raid on his place which was pretty Over the Top If I'm going to be honest uh he should know that this is a guy that should definitely know what the intelligence Community is capable of is it easier to take a 2d picture and turn it into a 3D fully rendered environment which we've proven or is it easier to take a 3D picture or 3D video and convert it to a 2d picture you guys tell me the answer to that one now I'm going to expose this technology and I'm going to expose what

(17:27) we did at MH370 we be in the United States government with or without kim.com with or without any other influencers I'm putting this out there because I want people to be on notice for this uh so that they know that I'm not messing around now the other thing I want to say on the kim.

(17:45) com stuff I do not want to expose him I don't want to go through my DMs but I would be happy to I'm trying to get away from doing that but I can show the DMS where I've got like 10 DMS to kim.com explaining why there can't be a 2d Cloud picture and he just completely ghosted me I could also talk about the fact that he called called me up the very next day when that cloud image came out at like 8 in the morning my time when I had just woken up and he pressured me to come out and make a statement that said that the images were

(18:08) debunked literally pressured me to do so which is not normal behavior um what else did I want to say uh so I anyway I found that to be pretty suspicious because I never had a good

feeling about it that's why I ended up deleting that post and later that day we already the whole story started to fall apart oh yeah and also kim.

(18:32) com basically offered me a job to try to help his case against the United States kind of like what he's talking about with using my talents for other things or some [redacted] like that but then ghosted me about that too these are all factual statements by the way um so I'm GNA be honest best bet you can do here Kim I like to give people my honest opinions uh for what they should do is don't get involved in this now if you want to flip your script and you want to out and support me again I'm going to be honest it's going to be hard

(19:01) for me to trust you the best thing you can do if you want to be on my side is just retweet my content I really don't want to get your opinions on it if I'm being perfectly honest um like I said this thing is not going to stop till the United States government issues a statement and anyone trying to prevent that from happening should be deemed suspicious I've already given the verifiable information to AO we don't need to litigate this on social media the Aro is going to have to issue a statement one way or another and

(19:28) anything they say I will be able to determine if it's a lie or not they will be able to find out if these are the videos Edward cin leaked uh they will be able to find out if that's what mq1 C Great Eagle looks like and I've got like 10 people in the last couple days telling me it is and the satellite video they will be able to confirm too if that's a cber system and if and when that does happen all the people who've been lying about this and trying to hide about it your Day of Reckoning will come

(19:51) your Day of Reckoning will come so just keep that in the back of your minds guys before you decide to take any actions um let's see I think we covered that I think we covered oh yeah and also we're well past the cloud images here guys we're well past determining whether or not some Cloud 2D cloud pictures in these videos way past that the body of evidence is far too strong if somebody wants to begin to explain how they knew where the coordinates of the V of the plane should be uh 10 days nine days

(20:21) before the coordinates were available feel free to just start explain to me which psychic oer did this in fact people ask me what would it take to make videos go away well the answer to that is you need to find the hoaxer if you're not out there trying to find the hoaxer of these of these videos then again your motives are suspect if you think these videos are debunked you should be you should have been trying to find the hoxer when kim.

(20:44) com had a \$100,000 Bounty that was never paid out by the way so no kim.com Bounty was never paid out uh Jonas the guy who supposedly took the pictures said that he would take a \$10,000 reward and then came back and backtracked on it and pretend he actually pretended for like a day and a half that he didn't agree to it I don't think he knew that I had recorded our meeting with kim.

(21:04) com so it seems like he was lying and he didn't know so he completely discredited

himself when he lied about that and then later on after he got caught in the LIE came out and said okay well now I'll take it but I'm going to give it to the families which also doesn't make any sense because you can't do that um I'm gonna actually pull it up so we can play that I've got it out here somewhere Dam where is it somebody can find the post for me I appreciate it for some reason I can't find the one where I took the video and

(21:48) I can't seem to find the video in my in my list here either here's all my Jonas ones the 10th huh weird man oh maybe I Google hold on oh Jonas affidavit there it is okay where is it oh okay I got it here we go guys you ready another thing that I wanted to ask you would you be will right away we're already hearing kim.

(22:28) com voice right by the way kim.com is the one told me to record this so once again don't get mad at me kim.com told me to to do an affidavit it's kind of a notarized sworn document that your evidence is accurate that you took that photo on that day that uh there's no uh false HS and anything that you was saying yeah sure cool yeah I'm I'm happy to vouch for the authenticity of these files happy to vouch for the authenticity of the files next day claims that never happened says that never happened the next day I post the

(23:02) that that video and next thing you know he's changing his tune later that day so I appreciate that kim.com did this but I want to clarify for everybody out there that no hoaxer ever came forward the Bounty was never paid out kim.com wanted to pay this guy the Bounty I told him no if you want to give him anything give him \$10,000 and he said okay I'll give you \$10,000 he said right then and there he was going to give him the Bitcoin right then and there and the guy says well I don't have a Bitcoin address and then he

(23:32) comes back with that statement about the affidavit the affidavit play was a really good play by kim.com which is why I'm disappointed him in him in general because he should have seen through the [ ] on this one um and I don't know if that guy was being played or whatever but all I know is that there's no 2D Cloud picture in this we've got a full 3d runner environment requirement so uh let's go ahead and just show actually I think I already did show that but you know what we'll show it again I'm GNA

(23:56) play that one more time now another thing that I wanted to ask you would you be willing to do an affidavit it's kind of a notarized sworn document that your evidence is accurate that you took that photo on that day that uh there's no uh false hoods and anything that saying sure cool yeah I'm I'm happy to vouch for the authenticity of these files I think that was probably the biggest mistake of that guy's whole life just G to be honest with you Jonas too probably biggest mistake of your life uh

(24:29) very first thing that I did when this guy dm'd me was told him not to get involved should have let other people get involved in it you're some random picture taker you shouldn't be getting involved making a debunk video uh and then his response was is that a threat it was just honest advice you probably should have took it back then I hope you uh don't end up regretting that now he also threatened me multiple times uh Jonas too did uh with uh supposed legal

consequences and uh you know what I I may show that

(25:00) DM um because I want to make sure that this guy doesn't have any uh legal case ever again uh against me and **redditors** thought that I should be afraid of this guy um I've never said anything false about him all I've done is post-factual stuff that he said um so here we go let me pull this up I'm going to screenshot it for you guys so I don't have to reveal a bunch of other stuff okay so **I want you** to know what kind of creep and loser this **Jonas** guy is um those are my opinions by the way uh but

(25:38) here we go let's stop share screen let's hide this so same guy you just saw in this video These are the DMS from this guy let make sure there's nothing okay so this is how much of a loser **Jonas** Doo is guys so next time here is is like the best legal advice if you're somebody who's out there uh let you know we're documenting everything you publish about me online and are currently looking into our options for a defamation charge I'll be in touch with other relevant parties such as textures.com legal team and our partners

(26:15) in the United States as well I'd appreciate if you take down any previous posts about me I won't respond to that publicly and happy to pretend it never happened to let you run your business anyway I just thought you should know best **Jonas** this is what a dumb **[ ]** **redditor** says who doesn't know anything about the law um and then and so you can see that was December 13th so I just ignored him I ghosted him because he's an idiot and he has no idea what he's talking about he has no lawsuit against

(26:40) me and in fact I'm going to make sure that the families take every single penny **Jonas** has I'll make sure that the media crucifies this guy for the rest of his life so you made the biggest mistake you've ever made **Jonas** too just letting you know that right now when these videos get confirmed may I have contact information for that of you or your legal counsel I'm proceeding with preparing a defamation charge against you January 29th 2024 I also want to inform you have I filed a comprehensive police report with

(27:09) the Tokyo Metropolitan Police Department detailing the false and damaging statements attributed to you he filed a false police report against me in Tokyo my response I didn't say anything false about you good luck his response says I'm just going to read this one you can take my word for it I'm proceeding in Japan not the United States statements don't need to be false to be convicted of you know what I am going to show it hold on I going to show it I want I don't want there to be any iGuy about

(27:46) this I didn't say anything false about you good luck you know what the absolute defense against defamation is the **truth** uh I guess this is the problem with like **redditors** is **redditors** don't really understand the law or really anything else unfortunately and these are by the way these are the same people **debunking** the videos so this is the level of intelligence that we're dealing with here guys um for the record when people Sue they don't threaten people about it laughing my ass off you're such

(28:12) a loser I also recorded our call so really man good luck so that was me just laying the hammer down on this guy uh because I've recorded the whole call so good luck with that bro uh and I just played it several times for you and and he says I'm proceeding in Japan not in sites statements don't need to be false to be convicted of defamation here no subpoena needed either I'm just making sure you're in the system here so he reported a false uh claim criminal claim against me in Japan um honestly if anything I probably

(28:46) have a good defamation case against him and uh **Jonas** best thing you should do **Jonas** is come out issue a formal apology say that the videos aren't **debunked** uh apologize for making your **debunk** video delete it off the internet that's what I told you to do right in the beginning um you are a [ ] idiot I don't really know how else to put it man you've gotten yourself into so much trouble here I don't even know where to begin um this is just straight up complete Mor and so of course like you

(29:14) know he has absolutely no case against me and if he were to file case I would counter Su and take him for everything he's got um so I hope he doesn't but it's up to him so now that we've dealt with that little bit of business um you know and and just for the record once again I'm just going to say it again if you're trying to **debunk** these videos because you don't think they can be real you should be thinking very hard and clearly about what you're doing you're fundamentally potentially covering up a

(29:50) conspiracy where 239 people disappeared where just again the official story is they don't know what happened to the plane **I want you** just to be that be 100% clear for everybody who's out there so that nobody's out there thinking that you know they're going to come at me or whatever yeah and here's the thing too is that I gave this guy all the chances in the world I told him not to come out not to involve himself in this he told me that he didn't want to uh I said don't do it then then don't and I said

(30:20) don't make a **debunk** video for sure because that's definitely going to get you directly involved he made he did multiple ask me anything on **Reddit** this guy multiple asking anything on **Reddit** it guy that just took some random picture he refused to listen to any of the evidence that I put forth refused absolutely refused to listen to any of it didn't review any of it so not only did he not do his due diligence at all to review the C the facts of the information then he went out and made a **debunk** video without realizing that

(30:46) there can't be a 2d Cloud picture in these videos so everybody out there kim.com **Jonas** D whatever you're all on notice you guys want to take it to court I'm happy to take it to court you guys have more money than me I'm happy to take your money and you really don't want to come out against these videos because if these videos do get proven to be true people are going to be wanting to crucify people out there have you seen how upset the families are imagine what the Public's going to think of somebody

(31:14) who tried to **debunk** the real fate of MH370 who tried to hide warp drive free energy uh and other Advanced Technologies from the world I don't think they're going to look kindly upon

you I think that your life might as well be over so yeah some of these people need like real Hobbies man and I'm not going to dunk on this guy anymore but this is just you know again giving you guys fair warning here and again and last time I G say this but I'm doing this because I want to make sure that nobody can play

(31:46) ignorant later on in the future nobody can pretend like they weren't warned that they didn't know what would happen uh that they didn't think this was that they were doing anything wrong you've been officially warned okay so oh yeah if that **Jonas** guy ever came at me the the very first thing I would do is just post the thing of him threatening to assume me where I said I didn't do anything wrong and him admitting that I didn't do anything wrong but it doesn't matter end of end of legal argument then I'm counters

(32:19) suing you and taking all your money okay next thing guys so what do we got next okay so I think we've addressed the cloud situation and we've addressed the kim.com situation out there pretty well now let's go ahead and take a look at now we've done the dirty business the first 30 minutes here the next thing I want to talk about is the warp drive stuff I want to go back into that for a minute let's close this actually leave this open for a second I do want to make a formal appeal here to the um to the physics community

(33:09) and the science Community what's it wrong oh there it is okay but I want to look at the content before with you guys so I make sure that I'm doing this correctly um so first thing I want to do guys let's dig into the thing we were looking at yesterday or two days ago I oh well first of all congratulations for 100,000 followers and I'm congratulating you guys for helping being part of MH370 X we had 100,000 followers in fact we're up to like 102,000 we got like 2,000 followers uh yesterday um what's the earpiece for so

(33:46) that I can hear uh when we play videos and stuff like that uh but so that's big and like I said things have been growing rapidly with respect to this yeah we're going to look back at the DIA paper here in just a second so just like what Nature's wisdom said because there's some more of this Dia paper that's extremely relevant for the physics so I guess I'll I'll set the this the um table here for this is that with these videos being real if somebody fake these videos why did they

(34:15) fake them with real science that's not publicly mainstream these videos Prove warp drive is real but mainstream physics doesn't know that it can be real in fact mainstream physics right now says you need need negative energy in order to for a wormhole or warp drive to be possible in these videos we're literally looking at that we're looking at a cold dark endothermic event we're looking at the negative energy that's required for a wormhole so who fake these videos consistent with physics that wasn't

(34:47) mainstream it's not even mainstream now let alone in 2014 which was just completely unknown in fact the paper that we're looking at from 2010 so unless the hoaxer was uh uh let's see a psychic who is also an engineer and knew aeronautical capabilities but they also knew physics that mainstream didn't accept and they wanted to fake it like mainstream physics

doesn't even know it's possible then these videos have to be real the reality of these videos that and let's just play let's just play that

(35:14) m370 videos the MH370 videos are real I'm 100% sure at this point um the intelligence Community that's hiding these videos is freaking out the side that wants this information to be hidden is losing their minds because some random dude on Twitter was able to use the publicly available information to figure out these videos are real and they don't know what to do probably in the old days like 10 years ago they probably would have silenced me but now it doesn't matter the information is out there and even if they silenced me 10

(35:44) other people are going to pick up the pace there's nothing they can do on that front the side that wants the information out is laughing their asses off at the people that are trying to hide it because it's to the point now where they've been suppressing the science so much that it's they' it's like when you lie too much and you get yourself wrapped into a corner and now you can't make up another lie anymore because anything you do you'll get caught up on that's exactly what's

(36:06) happening so the people that want this stuff to come out are laughing their asses off at the people who are trying to hide it um the answer of how I know is first of all that I I know certain people and uh the rest of it's through deduction certain people want this information to come out certain people don't want this information to come out certain people are profit off of it and uh the side that is uh trying to hide it right now is the issue here is that um the science has gotten out there so there's enough science out there where

(36:43) normal people who just like me or some of you guys as well can figure it out there's enough science where you can piece together what we're looking at here and that's how I was able to deduce it that's why my my intuition was mostly on The Mark with respect to what's happening in these videos that's why people like uh Salvador pz came out and wanted to talk to me that's why Bob Greener was able to figure it out because these guys know the stuff's real and it's really cutting edge and so for

(37:07) someone like me who's just a random guy to be able to figure it out with no formal training in physics or electrical engineering that's what impressed them so much A lot of people only believe whatever they read in their textbooks and when you do that you can't understand why this is possible there you have to have an open analytical mind in order to be able to figure this out it doesn't mean that I'm unique or special uh just means that you know that's the the type of requirement that

(37:31) you need for some of this stuff that's why there's not a lot of people they don't take like all the people you would consider be science influencers uh into the Department of Defense those aren't the smartest people a lot of them are some of the dumbest ones the smartest ones uh don't don't make it aware that don't speak out as openly like this um somebody asked another question these are not manned by humans these orbs you see here this is a plasma field in fact I didn't even know that

(37:58) Hypersonic weapons use plasma sheaths until well into this investigation like a few weeks ago so I think the proper classification for these would be Hypersonic weapon um in case in a plasma field although it is obviously a little bit more sophisticated than a normal just like what we would think of as like a missile with a plasma field around it because these things are just straight up creating space in front of themselves using a laser we're going to find out when we read this paper in a minute that's exactly what they're doing so I

(38:28) hadn't even read this uh this Dia paper on warp drive dark energy and manipulation of extra dimensions and it's got all the answers right in there um I this is the thing that I don't understand how people don't figure this out is the science is out in the open all you have to do is look at it that's it the problem with a lot of academics that are out there is that they don't just look at what's out there they just only they're too close-minded in terms of what they think can be possible those

(38:58) videos that we just looked at right there are the answer to the test those tell us how physics works now one thing I want to say right off the bat science is the study of observable reality science is not dictated by scientific papers that's not how science Works science is what we actually observe and can test and then we write the papers based on that what we have here is we have the answers to the test so a lot of scientists are working forward saying here's the scientific literature that I know of and they're

(39:32) trying to figure out the answers we're working with the answers over here and we are working backwards trying to figure out how it works reverse engineering by literal definition and it turns out we found the answer in the middle here in a bunch of scientific papers that are already out there and that's what we're going to look at here tonight is and I'm not trying to pick on anybody but uh Sabine hossenfelder uh replied on one of my Twitter posts and I went back and we I looked through her YouTube videos we're going to look

(40:03) at those YouTube videos together probably going to get strided on it but I don't care and I'm going to explain to her and to the science Community exactly why she's wrong on her various points that she makes not wrong but how these are the answers to everything that we need for warp drive we're staring at it right there and I think she's smart enough and open-minded enough to understand that uh if not and they don't want to believe it that's fine uh the true reality is whoever looks at these

(40:28) videos first and realizes that they're true and adjusts the scientific papers will probably win a Nobel Prize they probably will do they deserve it not really because the science has already been out there for us to already have it means somebody already figured it out and they just haven't gotten credit for it and that's the way the world really works and so that's why people like kim.

(40:50) com as well are just kind of in the dark on this is that they don't realize how the science works here the science has been suppressed it's been out there so um first I want to look at her post and I Sabine uh or Miss hossenfelder uh I don't call people doctors that are not medical

doctors so it's not anything personal I know you're a PhD and you do deserve respect so I'm not going I'm not trying to be disrespectful to any scientists that are out there including her I think she's very intelligent um but I do want to look here at this post

(41:19) that she made so that I can give a little bit of insight to it where I think that humbly um she might have missed the mark a little bit so let's go ahead and pull this up jeez I a lot of post here oh by the way as well the community notes got removed guys so cheers on that so the other thing that happened is the community notes on my content got removed thank God because people are just posting their opinions in my content and they're spamming every single one of my posts with these fake Community notes uh it's a straight up

(41:48) abuse of community notes also shout out to uh David PES if I butchered your last name I'm sorry sir uh but thank you very much for helping with this he does Missing 411 searching for missing people I think this is right up that alley 239 people disappeared there's no answer for what happened to them and we have verifiable evidence that can lead to maybe even their Discovery if somehow some of these people survived I don't potentially think they did but I like to keep my you know let's keep an open mind

(42:16) on that front where is it man this is pretty far back where's my Dia paper oh here it is okay so I previously made this post let's share this now this paper we're going to look at right here is probably the most important paper I've ever seen this paper is and yeah shout out to the Hodge twins as well who retweeted a bunch of my stuff Big Ups to them in general um and I honestly I think the best move is just to just retweet the content that you like you like the content retweet the content so honestly I explained it

(42:56) pretty much right here we're going go into more depth in a minute uh but the defense intelligence reference document from 2010 explains how warp drive Works via alberry Drive bending SpaceTime the answer is alberry drive that's how we're able to warp an object they they pretty much nailed it uh bending SpaceTime like this creates a bubble that generates a wormhole quote unquote allowing for faster to enlight relativistic travel there is a negative energy requirement for warp travel which we can be achieved by adding another dimension

(43:27) which test referred to as the ether Kusa added this extra spatial Dimension when he created his unification theory in 1919 through 1921 and added the vector and scalar potentials so I actually even went ahead and I screenshotted it down here where you can see it Kusa offered a unique approach to unifying gravity and electromagnetism which involved adding an extra spatial Dimension to general relativity and populating this extra Dimension with two mathematical objects called scalar uh vector and scalar potentials we're going to look at the

(43:59) rest of this in a minute so where was her response can't remember it's in one of these somewhere here oh man I probably should have screenshotted it where was it I remember it was a reply in one of these oh here it is right here okay so I said I'm watching a video by warp drive by Sabine hossenfelder I tagged her and every single criticism she uh has is actually addressed in this paper that's a factual statement I'm going to show you guys here in a minute

and unfortunately this is how embarrassing

(44:44) science influencers are and this was rude of me I apologize I probably shouldn't have been rude like this but the this is true the answers are simply in plain sight and I don't think anybody out there especially not somebody who's a scientist should be making videos that say Deb bunked in them you're clearly fishing for attention when you do that I've seen several of her videos that do that that's not good science whatsoever in fact that takes you down in my eyes a few pegs uh down to science influencer

(45:11) so her response was the document referred to does neither address the question of momentum of conservation nor where the material is supposed to come from if you think that we can just add a dimension in space you misunderstood more than just physics which is a pretty condescending reply if I'm being honest because obviously she didn't never read this paper because it literally I mean she must not even have read my post you can't just add an extra Dimension well that's literally what Kusa did in 1919

(45:37) that's literally what he did literally what Tesla did it's written right here by adding an extra spatial Dimension to general relativity it's right there I don't mean to talk to you like you're a baby but it's a little bit embarrassing when you say stuff like that also it's embarrassing when you bring up stuff like conservation momentum because when we're talking about conservation of momentum it doesn't really apply when we're dealing with a space-time bubble if I've got a

(46:04) space-time bubble like this and my object's in this and one minute's here and the next minute is over here there's no issue of conservation of momentum there's a general localized bubble here the plane is still moving at the exact same speed when it comes out of that bubble there's no issue of conservation momentum whatsoever this is not a situation where the plane itself is getting to light speed so you know she's a very accomplished physicist with like 100 papers so I'm very surprised that I

(46:34) saw that type of reply in there because conservation momentum is not an issue at all here in fact when we are talking about this as Salvador pises patent points out that there is an inertial Mass reduction capability so it actually is possible to potentially violate the law of conservation and momentum and literally set the plane down when it goes through the warp bubble in this case I don't think that's what happen is happening in the MH370 videos uh I think that the situation with MH370 videos is that it is simply coming out

(47:02) at the same speed that it goes in so no issue of extra Dimension or sorry no issue yeah no issue of the extra Dimension that's already been done and there's no issue whatsoever of conservation momentum I think you'd be better off arguing the issue of conservation of energy which we probably GNA have to rewrite and uh potentially the second law thermodynamics is probably going to end up getting violated now I'm going to do a quick recap for the science people here and then I'm going to look at this paper with you guys how

(47:35) is this possible how is what we see in the videos possible how is all this possible the

answer is there is an extra Dimension so scientists like to talk about the quantum fluctuations in fact I was just looking at a uh Kurt jangle jangle had Lawrence Krauss on who I'm just going to [REDACTED] on Lawrence Krauss I think la K is an idiot and uh unfortunately he probably won't be remembered too kindly in the history books because he does not understand how the physics really works he understands how he thinks it works and Academia has

(48:07) told him but not correct um but he they're talking about these uh that virtual particles just come into existence where do they come from how does something come from nothing uh where does the quantum fluctuations uh come from exactly and this is the part where the mainstream physicists have lost their way the answer for saine and everybody else is there is an extra Dimension The Ether we're going to call it the ether I don't want credit for all of this because I didn't I'm just an investigator um but there we don't need

(48:44) uh virtual particles in fact you can keep your virtual particles if you want but they come from The Ether The Ether is our source of unlimited negative energy Yes you heard me correctly unlimited negative energy so this is why not only do we get warp drive because what do we need in order to create a warp bubble we need negative energy but this is also why we're going to get free energy out of it as well uh and it shouldn't be that it shouldn't be that crazy because in the universe we have symmetry essentially

(49:16) everywhere we see symmetry everywhere and yet we uh speculate there's negative mass and negative energy but we don't see it well it's there it's in The Ether it's in the extra Dimension that we do not perceive now how do you want to be able to perceive it imagine the canvas the canvas is The Ether the paint our reality on it that's everything we see around us and this shouldn't surprise us because now we've seen em Drive is real and can work um because it's all a matter of uh having

(49:50) the negative energy is what allows us to get the uh opposite repulsion force that we need and then extreme amounts of energy can cause can allow us to uh Bend space time entirely which is what we're going to see in this paper here so highly recommend to the physicists and scientists that are out there read this paper warp drive dark energy and extra Dimensions also now that reminds me as well dark energy is also solved in this problem dark energy is the negative entropy that comes or negative energy that comes from the The

(50:23) Ether itself problem solved oh and this is the other thing I want to say is that the idea that we can't just add extra Dimensions or whatever physicists have been just making stuff up for as long as physics has been around so yes we can add extra Dimensions yes Kusa Klein already did that uh with between 1919 and 1926 and we added dark matter and we added dark energy which don't aren't really even things those are things that we are trying to explain what we can't understand dark matter is us trying to

(50:57) explain why Stars don't just spin off from their galaxies and fly off into the the void dark energy is us trying to understand why the universe can expand faster than the speed of light in the big bang you don't want to know why dark energy can allow us to expand faster than the

speed of light it's actually very simple because in The Ether the speed of light is no longer constant because our reality is a medium just like if I were to shine a light through my martini glass right here and there's going to be a refractor

(51:28) same happens in the medium that we see around us now why do we not realize that because we're all on Earth here we're all in the same medium it's like fish in a fishbowl that don't realize there's anything outside of it same concept the moment you strip away the medium now the speed of light can move as Tesla reported 50 times faster than the speed of light now you've explained why how dark energy works as well so we're going to be able to explain Dark Energy The Ether is going to give us dark energy

(51:57) negative energy it's going to allow us to warp an object and it's going to give us literally free energy that's the future whether or not you believe me I don't really give a [REDACTED] because we're looking at two videos of it being real I wouldn't be able to figure any of this out without those videos being real so either somebody faked those videos with science that isn't mainstream uh that somehow allowed me to figure out exactly how the universe works or those videos are real and we're

(52:24) going to rewrite the laws of physics so those are the options cheers now ask yourself this if I'm wrong so what nothing happens I guess we go back to trying to figure out why we can't understand how unification of general relativity and Quantum field mechanics Works um and if I'm right then everything changes then we get to move to Star Trek so is it worth it I think it's worth it I think we should take the chance on me being right and I think that if you do the math and you do the the physics equations you will find out

(53:04) that it checks out in fact this paper is going to prove it for us right now uh yeah so cheers real quick guys let's do a quick uh quick commercial break here and then we'll get to this paper cheers so how crazy is that guys how crazy is the idea that we potentially just figured out physics found out that the Maxwell equations got reduced we just did investigative journalism just investigative journalism was able to figure out that these videos are real that the Maxwell equations got incorrectly reduced which is why we

(53:46) didn't figure out how to bend gravity before this the military has already figured out with their special access programs decades ago they've been suppressing the science and the inertial mass reduction capability and everything else comes along with this they've been suppressing The Ether the public uh mainstream Academia has just been literally stonewalled not being able to progress because they've been all stuck on quantum foam and Quantum fluctuations and virtual particles instead of just

(54:13) realizing that there's an ether and that solves all the problems they've been out there just coming up with new terms for stuff like dark energy and dark matter when we don't need any of that the Dark Matter thing might not get solved with this I don't know we'll find out we'll probably get there too but the dark energy thing is definitely figured out from this so once again oh and also I just want to say this as well real quick oh kim.

(54:49) com responded okay we'll take a quick look at that um and I don't care how egotistical it sounds cuz I mean we're just dealing with the most incredible crap ever here but uh I don't I don't really want the Nobel Prize although I'll split the money with you people may say well why would you not I think they give you money with Nobel Prize right somebody check on that um people say why would you not want to donate the money to MH the to the families of the victims maybe but the families of the victims should be getting their money from the United

(55:16) States government from Boeing from the Malaysian government uh from Rolls-Royce from all the debunkers all those people should be giving all their money to the families that's where their money should come from the money for figuring this out should come from whatever Nobel Prize or whatever other crap that we want to give people for that I just want the Pulitzer prize because I think I probably earned that with my journalism my investigative journalism related to this and then I want to rip that thing up on stream I don't know if it comes in

(55:42) a piece of paper but if it doesn't come in a piece of paper I'll just print something out and then I'll just rip it up there because I want people to know how much of a joke mainstream journalism is not even just mainstream all journalism frankly um there's been CNN journalists that I've talked to as well related to this I'm not going to name them but nobody would pick this story up nobody had the balls to pick this story up which is potentially the biggest story in the history of the world at

(56:07) least to date free energy and anti-gravitational Technology that's been kept hidden for decades including us freaking stealing an airliner we stole a [REDACTED] airliner out of midair and just lied to the world about it and nobody could figure it out even though it's just the worst cover up ever yeah went out to the South Indian Ocean well we searched everywhere and found and nobody even thinks twice about it nobody even thinks twice about it so any aren't I worried they're going to off me honestly I don't give a [REDACTED] dude

(56:36) I'm so far past being worried about them offing me you have no idea don't give a [REDACTED] whatsoever um and it's too late it's too late this is the reason why I open sourced everything I open sourced everything all the evidence is out there it's never going away my account's not getting deleted you guys should download everything you want to download I just told you the answer just now I just told the whole world the whole answer The Ether explains everything it explains how we can unify the forces explains how

(57:00) we can get dark energy uh how we can get negative energy how we can do warp drive how warp drives real um and the papers have been out there too Harold White Sunny P sunny or Harold Sunny White he literally experimentally showed that we can make a warp bubble experimentally and it's public available information so the really the answer at this point is just a matter of when uh the first big scientist and physicist jumps on board with this they're going to get a lot of the credit that's the true story of it

(57:30) um because what they're going to do is they're going to dig into the science and the

math they're going to figure out to checks out it's just that simple man okay let's take a look at what kim.com said chat uh they're not going to bury this it's too late to bury this this is not getting buried anymore if they take me out then you guys know it's real and the reality is I'm not we can't wake everybody up there's no way we can wake everybody up we can only wake up so many

(57:58) people so when did he reply guys wait is this him down here stop dude Kim's just digging himself a grave right now dude okay hold on let me get this up here kim.com does not realize how bad he's digging himself into a hole at the moment stop deflecting have some Integrity release the call recording with the photographer who took the cloud picture that were used in the the video I sent the video the video to kim.

(58:29) com he can release it if he wants after the call we probed him for an hour we concluded that his evidence is real you agreed with me that the videos are fake I absolutely did not agree with kim.com that the videos are fake absolutely did not I don't know why kim.com is lying about this uh I have the recording at no point do I agree that the videos are fake I literally felt pressured by kim.

(58:54) com he calls me up at 8 in the morning when I just woke up and has to pressure me into making a statement about the videos I never felt good about it never felt good about it and ended up deleting it because of how bad I felt about it and because we were unable to find uh the images in the Torrance that **Jonas** claimed and then when the textures.

(59:17) com people were confronted with this information they made some announcement saying they found something suspicious and then the next day made a VFX of a saucer with aliens flying across their web page that's not the actions of a serious person in fact that completely discredits them and kim.com should be able to see through this so once again my advice to kim.

(59:42) com is stop digging in stop digging your own grave here buddy like read the replies bro read the replies kim.com is not an expert on these videos he never was an expert on these videos he was never an expert on MH370 and he's certainly certainly not a physics expert in any sense of the word so if Kim goham wants to go down this route I will start showing the DMS uh I will pull up the space with Dr Greer where Kim has a full meltdown and doesn't understand how any of this works and thinks that the aliens should give us the cure for cancer on the blockchain

(1:00:15) or whatever he thinks is going to go on um but it's starting to get embarrassing for him honestly so and and the thing is too like I have no problem just leeching more views off of kim.com if that's what he wants to do here with this back and forth between us because the more back and forth there is between kim.

(1:00:35) com and I uh the more the more people are going to look at these videos and that's all I'm trying to do here because I know they're real and I know we've got the science to back it up so let's see what the replies are um yeah there's nowhere where those also these images were

never verified so the idea that somebody is going to pull them up while you're on a stream and show you that they have metadata on them guys I was literally **scammed** out of \$3,000 by people that had fake metadata on a bunch of fake uh files so this idea

(1:01:08) that like somebody can't fake metadata is silly these images are only on the way back machine in 2016 that's a fact they do not predate 2016 even on the way back machine even in the uh even on the textures.com website according to their logs which can also be faked they only go back to October of 2014 which is after the the plane disappeared after the videos were already published there's absolutely no proof whatsoever that these images predate the videos none and aam's Razer would say that these images were produced from the

(1:01:46) videos because it's very very easy to produce an image from the videos and change the metadata on it it's extremely difficult for a random hoaxter to take a 2d Cloud picture and turn it into a full 3d render environment in fact I don't even know if that's possible using software from 2014 I've had several people tell me that it's not whoa Jake Goran dude what the hell thank you very much man holy crap forget Kim and **Jonas** and others who disturb the study here's a little donation help

(1:02:15) cover your utilities needed for the study thank you send for all the positive vibes for The Ether let's go Jake you're the man bro holy crap thank you very much dude that's super nice also I think missed one earlier big poo thank you very much just a test alien cheeks clap them thank you big poo appreciate you bro sassy Sandy super sticker thank you very much guys uh big big big appreciation also you guys if you could chill out on the donations that would be awesome because people call me a grifter when you guys donate

(1:02:45) too much money I always tell people do not donate your money to me if you need your own money I'd rather have you guys have your own money um so so thank you very much for that um okay B what's up

(1:04:25) guys for guys if we we have to uh I I really don't want to tear kim.com

(1:05:32) down guys I really don't guys what do I have to pay attention to where there's a typo somewhere where's typo okay how he got was told oh I got you okay there we go okay thank you for that edit wait is

(1:06:38) Kim the Kardashian in this thing now that'd be funny should I call him Kim Kardashian from now on we might actually call Kim Kim Kardashian from now on I kind of like that guys it's getting spicy in here tonight um just a warning to everybody out there uh I am a smart guy and I've lived my whole life uh with social media since social media was invented and um the reality is that I am not somebody who can be trolled and you'll never win a troll war with me unless your name is uh keemstar so so don't bother um I

(1:07:19) don't know why Kim Kardashian here is uh trying to trying to gatekeep us but it's getting pretty weird that we got a dude uh who should have no connection to these videos

trying to gatekeep us on what's real and what's not especially a dude who is potentially facing extradition to the United States whose assets are controlled by the United States government to me that's extremely suspicious why is he even in my replies why is kim.

(1:07:47) com why is Kim Kardashian here even in my replies why is he making all this drama up if he wants this there to be a bunch of drama he wants to make this thing go bigger dude I'm I'm all about it bro I'm all about it you want to send your 1.5 million followers to watch the videos uh I'm all about it dude doesn't make sense to me but whatever bro I already muted kim.

(1:08:16) com because I don't I don't trust anything he says period so I mean he's just he's destroying his own credibility right now so if he wants to keep going go for it bro I told him the best advice for him was walk away from this go do something else man go talk about Ukraine or whatever other [REDACTED] Tik Tok bills or whatever kim.

(1:08:54) com Kim Kardashian deals with this is funny cuz this reminds me a little bit of um the Danny Jones and the Julian Dory uh drama like people don't realize that people resonate with the truth and so when you come at somebody and you lie and lie about their what they're working on like people can see through you like you're transparent and that's what happened with those guys they actually thought that people were going to support them on their takedown of me um because in their minds they they thought what they were saying was true and that

(1:09:22) I was some kind of liar or something like that and they found out the hard way like one of them deleted the interview because they were so they were so triggered by how many negative comments they got and the other one started Banning people and they started removing a bunch of comments as well because they had so much negative attention and they they actually thought that I bought fake comments that's how delusional these people are they actually thought that I B coms no people just hate you because they can tell that

(1:09:46) you're full of [REDACTED] it's pretty simple okay wow more donations uh my channel thank you very much holla for the dollar holla yatsi for my channel uh my channel also says we are so back yeah I mean we're back in a big way now kim.com is just elevating us I don't know if he knows that or not but whatever oh tear tiles tear tiles how do you say this tear tiles all the way Michael talet was on this long ago I've been backtracking Breakaway technology along my travels for long Kim is Cia thank you very much that's another

(1:10:21) huge donation uh once again uh please keep your money if you need your money although I can tell you guys are fired up as I am so that's pretty awesome yeah I I don't know what Kim's deal is but he's super sketch right now this dude is like he might as what's the let me hold on uh what's the one oh yeah this this is kim.

(1:10:45) com right now well of course it comes from Reddit no I'm not not looking at a Reddit picture hold on hold on hold on hold on chat calm down chat calm down settle settle okay here it is oh God yo this is Kim Kardashian right now everybody just trying to look inconspicuous right

now just like all feds right here fed a Fed B fed C fed D I'm just a normal guy how are you doing fellow fellow **truth** Seekers stop trying to gatekeep me kim.

(1:11:25) com uh go do something else go get back to your like whatever [ ] you do on your social media uh I honestly don't give a crap anymore I think the lesson anyone should learn from this interaction is don't trust anything kim.com says if there is such a thing as um what do they call it uh controlled opposition which actually I didn't even really believe in that term then kim.

(1:11:48) com checks all the boxes now that's just my opinion but there's no reason this dude should be trying to gatekeep this right now and he shouldn't be trying to come to my replies especially when we're at like the peak of this he it seems like he's trying to make this go away and that's really sketchy dude really sketchy um I do have the full recording so I you know whatever I can pull Clips off of it I just the only reason why I didn't is because I wanted to be nice to **Jonas** and these other people but it's

(1:12:16) not going to make him look any better there's nothing in there that makes him look better I guarantee you that uh especially the part about how he he talks about reading the email where he got the burner email from a burner email account says I just thought you should know at proton or whatever it is saying I found these images here you go you should go find these images right here and go make a **debunk** video about them that is not GNA make him look any better man doesn't get any better from there uh and I don't know maybe kim.com

(1:12:45) doesn't remember it but I ended up leaving that conversation because I got bored of them kim.com ends up sitting there jerking **Jonas** off about wanting to invest in his video game that he's making like lit they sit there like jerking each other off about this video game that **Jonas** is working on and kim.

(1:13:02) com wants to invest in it how how he thinks **Jonas** is so talented and cool like you know that he hangs out with the hottest dudes and wears the freshest clothes and I was like okay guys I got to go do something else and I and I bounced off the call um so and I'm being 100% serious man I have the recording so uh I mean if Kim really wants me to embarrass him anymore I absolutely can abs absolutely have it and then once again he's the one who told me to make the recording that's the funniest part he told me to make it yeah and for the people that warned

(1:13:35) me about kim.com thank you very much I'm sorry I didn't listen to you early on uh I probably should have um yeah and also heck man I could play the recording of the Stephen Greer thing too kim.com loses his mind as Steven Greer and Stephen and Dr Greer is like dude this space is about me and kim.

(1:13:54) com just keeps cutting off like a like a four-year-old like just let people speak I felt like it was in a UFO Twitter space where it was like people just cutting each other off Non-Stop and I'm just sitting there laughing behind the scenes at it like that's not a good look dude doesn't make you look like you're an objective person trying to seek the **truth** makes it look like you're

like a **debunker** who doesn't think the stuff can be real so one last time uh Kim Kardashian uh get out of my get out of

(1:14:20) my replies go deal with your own thing you you did your part on MH370 your part is done uh I'm going to take it from here we're going to take this one across the finish line and we will expose the United States government and the CIA I hope you're not working with them I really don't think Kim is but I don't know man all I know is I can't trust the guy you know and he's a smart guy he was actually a pretty nice guy to me but that's the thing they come at you like they're a nice person and the whole

(1:14:47) point of a lot of disinformation that's out there I don't know this for a fact but a lot of what the disinformation is is they come at you and they try to get buddy buddy with you and then they kind of Build You Up only to just tear you down like that's a lot that's just the straight up the Playbook right out of the disinformation Playbook there so I'm definitely not letting that happen ever again um not with kim.

(1:15:06) com or any other influencer so any influencer that tries to tie themselves to me it ain't happening like that also the best part is like there it would be really suspicious if another **debunk** comes out of the blue right now because the only reason there should be another **debunk** right now is if people realize that this is like gotten too big and they have to try to make it go away cuz how could another **debunk** appear out of nowhere right now it can't right like imagine someone's like oh I just happened to find this video of the the

(1:15:37) plane without the orbs in it what where where did you find that video people have been searching for eight months and couldn't find anything and all of a sudden somebody finds some huge piece of evidence or whatever like that would be the sketchiest [ ] ever at this point and that's why I love about the fact that you know I played the retirement card everybody stepped away the whole case got once again suppressed on **Reddit** which is fed controlled 100% um now they have no excuse to come up with more **debunks** no excuse if you

(1:16:08) don't think the videos are real go do something else the only people we're trying to **debunk** these videos in social media are disinformation agents at this point otherwise everybody should agree that the United States why would kim.com not want the United States government to issue a statement about these videos isn't he against the United States government Kim Kim Kardashian are you against the United States government or not why don't you tell the people if he replies again that's going to be my next retweet

(1:16:33) is I want kim.com to say are you against the United States government or are you working for the United States government because the only people that want these videos to go away are people that are working for the United States government everybody else should want the United States government to issue a statement on these videos they're the potentially the biggest videos of all time we should hear what they have to say about it the fact that United States government is saying nothing is sketchy as hell uh do I have any big interviews

(1:17:01) coming up and guys yeah we will dig into the science here in a minute but we're doing some drama right now I guess I didn't make kim.com reply to that um I just finish an interview with oh dude we have something huge coming up tomorrow should I spoil it yeah we're spoiling it okay guys I did an interview with the big thing podcast uh earlier today it should drop I don't know soon but one thing he told me I hope he doesn't get mad for me telling this but he has an interview with AI lobe coming out tomorrow so uh

(1:17:35) Christian of the big thing podcast interviewed AI lobe and you know what he told me before our interview started he said I asked Avi lobe about your investigation about warp drive you know what Avy L said it's possible yeah yatsi we're clipping the [REDACTED] out of that when it drops we're posting that chat AI lobe said that it's possible Avi lobe said that the warp drive is possible let's go let's go can you believe it I guys I didn't even want to say it but I was to I was too excited man
